The Earl of CLARENDON said that the address had not received the sanction of the Government; for, though he thought its language perfectly unobjectionable, he had distinctly refused to instruct Lord Cowley to be present when it was laid before the Emperor of the French.

The Earl of ELLENBOROUGH said it was to him a matter of the greatest satisfaction to hear from one possessing the authority of the noble and learned Lord that this transaction was as illegal as it was repugnant to the feelings of every Englishman who would see disparage himself, and, as far as he could, his country. He dissented altogether from the whole of the complimentary terms used in the address, and he must confess that the whole transaction filled him with the most unqualified disgust.

The Earl of MALMESBURY regretted the address was made at all, and made in a channel not officially correct; but, as it had been presented, it was a source of congratulation to him that it had produced a good effect, as he had seen when in Paris

The LORD CHANCELLOR vindicated the deputation from the charge of illegality, and instanced, in its justification, the recent deputation to Tuscany.

Lord CAMPBELL reiterated his assertion, and drew a distinction between the deputations in question—the one being for a national, and the other for a general object

HOUSE OF COMMONS.—MONDAY.

The House of Commons met to-day after the Easter recess.

NATIONAL EDUCATION.

Lord J. RUSSELL rose to state generally the intentions of the Government with respect to education in England and Wales. He began with an historical survey of popular education, pointing out the defects of the systems of Lancaster and Bell, both of whom employed as monitors boys who had no peculiar aptitude for the office of teaching. He described the establishment of a Committee of Council, to superintend the administration of Parliamentary grants. He quoted a statement received only the day previous from the Registrar-General, with regard to the number of schools in this country, and of persons receiving education in them, which will be found in another column. He referred with great satisfaction to the fact that the working and poorer classes should contribute half a million a year out of their earnings to defray the expense of the instruction of their children, defective and blundering as it was. He could not for a moment for thinking that Parliament ought to direct their efforts rather to strengthen and improve the system of education which had grown up chiefly from voluntary efforts, than to attempt to originate in its place one which, while distu bing the existing system, might fail to supply an equal amount of money for the education of the poor. It was fortunate that the plan contemplated by the Government in 1839 of having one training school under State direction, did not succeed with public favour, and was not persevered in; but that, instead, a large number of training schools were established in different parts of the country, of which the greater part belonged to the Church, and the others to various Dissenting congregations. The dispersion of pupil-teachers to various training schools throughout the country, to which funds are apportioned under the minutes of Council, was productive of more beneficial results than could have been obtained from bringing them together into two or three large schools appropriated to their education as schoolmasters. Lord John Russell then described the pupil teacher system, which is so important a feature in the present system of education, that we shall quote the passage at length:—

> A boy or girl, as the case may be, who shows intelligence and capacity for teaching is retained as a pupil-teacher in the elementary school for five years. During this time the pupil-teacher receives, under the authority of the Committee of Council, out of the grant voted by this House, a salary beginning at £10, and rising to £30 before he leaves the school. He is then admitted into a training school or college, as some are called, where he becomes a Queen's scholar, and receives from £20 to £25 the first year, £25 in the second, and £30 in the third. There the pupil teacher receives an education to fit him for a schoolmaster. For this purpose he not only receives the best instruction from the masters and conductors of the schools, but has an opportunity of showing, practically, his capacity for teaching. In this way a large number of persons are educated specially and properly for filling the office of schoolmaster an office which I, long ago, declared in this house was not held in sufficient estimation, but which is now rising in just estimation, and which is certainly one of the most important that any person can fill in this country (Hear, hear) I think it an advantage that these pupil-teachers are dispersed over the country—some springing from the middle orders—some belonging to the working classes, who are proud, and justly proud, of seeing that their children, by dint of intelligence, by dint of quickness in learning, and also by reason of religious and moral qualities, have a chance of obtaining from the masters of the training colleges and the inspectors appointed by the Government honourable testimony to their fitness for the office of teacher. In 1853 the total expenditure on these schools, under the minutes of the Committee of Council, was—for augmentation of teachers' salaries, £12,276; for stipends of pupil-teachers and gratuities to schoolmasters for their instruction, £79,587; towards the building of training-schools, £15,596; for the support of training-schools, £17,545: making a total of £130,189. An examination is carried on under the direction of the Committee of Council, both of those who have been, and those who desire to become schoolmasters, and to whom, if approved, certificates are granted. About 1900 men and 900 women have obtained certificates of merit. A portion of these are not now exercising the duties of teachers; but I should say that about 2700 of those who have received certificates of merit continue to teach.

The noble Lord rebutted the arguments of the inconsiderable number of religionists who contend that education ought to be supported solely by voluntary contribution. He also expressed his dissent from the views of those who held that it was possible to give the children secular instruction, leaving their religious instruction to the ministers and pastors of the different communities. According to this plan of secular instruction, there would not be sufficient time or opportunity allowed for the clergy of the Church or the other denominations to instruct the children in religion, and consequently the most important end of education would not be sufficiently attended to. Others said that natural theology should be taught in schools, but that Christianity should not be taught there. This he thought a more dangerous doctrine than the other. "My belief (said the noble Lord) is—

That the people of this country acted with a right instinct when, upon associating together and devoting their money for the purpose of education, they declared openly that there should be a religious training in the schools, and that that religious training should comprise all the great doctrines of Christianity (Cheers). Therefore neither I nor the present Government can be a party to any plan for proposing a secular mode of teaching, instead of that which is at present established.

There was a difficulty in the way of the establishment of one scheme of education supported by a rate, because the whole of the community would not agree to any one scheme. He feared, with the late Home Secretary (Mr. Walpole), that if a school rate were imposed in every parish, there would be something like the agitation which now prevailed in reference to church rates. Towns having corporate institutions and Town-councils might vote rates for education, supposing that two-thirds of the Town-council should agree in the imposition of the rate. But then the rate so raised is only to be applied in aid of the schools at present receiving aid from Parliamentary grants:—

> We think it necessary that the rate should be applied, not to establish schools in substitution of former schools, but in aid of the voluntary efforts of individuals, and of the school pence given by the parents of children. We should propose some such scheme as this—that the rate might be applied to pay 2d in the week for the scholars, provided 4d. or 6d. were contributed from other sources. We should propose, likewise, that the schools which should receive this assistance should be schools which, under the minutes of Council, might receive assistance, and which, consequently, have for years received the sanction of Parliament. I should be afraid of great difficulty and dissension if we were to go beyond a rule of this kind.

The Town-council will only have power to appoint a committee, who are to distribute the sums according to the minutes of the Privy Council; the parents to have the power of withdrawing their children from the religious instruction to which they might object. In places which had no municipal corporations, it was proposed to allow a certain sum per head to the children attending these schools, confining such grants to schools where the schoolmaster has obtained a certificate. Additional grants would also be made for building schools in some poor places where there exists the greatest difficulty in obtaining funds sufficient for establish ng them. There was another subject of great importance—the large amount of money left by charitable bequests for purposes of education. The number of these charities was 28,340, and the annual income of the endowments for education was £312,000. Abuses had been found to exist in these charities; many were of extremely small amount, and some had been left for purposes which were not now useful. It appeared to the Government that there were two matters, totally distinct, to be provided for—one, a judicial power, to declare whether any of the trusts had been abused, and to take measures to remedy such abuses; another, a power of administration, or of superintending the administration, of the trusts. The latter power was now proposed to vest in a committee of the Privy Council, to be appointed by her Majesty, with the Lord President at its head: and it was proposed to give the judicial power to the County Courts where the income of the charity was under £30 a year; and to the Master of the Rolls where it exceeded that amount. The sums to be granted for the promotion of science and art it was intended to place under the control of a department of the Board of Trade. With regard to the Universities he had no particular scheme to announce on the part of the Government. He recapitulated the private recommendations of the commissions, and suggested that if the Universities wished to carry out those recommendations themselves, they should have every facility Parliament could give them for the purpose; but, that if they showed no such intention, or fell short of the public expectation, Parliament would step in and deal with them in a more summary manner. The particular points specified by Lord John Russell are, the concession of some voice in the government of the University to those who are actually engaged in teaching; admission to the privileges of the University without the condition of belonging to any college; the removal of restrictions in the election to fellowships and scholarships; the limitation of those stipends to a certain period of years; and, in general, the application of the college revenues more directly and effectually to the purpose of instruction. The Government would keep these objects in view, and if the Universities should refrain from making useful alterations, it would be the duty of her Majesty's Government not to hesitate at bringing in measures which they might think necessary for that purpose. The noble Lord concluded by moving for leave to bring in a bill to carry out some of the objects mentioned in his speech

Mr. HUME did not approve of the imperfect and unsatisfactory system now proposed. He would rate every parish in the kingdom, every acre in the country, in order to instruct the people in their moral and social duties, and to render them good citizens; and he would leave it to the various clergy of the different sects to instruct their people in religion.

Lord J. RUSSELL (in answer to Mr. M. Gibson) stated that the Government had cancelled the instructions issued by Lord Derby's Government, enabling the clergyman in church schools to dismiss the schoolmaster upon other than religious grounds. In its place, it was proposed, that there should be power given by a minute to the clergyman to appeal to the Lord President of the Council and to the Bishop of the diocese, in the case of a schoolmaster of immoral conduct or immoral habits.

Mr. W. J. FOX was disappointed that the noble Lord had not shown greater courage in dealing with this question. He did not wish to exclude religion from education, and there were no such persons among the advocates of the secular system. The question was how the religious element could be best infused. He thought the clergyman a better trainer in religion than the schoolmaster. The difficulty had been overcome in Ireland, in Canada, and in the United States, where children of different religions harmoniously mingled. He urged the inadequacy of the emoluments of schoolmasters.

After some remarks of no great importance from other members, leave was given to bring in the bill.

The Government Pilotage Bill and the Merchant Shipping Bill were read a second time.

HOUSE OF LORDS.—TUESDAY.

The Ball in Error Bill was read a third time and passed. The Land Improvements (Ireland) Bill was read a second time, on the motion of Lord Canning. A conference was appointed with the Commons, with a view to an address to the Crown for a commission of inquiry into the proceedings at the late Hull election.

HOUSE OF COMMONS.—TUESDAY.

Mr. WILSON PATTEN announced that his failing health no longer allowed him to discharge the duties of Chairman of Committees of Ways and Means—an office which he had filled since 1841, and received the following compliment from Lord J. RUSSELL and Mr. DISRAELI. Mr. Bouverie, son of Lord Radnor, and M.P. for Kilmarnock, is said to be likely to succeed to the appointment, which is worth £2000 a year.

Sir J. GRAHAM, in reply to an inquiry, said that, since January, a considerable number of desertions had taken place from the squadron on the home station, which were attributed to the unusually high rate of pay in the merchant service, and to the endeavours made to induce the men in the Royal Navy to accept this high pay, and desert

The CHANCELLOR of the EXCHEQUER stated that the subject of a decimal coinage being one of great delicacy and importance, it was the intention of the Government to refer it to a Select Committee

Mr. LABOUCHERE, Chairman of the Hull Election Committee, moved an address to her Majesty to appoint a commission of inquiry into the alleged corrupt practices in that borough. The motion was agreed to.

Mr. H. BROWN drew attention to the increasing number of railway accidents, and thought the time had arrived for the House to interfere

Mr. CARDWELL recommended the House to wait for the report of the Select Committee appointed to sift the whole question of the management of railways

Considerable discussion followed. Mr. J MACGREGOR thought railway boards had done their best to prevent accidents. Mr. D. WADDINGTON knew no instance in which a suggestion from the Board of Trade had not been adopted by railway directors as a law. He would leave the matter in the hands of the Government. Mr. LAING deprecated Government interference in railways, and insisted that, considering the multiplicity of trains and the high rate of speed on English railways, the casualties were remarkably few.

THE WINE DUTIES.

Mr. OLIVEIRA moved a resolution in favour of reducing the duties upon all foreign and colonial wines, to one shilling per gallon. He showed the bearing of this question upon the social and moral condition of the people; observing that in countries where wine was the ordinary beverage, there was less intoxication and a far better general tone of morality among the lower classes than among the corresponding classes in Great Britain. The question had also important bearings upon the preservation of peace, for if the wine duties were removed, our relations with France and other countries would be placed upon an improved footing. He recapitulated some of the startling statements made before the Select Committee on the Wine Duties with respect to the growing taste for wine among the lower classes of London, in preference to spirits, and referred to the declarations of the retail metropolitan dealers as to the increased consumption which would follow upon an extensive reduction of the duty. He thought the revenue would not suffer, after two years, if the House reduced the duty from its present amount of 5s. 9d. a gallon to 1s.

The CHANCELLOR of the EXCHEQUER expressed a strong opinion that it was most desirable to make an important change in the duties upon wine. He refused to state the intentions of the Government till the 15th of April, the day fixed for his financial statement; but admitted that he knew no article burdened with a fiscal charge under our financial system, in favour of a change in which stronger reasons could be given. He could not agree that the Revenue would recover itself in two years if the duty were reduced to 1s. per gallon. At present we consumed about 6,000,000 gallons a year. To make up the same amount of revenue, the consumption must be raised to 30,000,000; and the hon. gentleman himself would hardly say that the national taste relative to beverages could be revolutionised to this extent in so short a time. At present the wine duties produced a revenue of £1,750,000. Before sacrificing for some years a sum of £1,000,000 upon wine, he must consider whether that sum would not be better laid out in remitting other taxes. With that £1,000,000 a year, a great reform in the duties upon tea might be effected, or an entire re-construction of the Customs tariff, or a removal of that most mischievous duty upon soap.

Mr. MOFFATT reminded the House that in Paris the consumption of wine was at the rate of 280 bottles per head per annum; the duty being about 10d. per gallon. In the Hanseatic towns the consumption was 28 bottles per head; in England, only one bottle and one-third. France sent us £80,000-worth of gloves, £100,000-worth of watches, £400,000-worth of potatoes, but only £70,000-worth of the wines for which she was renowned.

Mr HUME declared that there was no part of our financial arrangements so injurious as that which taxed the innocent beverage of the people.

The motion was withdrawn.

Mr. BROWN moved for a new writ for the borough of Lancaster, which was ordered, after an ineffectual attempt, on the part of Mr. THORNELEY to delay it for a month.

The Combination of Workmen, and Sheriffs' Courts (Scotland) Bills, were read a second time.

Mr. R. PHILLIMORE gave notice that, on that day fortnight, he should move for leave to bring in a bill to alter the present mode of levying Church-rates.

Sir W. CLAY also gave notice that, on the same day, he should bring forward a motion for the entire abolition of Church-rates.

HOUSE OF COMMONS.—WEDNESDAY.

On the motion, by Mr. G. HADFIELD, for the second reading of the Probates of Wills and Grants of Administration Bill,

The SOLICITOR-GENERAL said he should either introduce a larger measure on this subject, or else propose extensive alterations in the present bill. The Government proposed to abolish all the peculiar testamentary jurisdictions (including the archidiaconal courts), and the metropolitan court of York; establishing one court of probate in all matters of contentious jurisdiction; reserving to the diocesan courts the power of granting probate of wills within a limited amount in common form, under certain conditions; providing for the due qualifications of the chancellors or judges; and that every will proved in a diocesan court should be transmitted to a general registry of wills to be established in London. It would be also proposed to give to County Courts a certain extent of jurisdiction in cases of testacy and intestacy. The metropolitan jurisdiction it was intended to transfer to the Court of Chancery, which would consist of a great court of probate, the proctors, registrars, and clerks of seats being officers of the Court of Chancery for the purpose of administering the new jurisdiction, the proctors retaining, by way of compensation, for a certain time, the exclusive conduct of the business of proving wills in common form. The Government measure would abolish all those sinecures which had been the opprobrium of the Ecclesiastical Court.

Mr. HADFIELD consented to defer the bill for a month.

The House then went into committee upon the AGGRAVATED ASSAULTS Bill.

Mr. PHINN moved, in the first clause, to insert the words "publicly or privately whipped, in addition to such imprisonment as aforesaid." He was quite manifest that some greater punishment was requisite to deter the degraded ruffians whose brutal assaults on women and children now, almost daily, horrified the readers of the public journals, from the repetition of these outrages.

Lord PALMERSTON opposed the amendment. He said that a man who had been whipped on the complaint of his wife could never return to her; and that the wife would be driven to the workhouse, who would say, "There goes the woman who had her husband flogged." If this punishment were imposed women would often be deterred from complaining of the violence of their husbands.

Mr. WALPOLE also objected to the risk of outraging public feeling by the infliction of a brutalising punishment. It was said that for these brutal offences the man should be treated as a brute. But punishment was inflicted to deter from the commission of crime, and with the hope of civilising and humanising the offender. Introduce this amendment into the bill, however, and they would not humanise, but brutalise, the very persons whom they wanted to correct

Mr. Phinn's amendment was negatived by 108 votes against 50.

HOUSE OF LORDS.—THURSDAY.

BIRTH OF A PRINCE.

The Earl of ABERDEEN wished to submit a motion consequent on the happy event which had taken place that day, and to ask their Lordships to agree to an address to her Majesty, congratulating her Majesty on the birth of a Prince, and expressive of their Lordships' devotion to her Majesty.

The Earl of MALMESBURY, in the name of noble Lords on his side of the House, begged briefly to second the motion.

The motion was then unanimously agreed to.

Lord CAMPBELL, in adverting to his remarks the other evening on the subject of the Address to the French Emperor, said that he had received a letter from Dr. Robert Adair, in which he denied that he had ever been commissioned by Mr. Fox, or any other person in this country, to represent them at the Court of the Empress at St. Petersburgh.

The Earl of ALBEMARLE thanked the noble and learned Lord for his vindication of his octogenarian kinsman, who had laboured under misrepresentation for nearly sixty years.

The General BOARD OF HEALTH Bill was read a third time on the motion of the Duke of ARGYLL

The Earl of HARROWBY presented a petition from the native inhabitants of Calcutta and other places in Bengal, in reference to the renewal of the Indian Charter. After some discussion, the petition was laid upon the table.

Earl GREY asked whether it was the intention of the Government to institute any inquiry into the charges brought against the New Zealand Company, as many of those charges had been preferred by some leading members of the present Government in a discussion which took place last Session upon the subject in the House of Commons?

The Duke of NEWCASTLE said that he was not the intention of the Government to institute any such inquiry.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The members appointed on the Taunton Committee were sworn in at the table: they were Sir G. Grey (chairman), Mr. C. G. Round, Dr. Bird, Mr. Montagu Chambers, M. H. B. Coles, and Mr. Pilkington. Member petitioned against, Mr. A. Mills.

The members appointed to try the petition against the return for Leicester were sworn in at the table:—Mr. Divett (chairman), Mr. S. Gregson, Mr. R. T. Parker, Lord Dalrymple, and Mr. M. Kendall. Members petitioned against, Sir J. Walmsley and Mr. R. Gardner

In answer to a question from Mr. Deedes, Mr. CARDWELL said it was his intention to proceed with the Canadian Reserves Bill immediately, if he had an opportunity of doing so.

In answer to a question from Sir B. Hall, Sir J. GRAHAM said, there was no minute at the Admiralty with reference to the reinstatement of Admiral Sir B. Walker, as to the proceedings of the Government with respect to the exercise of political influence in the dockyards. Whatever documents did exist in the Admiralty would be produced in the House.

BIRTH OF A PRINCE.

Lord J. RUSSELL said, that before the House proceeded to any further business, he begged to propose that an humble address be presented to her Majesty, congratulating her on her late addition to her family in the birth of another Prince, and he would therefore move a vote of congratulation to her Majesty accordingly.

Mr. DISRAELI seconded the motion, and congratulated her Majesty and the House on the happy occasion which induced the noble Lord to make the motion.—Motion agreed to.

Mr. SMITH moved a resolution for issuing a commission to inquire into corrupt practices at the late and previous elections for the

borough of Cambridge. From the evidence adduced before the committee, there could be no doubt that systematic bribery and corruption had been carried on at Cambridge, and therefore he hoped the House would agree to his motion. The motion was agreed to.

CONSOLIDATED ANNUITIES (IRELAND).

Mr. MOORE observed that it was the duty of her Majesty's Government forthwith to take into consideration the Irish Consolidated Annuities, in order to effect a more equitable settlement of the claims for which those annuities were granted.

A discussion then took place, in the course of which

The CHANCELLOR of the EXCHEQUER said that he could only state the intentions of the Government with regard to the Consolidated Annuities when he brought forward his Financial Statement. The Government which passed the measures for the relief of Ireland during a period of unprecedented distress had made every effort to give the landlords of Ireland as much influence as possible in carrying out their deals.

Lord J. RUSSELL reminded the House that the chief object of those measures had been to save life, and that object had been to a considerable extent attained.

Several Irish members addressed the House in support of the motion.

On a division, the numbers were—For Mr. Moore's motion, 95; against it, 143: majority against the motion, 48.—Adjourned.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 7.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	The thermometer. Highest Reading	The thermometer. Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches
April 1	29.347	48·1	44·4	46·7	+ 5·1	82	W.S.W.	0.47
" 2	29.763	57·9	41·3	47·3	+ 3·6	74	W.	0.00
" 3	29.584	53·8	43·2	48·0	+ 2·1	91	S.W.	0.10
" 4	29.663	53·1	43·5	52·2	+ 3·2	74	W.	0.00
" 5	29.788	52·0	40·7	52·4	+ 3·2	76	W.	0.18
" 6	29.920	51·9	47·0	52·0	+ 3·0	87	W.S.W.	0.00
" 7	29.738	53·0	46·6	49·9	+ 0·8	71	W.	0.01

Note.—The sign + denotes above the average.

The reading of the barometer has been variable during the week: its mean reading was 29.687 inches; and the range in the week was rather more than half an inch. The temperature during the week has been warm, dense, and variable. The mean daily temperature was above its average on every day. The mean temperature of the week was 49·9°, which is 5·9° above the average of the same week in thirty-eight years. The daily range of temperature was less than in the preceding week. The range of temperature in the week was 21·8°; the highest reading being 53·1°, on the 4th; and the lowest 41·3°, on the 2nd. Rain has fallen frequently; and, together with hail which fell on the 1st, produced nearly eighteenths of an inch of water.

Lewisham, April 8th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—In the week ending April 2, the births of 1969 children were registered in the metropolitan districts; of these 1045 were boys, and 924 were girls. In the eight corresponding weeks of the last preceding years the average number was 1411. The number of deaths from all causes amounted to the large number of 1748. This great increase on the high mortality of the previous week is due to some considerable extent to the extremes to which the weather has lately been subjected; and the Registrar-General remarks that the increase is due also to the same extent to the influx into the register books on which coroners had held inquests, and which have been permitted to accumulate during the quarter. The Registrar-General estimates the number of deaths to exceed the estimated amount by more than 400. To zymotic diseases, whose average is 179, were attributed 273 deaths: of these there were 6 to small pox; to scarlatina, 28; to hooping-cough, 84, whose average is 46 only; and to typhus, 71, its average is 36. To tubercular diseases 235 are due, whose averages amount to 185. the excess was on cases of consumption, to which cause 179 deaths were due, its average being 122. To diseases of the brain, nerves, &c., there were 170 deaths, exceeding their average by 45; of these 44 were attributed to apoplexy, its average is 27. To diseases of the heart and blood-vessels, 68. To diseases of the lungs and of the other organs of respiration, the large number of 420 deaths took place, exceeding their averages by no less than 231: of these are due to bronchitis 141, its average is 52; and to pneumonia 122, its average is 78. To violence, privation, cold, and intemperance, 163 deaths are referred.

THE LATE DUKE OF WELLINGTON.—On the decease of the late Duke of Wellington, ther remained in the possession of his family three Ribands of the Order of the Garter. The latest worn by the lamented hero has recently been presented to, and graciously accepted by, her Majesty A second, of very old and historical interest, is retained in the family; and the third has just been sent by the present Duke of Wellington to the Marquis of Londonderry, upon whom the Garter of the great Duke was conferred by the Queen.

MUSEUM OF ORNAMENTAL ART, MARLBOROUGH-HOUSE.—The numbers attending, &c., during the month of March were as follows:—12,007 persons on be public days and 4-mitted free 1091 persons on the students' days, and admitted as students on the payment of 6d. each besides the registered students of the classes o schools.

CITY LONDON LITERARY AND PENSION SOCIETY.—The anniversary festival of this society was held at the London Tavern on Wednesday evening. Mr. Henry Pownall presiding. n the absence of the Right Hon. Lord Stanley, M.P. A very pleasant evening was passed, and upwards of £600 was added to the funds of the institution

METROPOLITAN DRAINAGE.—On Monday night the adjourned meeting of delegates appointed to take into consideration the provisions of the Great London Drainage Bill was held at the Marylebone Courthouse, Mr Nicholay in the chair. Mr. J. Toulmin Smith spoke in support of the amendment, to the effect that the bill, with certain modifications, was one that ought to be supported. Mr. T. M. Nelson opposed the measure. After considerable debate, Mr. Smith's amendment was lost; and Mr. Nelson then proposed, and Mr. Horne seconded, another amendment, to the effect, that no scheme of drainage should be under the supervision of a board to be appointed by the ratepayers; that sewage be diverted as much as possible from the river Thames, and be delivered without artificia. means at a point so distant as would preclude its return; that if the collection should form a source of profit, it should be sold for the benefit of the ratepayers; and that, should the legislature agree to such a system, it should be without a guarantee clause. This was agreed to; and the meeting separated.

ROYAL ASYLUM OF ST. ANNE'S SOCIETY.—The anniversary festival of this charity took place on Tuesday night at the London Tavern, and was presided over by Mr. Booker, M.P. About 150 gentlemen sat down to dinner, among whom were Lord Bernard, Lord Erskine, Mr. Serjeant Peake, and the Hon. and Rev. Mr. Noel. The children were paraded round the room, and one of the boys delivered a poetical address. During the evening subscriptions to the amount of £2000 were announced by the secretary.

WESTBOURNE-GROVE CHAPEL, BAYSWATER.—This chapel was opened on Tuesday, when a sermon was preached by the Hon and Rev. Baptist Noel to a crowded and respectable congregation. The chapel is a spacious structure, and cost nearly £4000.

EMIGRATION TO AUSTRALIA.—A crowded meeting took place on Saturday evening, at the Lecture-hall, Fair-street, Horsleydown, to hear an address from Mrs. Chisholm, on the subject of emigration, which was delivered at the request of the committee of the Bermondsey and Horsleydown Mutual Improvement Association. Not less than 400 persons were present, including a great number of females.

COLLEGE OF PHYSICIANS.—On Wednesday afternoon a deputation, consisting of the president, fellows, and members of the Royal College of Physicians, waited upon Lord Palmerston, at the Home-office, for the purpose of entreating his Lordship to take such immediate steps as might appear necessary to obtain a new charter for the college. His Lordship promised to pay every attention to the wishes of the deputation.

NEW PEERS.—Viscount Canterbury is about to be summoned to the House of Peers by the title of Baron Stratford, of Harmondsworth, Middlesex; and the Marquis of Stafford is to be Lord-Lieutenant of Cromarty, in the place of Roderick Macleod, of Cadboll, Esq., deceased.

ARRIVAL OF GOLD.—On Wednesday morning the train from Liverpool brought to the Euston-station four tons and a half of gold, which had been landed from Australia. The valuable cargo remained in the custody of the servants of the North-Western Railway Company until eight, when it was conveyed in a waggon and covered cart to the Bank of England, guarded by thirty-five of the police.

FIRES.—An alarming fire broke out on Monday evening, in Milk street, Cheapside, on the premises of Messrs. Bartlett. The fire was not put out until there had been very considerable damage done to the property.— Another fire occurred, at the same time, in Silver street, Wood-street, at Mr. Crawley's, caused by the heat of stoves in the next house: and the firemen were unable to conquer the flames until several of the stores or warehouses were nearly burnt out. While on the way to the first fire, an unfortunate man was knocked down by one of the engines, on Ludgate hill, and the wheels passed over his body.

CHESS.

TO CORRESPONDENTS.

HARRIET.—We do not think the defence in question, however ingenious, is perfectly satisfactory. Its validity has been questioned by Mr Hopkinhead, in his last edition of Bilguer's "Handbuch," p. 32b.

J. J. of Hanworth.—Mr. Bigland's Problem, No. 479 is in every respect correct. Try Nonne again.

W. N., Shirley.—In the position given, Black cannot in any way save the game. He should resign at once.

RANSPERT.—Yes. You were at liberty to take his Pawn in passing, in the way you mention.

A. ARGUS.—It is under consideration, and shall be reported on next week.

R. H. M., EMMA, BRIGHTON.—Black may defy you to mate another move.

D. L., Dublin.—The games appears, with notes, in the current Number of the *Chess-Player's Chronicle*.

W. B. F., Dundee, is thanked for the game.

C. W. L.—We have never published any Engravings of the Staunton Chess-men. You may see them at any of the chief dealers', such as Lenchars, Lund, Mechi, Fisher, &c., in London.

A LEARNER.—The word "Gambit" is derived from an Italian phrase applied to a feint in wrestling, and in Chess it is used to denote those openings where a Pawn is sacrificed for the purpose of enabling the first player to obtain a rapid attack. See the "Chess-Player's Handbook," under the head "Technical Terms," p. 19.

G. D., Wincanton.—1. It is drawn, we should say; but our defective Chess Lore makes no provision for such a case. 2. Establish, or join, a Chess-club in your neighbourhood

BRIGHELMA.—Probably next week.

J. D. M., Aberdeen.—1. Der Lasa, when in practice. 2. Yes, a very useful compilation.

J. J., Leeds.—We are afraid, perhaps

KIBITZER.—Send an address, and rules shall be forwarded

CLERICUS.—In position referred, the Black King is check-mated. A King is in check when he is attacked by any piece belonging to the enemy; in other words, whenever the square on which he stands is commanded by an opponent's piece.

BUDDHIST.—They are new to the gentleman's hands

W. W., Wakefield.—The amendment you propose before we offer an opinion on the merits of your problem.

F. de J., St. Petersburgh.—The long-expected and much-wished-for packet has reached us safely. Accept our best thanks and acknowledgments

T. W. M. D. D., and OMEGA.—The Liverpool Chess-club intends to take advantage of the assembling of so many distinguished players at the Manchester Meeting, on the 6th and 7th of next month, to give a soirée, on an extended scale, on the Monday following

R. M., W. S. B., and others.—We shall withhold the Solution of Problem 479 until next Week.

SOLUTIONS OF PROBLEM No. 478, by Sigma, A. T., R. D. M., Ricardo, G. D., W. P., J. W. J., J. P. C., H. P. S., J. P. F., S. F. H., are correct

SOLUTION OF PROBLEM No. 476, by J. F. P., O. R., J. P. of Bethnal-green, J. P. F., Jack o'Newbury, Alpha, H. F. N., J. P., Farnwood, are correct

SOLUTIONS TO ENIGMAS, by J. P. F., S. B. T. W., O. P. Q., R. T. D., P. Simple, Stultus, Moves of no class, Ornus, are correct. All others are wrong.

*** Communications—and there are several not replied to this week—shall be answered in our next

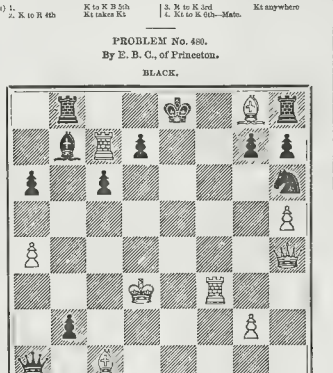
SOLUTION OF PROBLEM, No. 478.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K 6th (ch)	K tks Kt, or (a)	3. P to K B 4th	P moves
2. R takes Kt (ch)	P takes R	4. K B P tks P—Mate.	

(a) 1. K to K B 5th — 2. K to R 4th — Kt takes Kt — 3. R to K 3rd — Kt anywhere — 4. Kt to K 6th—Mate.

PROBLEM No. 480.
By E. B. C., of Princeton.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN VIENNA.
An excellent Game between Messrs. SZEN and HAMPE.

(Philidor's defence to the K Kt opening.)

WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)	BLACK (Mr. H.)
1. P to K 4th	P to K 4th	22. Kt to K 3rd	R to K 6th (ch)
2. Kt to K B 3rd	P to Q 3rd	23. K to Kt sq	K to his 3rd
3. P to Q 4th	P takes P	24. R to Q 3rd	B to Q 4th
4. B to Q B 4th	Kt to Q B 3rd	25. Kt to K 2nd	P to Q B 4th
5. Kt takes P	Kt takes Kt	26. R to Q R 3rd (c)	P to Q R 4th
6. Q takes Kt	B to K 3rd	27. Kt takes B (ch)	K P takes Kt
7. Kt to Q B 3rd	B takes B	28. P to Q B 3rd	R to Q 3rd
8. Q takes B	Q to Q 2nd	29. R to B 2nd	R to Q B 3rd
9. B to K 3rd	Kt to K B 3rd	30. P takes P	P takes P
10. Calls on Q side	Q to Q B 3rd (a)	31. R to Q R 4th	K to Q B 4th
11. Q takes Q	P takes Q	32. P to Q Kt 4th	K to Kt 4th
12. B to Q 4th	Kt to Kt 5th	(ch) (d)	
13. P to K B 3rd	Kt to K 4th	33. R takes P (ch)	R takes R
14. B takes Kt	P takes B	34. P takes R	R takes P
15. Q R to Q 3rd	B to Q 3rd	35. P to K 5 4th	R to Kt 4th
16. Kt to Q sq (b)	Calls on K side	36. K to Q 3rd	P to Q B 4th
17. Kt to K 3rd	P to K B 3rd	37. P to K 5th (e)	P takes P
18. Kt to K B 5th	B to Q B 4th	38. P takes P	K to Q B 3rd
19. Q R to Q 7th	R to K B 2nd	39. P to Q R 4th	K to Q 4th
20. R takes R	R takes R	40. P to Q R 5th	
21. R to Q sq	P to K Kt 3rd	And White wins.	

(a) Whence this eager desire to exchange pieces, even at a disadvantage, which Mr Hampe exhibits? One would have supposed that Mr. Szen's acknowledged skill in Pawn-and games would have prompted his antagonist to retain his officers as long as possible.

(b) Kt to Q B 4th, with the object of afterwards playing his Q Rook to Q B 3rd, would also have been good play.

(c) Pawn to Q B 3rd looks a better move.

(d) The combination is played in a way which shows with the ingenuity which he always displays in endings of this description.

(e) If now chutes two passed Pawns, as he foresaw, when he forced an exchange of Rooks; and it is impossible for the Black King to stop both.

CHESS ENIGMAS.

No. 805.—By E. B. C., of Princeton.

TESTIMONIAL TO DR. SMITH, OF HOLBEACH.—A handsome silver tea and coffee-service has lately been presented to F. Smith, Esq., M.D., by 130 of his patients and friends, in acknowledgment of his professional services. The presentation took place on the 14th ult., at the Chequers Inn, Holbeach; Mr. Edward Joy in the chair, and Mr. John Codling vice-chair The chairman having addressed the company, in the name of the 130 subscribers presented the superb testimonial; for which, Dr. Smith, in a well-graced speech, returned thanks. "The health of the chairman" was then proposed by Mr. W. Thomas, and duly honoured; and was succeeded by a variety of other toasts.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A letter from the Hon. Mr. Dutton, who was announced as a candidate at the first vacancy for South Hants, denies that his political opinions are in accordance with those of her Majesty's Ministers.

The ship *Coromandel* left Southampton on Saturday week, with nearly 400 emigrants, for Van Diemen's Land. She also took out a ship mail, which contained nearly 7000 newspapers.

Recent letters from Breslau state that for seven days the snow had not ceased to fall heavily, and that for several days all the roads in Upper Silesia and Bohemia were blocked up.

There are at present located in the convict establishment at Portland 935 convicts, which number is to be considerably augmented.

A shock of an earthquake is stated to have been felt at Portsmouth, on Friday night week. It was of about two minutes duration; those who ever enced it stating that their beds were sensibly shaken, whilst the walls of the rooms appeared to crack.

A Danish artist of Copenhagen, Scholer, has just produced a brilliant specimen of a new art—a large portrait of Thorwaldsen engraved in stylography drawn with a stylus on a black mass with a thin white coating, and thence transferred to copper by means of the electrotype.

The ship *Moses Taylor*, from New Orleans for Liverpool, with a cargo of 2600 bales of cotton and a large quantity of Indian corn, has been totally wrecked on the bar of the Mississippi

The Chevalier Leopold Simondi, director of the administration of the public debt of Tuscany, died at Turin on the 28th ult.

Dr. Ramscher, Prince Bishop of Seckau, has been named Archbishop of Vienna, in the room of Monseigner Milde.

Some idea may be formed of the high price of coals at foreign coaling stations, from the fact that the captain of the *Great Britain* steamer, will be put in at Vigo for coals, on his way from Australia, paid 53s. a ton for 400 tons!

The *Firebrand* has taken into the Tagus the crew of the *Lady Rowena* from Lagos, which vessel, with a cargo of cotton and beans from Alexandria, was totally destroyed by fire.

A decree has recently been passed by the Bolivian Government, giving to all nations the right of trading on the Amazon and La Plata.

The *Lady Russell* sailed from Tralee on Saturday morning with 360 emigrants for New York. They were all of the class of small farmers and able-bodied labourers. From Londonderry, Waterford, Sligo, Limerick, and Belfast, the tide of emigration flows with rapidity.

In 1820 the consumption of coals in Paris was 513,900 hectolitres; in 1830, 984,000; in 1840, 1,611,200; in 1850, 3,056,236: and in 1852, 3,800,400—an increase of 740 per cent. In wood consumed for firing, there has been a falling off since 1850 from 1,094,300 stares to 476,500, or from 100 to 47

A man, while following a moor-hen, at Mesley, in Worcestershire, made a small break in the river, fired at the spot, and, to his great surprise, found he had shot a large otter, weighing 22 lb., with a pike of 11 lb. in his mouth. Both were killed and secured.

The Law Life Assurance Company have issued a ukase that no person be permitted to fish or angle in the lakes on their lately-purchased Ballinahinch estates, in Connemara, without paying 10s. 6d. a day for licence during the season

The concession for the Bordeaux and Lyons Railway has been granted to the Count of Morny, Mr. Masterman, and Mr. M. Uzielli, under the law of June 11th, 1842, by which the Government give to the company gratis the earth-works.

James Roche, Esq., J.P., the well-known "I. R." of the literary world, and the author of "Essays of an Octogenarian," died at Cork on the 1st inst., aged eighty three years.

The sharp contest in the parish of St. James, Clerkenwell, for the office of vestry-clerk, is concluded. The numbers polled were as follow:—Mr. Wakeling, 1408; Mr. Marsh, 1056: majority, 410.

A lime-truck, during a hurricane, on the 1st inst., was blown out of the siding at Starcross station, just before the arrival of the up mail train from Plymouth, and was forced without interruption to the Exeter station, where its arrival was telegraphed to Starcross. The train was detained, in consequence, half an hour.

The Academy of Moral and Political Sciences of Paris have adjudged the prize for the best paper on "A Comparison of the Moral and Political Philosophy of Plato and Aristotle," to M. Paul Janet, Professor of Philosophy of Strasburg

Several Cork constabulary—fine-looking young men—have taken their departure for Australia, and others have given notice. Many of the yeomanry, and small farmers scattered through the midland counties, are proceeding to America.

The Sultan of Borneo died on the 8th of January, and is succeeded by Pangeran Moumien, who had long acted as Prime Minister. The legitimate heir is thus put aside; but Moumien is very popular with all parties

Sir Robert Peel has delivered a very interesting lecture on "Switzerland," to the members and friends of the Leamington Literary Institute, in the hall of the building fund.

The Countess de Montijo took from Paris to Madrid a number of presents from the Empress to her relatives. The most remarkable were a magnificent pearl for the Duke of Alba, and a rich bracelet for her sister, the Duchess of Alba.

Mr. Caratti, the Greek merchant, who was so seriously hurt by the railroad accident at Dixonfold, is about to bring an action against the London and North Western and Yorkshire Company, and claims compensation to the amount of £20,000.

The Queen has appointed Charles Edmund Phipps, Esq., to be Page of Honour to her Majesty.

M. Albert Gaudry, a well known French naturalist, has been charged with a scientific mission to Cyprus and the Levant. M. Gaudry is to study and report on the geology and natural history of those interesting portions of the Turkish Empire.

The contract for the mason work of the new castle to be erected at Balmoral for her Majesty has been obtained by Mr. Alex. Stuart, Peterhead. Arrangements are being made to commence the work forthwith

Among the passengers in the *Great Britain* were several men who were successful. One brought £15,000, made in a public-house in Melbourne. Two others £30,000, made by keeping a circus. A carter brought home £2000; and one man had a nugget of pure gold, weighing 28lbs., which he picked up himself.

Pope Pius has approved of De Fabrio's plan for a great monument to the memory of Tasso—notwithstanding the poet's doubts and sometimes heterodoxy.

An important movement has been set on foot in Liverpool, chiefly by several captains of American merchant vessels, in favour of the abolition, on both sides of the Atlantic, of the present practice of giving advance notes to seamen

A letter from Medellin, New Granada, speaks of the provinces of Antioquia as another California. The post-office of Medellin has, within the last ten months, forwarded 4000 pounds of gold dust, the product of mines recently discovered in that country

Lord Derby has caused his cattle and farming stock in Tipperary to be sold. The property is entailed on his son. The estate, hitherto farmed by his Lordship, has been let to tenants.

An accident occurred in the Lagan a few days ago, by which Capt Langridge, of the Egyptian yacht *Kassabe*, unfortunately lost his life. His boat was capsized, and he sank at once Mr. Swift, the tenor of the Lisbon Opera House, was luckily rescued when he was at the last gasp

A miser, named Little, recently died at Wigan, leaving a large amount of property. £2000 in guineas and other coins were found secreted in the house, wrapped in rags and paper. The other property consists of lands and houses.

The betrothal of Princess Helena of Nassau with the Prince of Waldeck and Pyrmont has been officially announced at Wiesbaden.

The Theological Faculty of the University of Gottingen has conferred the doctor's degree upon the Chevalier Bunsen, the Prussian Ambassador.

M. Saffi, the colleague of M. Mazzini, has arrived in England, after passing to and fro through the ranks of his deadliest enemies.

Professor Scholefield, who has long occupied a prominent place in the University of Cambridge, died, at Hastings, on Monday morning, in his sixty-fourth year.

Agnes Fife, in the parish of Echt, near Aberdeen, died on the 20th ult., at the great age of 113 years. It is said that she never left her native parish.

A novelty in emigration has occurred in Nassau. The whole parish of Seapennoda, consisting of some fifty individuals, have abandoned their fatherland's hearths, and proceeded to America.

Mr. J. E. Jones has just completed a bust of the Empress of the French. The likeness is said to be perfect, and the bust will grace the great Exhibition in Dublin.

The Queen has been pleased to confer the honour of a Baronetcy upon Dr. Henry Holland, one of her Majesty's Physicians Extraordinary.

Colonel de Sercey has been sentenced by court-martial, in Paris, for swindling, to five years' imprisonment

The Yealm market-boat, in returning from Plymouth on the evening of Thursday week, was capsized, and both the men belonging to her drowned.

LECTURE-ROOM OF THE HINDOOSTANEE SCHOOL, AT PARIS.

SCHOOL OF ORIENTAL LANGUAGES, AT PARIS.

Nowhere has the rage for improvement, which is the characteristic feature of our century, more unrelentingly dealt its strokes of late than in Paris. What classical streets, what historical reminiscences have disappeared within the last three years before the all-levelling hammer of the mason, it has become a tedious task to enumerate. The Hôtel de Longueville, recalling to mind the intrigues of the Fronde; the small turreted house, once enlivened by poor deformed Scarron's hearty grin; and, not far from it, the princely mansions of Louis II., Duke of Anjou, and Jacques de Bourbon, Constable of France—all, all, alas! and many more, are gone; and the antiquarian may thank his stars that the inexorable Rue de Rivoli has spared the window which tradition still points out as that whence Admiral de Coligny was hurled into eternity by the fiends of St Bartholomew's Night; though, to be sure, the front part of that hotel, once the abode of the charming Duchess de Montbazon, and in 1792 inhabited by De Hurugues, the stanch companion of Thévelgne de Méricourt, the noted Clubbist, has "gone the way of all flesh," or, rather, of bricks and mortar. Still, there is a portion of Paris often indeed threatened with innovation, but hitherto successful in its manœuvres against the craving for wide streets and dashing houses, though certainly it cannot be said to be quite deficient in modern comfort: we mean the part which is nearly bisected by the Rue de Richelieu, of Frascati notoriety, and to which we had better at once introduce our reader.

Let us turn away from that square, where an elegant fountain, besplashing its cast-iron nymphs and genii with the crystal stream, marks the spot where the unfortunate Duc de Berry fell by the awl of the fanatic Louvel; and rest our eyes upon that bare, uniform, dingy, uncomfortable-looking pile opposite, that extends its weary length into the corner of the Rue Neuve des Petits Champs. That, gentle reader, is the Bibliothèque Nationale, once the mansion of Cardinal Mazarin, and afterwards known under the name of Hôtel de Nevers, once the resort of the money-making tribe—Law having established his bank therein. It is now the repository of immense literary treasures, many of which, perchance, are indefinitely, if not hopelessly, lost to the world for want of a catalogue. Willingly would we tarry, and show thee the old Caxtons, and Guttenbergs, and Schoeffers entombed within these walls, the precious manuscripts stated at random to amount to 125,000 volumes; besides many curious autographs of Henry IV., Molière, Corneille, Madame de Sévigné, and other luminaries. But we must pause, and, reluctantly passing under silence the Salle du Zodiaque and Salle des Ancêtres, take thee to a portion of the building which more nearly concerns our present object.

Facing the Rue Neuve des Petits Champs, is that part of the Palace of Cardinal Mazarin which more especially bore his name until 1719, when the Regent purchased it for the India Company. It was subsequently occupied by the Exchange, and at a still later period by the Treasury. Since 1829 it has been annexed to the National Library, and a portion of it devoted to the convenience of students of Oriental lore. Here lectures are given in pure and vulgar Arabic, Persian, Turkish, Armenian, modern Greek, Chinese, Malay, and Hindoostanee. Let us pause before the latter, which our immense Indian possessions render most interesting to the British reader.

Nothing can be more honourable to the various Governments that have succeeded one another in France, than the protection afforded to the study of Oriental literature, which, were it not for such protection, could hardly have risen to its present excellence, much less produced those eminent Orientalists whose names give additional lustre to the annals of literature in France. Among these names, that of M. Garcin de Tassy, the Professor of Hindoostanee, holds a conspicuous rank, both on account of the talent and zeal he has displayed in the exercise of his functions for the last twenty-two years, and of the numerous works he has published on his favourite language.

M. Garcin de Tassy, the nephew of Auguste de Tassy, one of the youngest victims of the disaster of Quiberon, was born at Marseilles in 1794. At an early period of his life he commenced the study of the Arabic language, and continued it, together with that of the Persian and Turkish languages, under the auspices of Baron S. de Lacy, and other eminent Orientalists of the day. At a later period he enjoyed the instruction of Mr John Shakespeare in Hindoostanee; and was, in 1828, appointed to the Chair of that language, which had just been created.

Since then, M. Garcin de Tassy, now a member of the Institut de France, has fulfilled his duties with a zeal which evinces his ardent fondness for the branch of Oriental literature entrusted to his care, nor does he fail to excite a similar zeal in his pupils. He is of a middle stature; his countenance is animated, and betrays the lively interest he takes in the volume before him, while explaining it to his audience. He makes his hearers feel, as he does, the beauties of the work on which he lectures; illustrating it with the description of those peculiar Oriental customs, the ignorance of which often renders the most beautiful passages obscure. So attractive, indeed, are his lectures, that it is by no means unfrequent to see ladies attend them, and take as lively an interest in them, as if the latest novel were the subject of discussion.

We ought not to omit to observe that the study of both the Hindee and Hindoostanee dialects has been founded in France by M. G. de Tassy. It is not, perhaps, generally known, that what what is commonly called Hindoostanee, comprises the above two dialects, the Hindoostanee being the purest of the two. When we consider that in 1850 twenty three printing-offices were actively at work in the north-western provinces only of India, for the sole purpose of spreading Hindoostanee literature; that, besides about 150 different works in various dialects of that tongue, not less than 25 Hindoostanee periodicals issued from the press that year; nay, that such old friends as the "Pilgrim's Progress," Gay's "Fables," and "Rasselas" have donned the Hindoostanee garb, and are extensively read by the educated natives of our Eastern empire; we need not dwell upon the political importance of cultivating a language so intimately connected with the vital interests of our country.

The works of M. Garcin de Tassy, published up to this time, are numerous, and deservedly esteemed by our best Orientalists. Professor H. Wilson has spoken in the highest terms of M. de Tassy's "Account of the Musulman Religion in India." His translation of the works of the celebrated Dakhnee poet, Wali, deserves to be particularly mentioned, on account of the difficulty which he has successfully overcome, of rendering intelligible to Europeans the high-flown hyperboles of the original.

Among M. de Tassy's minor works, we may mention his "Rhetoric and Prosody of the Musulman nations," and his edition of the "Adventures of Kamroop," printed under the auspices of our Committee of Oriental Translations. But his principal work is his "History of the Hindoose and Hindee Literature," dedicated, by permission, to our Most Gracious Queen. We may easily judge of the merit this work must have in the eyes of the learned class in India, from the circumstance of its first volume having been already translated into Hindoostance, and printed at Delhi. Among the other works of the learned professor are "The Principles of the Musulman Creed Explained, according to a Turkish Catechism;" and "The Birds and the Flower," a celebrated mystical work, translated from the Arabic.

On Tuesday last, Professor de Tassy was announced to commence his lectures upon the Hindoostanee language at the school, at Paris, when he was to explain the *Bagh-o-Bahah*, which is the text-book for the examination of the East India Company's junior officers. The lectures will be continued on Tuesdays, Thursdays, and Saturdays, till the end of July.

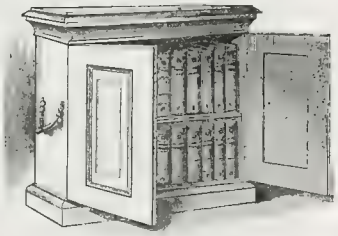
M. GARCIN DE TASSY, PROFESSOR OF HINDOOSTANEE.

SLAVERY IN THE UNITED STATES.

We here engrave the oaken case containing the Address of the Women of Great Britain and Ireland to the Women of the United States, on the subject of Slavery. The Address, with its more than half-a-million signatures, is contained in twenty-six folio volumes, inclosed in the case and, we understand, will be dispatched to the United States this day (Saturday). The following ladies have signed the Address:—

Duchesses: Sutherland, Manchester, St. Albans.
Marchioness of Kildare
Countesses: Gainsborough, Bandon, Sefton, Roden, Orkney, Winchilsea, Bantry, Leven, Annesley, Minto, Portarlington, Dowager of Kilmore, Clancarty, Meath, Carrick.
Viscountesses: Palmerston, Jocelyn, Gough, Massareene, Hill, Bernard, Bangor.
Ladies: Agnew, Harriet Bernard, Wriothesley Russell, Diana Beauclerk, Napier, Pirie, Grace Vandeleur, &c.

It is feared from the following letter received in Glasgow on Monday



CASE, CONTAINING THE ANTI-SLAVERY ADDRESS FOR TRANSMISSION TO THE UNITED STATES.

by the agent for the *Glasgow*, New York steamer, that Mrs. Stowe will probably not visit England this season:—

ANDOVER, March 21.

My dear Sir—I am very sorry to be obliged to inform you that Mrs. Stowe is very sick, and unable to leave her bed. She has been confined for more than a week, under very severe treatment, attended by two able physicians, who both prohibit any expectation of her being able to leave her room, without extreme peril, for a week or ten days to come. In these circumstances we are reluctantly obliged to forego the privilege of taking passage in your vessel on the 26th. With heartfelt thanks to you, and to the company you represent, for your very generous offer, I am, sincerely yours.

J. M'Symon, Esq. C. B. Stowe.

THE HOLY PLACES.

We continue these Illustrations from our Journal of last week, with a View of the Grotto of the Nativity, from Mr. Roberts's large work.

At Bethlehem, six miles from Jerusalem, a large and imposing church has been built over the place of our Lord's nativity. A flight of steps and a long narrow passage conduct the visitor to a small dimly-lighted chapel, called the Grotto of the Nativity. It is lined and floored with marble, and provided on each side with five oratories. The precise spot of our Saviour's birth is marked by a glory in the floor, composed of marble and jasper, encircled with silver, around which are inscribed the words "*Hic de Virgine Maria Jesus Christus natus est*" (Here Jesus Christ was born of the Virgin Mary). Over this is a marble table, or altar, which rests against the side of the rock, here cut into an arcade. The manger is at the distance of seven paces from the altar. It is in a low recess, hewn out of the rock, to which you descend by two steps, and consists of a block of marble raised about a foot and a half above the floor, and hollowed out in the form of a manger. Before it is the Altar of the Magi. The chapel is illuminated by thirty-two lamps, the gifts of different Princes in Christendom. The pilgrim is next conducted to the Grotto of St. Jerome, where they show the tomb of that father, who passed a great part of his life in this place; and who, in the grotto shown as his oratory, is said to have translated that version of the Bible which has been adopted by the Church of Rome, and is called the Vulgate. Bethlehem contains about 300 inhabitants.

GROTTO OF THE NATIVITY, AT BETHLEHEM.

TERCENTENARY OF KING EDWARD VI. GRAMMAR-SCHOOL, BROMSGROVE.—THE PROCESSION TO THE CHURCH.

SILVER CUP PRESENTED TO THE REV. MR. KEANE.

This Testimonial is alike interesting from the occasion of its presentation, its characteristic design, and other circumstances. It is a piece of Indian workmanship. It is crowned with a graceful cluster of Indian fruit, including the plantain, mango, lichi, and pine-apple. Around the foot of the bowl is a belt of shells, such as are found on the Madras beach. On one face of the Cup is a native and an English boy holding a piece of drapery, bearing the following inscription

Presented to the Rev. W. Keane, M.A., by the Masters and Pupils of Bishop Corrie's Grammar School, in token of esteem and gratitude for his exceeding kindness and attention while Head Master of that Institution Madras. 17th December MDCCCLII.

On the opposite face is executed a game of cricket, which, in the attitudes and spirit of the players, does alike justice to the Artist and the Schoolmaster, who is present, in cap and gown, directing the youngsters in their game.

TESTIMONIAL PRESENTED TO THE REV. MR. KEANE, BY THE MASTERS AND PUPILS OF BISHOP CORRIE'S GRAMMAR-SCHOOL, MADRAS.

The sum of £2 12s. 6d. was required at the Custom-house, before the admittance into this country of the above specimen of workmanship, which might fairly compete with the London manufacturer.

TERCENTENARY OF THE BROMSGROVE GRAMMAR-SCHOOL.

Few of the festivities which are from time to time illustrated in our pages possess such enduring interest as the celebration of the foundation of our educational institutions. Of this class was the tercentenary of the Grammar-school at Bromsgrove, on Thursday (last week). Three centuries have elapsed since King Edward VI. munificently founded thirty grammar-schools in various parts of the kingdom for "the advancement of piety and learning." The Bromsgrove School, though it has since King Edward's time been subsidised by various liberal benefactors, has not been able to extend its utility like some of the others; because the gifts of its Royal founder and of its subsequent donors not having been invested in land, its means have not kept pace with the times. Nevertheless, at various epochs of its history, the excellence of its masters, and especially the fact that six scholarships and six fellowships in Worcester College, endowed by Sir Thomas Cookes, being accessible to its alumni, have caused it to be much resorted to. It has never, however, attained greater celebrity than it enjoys at the present moment, when, thanks to the exertions and reputation of the present and two preceding head masters, there are, besides the twelve boys on the foundation, seventy pupils, most of them boarding in the house. It was, therefore, in every respect suitable that the tercentenary of its foundation (Thursday, the 31st ult.) should be specially marked as a memorable day in its history.

The following programme of very appropriate proceedings was arranged for the celebration:—The friends of the school, a numerous body of clergy, and former scholars, assembled in the morning from various parts of the country, and formed themselves into a procession to walk from the school-house to the parish church, where Divine Service was performed, and a sermon preached by the Rev. George A. Jacob, D.D., the predecessor of the Rev. J. D. Collis, as Master of the School. The procession was headed by the twelve foundation scholars in blue caps, coats, and breeches. Then came some sixteen or eighteen persons who had formerly been educated on the foundation. These were followed by Dr. Farley, of Magdalen College, and the Rev. George Jacob, the Very Rev. the Dean of Worcester, and the High Sheriff, and a long train of clergy, two and two, all in academical costume. After these came several gentlemen from the neighbourhood and others who had been formerly educated in the school. The private pupils, arranged in their forms, and accompanied by their several masters, with Mr. Collis himself in the rear, closed the procession, which was thus of no inconsiderable length; and, in its traverse of the town, had a grave and imposing appearance.

The clergy, on arriving at the church, occupied the middle aisle; the pupils filled the organ gallery; and a respectable congregation, principally ladies, was sprinkled over the south gallery and the rest of the edifice. Morning prayers and the lessons for the day were read by the Rev. J. Topham, a former master of the school; and the chants were sung by the pupils, accompanied on the organ by Mr. Tibbutt. A hymn specially composed for the occasion was sung before the sermon

Dr. Jacob chose for his text, John xix., v. 19, 20—"And Pilate wrote a title and put it on the cross. And the writing was, Jesus of Nazareth, the King of the Jews. This title then read many of the Jews; for the place where Jesus was crucified was nigh unto the city, and it was written in Hebrew, Greek, and Latin." In this interesting and appropriate discourse the preacher felicitously referred to the first Reformers having established grammar-schools, where the three languages in which the title on the cross was written might be studied with a view to the enlightened understanding of Scripture, truth, and doctrine. Such was the Bromsgrove Grammar-school, founded three centuries ago by King Edward VI., the first Protestant King of England.

The service being closed, the procession returned to the school, and, about two o'clock assembled in the dining-hall. Here the Lord Bishop of the Diocese presided. The room was crowded with elegantly-dressed ladies, clergy, and others; the majority of the school-boys were placed in a temporary gallery.

The proceedings were commenced by singing the National Anthem.

The Lord Bishop said he had great pleasure in attending these most interesting proceedings. He was happy to say that his diocese was rich in institutions for education. There was the magnificent school at Birmingham, the Rugby school, the one at Hartlebury (now again upon its legs), Kidderminster Grammar-school, and others of a like kind, for which they were chiefly indebted to the piety of that youthful monarch who was cut off ere he reached his prime. The Bromsgrove School was not the least interesting or important of those founded by his care.

The Rev. J. D. Collis then read an address, which related the principal features in the history of the school.

On the motion of the Very Rev. the Dean, a vote of thanks to Mr. Collis for his address was passed by acclamation.

The prizes were then distributed, having been awarded as follows:—

1 For [illegible]—Despotism favoured by the Papacy. W. Ker.
2 For [illegible]—Comparison of Josiah and Edward VI. C. D. Crossman.
1 For [illegible]—The death of Cranmer, resulting from his reforming tendencies in the reign of Henry VIII and Edward VI. A. M. Alington.
1 For [illegible]—Remarks on the Succession with Mary and Lady Jane Grey. [illegible]. Moore.
A second prize for [illegible] has been awarded to W. Ker.

Mr. Ker read his essay at full length. Master Edward Moore read his prize poem, and was loudly applauded.

The Lord Bishop then gave to each of the successful boys the elegantly bound book which constituted his prize, accompanying the presentation with a few complimentary and appropriate remarks.

A vote of thanks having been passed to the Lord Bishop for his kindness in presiding, the meeting dispersed amidst the most vociferous demonstrations from the boys, who cheered the Bishop, the masters, the visitors, and finally, when they could find nobody else to cheer, cheered themselves.

The ladies of the party were afterwards invited to luncheon at Mr. Collis's house.

In the evening, a considerable number of those who took part in the commemoration dined together at the Golden Cross Assembly-room. The chair was taken by C. Noel, Esq., High Sheriff, in the unavoidable absence of Lord Lyttelton. On his right was the Right Rev. the Lord Bishop of Worcester, and on his left the Very Rev. the Dean of Worcester. The Rev. J. D. Collis occupied the vice-chair.

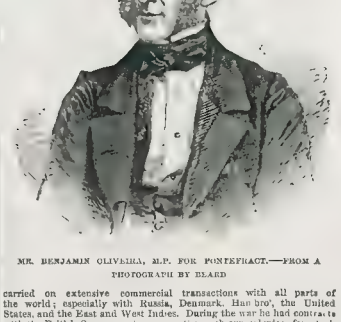
The following was the order of the toasts:—By the chairman—"The memory of King Edward VI. and of Sir Thomas Cookes" (drunk in solemn silence); "The Queen," "Prince Albert, and the rest of the Royal Family;" "The Right Rev. the Bishop of Worcester;" "The Dean of Worcester and the rest of the Clergy," replied to by the Dean. A variety of other toasts having been drunk, the company now rose to depart; but before he left the table, the chairman proposed "*Floreat Bromsgrovea*," which was received with laughter and applause.

PARLIAMENTARY PORTRAITS.

MR. BENJAMIN OLIVEIRA, M.P. FOR PONTEFRACT.

There are some members of the House of Commons who speak upon all subjects brought before it, whilst others confine themselves to a particular topic, which political opponents sometimes choose to designate as a "hobby," but which friends claim to be the question on which a particular member may be best informed; and, therefore, one on which he is entitled to speak with authority. We are not aware that any disadvantage arises to the public in consequence of members thus exclusively devoting their time and attention to one subject. By the unremitting advocacy of an individual, a subject, long tabooed, not unfrequently attains the dignity of a cause; and isolated exertions at first frowned at or laughed down, ultimately become triumphant. Mr. Oliveira, the subject of this memoir, has principally devoted his Parliamentary energies to the reduction of the Wine Duties, his last attempt in this respect having occurred on Tuesday night.

Mr. Oliveira was born on the 24th June, 1806, and is the third and only surviving son of the late Dominick Oliveira (a native of the Island of Madeira) and Sarah, his wife, daughter of a wealthy merchant and citizen of London. His father established himself as a merchant in the city of London in 1797, and subsequently



MR. BENJAMIN OLIVEIRA, M.P. FOR PONTEFRACT.—FROM A PHOTOGRAPH BY BEARD.

carried on extensive commercial transactions with all parts of the world; especially with Russia, Denmark, Hamburg, the United States, and the East and West Indies. During the war he had contracts with the British Government in connection with our colonies, for which he chartered annually a large number of ships. Mr. Benjamin Oliveira, his son, received his education partly under the paternal roof, and partly from his tutor, George O'Brien, of Cheshunt, Herts, and formerly a Fellow of Trinity College, Cambridge. Under the guidance of this gentleman young Mr. Oliveira made good progress in his studies, both classical and mathematical. He executed some translations from the British poets into Latin verse, and amongst them the "Melodies" and the "Windsor Forest" of Pope. He also turned some of the odes of Anacreon, and the satires of Juvenal, into English. To a knowledge of French and Spanish, in which he also exercised his skill in translations, Mr. Oliveira added an acquaintance with ancient and modern history; and, no doubt with ulterior objects, he paid particular attention to questions of international law, maritime usages, treaties, and the commercial code affecting the intercourse between nations. For these latter acquirements a use was in good time found. In 1826, when only twenty years of age, he was deputed by his father to proceed to the Brazils, where his uncle had held the post of Minister of War to Don Pedro, for the purpose of negotiating some commercial questions. During his residence in Portugal

and Brazil, young Mr. Oliveira examined the resources and capabilities of the Brazilian empire, as well as the question of slavery there carried on. He also wrote an account of his travels in Brazil, and of his return through Portugal, the island of Madeira, the island of Teneriffe, Gibraltar, Andalusia, Granada, &c.

By the death of his father, in 1850, Mr. Oliveira succeeded to the management of the family affairs—at first an undertaking of some difficulty and responsibility. Subsequently, Mr. Oliveira devoted a portion of each year to visiting the various countries of Europe and Asia. During his visits to the first, he applied himself to the study of their different forms of government, and making himself personally acquainted with many of the treasures of art which had been brought together in some parts of Italy, Germany, and France. He also inspected the antiquities of Egypt, Syria, Constantinople, Greece, and the Ionian Islands.

In 1850 Mr. Oliveira became a candidate for the borough of Reading, on the Liberal interest, in opposition to the then restrictive policy of Sir Robert Peel. He was not successful in his attempt, the election resulting in the return of Mr. Sergeant (now Judge) Talfourd. From this time Mr. Oliveira devoted himself to literature and the fine arts, and to the support and management of many of the charitable institutions of the metropolis. In 1835, Mr. Oliveira was elected a Fellow of the Royal Society, as also of the Society of Antiquaries; and he has also steadily supported our various literary and scientific institutions, and the Schools of Art which have been formed to promote painting, sculpture, &c. Commercially, Mr. Oliveira has contributed to the formation of many of the great lines of railway in Great Britain, and he has been employed, in Belgium and France, in negotiating concessions for railways in both those countries. He has twice been deputed to Portugal, for the purpose of arranging terms for constructing railways in that country, auxiliary to the development of its resources, and to the mutual reduction of import duties in connection with the Free-trade policy. Last year Mr. Oliveira offered a prize for an Essay to commemorate the Great Exhibition, having reference to the capabilities of Portugal, and the enlarged intercourse which might be brought about by an interchange of commodities.

It should be added that Mr. Oliveira, as private agent for his cousin, Count Tojal, Minister for Foreign Affairs to the Queen of Portugal, has at various times superintended financial transactions for that Government. In 1846 he was charged to negotiate with Don Miguel for a renunciation of his right to the throne of Portugal, upon the receipt of a pension. Mr. Oliveira's family was originally Portuguese, his uncle, John Francisco D'Oliveira, having been Portuguese Ambassador at the Court of St. James's, during the reign of George III.

Mr Oliveira was returned Member for Pontefract at the last general election, in conjunction with Mr. M. Milnes.

At the last dissolution of Parliament, Mr. Oliveira was invited to stand for the representation of Hull, but gave way for Lord Goderich. The present unenviable position of this borough no doubt makes it a matter of congratulation to the hon. member that he declined to solicit the honour of an election at that port.

Mr Oliveira has been twice married: first, in 1838, at Philadelphia, to Mary, eldest daughter of the late John Ede, of Upper Harley-street, merchant; and, secondly, in 1849, to Emma Hephzibah Hunt, of St John's-wood, and Matlock, Derbyshire.

NATIONAL SPORTS.

The steeplechase calendar, gradually diminishing in interest and dimensions, shows only three meetings for the ensuing week, viz., Alwinton on Tuesday, and Carlisle and Rothbury on Thursday. The racing fraternity will be located exclusively at Newmarket, where we may look for five days' moderate sport: at least one day might be lopped off to the advantage of the meeting and the satisfaction of the public.

TATTERSALL'S.

MONDAY.—Subscribers mustered numerously; but, during the greater part of the afternoon, the winding up of the Northampton accounts was the principal feature of business. Closing prices:—

TWO THOUSAND GUINEAS STAKES.—226 to 100 agst The Reiver, Filbert, and Barbatus (t)

CERTIFICATE

1000 to 20 agst Little Jack (t)		1000 to 90 agst Foggy (t)

DERBY.

9 to 1 agst West Australian	12 to 1 agst The Reiver (t)	30 to 1 agst Contentment (t)
(t)	15 to 1 — Cinesa (t)	30 to 1 — The Queen colt
12 to 1 — Orestes (t)	15 to 1 — Honeywood (t)	(t)

DERBY, 1854.—20 to 1 agst Ruby (t)

THURSDAY being the Metropolitan day, the room was closed; but, it will be opened this day (Saturday) for the settlement of the Epsom accounts.

EPSOM SPRING MEETING.—THURSDAY

Epsom has added largely to the reputation, by the success of this meeting. When first conceived, the project had to encounter strong prejudices, and objections were raised on all sides. The undiscouraged spirit of enterprise which animated Messrs. Benton and Dorling to conceive and execute, have now permanently established the meeting in popularity. Dark lowering clouds had occasioned uneasy doubts respecting the weather, but before noon they cleared, and the sun shone forth with power and brilliancy. The grand stand and betting enclosure were very numerously attended, the company comprising the principal professional speculators and high-born patrons of the turf. The programme promised ample sport, and the expectations which it excited were most pleasantly realised. The following is an outline of the sport:

EPSOM TRIAL STAKES.—Lancelles, 1. Ephesus, 2

CITY AND SUBURBAN HANDICAP.—A dead heat between Ethelbert and Ignorance. *Deciding heat:* Ethelbert, 1. Pincake, 2.

TWO-YEAR-OLD PLATE.—Dark Lass, 1. Moss, 2

GREAT METROPOLITAN STAKES.—Gedaloust, 1. Richmond, 2.

SELLING STAKES.—Purbeck, 1. Shipwreck, 2

RAILWAY PLATE.—Narcissus, 1. Chilton, 2

FRIDAY

GREAT STEEPLE-CHASE.—Thunderbolt, 1. Ringleader, 2

SELLING STEEPLE-CHASE.—Slashing Painter, 1. Thumb, 2

HURDLE RACE.—Caurite, 1. Malmesbury, 2

CROXTON PARK RACES.—TUESDAY.

FARMERS' PLATE.—Warinaby, 1. Free Trader, 2

DERBY STAKES.—by Councillor, 1. Priam the Third, 2

GRAND HANDICAP.—Orphena, 1. Caurite, 2

SWEEPSTAKES of 10 sovs.—Contender, 1. Ch. c. by The Hero, 2

WEDNESDAY.

FARMERS' HANDICAP.—Free-trader, 1. John Hamlin, 2.

BELVOIR CASTLE STAKES.—Trajectshot, 1. B.c. by the Emperor, 2.

CROXTON PARK PLATE.—Jack in the Corner, 1. Alfred the Great, 2

CUP of £50.—Annette, 1. Annette's Bill, 2.

SWEEPSTAKES of 10 sovs.—Contender, 1. Ch. c. by The Hero, 2

THURSDAY.

FARMERS' HANDICAP.—Free-trader, 1. John Hamlin, 2.

BELVOIR CASTLE STAKES.—Trajectshot, 1. B.c. by the Emperor, 2.

CROXTON PARK PLATE.—Jack in the Corner, 1. Alfred the Great, 2

CUP of £50.—Annette, 1. Annette's Bill, 2.

BILLESDON COPLOW STAKES.—Kennington, 1. Tom Jones, 2.

CHELTENHAM RACES.—TUESDAY.

SWEEPSTAKES of 5 sovs.—Justice, 1. Valentine, 2

FREE HANDICAP SELLING STEEPLECHASE.—Harriott, 1. Nom de Guerre, 2.

WELTER STEEPLECHASE.—The Ex-Minister, 1. Miracle, 2.

BERKELEY HUNT STEEPLECHASE.—Diana, 1. Melon, 2.

SCUBBY FLAT RACE.—Gay Lad, 1. Theodine, 2.

WEDNESDAY.

FREE HANDICAP HURDLE-RACE.—Tom Gurney, 1. Pontiff, 2

GRAND ANNUAL STEEPLE-CHASE.—Oscar, 1. Sir Peter Laurie, 2

LADIES' HUNTERS' STAKES.—Thurgarton, 1. Tom Gurney, 2

SELLING STEEPLE-CHASE.—Bullfincher, 1. Hazard, 2

SCUBBY HANDICAP.—Fawn, 1. Tenbury Lass, 2.

GUTTA PERCHA.—Late inquiries at Singapore respecting the gutta-percha tree, confirm the statements that have been made about its rapid destruction and scarcity. It takes ten trees to yield a ton of gutta-percha—i.e., 2240 lbs. of solid gutta. Now since between January 1845, and the middle of 1847, no fewer than 6316 piculs were sent from Singapore to Europe, the vast number of 69,160 trees must have been sacrificed!

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The Chancellor of the Exchequer having determined to submit certain resolutions to the House of Commons for the reduction of the interest on the Three per Cents to two-and-a-half per cent, with certain options to the holders, Consols have been very steady throughout the week, and prices have been on the advance. The resolutions in question may be thus summed up.—The present holders of £3 per Centum Annuities will receive—if they refuse to accept of £100 in money, £80 10s. New Three-and-a-Half per Cent Stock; or £110 in Two-and-a-Half per Cent ditto; or £110 Exchequer Bonds, guaranteed for a certain number of years. Options are much divided as respects the policy of the scheme, as it is considered that it will add materially to the actual amount of the National Debt.

The favourable returns of the revenue for the year and quarter, have given great confidence to the *Bulls*, who have operated largely for the next Account, whilst large amounts of Money Stock have been purchased both on public and private account. During the present quarter, £600,000 will be invested for the Sinking Fund. In the year ending on the 5th inst., the following amounts were taken:—

Quarter ending 5th July,	1852	..	..	£681,599
"	10th Oct.,	1852	..	..	544,249
"	5th Jan.,	1853	..	..	436 360
"	6th April,	1853	..	..	476,085

On Monday the Three per Cent Consols were done at 99⅞ to 100⅛; and the New Five per Cents, 108; India Stock, was 262 to 263½; Exchequer Bills, June, 7s.; Ditto, March, 7s. to 10s. premium. The Market, on Tuesday, was very firm, and the quotations were well supported. On Tuesday, the Three per Cents marked 100⅞ for Money, and 100¾ for the Account. India Stock, was 264; Bank Stock, 225. Exchequer Bills were steady. Long Annuities, marked 6. There was considerable activity in the demand for Money on Wednesday, and, at one time, the Three per Cents rulled at 100⅞ to 101; whilst they closed firmly, at 100⅞ for Money, and 100¾ for the Account. Exchequer Bills, were 6s. to 10s.; and India Bonds, 44s. to 46s. premium.

Rather more than an average amount of business has been transacted in the Foreign House, and the quotations have had an upward tendency. We have had an arrival of 200,000 dollars on account of the Mexican dividends. Bargains have been concluded in Brazilian Four-and-a-Half per Cents, at 93; Chilian Three per Cents, 81; Ecuador, 5½; Greek, ex coupons, 12½; Mexican, 23¾ to 24 per Cents; Peruvian, 5 per Cents, 79½ Ditto, for the Account, 27¾ to 28; Peruvian Scrip, 3¾ prem.; Portuguese Five per Cents, 41¾ to 42; the Four per Cents, 29¾ to 30¾; Russian Five per Cents, 117¾ to ⅞; the Four and-a-Half per Cents, 105 to 106; Brazilian Five per Cents, 97¾; Spanish Five per Cents, 49¾; Ditto, New Deferred, 4¼; Passive Certificates, per Bonded, 5¾ per cent; Venezuela, 21; the Deferred, 9; Dutch Two and a Half per Cents, 60; and Dutch Four per Cents, 97¼ to 98.

Owing to rather heavy sales, the market for miscellaneous securities in the early part of the week was heavy, and the general quotations had a downward tendency. The demand has since improved, with some increase in prices. Australian Agricultural have been 98 to 100; Peel River, 6¾ to ¼ prem.; Van Diemen's Land, 22 to 23; South Australian Land, 5¼ to 5⅝; North British Australian, 1¾ to ⅞ prem.; Scottish Australian Investment, 1¾ to ⅞ prem.; New South Wales, 1¼ to ½ prem.; Australasian Coal, par to ½ prem.; Union Bank of Australia, 77¾ to 78¾; Bank of Australasia, 32 to 33½; London Chartered of Australia, 3¾ to ¼ prem.; English Scottish and Australian, ¼ to ½ prem.; Bank of India, China, and Australia, 1 to 1½ prem.; Oriental Bank, 5½ to 5⅝ ex. div.; British American Land, 66 to 68; Berlin Waterworks, ¾ to ¼ prem.; North of Europe, Scotia, Sweden Central, 6s. prem.; Shrewsbury and Birmingham, 66; South-Eastern, 77½; South Wales, 28; Thames Haven Dock and Railway, 2½; Vale of Neath, 16; Waterford and Kilkenny, 9½; York, Newcastle, and Berwick, 76½; Ditto, G. N. E. Purchase, 9; York and North Midland, 61.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, Six per Cent, 142; Manchester, Buxton, and Matlock, 11; Midland Bristol, 106; West Valley, 22¾, Wilts and Somerset, 10½

PREFERENCE SHARES.—Caledonian (£10), 10s ex div.; Eastern Counties Extension (No. 1) 12 prem.; Ditto, Four per Cent, 14¾; Great Northern, five per Cent, 138; Ditto, Ten per Cent pm., 119½; Ditto, Four and-a-Half per Cent Scrip, 3¾; Great Western, Four-and-a-Half per Cent, 107; Londonderry and Enniskillen, Half Shares, 3¾; Manchester, Sheffield, and Lincolnshire, £10 Shares, 10½; Ditto, £5, 3; Midland, Consolidated, 149; Norfolk Extension Debentures, 4; North British, Five per Cent, 85; Staffordshire, 25¾; Oxford, Worcester, and Wolverhampton, six per Cent, 116½; Ditto, 15; Waterford and Kilkenny, Six per Cent, 3; York and North Midland, Five per Cent, 108½.

FOREIGN.—Dutch Rhenish, 4 per Cent Debentures, 2½; Ditto, Extension, 1½; Great Indian Peninsula, 7½; Luxembourg, Ditto Railway, 4½; Namur and Liege (with warrants), 7½; Northern of France, 20¾; Ditto, New Shares, 5¾; Paris and Strasbourg, 34; Royal Swedish, 1¾; Sambre and Meuse, 9¾; Upper India Scrip, ¾ pm.; Western of France 5.

On Thursday, Money was in good demand, the market at 2¾ Cobre Copper, 47¾; Colonial Gold, 3¾; Copper Miners of England, 8¾; Great Nugget Vein, 3¾ to 4¼; Linaris, 1¾ ex div.; Rhymney Iron, 29; Santiago di Cuba, 6¾; West Mauposa, 1¾.

FRIDAY EVENING.—The amount of business doing in the Consol Market to-day has been by no means extensive, yet prices have ruled steady. The Three per Cents, for Money, have been at 100⅝; Ditto, for the Account, 100¾; Three per Cents Reduced, 100; and New Three-and-a-Half per Cents, 101¾. India Stock, 264; Bank Stock, 225; India Bonds, 44s. to 46s.; and Exchequer Bills, 6s. to 11s. premium. Foreign Bonds and Railway shares without material alteration.

THE MARKETS.

CORN-EXCHANGE, Friday.—Up to our market this week the arrivals of English wheat have been moderate, [illegible] quant[illegible] mostly from Essex and Kent, both last days, have been on a limited scale. The show of samples was rather large, [illegible] and the trade was at a standstill, inasmuch as [illegible] took place in the quotations. For forward delivery very little was doing. From Ireland and Scotland we have received 10,000 quarters of wheat since our last; [illegible] sold a good [illegible] at a currency. In low and middling kinds, most [illegible] Prices [illegible] Barley [illegible] Scarce [illegible] met a slow inquiry, at Monday's prices. Malted barley [illegible] Oats [illegible] Beans [illegible] Peas, the supply of which was moderate, sold [illegible] at [illegible] Flour [illegible] New transactions were [illegible] Bear having been extended, in trade [illegible] At Mark [illegible] Wheat, 5,610 qrs.; barley, 4,060; oats, 7,200; beans, 1,100; peas, 1,000; flour, 11,670 sacks. Foreign imports: Wheat, 6,600 qrs.; barley, 2,000; oats, 1,000; beans, 1,000; peas, 1,000; flour, 1,000 sacks.

Wheat.—Fresh arrivals of wheat, from Essex and Kent, rod, 44s. to 52s.; ditto, white, 43s. to 50s.; Norfolk and Suffolk, red, 42s. to 52s.; ditto, white, 46s. to 52s.; Lincoln and Yorkshire, red, 42s. to 50s.; ditto, white, 46s. to 52s.; Northumberland and Scotch, red, 42s. to 48s.; ditto, white, 44s. to 50s.; Foreign, in bond, 36s. to 40s.; ditto, free, 40s. to 44s.; Baltic, red, 36s. to 40s.; ditto, white, 38s. to 42s.; Marks, 38s. to 42s.; Odessa, 36s. to 40s.; Taganrog, 36s. to 40s.; Egyptian, 36s. to 40s.; Barbary, 38s. to 42s.; American, red, 36s. to 40s.; ditto, white, 38s. to 42s.; Australian, 40s. to 44s.; Spanish, 40s. to 44s.; Portuguese, 40s. to 44s.; Sicily, 40s. to 44s.; Tuscan, 40s. to 44s.; Chilian, 40s. to 44s.; Peruvian, 40s. to 44s.

Barley.—The price of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 6½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 44s. 6d.; barley, 31s. 6d.; oats, 19s. 0d.; rye, 30s. 2d.; beans, 34s. 8d.; peas, 33s. 5d.

Tithe-free Weekly Average.—Wheat, 44s. 6d.; barley, 31s. 7d.; oats, 18s. 7d.; rye, 31s. 0d.; beans, 35s. 0d.; peas, 37s. 5d.

Duties.—Wheat, 10s.; barley, 7s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Teas.—At public sale 13,629 packages have been offered this week, out of which 5000 changed hands, at very full prices. Privately, the demand is scarcely any, and common sound congous is worth 10½d. per lb.

Sugar.—Owing to the unusually large supplies brought forward, this market has been in a depressed state; and prices have given way from 6d. to, in some instances, 1s. per cwt. Fine yellow Mauritius has sold at from 39s. 6d. to 39s. 6d.; fine yellow Penang, 38s.; good to fine white Bengals, 37s. to 38s.; and fine grainy yellow, 36s. 6d. to 40s. per cwt. Floating cargoes of Bengal are quiet, at lower rates. Of 3000 bags of Madras, 2000 bags, 2s. 6d. to 3s.; and low to fine grocery, 40s. 6d. to 42s. 6d. per cwt. The total clearances to the 2nd inst. were 1,463,886 cwt., against 1,550,000 cwt. in 1852.

Coffee.—The demand for most kinds is in a very inactive state, and prices are barely supported. Good ordinary native Ceylon has sold at from 42s. to 43s. per cwt.

Tea.—The market is very flat, but we have no actual change to notice in the quotations.

Provisions.—The Irish butter is steady, and quite as fine as we have seen it; whilst Dutch and foreign parcels are a very slow inquiry. Fine weekly Dorset, 100s. to 102s.; middling ditto, 90s. to 96s. per cwt.; Fresh, 9s. to 12s. per dozen lbs. Bacon is in improved request, and [illegible] dearer. Lard is offering on lower terms. Most other kinds of provisions are [illegible] the demand for most kinds of corn is in a stagnant state, and [illegible] supported. Linseeds, to hand to-day, from India, 58s.; Black, 52s.; Mediterranean, 54s. 6d. to 55s. per quarter. In bonds, very little is doing, on both [illegible] Hamburg, 25s. 6d. to 26s.; and low to fine grocery, 40s. 6d. to 42s. per cwt. The total clearances to the 2nd inst. were 1,463,886 cwt., against 1,550,000 cwt. in 1852.

Coffee.—The demand for most kinds is in a very inactive state, and prices are barely supported. Good ordinary native Ceylon has sold at from 42s. to 43s. per cwt.

Tea.—The market is very flat, but we have no actual change to notice in the quotations.

Provisions.—The Irish butter is steady, and quite as fine as we have seen it; whilst Dutch and foreign parcels are a very slow inquiry. Fine weekly Dorset, 100s. to 102s.; middling ditto, 90s. to 96s. per cwt.; Fresh, 9s. to 12s. per dozen lbs. Bacon is in improved request, and [illegible] dearer. Lard is offering on lower terms. Most other kinds of provisions are [illegible]

[illegible]

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 338, Strand, opposite Somerset House. Jones's Watches are simply more than half a minute per week. On receipt of a Post-office Order, payable to JOHN JONES, for £4 4s., one will be sent free. Jones's Sketch of Watchwork, free, for 3d

HAWLEYS, Watchmakers and Goldsmiths, 180, Oxford-street, and 284, High Holborn; from 75, Strand, Coventry-street.—Elegant Gold Watches, invented by the late, maintaining power, with all the late improvements, £3 10s.; Silver Watches, £2 5s.; Hawleys's equable in Action, £2 2s., a written warranty given with each Watch; solid fine Gold Chains, from 10s. each. Established upwards of half a century. The only genuine firm of the name in London.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, CORNHILL.—The beautiful metal continues to stand unrivalled amongst all the substitutes for silver. Its intrinsic excellence, combined with its elegant appearance, renders it a complete substitute. It is upwards of thirteen years since the manufacturer was introduced by Sarl and Son to the public; and, notwithstanding the many spurious and unprincipled imitations, the present demand evinces all former precedent has given a convincing proof of its having answered the end proposed, which was to produce an article possessing the durability and appearance of solid silver at a sixth its cost. The unaugmented stock has recently been enriched with many splendid novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at the present time. The spoon and fork department includes all the various patterns that are made of solid silver. A new and enlarged pamphlet of sketches and prices is just published, and will be ready for circulation in May. It may be obtained gratis by applying at the manufactories, SARL and SONS, 17 and 18, Cornhill, London.—The public are hereby cautioned that no article is genuine, except purchased at Sarl and Sons. No other persons are authorised to sell it.

PATENT LEVER WATCHES.—BENNETT, WATCH and CLOCK MAKER, 65, Cornhill (next to Bank), begs to direct attention to the PATENT DETACHABLE LEVER WATCHES of his own make, which are particularly adapted for Gentlemen's Pocket Watches, and to the perfecting of which construction they have been long and carefully directed. Also to his

PRIZE MEDAL MULTIPLYING SILVER CASES

Patent Lever Watch in double-backed, engine-turned case, the interior of which is jewelled in four holes, with the latest escapement jewelled, hard enamel dial, hand to mark the seconds, and safe-acting power to continue going while winding round £4 14 6

Ditto, jewelled in four holes, and capped 5 5 0

Ditto, the finest quality, with the improved regulator ... 6 6 0

Ditto, in silver cases, such as is usually mounted in gold cases 8 8 0

Either of the above watches can be had with extra jewelled holes, and adjusted to the various climates of India, China, or any part of the world ... ...

ANTIQUITIES DISCOVERED AT WOOLWICH.

A few days since, as some convicts were employed in digging a drain in the carriage department of the Royal Arsenal, at Woolwich, they turned up a considerable number of vessels and bones, among which were the three vases figured in the accompanying Illustration. In the largest of these vessels were remains of human bones; and in the other, ashes. Although of common material, the forms of these vases are remarkable, and denote them to be of Roman art. Unfortunately, they were much injured by the picks and spades used by the convicts in opening them with the expectation of finding money in them. They were of red brick ground, with an elegant raised pattern of darker hue, the relieved portion being comparatively entire.

ROMAN VASES FOUND AT WOOLWICH.

PRINCESS' THEATRE.—"MARCO SPADA."

We this week present an Illustration of the grand Ball-room scene in the Palazzo, on the occasion of the fête given by the *Prince Orsini*, the Governor of Rome, to which *Marco Spada* and his supposed daughter were invited. For variety of costume, and picturesque grouping, the situation exceeds the most brilliant of similar exhibitions even at this theatre since the management of Mr. Kean commenced. The number of persons engaged is very large, and the ballet accompaniments are highly exciting. The latter are under the direction of Mr. Oscar Byrne, to whose invention they bear favorable witness. It will be recollected that the brigand chief was in peril at this fête of being recognised by *Fra Borromeo*, a Franciscan monk; whom, however, he contrives to evade by continually preceding him while threading the labyrinthine mazes of the crowded chambers, until, meeting with the monk alone, he places his pistol at his forehead, and consigns him to the care of his bandit subordinates, disguised as servants. This busy, multitudinous, and gorgeous scene our artist has taken at one of its most salient points, being careful to include within his design the variety of detail combined in the general expression. The whole has a life-like and stirring effect, and is of the most costly character from the greatest to the least important of the accessories The management, in this expensive mode of getting up dramatic novelties, appears determined to distance competition. Altogether this is, perhaps, the most complete thing of the kind ever witnessed. The point selected for illustration is where *Borromeo* is handing round his basket, for the ostensible purpose of receiving the contribution of the guests, but, really, to detect amidst the throng the person of *Marco Spada*. The brigand chief turns from him, and communes apart with his daughter The characters are represented by Mr. Graham, Mr. Ryder, and Miss Heath. The anxiety of the monk to make the desirable discovery is well depicted. It was admirably acted by Mr. Graham, as the attitude in the above Illustration may serve to prove.

SCENE FROM THE NEW DRAMA OF "MARCO SPADA," AT THE PRINCESS' THEATRE.—BALL-ROOM IN THE PALAZZO OF THE PRINCE ORSINI.

THE ILLUSTRATED LONDON NEWS

No. 617.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, APRIL 16, 1853. [SIXPENCE.

THE PROPERTY AND INCOME-TAX.

ALL countries are, and probably ever will be, impatient of taxation. The late Lord Castlereagh declared such impatience to be entirely the result of ignorance. There was, possibly, some truth in the statesman's remark. If all countries possessed a well-educated and a well-governed people, and if no taxes were imposed upon them that were not strictly just and strictly necessary, the "ignorant impatience" would entirely disappear, and taxation would be cheerfully borne. But, until that happy time, which, we fear, is not coming, taxation will rank among the number of the inevitable ills that states and communities are liable to; and statesmen will impose the taxes on the tyrant's plea of necessity, and the people will pay them with the usual growls against the Government and the collector.

Of all taxes, a Property and Income-tax was formerly considered the most unpopular. It was held that nothing but a state of war could justify it, and that it ought strictly to be reserved for those occasions of national peril in which other sources of taxation might prove inadequate to provide for the national safety. But a new faith on this subject has gradually arisen; and it was left to the sagacious mind and fearless patriotism of the lamented Sir Robert Peel to employ a Property and Income-tax in a time of profound peace, and to make it subservient to the best interests of an industrious and thriving people. Under its beneficial operation, trade and commerce have expanded; the burdens that weighed unduly upon the producing classes have been alleviated or removed; and the national resources have been developed in a thousand ways that the most sanguine of statesmen and philosophers could scarcely have anticipated.

So firmly has the Property and Income-tax become rooted in our financial system that no one dreams of removing it. And yet the tax is by no means popular. Loud complaints are raised against it on every hand. By some it is condemned as inquisitorial; by others it is denounced as grossly partial; while among the earners of precarious and fluctuating income—as distinguished from permanent and realised property—there seems to be no epithet harsh enough to stigmatise its injustice. As it is the evident policy of the Government, no less than the interest of the people, that this paramount and essential tax, before it be finally fastened upon us, should be rendered as just and fair as it is possible for a tax to be, it may be well to inquire into the truth or untruth of the charges that are incessantly brought against it by some who pay and by many who evade it; and to point out the remedy for any real grievance or injustice that may be proved to exist in it.

And first of all of its inquisitorial nature. This is no doubt a nuisance. No man in business likes to expose his books, papers, and vouchers, to the prying and insolent curiosity of a fellow-parishioner who may happen, perchance, to be his rival in trade. No man likes to be trebly surcharged by pert malevolence, and to undergo the labour of months to prove that the surcharge is wrong. But we fear these evils are inherent in the tax, and do not lie at the door of the Government, but at that of the paid and unpaid functionaries without whose assistance its collection would be impossible. The Property and Income-tax shares the evil with the assessed and other taxes, in the levying of which lynx-eyed collectors pry into the marks on our spoons or our hall chairs, or listen in our corridors for the barking of our dogs. But these things cannot be helped. There is not a tax that is levied that is not in some stage of its existence an inquisitorial one; and, upon the principle of enduring that which we cannot cure, we must make up our minds to the occasional impertinences of commissioners and collectors, and foil their arts by our own simplicity and uprightness.

The second objection to the tax is far more reasonable. We are convinced, indeed, that the objection is so strong and so just, that sooner or later the Government will be compelled to remove it. It was, or it appeared necessary that Sir Robert Peel, when, to meet a temporary emergency, he first imposed the tax, should gain the support of the lower stratum of the middle classes, and of all people of limited incomes. To effect this object he arbitrarily and unreasonably exempted from the operation of the tax all persons whose incomes fell short of £150 per annum. By this injustice he failed to attain the object for which he strove. He aroused on every side a sense of wrong. The man deriving a permanent income of £149 per annum from the Three per Cents, possibly a bachelor, with none but himself to feed and clothe, contributed not one farthing upon his property; while a poor clerk in a merchant's office, or in a banking-house—married, perhaps, with half a dozen children to maintain and educate—receiving £150 per annum, and dependent for that upon health, strength, capacity, caprice, and a thousand other minor circumstances, was mulcted of ninety shillings per annum. This affronted the common sense as well as the common

RAILWAYS IN INDIA.—EMBANKMENT FOR THE CALCUTTA RAILWAY, BUILDING UP TO A HEIGHT OF [illegible].—(SEE NEXT PAGE.

justice of the nation, and from that day to this has never ceased to afford valid arguments to the opponents of the tax. And it is not only because it offends the sense of right that this exemption is financially unwise. It allows a large source of available revenue to escape, and impoverishes the Treasury without the shadow of a justification. If the new Chancellor of the Exchequer shall extend the operation of the tax to all realised property whatsoever, he will inflict no injustice, and make no enemies; but very considerably increase the national resources. The extension of the Income-tax to fluctuating incomes of a less amount than £150 per annum, is simply a question of the cost of collection. In strict justice, all property and all income should be equally liable. But, if it be not worth the while of the Government to gather its per centages upon the weekly wages of clerks and workmen, it can draw the line at the point where collection ceases to be profitable.

The third and last objection to the Property and Income-tax is the most formidable, and enlists upon its side all the sympathies of the people. "Is it not monstrous," exclaim all those who gain their daily bread by the hard labour of their hands, or the still more severe and protracted labour of their intellect; "is it not monstrous," exclaim all professional men whose incomes depend upon health, strength, sanity, the changes of fashion, and the caprice of the public—to say nothing of life itself—"that we should pay three per cent upon our precarious earnings, which are here to-day and may be lost to-morrow; and that the man who has a realised property in land, in houses, or in the funds; in canals, in docks, in railways, or in water companies; and which is not dependent upon his health or his life, or upon the caprices of fashion, should pay no more?" A loud chorus of accountants and actuaries join the cry, and array in favour of the objection so formidable an amount of apparently unimpeachable figures, that plain men are bamboozled, and leave them and their figures in possession of the field. The actuaries build a beautiful superstructure upon a false foundation. They forget that the tax is not a prospective but a retrospective one, and that the Government does not seek to know, and has no right to know, what a man's professional income may be worth on the chances of a certain number of years during which he may live to earn it, but what amount of professional income he earned in the year immediately preceding that in which it asks him to pay his contribution to the necessities of the State. If he earned £1000 that year he must pay upon £1000, and those £1000 are as fair and equitable a subject of taxation as the £1000 that any non-professional man may have derived during the same period from his landed estates or from his investments in the funds. "True," says the professional man, "but my income has diminished, while that of the landed proprietor and fundholder has remained the same." The reply to this is, that if the income have diminished, the liability to the tax has diminished also, and that if this year he have earned but £500, he will have to pay but upon £500. Government cannot capitalize professional incomes, neither can it make any distinction for the purposes of taxation between the origin and sources of incomes. To do so would be to introduce confusion and injustice into our whole financial system, and to confiscate realised property for the supposed benefit of those who live by their daily or weekly earnings. If it were conceded that precarious income, because it is precarious income, should pay a less per-centage than fixed income in one particular tax that the state demands, it would be necessary to carry out the principle to every other item of taxation. The professional man ought, according to this mode of reasoning, to pay a lesser amount of House-tax, a lesser amount of every other assessed tax, a lesser amount of indirect taxation—less for his tea, less for his malt, less for his sugar, less for his wine, and less for his tobacco. To such absurd lengths are clear-headed actuaries carried when they reason on false premises, and build their palaces of figures like castles in the clouds.

The only solid objection to the Property and Income-tax is its limitation to incomes of £150 per annum. We trust Mr. Gladstone will have the courage, not only to remedy this defect, but to refuse to yield obedience to the popular clamour which seeks to establish a classification of incomes to pay less than their due share of the common burden.

RAILWAYS IN INDIA.—THE CALCUTTA RAILWAY.

THIS undertaking is but a portion of the vast enterprise which, it is asserted, but for Government interference, would have covered India with rails from Lahore to Cape Cormorin, and from Bombay to Calcutta.

The View engraved upon the preceding page, however, shows the early works of one of the most important lines, from a sketch by G. K. Ingelow, Esq.

It is taken on the embankment for the rails behind the town of Serampore, about fifteen miles from its commencement at Howrah (opposite Calcutta). Here is nothing but a cutting through the jungles, &c., and a raised embankment of from five to ten feet. The whole country is a dead level until the Rajmahs hills are approached. On the top of this embankment of earth, the engineers place about a foot of kunka (broken lumps of burnt clay), and on this the sleepers. This section of the embankment, at the date of the Sketch, had been laid down several months; and it was to be allowed to remain in its present state until after the next rains, in order that its stability might be tested by its power of resisting the tremendous torrents of water which often inundate the plains of Bengal. Further sections have since been rapidly completed by the contractors.

The scene, with its luxuriant vegetation, is very picturesque. The large tree in the right hand foreground is a banyan, only one of the curious supports which this tree sends being here seen; beneath its branches is the tomb of a saint. On the other side are two of the grub trees; and beyond is a cocoa-nut tree, with the long feather-like leaves. The small boy in the foreground and the man in the distance are making twine; women are passing along the embankments with water-pots on their heads

In a late number of *Lawson's Merchant's Magazine* we find the following interesting illustrations of the advantages of the application of the new power to this portion of our Indian possessions

We will take for instance the Bengal presidency, with the river conveyance. Delays take place from want of water, floods, rains, and monsoons. Take the case of the coal of Burdwan. The owners are unable to bring the coal down a direct distance of *only seventy-five miles* in less than two seasons, by the circuitous route of the river Damoodu. The boats come from Ooptu to the mines, only in July, August, and September, and the numeral remains the whole year until those months. Here nine months' interest may be lost. And in the case of the whole river traffic from Calcutta to the country. The only passable channel for boats drawing five feet of water during nine months of the year—the smaller channels being closed—is by a circuitous route of 528 miles instead of 200, through a perilous labyrinth of creeks, and wood-encumbered reaches, forming the wilderness called the Sunderbund. Thirty days are sometimes required for the passage from Calcutta to Rajmahl. Between Calcutta and Mirzapore, the passage is only by water, and seventy days by land. Further on we find the steamers sometimes occupy thirty-six days going from Calcutta to Allahabad, although the voyage is occasionally performed in eighteen days.

Now, in summer, the time of the river journey from Allahabad to Calcutta is about a week; in winter, a fortnight. If carried by rail at *twelve* miles an hour, the goods could be delivered *with certainty* in forty-eight hours. We have here a marvellous improvement in transit, which could be secured at a moderate outlay, the incidental advantages of which cannot be over estimated. And amongst the chief of these advantages is the capacity of bringing into the market the raw cotton of the interior, clean and undamaged.

THE BOOMERANG PROPELLER.—A trial of this invention was made by a steamship in the Mersey last week, when, notwithstanding many adverse circumstances, the average speed obtained in slack water was from 9 knots to 9¼ knots, under a pressure of steam of from 6 lbs. to 9 lbs.; a speed which several scientific gentlemen on board asserted was one knot faster than could have been made by the common screw under the same pressure of steam. Messrs. M'Kean and M'Clarty are having one of their Mersey-built steam-ships prepared for the trial of the new propeller, in "all its integrity."

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Paris presents at this moment a curious spectacle. A stranger arriving in it would certainly be tempted to imagine that all the landlords had joined together to issue circulars "notices to quit" to all the tenants: and, where they proved insensible to the hint, gave a broader one, by pulling down the houses about their ears. In every street, lane, and alley are you intercepted by horse-carts and hand-carts, trucks and barrows, porters and *commissionaires*, bearing furniture, trunks, goods, and chattels of every sort, kind, and description; while masons and carpenters hardly wait till they are fairly ousted to knock down the buildings which contained them. In the April term there is always—more than at any other—a movement of this sort; but this year it has been increased ten-fold by two circumstances—the immense rise in rents, and the number of houses, and indeed whole streets, demolished by Government and by private proprietors. The former cause, if it be a sign of general prosperity (which in the present state of affairs we beg leave to doubt), is unquestionably a source of individual distress, and bitter are the complaints arising therefrom. Labour is not sufficiently abundant, sufficiently constant, nor sufficiently remunerated, to meet the increase of prices of lodging, food—every article, in short, of daily consumption. Among the poorer classes, thousands who contrived to earn just sufficient to support themselves and their families, now no longer find the fruits of their labour enough to accomplish the point; small *rentiers*—people who possessed little annuities—can no longer live on them; while among the *bourgeoisie*, a struggle to keep up appearances, to meet the passion for show and expense that since the establishment of the Empire has gradually increased to its utmost limits, goes on to an extent that would be ridiculous, were it not for the lamentable consequences that must of necessity ensue. To nothing does this remark apply so strongly as to dress. What say you, English husband and father, who grumble at the "little bills" of your wife's and daughter's dressmaker and milliner, when we tell you that the French husband and father, possessed of a property or employment that brings him in a yearly revenue of from £900 to £600, is told by Madame that she cannot possibly appear herself, nor take her daughters into society, without bedecking her own person in gowns of velvet, satin, gold and silver blonde, silks, *lamées d'or et d'argent*, with head-dresses to match; and her daughters in dresses, perhaps of comparatively simple materials, but so covered with trimmings that the making costs four times the price of the stuff, which is so light that it never survives a second, sometimes not a first, ball: it is computed that the dress of a woman of moderate fortune, who goes much into society, costs her on an average £20 a night. Add to this her visiting toilet, of brocade gowns, velvet cloaks, cachmere shawls, and bonnets with feathers and flowers—and then, oh, John Bull, bless your stars and your helpmate, that she does not ask you to convert your bank-notes into gauze and lace, and your sovereigns into spangles and tinsel for her embellishment. Ye English matrons, too—ye also have no less cause for thankfulness that your sex-mates have to take you into all society dressed in the homely, quiet fashion that sets well on the noblest form, and draws no ridicule on the meanest, instead of spending his money on a costume in which, in nine cases out of ten, the wearer looks and feels abashed, awkward, and absurd.

The Emperor's indisposition continues. It was caused, it appears, by an imprudence during the bitter cold winds which reigned a short time since. Having over-heated himself by rowing on the river, near St. Cloud, he remained seated inactive in the boat till thoroughly chilled; the consequence was, a violent derangement of the digestive organs, followed by great fatigue and lassitude, which still continue to affect him.

The return of M. St. Arnaud is shortly expected. His health, though much improved, is not yet restored; and he is, on his arrival, to place himself in the hands of Dr. Cabarrus, "le roi de l'homœopathie," and who is the cousin and physician of the Empress.

The condemnation, for cowardice, of Colonel De Sercey, a most brave and distinguished officer, has excited a great sensation here. He was, it appears, about to marry Mdlle. Murat, thus becoming a family connection of the Emperor, and to be named General, when the discovery of the disgraceful conduct of which he took place. M. De Sercey was known some years since, during a short stay in London, as a constant frequenter of Crockford's, where he played so high and with such little success, that some of the chief of one of the members of the club enabled him to avoid the most unpleasant consequences, and return in safety to France.

The Pope has ended the politico-theological discussions of the French clergy by declaring in favour of the Veuillot and the *Univers*, and, consequently, against the Archbishop of Paris and his supporters. The matter is thus publicly decided, but not so the feelings to which the difference has given rise.

At the Gaîté, "Marie Rose;" and at the Ambigu Comique—*ainsi nommé* because it always represents scenes of the most moving and *larmoyante* description—the "Château des Tilleuls" are the chief theatrical attractions of the moment. *Marie Rose* is the wife of a mercier at Marseilles: he adores her; but his education takes the unfortunate turn of intense jealousy, which one day finds food—with every appearance of reason, we must admit—in discovering in her hands a love-letter, most unmistakably addressed "à Marie Rose," a scene ensues, of which the result is that the heroine loses her reason. A child is born, whom *Ambroise*, the *Othello*, refuses to own, and she is sent away to be brought up by her grandmother. Arriving at the age of fourteen or fifteen, she learns a part of her mother's tragic history, and, being personally unknown to her father, contrives to obtain the place of servant to guard and tend *Marie Rose*, who, thanks to her tender and soothing care, recovers a gleam of reason. On the return of *M. de Simiane* (whose son has been the playfellow of *Mignonne*, the dutiful daughter), from India, all is explained; it was he who wrote the fatal letter to the godmother of the heroine, the whose hands it fell by accident: he is restored to her senses, and beholds the union of *Mignonne* with the young *Chevalier de Simiane*. In the "Château des Tilleuls" it is the hero who is mad; he, like *Marie Rose*, goes through a variety of trying accidents, more complicated and melodramatic, however, than hers; and, like her, recovers his senses in time to relieve the anxiety of the audience on his account, and to bid them a sane and satisfactory adieu.

The Emperor and Empress of France have not quitted the Tuileries for some days, owing to the indisposition of his Imperial Majesty. The Emperor has abandoned, for the present, his intended journey into Brittany.

The Government has caused a circular to be forwarded to the prefects, giving stringent orders regulating the future residences of political refugees

The will of Napoleon I. has been brought from London to Paris by M. Charles Baudin, Secretary of the French Legation in London. The Emperor has decreed that this will should be deposited in the national archives. The Emperor has on this occasion addressed a letter of thanks to Lord Clarendon; and a gold snuff-box, with the Imperial initials in diamonds, has been sent to Mr. Dyke, the Queen's Proctor.

The fear of a Republican plot has extended to Paris—probably without any real foundation. Political arrests are made several times in the week. Eighteen persons were arrested at Montmartre. Twenty-six officers and non-commissioned officers of the army of Paris have been arrested. The arrests, it is said, caused by the seizure of some correspondence with the refugees of London, and by the distribution of printed papers emanating from them. The total number of arrests is about sixty.

The news of a Ministerial crisis in Madrid has excited much interest in Paris. General Narvaez, who, notwithstanding his recent protests of illness, was well enough to appear at the ball of the Tuileries on Thursday night, is delighted with the danger that he makes his adversaries; and, should any events require his presence at Madrid, he places himself in power again, the sooner all of them, high and low, get out of his way the better. But, whether the present Cabinet stand or fall, the crisis is not the less serious.

The case of the foreign correspondents came on on Tuesday before the Sixth Chamber of the Correctional Police Court. MM. de Coetlogon, Virmaitre, and de Planhol repudiated very strongly the charge against them of belonging to a secret society. The Duke de Rovigo denied having any act, hand, or part in the libellous verses circulated on the occasion of the Emperor's marriage, and with reference to the Empress has declared that he was incapable of outraging a woman. M. Vallée did not appear on the prisoners' bench, as he had succeeded in effecting his escape from France. A considerable number of letters that had passed between MM. de Coetlogon, Virmaitre, and the refugees in Belgium, were read, and it appears that those letters were of the most insulting kind to the Emperor and the Empress. Extracts were also read from the correspondence of the *Nation* and the *Observateur*, both of which papers are published in Brussels, and with which it is alleged MM. de Coetlogon and Virmaitre are connected. M. Dupré de Lasalle addressed the Court for the prosecution. With reference to the Duke de Rovigo, he praised the sentiments that gentleman expressed about his being incapable of insulting or outraging a woman. The proceedings were carried on with closed doors, in consequence of the improper nature of the verses and other documents composed against the Empress. Few besides the counsel on both sides were admitted; and even M. Berryer, the *batonnier* of the Order of Advocates, was refused admission. The trial was resumed on Wednesday, when the name of the Count de Chambord was more than once mentioned during the proceedings. Letters from the Duke de Levis to M. de Coetlogon were read, one of which announced the transmission of 12,000f. to carry on the *Corsaire*, the well-known satirical paper—the *Charivari*, in fact, of the Legitimist party. The *Corsaire* has been for some time suppressed by the Minister of Police.

One of the confidential agents of the Count de Chambord, and an ex-representative of the people, has just returned to Paris from a visit to the Prince at Venice. His report is favourable as regards the health of the Count and Countess. Nothing new is said respecting the fusion, except that we are still assured that the Princes of the Orleans family "appear to be well disposed." The blame is still laid on the Duchess of Orleans, who refuses to have anything to do with the fusionist movement. The Duchess prefers waiting till the Count de Paris has attained his majority, that he may decide in the matter himself

An encyclical letter has arrived from the Pope to the Archbishops and Bishops of France, which gives a perfect victory to the Ultramontane press of France. The Archbishop of Paris, a Gallican divine of the school of Bossuet, had been so alarmed at the increasing audacity with which extreme Ultramontane doctrines were advocated by the *Univers*, that he prohibited all the clergy in his diocese from reading that journal, under pain of suspension. M. Louis Veuillot, the editor, appealed in person to the Pope; and his Holiness has unequivocally decided against Archbishop Sibour, who immediately hastened to withdraw his interdict against the *Univers*. In this letter, the Archbishops and Bishops are urgently entreated

To extend all your benevolence and all your favour to the men who, animated with the Catholic spirit, and versed in letters and sciences, devote their days to write and publish books and journals for the diffusion and defence of Catholic doctrines, and for the dispersion of opinions and sentiments adverse to the Holy See and its authority. Your charity and your episcopal solicitude should then excite the ardour of Catholic writers animated with a good spirit, so that they may continue to defend the cause of Catholic refusal, which is in itself not very flattering to a ruler whose army is at this moment in possession of the Papal dominions, by a manifesto such as no previous Government of France has endured, and which asserts in the most absolute terms the entire dependence of the Church in France on the unlimited authority of Rome.

The Bourse recovered in some measure on Wednesday from the depression of the previous day. The suspension of the stings of the Spanish Cortes was not regarded as an alarming fact appeared on its first announcement. The Three per Cents opened at 69f. 50c., rose to 69f. 80c., and closed at 69f. 50c. for the end of the month. The Four-and-a-Half per Cents closed at 103f 25c.

GERMANY

House-searchings have not entirely ceased in Berlin in connection with the lately discovered conspiracy; and, not only in Elbing and Breslau (nearly the two extremes of the kingdom), have they been presented with success, but also in Bremen, Hanover, and Brunswick. Dr. Ladendorf, one of the parties chiefly mentioned, has been apprehended near Frankfort-on-the-Oder, whither he had escaped from Berlin. One of the worst features in these late detections is, that three guns in the Spandau garrison were amongst the apprehended charged with having manufactured the ammunition for the culprits; and in Hanover, where searching proceedings were instituted by the military authorities, a foot soldier was found guilty of distributing political tracts among his comrades, a seditious pamphlet published in Brussels. In Frankfort the military have been for some time past under arms at their barracks every evening, and both the military and police forces are on the alert. There have been numerous arrests at Munich. A crowd of young men were seized by the *gendarmerie*, and carried off to the bureau of police, where they were speedily set at liberty without their hats, which were of the Calabrian figure. The watch of the city was doubled. The stretch of power by the Berlin police, in arbitrarily abolishing the great sick club without judicial process, was very ill received in the Prussian capital.

The *Urwähler Zeitung*, the organ of the extreme Radical party of Berlin, was brought to an untimely end by the arrest of its editor, Holdheim, in the course of last week, and the latter has been condemned to two months' imprisonment for bringing the Constitution into contempt by an article published by him in February last. To supply the place of the *Urwähler Zeitung*, a new paper on the same principles, called the *Volks Zeitung*, was launched on Saturday, but its course was arrested at the printer's door, where the whole impression of 12,000 was seized, and the editor arrested.

The Second Prussian Chamber has passed the last reading of the Peerage Bill. The members will henceforth be all nominated by the King.

A letter from Vienna, says:—"The Emperor is to leave in a few days for Trieste and Venice. His Majesty will also visit Verona, where there will be a concentration of troops. Thence he will proceed to Ischl, where he intends residing some time. The Archduchess Sophia, and part of the Court will also proceed to Ischl in the month of June. The King and Queen of Prussia and the Queen of Saxony are also expected there about the same time.

ITALY

A letter from Rome states that the nominal capital of the loan contracted for by the Papal Government with Messrs. Rothschild is eight millions of scudi at 4 per cent interest, and the price of 70.

Arrests continue to be made in Milan. The rumours of Radetzky's recall, and the adoption of a more lenient rule are unfounded.

The hostility of the Austrian authorities towards the English travelling in Italy has produced the results which were to be expected. Formerly Venice teemed with our countrymen, but during the winter hardly any have been seen there

SPAIN.

The Cortes have been dissolved, and the Ministry have given in their resignations. The Senate assembled on the 7th, and resumed the discussion relative to railways. Several senators spoke at some length, and with much warmth. M. Pidal made a sharp attack on the Ministry for its conduct in the elections; and his speech, contrasting with his ordinary moderation, produced great sensation. The Marquis del Duero considered the Government for its proceedings relative to the press. On the 8th, at the end of the suspension of the sittings of the Cortes, and the senators and deputies hastened to their respective Chambers, to learn what the Government would do. At the sitting of the Chamber of Deputies, the President of the Council read a Royal decree, by which the sittings of the Cortes were suspended for the session. The document was listened to in profound silence, and the deputies immediately retired. In the evening, the Ministers presented their resignation. The Queen declared that she would come to a decision on the subject in twenty-four hours

A telegraphic despatch from Madrid of the 12th announces the important fact of General Lersundi, the Captain-General of Madrid, having been commissioned to form a new Cabinet The Cortes had resumed their meetings.

GREECE.

We hear from Athens that General Macryanni has been found guilty by a military court of conspiring against the lives of the King and Queen. Upon hearing the sentence the General entreated that he might be speedily executed. The judges, however, have earnestly recommended him to the Royal clemency

RUSSIA.

According to advices of the 28th of March, from Odessa, warlike preparations against Turkey are carried on with great zeal. The preparations were hardly on such a grand scale in 1812; they extend even to Great Russia, and eight steamers are employed on the Wolga in conveying troops to Kertsch. Even old soldiers, who have served 20 and 25 years, are again called under arms.

On the 26th ult. the great theatre at Moscow was burned to the

ground. The news of the fire was at once telegraphed to St. Petersburg, and the Czar's reply was, "Do not expose life to danger; save the surrounding houses."

TURKEY.

Accounts from Constantinople state that the arrival of Lord Stratford de Redcliffe was anxiously expected by the Turkish Ulemas.

Great mystery continued to hang over the mission of Prince Menschikoff. Russian gold was expended in profusion, and the Prince having brought with him a sum of 300,000 half-imperials (about 30,000,000 piastres). While some think he wishes to negotiate a secret treaty with Turkey, like that of Unkiar Skelessi, others aver that Prince Menschikoff is instructed solely to treat on the question of the Holy Places. RUSSIA pretends that the last firmans, according to the Latins, contain certain enactments contrary to the interest of the Greek Christians, regulated by treaties which Turkey some time ago entered into with her. She, consequently, demands that these concessions shall be examined and discussed, and become the subject of a new negotiation. The Porte is said to have endeavoured to get out of the affair by saying that what took place with regard to the Holy Places was a favour granted to her, and by demanding of Russia and France to come to an understanding between themselves on the subject. But those Powers separately replied that the question did not rest between them, and that it was only with the Porte that they would or could treat. The Porte, thereupon resolved to carry on the negotiations very slowly, in order to afford time to the Ambassadors of England and France, and even to the Ambassador of Austria, to arrive at Constantinople.

LATEST FROM CONSTANTINOPLE.

An important telegraphic despatch, dated Constantinople, April 2, states that Prince Menschikoff had made the following demands on behalf of the Russian Government:—

1. Respecting the Holy Places, he requires the repeal of the concessions in favour of the Roman Catholics made in M. Lavalette's time, unless they be modified in expressions in such a manner that nothing should be decided without Russia.

2. The conclusion of an offensive and defensive treaty, according the right to Russia to enter the Dardanelles for the defence of her ally.

3. The abandonment of certain tracts of territory in Georgia

4. The suzerainity of Montenegro, whose independence would be recognised by the Porte

5. The independence of the Oriental Chri-tians in all matters relating to their creed.

6 The eventual military occupation of the Danubian provinces for the purpose of repressing the revolutionary spirit.

An amicable arrangement of the difficulties was hoped for, although Russia still continued her warlike preparations at Odessa and Sebastopol. No decision was anticipated before the arrival of the English and French Ambassadors

PERSIA.

A grave misunderstanding has arisen between the Persian Court and the British Legation, relative to Herat, and a rupture was feared. Colonel Shell, who was about to quit Teheran in a few days, on leave of absence, expected to take with him all the personnel of his legation. The cholera was advancing towards Teheran: it had reached Resht and Caslin, and had made ravages in those places.

AMERICA

By the steam-ship *Baltic* we have advices from New York to the 2nd inst. Mrs. Fillmore, the wife of the ex-President, died at Washington, on the 30th ult. Mrs. Cass, wife of General Cass, had also expired.

Father Gavazzi is creating an *furore* in the States as he did in England. His first appearance there was quite successful, and up to the sailing of the steamer he had not only kept his position but advanced in popularity. His lectures are crowded, and enthusiastically received.

The strike among the working-classes for an advance of wages was spreading, and New York and other cities had been included in the list.

We have no news of importance from Washington, the President being still busied with the nominations. A report was current at Washington that the expedition to Japan would be abandoned, General Pierce deeming it useless and inexpedient, for the reason that it is not sufficiently strong to compel the Japanese to open their ports, and that the force of arguments or of persuasion would be wholly ineffectual. The exploration of Behring's Straits will be postponed.

The Crystal Palace, intended for the World's Fair, in New York, is progressing, but not so fast as could be wished. It will hardly be ready by the time announced for its opening, namely, May 1. The Queen and Prince Albert, the Emperor of the French, the Pope, and the Sultan intend to contribute. Thus far we have England down for 242 objects, France 226, the Zollverein 160, Belgium 142. Italy and Russia are slow.

The steamer *Georgia* had arrived at New York with 1,832,530 dollars in gold-dust on freight. The accounts from the mines are most cheering. A lump of gold weighing 247 ounces had been picked up at Yankee Hill, near Sonora, valued at about 4250 dollars. It is said that three Mexicans had taken out upwards of 30,000 dollars in four days from a new claim near Churtsville. Two parties sunk a hole on a claim near Campo Seco, and in five days they took out 5700 dollars worth of gold dust. Gold-dust continued to be raised in Placerville in unprecedented quantities, and the weekly average purchased by the regular dealers and brought there, is reckoned at upwards of 70,000 ounces. Some beautiful specimens of rubies and emeralds have lately been found in California, and also a magnificent diamond of the first water.

We hear from South America that Buenos Ayres was still closely besieged by Urquiza.

THE OVERLAND MAIL.

The steamer *Adria* has arrived at Trieste, and, by submarine telegraph, the following intelligence is received:—"There was no further intelligence from Burmah. The Governor-General had returned to Calcutta. Lord Falkland had dismissed two of the Sudder judges. The weather at Calcutta was warm, and trade dull. Advices had been received from China down to the 25th of February. The rebellion was growing more and more formidable, and a complete panic prevailed at Pekin."

NEW YORK EXHIBITION.—The Earl of Ellesmere is to be her Majesty's Commissioner to attend the Great Exhibition at New York The appointment of a Royal Commissioner is a graceful act of courtesy towards the States; and the act will lose nothing in the hands of Lord Ellesmere (formerly Lord Leveson Gower), who unites, with great wealth and distinguished birth, popular manners, and the species of talent most serviceable in such a mission.

THE ROMAN CATHOLIC CHURCH IN FRANCE.—The clergy of the Roman Catholic Church in France is thus composed in the eighty sees which form the circumscription of it: 16 archbishops, 68 bishops, 175 vicars-general, 661 canons, 3388 curés, 29,537 *desservans* of succursals, 6 chaplains for the three cemeteries of Paris, and 7190 vicars in the small communes. The *personnel* of the Protestant worship are 758 in number, 507 of whom are for the Reformed Church, and 249 for the Lutheran worship. In the Jewish Church there are 52 rabbis, and 61 officiating ministers. The church in Algeria is not included in this account.

TABTES DIFFER.—At Dresden, a member of the fair sex, one Louise Otto, of Meissen, notorious for her democratic exivavagance, has indited with the intention of publishing, a letter expressive of profound sympathy and admiration of Libeul, the regicide. A worthy in the Tyrol, on the other hand, has resolved to perform a pilgrimage to Jerusalem, in order to offer up thanksgivings for the Emperor's providential escape from the knife of his assassin.

NEW CARRIAGE FOR THE PACHA OF EGYPT.—During the week the bazaar of Mr. Jones's, Southampton, has been crowded with the nobility and gentry, for the purpose of viewing a magnificent carriage, made for the ruler of Egypt. The first impression conveyed to the eye is that of magnitude, combined with lightness and elegance. The body and carriage are of the great length of 16 feet, and the axle is 6 feet wide. As a whole the carriage is really a work of the highest mechanical art, enabelished with the richest materials and with the most perfect taste, and will do honour to the reputation of the town for its simple manufacture, as well as to the honour of the party by whom it has been designed and executed. Mr. Jones deserves the greatest praise for this unequalled vehicle, which will, no doubt, highly gratify the Pacha, as it has done the nobility and gentry of Great Britain.

THE CASE OF MR. CRAUFURD.—We understand that an ample apology has been sent by the Tuscan authorities, through the Foreign Office, to Mr. Craufurd, the English gentleman who was compelled to leave the dominions of the Grand Duke. The objection to Mr. Craufurd's return to Tuscany has at the same time been withdrawn.—*Daily News.*

YANKEE LEVIATHANS.—An American paper states that an immense iron steam-ship is to be immediately built at New York. The saloon is to be 200 feet in length, with accommodation for 3000 passengers. There are to be 16 engines, with an aggregate power of 3000 horses. The maximum speed centen plated is 20 miles per hour, and it is calculated that the passage from New York to Liverpool will be performed in five days.—And so a match for this giant steamer, another paper announces, that the activity of the shipping trade stimulates constant experiments and improvements; and a new sailing vessel is in course of construction at Boston of 4000 tons burden, to be called the *King of the Clipper.*

MUSIC.

NEW PHILHARMONIC SOCIETY.

The programme of the second concert, given in Exeter-hall on Wednesday night, in the presence of an immense auditory, contained some highly attractive items. The first production in this country of Cherubini's "Requiem," which on the Continent enjoys a reputation in no way inferior to the famed work of Mozart, would alone have stamped this concert as one highly honourable to the judgment and taste of the directors; but we had, in addition, Beethoven's Symphony in A, and his passionate Pianoforte Concerto in E flat—one eternal love-song from the first bar to the last; besides overtures in very opposite modes—Lindpaintner's "Faust," and Rossini's "Siege of Corinth." The vocal portion of the scheme was confined to the scena from Mendelssohn's "Lorely," and to the scena from Barnett's "Fair Rosamond"—both sung by Miss Louisa Pyne—the latter with considerable effect; the former being beyond her dramatic powers, and requiring a Viardot, a Cruvelli, or a Fiorentini, adequately to convey the composer's intentions. It was a graceful compliment to the gifted composer of the "Mounta n Sylph" and "Farinel:" to present one of his vocal compositions. The scena from "Fair Rosamond" was cordially well conceived, particularly in the accompanied recitative, the orchestration of which is admirable.

The *tutti* in the concerto and the symphony afforded the amateurs the occasion to appreciate the precision and accuracy with which Lindpaintner, the conductor, wields the baton; but, as a colourist, he is singularly deficient; and something more is expected than the regularity of the clock-like metronome in the conduct of a large work. Lindpaintner is cold and passionless, and failed to inspire his forces with the sentiment and animation of the composer's conceptions, masterly as was the mechanism in its unity. M. Billet, the pianist, comes as a player under the same category as Lindpaintner as a conductor. His reading of the concerto was correct; the manipulation was excellent; there was no lack of delicacy; and, altogether, it was a very able bit of pianoforte playing; but still, it lacked the grandeur, breadth, and fervency of an executant of kindred genius with the composer. The allegretto in A minor of the symphony was encored. Lindpaintner's own overture—very Weberian and Spohrish, and very patchy, incoherent, and fragmentary—was wonderfully played by the band, who took the movements with an irresistible impetuosity which carried the hall by storm in point of enthusiasm.

The "Requiem" of Cherubini calls for an essay, and not for a passing notice: the space at our disposal is most inadequate to do justice to one of the grandest conceptions of any musician. Its gravity, its solemnity, its loftiness, its dignity, and its pathos, are unsurpassed: it makes the hearer think as well as feel. Like the "Requiem" of Mozart, Cherubini's work was heard under the greatest disadvantage of the religious service, but the auditory seemed not the less imbued with the affecting and sublime strains, in which are centred all the greatest resources of art, with a devotional imagination of the highest order. For a first reading the execution was creditabl, but it is a long way off the right interpretation as yet. The name of Cherubini is scarcely yet known to this country. Independently of the genius manifested in his Requiem mnde, he has written symphonies, overtures, and chamber compositions of infinite interest and importance, and there are some of his lyric productions, we have been pointed out on other occasions, well worthy of being mounted at the Royal Italian Opera.

NOTES OF THE WEEK

Under the title of the Orchestral Union, a band of very able players including Mr. Mellon as conductor, Mr. Cooper as leader, Messrs. and T. Harper, Dando, Hatton, Hill, Howell, H. S. Pratten, Nicholson, W. E. Reed, Trust, Webb, Winterbottom, Severini, Mayeed, Horton, Wilson, &c.—commenced, at the Hanover-square Rooms, on Saturday last, a series of three morning concerts, for the performance of the great instrumental works of the best masters. Mozart's Symphony in G minor, Mendelssohn's "Son and Stranger" overture, W. S. Bennett's overture to the "Naiades," and Auber's "Domino Noir" overture, besides spohr's violin concerto No. 11, played by Mr. Cooper, were included in the programme, which was relieved by the singing of Mr. and Mrs. Weiss. This undertaking, begun with modest proportions, for its accordance, bids fair to take, in time, a prominent position amongst our musical institutions, if the instrumentalists act with harmony and judgment.

Herr Jansa's fourth soirée took place on Monday, at the Queen Anne-street Rooms; aided by Herren Hausen, Goffin, the German Vocal Quartet Union; Mr. W. F. Reed (violoncello), Miss Bigg (pianist).

Mr. George Case had a monster concert at Exeter-hall, last Monday. The solo instrumentalists were Mdlle. Coulon, Miss Ellen Day, Mrs. Sims, M. Billet, Herr Ganz, and Mr. Lindsay Sloper (pianists); Mr. Pratten (flute), Mr. Sainton (violin), Mr. F. Chatterton (harp), Bottesini and Howell (double bass), Mr. Lazarus (clarionet), Mr. Jarrett (horn), Mr. T. Harper (trumpet), Mr. G. Case (concertina), and the Messrs. Distin (saxhorns). There was a band of about fifty players. The vocalists were Mdlle. Louisa Pyne, Madame Nedden, Mdlle. Anna Zerr, Mdlle Parodi, Miss Louisa Jewes; Miss C. Nori, Rameau, Poole, Rose Braham, Messent, Ls. Stuart, Lascelles, Mac Alpine, Brougham, Madame Doria; Messrs Sims Reeves, G. Tedder, Perren, T. Williams, C. Cotton, Genge, Young, Drayton, F. Smith, Bodger, and F. Bodda.

The Western Madrigal Society—which, thanks to the tact and zeal of the president, J. Evans, Esq., is in a prosperous condition—celebrated its anniversary festival in Freemasons' Hall, on the 6th inst., at which there was an excellent selection from the works of the ancient masters, and several encores took place. The attendance both of professors and amateurs, besides the ladies in the gallery, was large.

The Quartet Association held its first meeting at Willis's Rooms on Thursday afternoon, in the presence of a numerous and fashionable assemblage of connoisseurs. Sainton, Cooper, Hill, and Piatti formed the party—professors of top-well-known ability to require any eulogium here. Miss Arabella Goddard was the pianist. The performance of this young pianist of Beethoven's Sonata in B flat was one of the most remarkable displays of execution of the present season. Miss A. Goddard has taken the highest position by her masterly display.

Handel's "Israel in Egypt" was performed last night at Exeter-hall by the Sacred Harmonic Society, under Costa's direction; the principal vocalists being Mdlle. Clara Novello, Miss F. Rowland, Miss Dolby, Mr. Sims Reeves, Staudigl, and Formes.

Handel's "Alexander's Feast," Macfarren's "Lenora," a selection from "Acis and Galatea," a pianoforte concerto, to be executed by Miss Arabella Goddard, and a new overture, are the features in Monday's concert of the Harmonic Union, under Benedict's direction ——The third Philharmonic Concert, and the second meeting of the Musical Union, are also in next week's list of engagements for the amateurs.

Mr. Harry Lee Carter, an amateur well known in the musical circles for his varied accomplishments, produced a new entertainment at the Marionette Theatre, on Wednesday night, under the title of "The Two Lands of Gold." This undertaking is based on more attractive themes than those chosen by Mr. Carter at Willis's Rooms last season; and, as there is a pretty panorama of views, both in the California and Australia, his present lecture with accompanying songs—the music by Mr. Henry Russell—is much more entertaining.

THE THEATRES, &c.

ROYAL ITALIAN OPERA.

The modern Italian comic opera appears to have no stronghold on the musical public of these days. Such a *Figaro* and such a *Dulcamara* as Ronconi presents it will take the long experience of any living amateur to mad; but, notwithstanding his powerful sway over the audiences who have revelled in the "Barbiere" and the "Elisor d'Amore," the former opera having been given twice, and the latter work having been produced last Tuesday, the performances, to use the common term, "hung fire." Madame Bosio, in *Rosina* and *Adina*, charmed by her sympathetic organ and the purity of her style of vocalisation; and, although many pretensions to extraordinary ability, she will be always acceptable in characters exacting no dramatic intensity. The new tenor, Lucchesi, is stated to be under a cloud, like his voice is at present, owing to a severe domestic affliction, the news of which has only just reached him. Whatever may be the extent of his capabilities, compared with those of the colossal tenor, Mario and Tamburini, there is one fact must be borne in mind, namely, that he is certainly far superior to his predecessors—Negri, Galvani, Meralti, Ander, and Guerrini; and the gentleman who plays Figaro is required. Tagliafico, always a most useful and meritorious artist, has rather raised himself by his *Dr. Bartolo* and *Sergeant Belcore*—not by comparison, certainly, but by sure and finish in the details

The subscription night, given on Thursday, in lieu of the last Saturday of the season, was signalised by the first appearance in this country of Mdlle. Marai, in Rossini's master-piece in serious opera, "Guglielmo Tell." From last year's cast, there were other departures: Formes replacing Marini in *Walter*; Lucchesi taking the fisherman's part; Polonini

TOMBS JUST DISCOVERED AT SAKKARA.

ENTRANCE TO THE TOMBS

sages are altogether without them. The hieroglyphic inscriptions on the tomb are, in one instance, if not more, unfinished; and the doors erected at the entrance are too small to have allowed the passage of the Sarcophagi, and must, therefore, have been built after the latter were introduced. The chambers are not opposite each other, but arranged alternately, in the usual manner of Egyptian places of sepulture. The appearance of this long gallery

DOORWAY IN TOMB.

when lighted up by numerous candles, receding in dim perspective into gloom—the massive Sarcophagi, of polished granite, each in its chamber, looking tranquillity—is an imposing sight. They are of enormous size and weight; one, and that not the largest, has been estimated to weigh, including the lid, upwards of sixty tons. To have moved these and lowered them into their receptacles, which are some six feet below the floor of the gallery, in so confined a space, must have required a considerable amount of mechanical skill and power. In the walls are holes, apparently for the introduction of the ends of beams. The chambers may, however, have been filled with sand, the sarcophagus pushed in and gradually lowered by abstracting the sand. The underside of one of the sarcophagi is rounded, and it was kept steady by wooden blocks on each side. When these are removed it can be rocked by the hand. A groove, about two feet broad and two or three inches in depth, runs down the middle of the gallery. A wooden capstan was found near the tombs, and is supposed to have been used for moving the stones. The entrance is inclined. The tombs are excavated in a soft friable limestone, containing numerous small veins of gypsum, about half an inch in thickness. To prevent the roof from falling, it has been coated with flagstones, cemented to it by a gypseous cement; but, either by the hand of violence, or that of time, these have been detached, and have fallen to the ground, encumbering, and partially choking the galleries and rooms. The mortar, however, still adheres in several places to the walls, and projects where the joints of the stones have been. In one chamber is a self-sustained stone arch—another proof, if any were now necessary, that the construction was known to the ancients. (This arch is shown in the second View). This chamber contains a small sarcophagus, in which, probably, were the bones of a young bull. The bones of bulls have been found in several sarcophagi; but every one had been opened, and some heaped with stones—an Eastern mark of contempt—probably, the work of the Persians. At the entrance were numerous *ex voto* offerings of inscribed tablets inserted in small recesses in the walls. There are also inscriptions, in the Demotic character, on the outer doorway. In some chambers are large recesses to the right and left of the tomb, which in one instance contained a large granite tablet with hieroglyphics. The number of sarcophagi already discovered is twenty-five.

CHAMBER AND SARCOPHAGUS.

These tombs merit the visit of all antiquaries and travellers passing through Egypt, and M. Mariette's work describing them is looked for with anxiety by all *savants*. To his kindness and courtesy, which, as well as his hospitality, are well known, we are indebted for the greater portion of this information.

Near to Sakkara, on the site of Memphis, Hekekyan Bey has been making excavations connected with the geological investigations of the Nile Valley, instituted at the request of Mr. Leonard Horner and the Geological Society of London, by his Highness the Viceroy, who has very recently received from the English Government, through Mr. Murray, a letter of thanks for his liberal aid to the cause of science.

THE GREAT GALLERY IN . . . . . .

WRECK OF "THE DUKE OF SUTHERLAND" STEAM-SHIP, OFF ABERDEEN PIER.—TAKING PERSONS FROM THE SHIP.

WRECK OF THE "DUKE OF SUTHERLAND" STEAM-SHIP.

This lamentable catastrophe was fully described in our Journal of last week, since which we have received from Aberdeen the two accompanying Sketches:—1. of the mode by which several persons were saved from the wreck; 2. The night scene on the beach.

It will be recollected that while the Harbour Commissioners' lifeboat was taking fifteen persons off the steamer, the passengers who were still on board clustered around the starboard paddle-box, the vessel amidships having sunk down solidly on the rocks. To render them relief, life-lines were fired with Dennett's rockets, after about twenty attempts, with success; when Captain Morrison, Dr. Sutherland, and a mechanic, had the cheering gratification of seeing the rocket and line carried beautifully right across the ship, near the funnel. With this line the crew on board got off the pier hawser; and, after fastening it well, a party in charge of it on shore, tightened it up. Then came the difficulty of the box-cradle, and the substitution of slings, by which several passengers were suspended from the hawser by the waist, and thus saved. Next followed the melancholy fate of the Captain, which we have already described.

By the time that the warp was fully secured, and those on shore had begun to work the lines, the ship parted abaft the funnel, which was still standing, the main and mizen-masts having both gone some time previously. Dr. Sutherland, in his graphic narrative, says:—"This was rather a favourable occurrence, for the midship part containing the engines we expected would hold out longer, and from this we might hope to get off all the survivors, although sometimes we had reason to fear that the awful destruction which this part of the vessel was suffering in front would annihilate the whole of it before the last person came off. Six or seven females, and at least fourteen men, were taken off in this way; but of the exact number I am not certain, although each passed me as we released them from the ropes. The females were not the first to come off; this, however, was not owing to the men stepping in before them, but to the heroism some of them evinced in putting the men into the slings, and adjusting the ropes around their bodies. Three females were taken off at one time, and now only as many men remained. One of the small lines became entangled while the females were half-way in, and, owing to this accident, it was feared for a moment that the line would break, and, consequently, that the remaining three would perish. Happily, however, this suspense was only momentary. The females, although much exhausted, were safely landed and carried away. In a few minutes the three men arranged the ropes, and one of them, the chief steward of the vessel, who was the last to leave the wreck, and to whose presence of mind in working the lines on board the ship is due the saving of many lives, gave the signal, and in two or three minutes more all were in the hands of their friends on the pier." It deserves mention that Christie, the steward, observing that one of the ropes employed in drawing the persons in the slings along the hawser, was frequently getting entangled, and therefore almost frustrating the efforts of those on shore, he (Christie), after placing the last man in the slings, opened his clasp-knife, and placing it in his mouth, was drawn ashore and on to the pier, holding the knife firmly between his teeth.

The scene along the beach, while the efforts were being made to save the crew and passengers has been described; but the Artist's second Sketch shows a provision not yet detailed. After the remaining passengers and crew had been saved from the wreck, a number of the men belonging to the *Archer*, the military and supernumerary watchmen, were stationed on the pier and beach, and bonfires were lighted up, in order to secure any bodies or parts of the cargo that might be washed in. The Lord Provost, Shoremaster, and others of the Harbour Commissioners, were on the spot till nearly midnight. The beach was for a long time subsequently watched, and no persons were allowed to remove articles without establishing a claim to them.

The *Aberdeen Herald* of the 9th states the total loss from the steamer to have been 11; from the coble 5—16 souls: 4 females and 12 males.

WRECK OF "THE DUKE OF SUTHERLAND" STEAM-SHIP.—BONFIRES ON THE BEACH.

TESTIMONIAL TO THE HON. R. GODLANTON.

The interesting circumstances which have led to the presentation of this testimonial of public esteem are thus narrated in the inscription:—

Presented to the Hon R. Godlanton, M.L.C., by a number of his fellow colonists in Grahams' Town and Albany, Cape of Good Hope; as a small testimonial of their approval and high admiration of his able, consistent, and persevering advocacy of the rights and interests of the inhabitants of the Eastern Province; alike in his place as an elected Member of the Legislative Council, and in his profession as Editor of an influential public journal. Graham's Town, 1853.

This handsome gift, a candelabrum or epergne, is upwards of two feet in height: the design consists of a tree, at the base of which are three figures—a European settler, a Kaffir, and a Bushman, the races engaged in the recent struggle; the Kaffir being an authentic likeness of Sandilli, the celebrated rebel chief: these figures are highly characteristic, and are cleverly modeled. Above them, and round the stem, are other three figures, allegorical of Commerce, Plenty, and Peace.

PLATE PRESENTED TO THE HON. R. GODLANTON, M.L.C., BY CAPE COLONISTS.

This costly piece of plate has been ably executed by Mr. Joseph Angell, 10, Strand, for Mr. Radmall, Cape Town; and was despatched to the colony on Monday last.

CALENDAR FOR THE WEEK.

SUNDAY, April 17.—Third Sunday after Easter.
MONDAY, 18.—Judge Jeffries died, 1689. American Revolution, 1775.
TUESDAY, 19.—St. Alphage. Lord Byron died, 1824.
WEDNESDAY, 20.—Spanish Fleet destroyed by Admiral Blake, 1657.
THURSDAY, 21.—Bishop Heber born, 1783.
FRIDAY, 22.—Duke of Sussex died, 1843. Fielding born, 1707.
SATURDAY, 23.—St. George. Shakspeare born, 1564; died, 1616.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 23, 1853.

TO CORRESPONDENTS.

T. S.—In our answer last week, instead of "A frigate does not rank as a ship," read a frigate does not rank as a ship *of the line*.
A LIEUTENANT, R.N., is thanked for the correction.
J. T.—The number of planets at present known between Mars and Jupiter is twenty-three.
Z. H.—Murphy's predicted cold day was Jan. 20, in the year 1838.
PLANETA.—On Nov. 15th, 1852, Lutetia was discovered, by Goldschmidt; on Nov. 16th, 1852, Calliope; and Thalia, on Dec. 15th, 1852, by Hind.
A. B. and A SUBSCRIBER.—The phenomena in question were parts of a solar halo, and mock suns.
PHILO-NAUTICUS.—Tonnage of Vessels.—Having procured the length of keel between the stem and stern posts, deduct from that length three fifths of the vessel's beam, and the remainder will be the length on keel for tonnage. Multiply the product by the entire beam of the ship, and the last product again by half the beam, the total divided by ninety-four will be the tonnage for ships of ordinary proportions. In sharp, fast vessels, where there is a raking stem and stern post, allowance must be made by taking the length amidships between the keel and the main deck, and under the difference in the keel measurement, vessels of peculiar construction and great depth of hold, will, of course, be valued accordingly; in steam-vessels the engine room space must be deducted.
PHILO PERISTERON, Truro. See a Handbook on Pigeons published by ORR and Co.
A COMPETITOR, Glasgow.—We cannot undertake to inquire into the cause of the delay of the award of the "Temperance" prize. A letter to Sir Horace St. Paul may answer the writer's purpose.
A SUBSCRIBER, Northallerton.—Apply for musical-glasses to Horne, Thornthwaite, and Co., Newgate street.
A SCOTCHMAN, Falmouth, Jamaica.—The population of Glasgow, by the census returns of 1851, was 338,697; of Liverpool, 255,055.
ANNIE DE LISLE.—Hamel's "French Educational Works," published by Whittaker and Co.
S. V.—Postage-stamps may now be sold without a license.
S. H. C.—Roland and Oliver are said to have been the names of two equally matched steeds in Charlemagne's expedition against the Saracens; hence "Roland for an Oliver" became a phrase for tit for tat.
AN OLD SUBSCRIBER.—Charles Romilly, Esq., who married Lady Georgiana Elizabeth Russell, is one of the sons of the late Sir Samuel Romilly. Another of the sons, the present Master of the Rolls, Sir John Romilly, is the husband of Miss Otter, daughter of the late Bishop of Chichester.
J. B., Norwich.—The arms of the Trinity-house fraternity are "Az a cross gu. between four ships of three masts, each under full sail, all Arg. On each seat, pennant and ensign, a cross gu., and each quarter resembling a sea piece. *Crest*: A demi lion rampt. guardant, and regally crowned or, holding in his dexter paw a sword erect arg., Hilted and pomelled of the first. *Motto*: Trinitas in Unitate."
AN OLD SUBSCRIBER.—The Arms required to be described are: A saltire, and on a chief a lion passant. The tinctures are not indicated on the seal.
A SUBSCRIBER, AND THE YOUNGEST SON OF AN HERESS.—We have not space to give the subscriber that we can assure our Correspondent that *all* the sons of an heiress are entitled to quarter their mother's arms.
A DESCENDANT OF ADAM.—The children of A. and B. may legally quarter, with their paternal bearings, the arms of their mother, and all the quarterings she was entitled to. The crest of the mother's family must not be adopted. In the case submitted, the marshalling would be as follows:—Quarterly—1st, A.; 2nd, C.; 3rd, B.; 4th, D. The arrangement of B. and D quarterly would not be incorrect, although unusual and unnecessary.
A GRANDEE.—The descent of the Empress of the French from the great family of Kirkpatrick, of Closeburn, though recognised, has never been clearly shown.
PRISCUS is thanked. | S. G. C.—The letter is past recovery

*** ERRATUM.—In the notice of the Exhibition of the Society of British Artists, at page 272, for Mrs Basset read Mrs Besset

THE ILLUSTRATED LONDON NEWS

LONDON, SATURDAY, APRIL 16, 1853.

THE propositions which the Chancellor of the Exchequer made on Friday evening week, are much more appropriately called the conversion than the reduction of the National Debt. There still exists, as a part of our incumbrances, a sum of nearly £9,000,000, which originated in the notorious South Sea Bubble, of the reign of George I., which has left to this day a burden on the children of those who admired it. There exists, too, amongst our incumbrances, £676,130 of Bank Annuities, created as long ago as 1720—about the period of that bubble when our forefathers were reckless of the welfare of their children. These patriarchal stocks (as the Chancellor called them), amounting together to £9,500,000, still bear an interest of three per cent; though the interest of money on less safe securities has been, with some exceptions, lower than that for many months, and even some years. By the resolutions submitted to the House of Commons on Friday week, the Chancellor proposes to convert these Three per Cents into stocks, bearing a less rate of interest; and, if the owners decline his offers, he will pay them off. It has been resolved by the House of Commons that after April 5th, 1854, interest shall no longer be paid on these stocks, and that during the last visible remnant amongst us of the great swindle of the 18th century is positively to be for ever extinguished. We cannot, however, get rid of the obligations it imposed on us; and in place of every £100 of these stocks, the Chancellor proposes to substitute either:—

£82 10s of a new stock, to be created, bearing interest at the rate of 2½ per cent, which is about equivalent to £2 17s. 9d., on every £100 of the old stock; or

£110 of a new stock, bearing interest at the rate of 2½, which is equivalent to about £2 15s. on every £100 of the old stock; or

£100 of Exchequer Bonds, bearing interest at the rate of 2½ per cent for ten years, and then 2½ per cent.

All these are new securities, and the rates of interest on them are to be guaranteed for 40 years. If the holders of the South Sea Stock will not on these terms accept the new stocks they will be paid off at par. It is clear that from such an operation, supposing it to be ever so successful, very little saving can accrue to the public; and the Chancellor of the Exchequer does not estimate it at more than £25,000 a year—a sum not worth causing great inconvenience and trouble to obtain. But the Chancellor contemplates, as a part of the plan, a great prospective conversion of debt. There exists, under the name of Consols and Reduced Annuities, a sum of about £500,000,000, on which the nation still pays an annual interest of three per cent, though money is borrowed on less safe securities at a much lower rate of interest. There is a general expectation, though perhaps not justified, that the rate will be still lower. The Chancellor of the Exchequer is of that opinion; and believing, therefore, that the holders of these Three per Cents, living in the apprehension of being paid off, or having the rate of interest greatly reduced, will be ready to accept a lower rate of interest guaranteed for forty years, he offers to convert the Three per Cents into these new stocks at the option of the holders, and so bring about a voluntary conversion, to a great extent, of the National Debt; with this additional advantage, that, at the end of forty years, all the new stocks may be further reduced without notice, should the state of the money market warrant the reduction; while now the Three per Cents can only be reduced after a year's notice, and their immense amount almost forbids the hope of reducing them. The Chancellor tempts different classes to enter into his plan by different advantages. To those who may wish to increase their income without caring so much about the amount of their capital, he offers the Three-and-a-Half new stock; to those who care less about a present income, and look more to the amount of capital, he offers the Two-and-a-Half per Cent new stock; and to merchants and bankers, here and abroad, who like easily negotiable securities, he offers his new-invented Exchequer Bonds, bearing interest payable half-yearly, with *coupons* attached to them, so that the interest can be obtained wherever there is a bank communicating with a bank in London. There can be little doubt, if the interest of money continues as low as at present, that the Chancellor of the Exchequer will succeed in converting the old debt into these new securities. To the conversion into the Three-and-a-Half Stock he places no limit; to the conversion into the Two-and-a-Half Stock, and into Exchequer Bonds, he, at present places a limit of £300,000,000: if the plan succeed, however, he will extend the limit. He does not expect to gain as much as £200,000 by the scheme, but it may lay the foundation for a great reduction of charge on the debt hereafter. The success will depend, however, on the rate of interest for money for the next forty years; and that he can no more control or foresee than any ordinary mortal. His plan is sufficiently comprehensive to please a great number of persons. In particular, the creation of Exchequer Bonds, as answering many commercial purposes, is highly approved of; but the creation of a Two-and-a-Half per Cent Stock, which may add 10 per cent in proportion to the amount of the conversion to the capital of the National Debt, though obviously the Chancellor's favourite part of the scheme, is very generally condemned. In our opinion, he would have done better had he followed the example of his predecessors, and attempted, if the market rate of interest warranted the attempt to reduce the rate of interest on the existing stocks without creating new stocks. The Exchequer Bonds, which everybody approves of—though, perhaps, they place too much pecuniary power in the hands of the Government—might for such a purpose, have been issued to a much larger amount.

A GREAT step was made, or rather announced, in the House of Commons on Tuesday, towards obtaining for Parliament a more complete control over the public expenditure. At present, besides the £52,000,000, or thereabout, we continually hear of as the annual revenue, there is about £6,000,000, of which we rarely hear, gathered, like the larger sum, from the people by Customhouse and Excise duties, but which is never paid into the Exchequer, appears in no estimates, and is never submitted in any shape to the control of Parliament. The cost of collecting the duties is paid out of them before the proceeds are remitted to the Exchequer, subject to the revision and control of the Treasury only, which has a great desire to multiply patronage and places. The present ones who collect the revenue determine how many of them are required, and what wages they shall get. They do not wait for the public whom they serve to fix their remuneration—they pay themselves. On the revenue, too, before it reaches the Exchequer, sundry hereditary pensions—some of them granted as long ago as the reign of Charles II.—are charged; on the Excise the judicial establishment of Scotland is charged; and various functionaries, placed under the control of the Board of Customs, such as quarantine officers, are all paid by the Custom-house officials out of the revenue, as they collect it. The six million odd which is stopped and scarcely accounted for—certainly not efficiently audited and controlled—has for many years attracted the attention of financial reformers; but till last Tuesday all their efforts to obtain from Parliament any control over this money were fruitless. The Treasury has generally, as the rule, haughtily warned off the reformers from this nice little preserve of its own. Then, however, on Mr. Williams making his almost annual motion to bring the whole of the income, without any deduction whatever, into the Exchequer, and to pay no one out of the public income without the sanction of Parliament, the Chancellor of the Exchequer admitted that the principle was correct, and stated that Government was engaged in giving effect to it. In particular, he described as indefensible the strange circumstance that the Scotch judicial establishment is paid out of the Excise, and that practice we may expect will be immediately altered. It will be his great object, consistently with admitting this principle, to bring all the expenditure now made by the various Boards directly under the control of the Treasury that it may answer to Parliament for the whole annual expenditure of the country. The admission and the promises to effect improvement are very satisfactory in themselves, but as an indication of the spirit of the Government intent on making the administration of public affairs as cheap and as efficient as possible, they are invaluable. If the business of the Opposition be, as is said, at an end, it is because the Ministry has taken the path which patriotism has pointed out for it, and no longer appears as the oppressor of the people and the waster of the public resources, but as the protector of the public interests and the guardian of the public purse. If every Government, however, is now so ready to run before the public wishes as to make an opposition almost needless, let us not forget that to the continual labours of men on the left of the Speaker's chair, the occupants of the Treasury benches have been drilled into economy and patriotism.

NEW SOCIETY OF PAINTERS IN WATER COLOURS.—His Royal Highness Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, honoured the Exhibition of the New Society of Painters in Water Colours with a lengthened visit on Thursday; when Prince Albert was pleased to express great satisfaction at the progress of the society. His Royal Highness Prince Albert was attended by Col. Seymour; and Miss and Mrs. Gibbs accompanied the Royal children.

SOLAR PHENOMENON.—Mr. E. J. Lowe thus describes a magnificent solar phenomenon noticed at the Observatory, Highfield-house, near Nottingham, on the afternoon of the 10th inst. At 3h. 30m. a solar halo of 22° radius became visible. At 3h. 47m. a mock sun formed on the halo on the south side and on the sun's horizontal level: at 4h. 45m. the phenomenon became most remarkable. The sun, Jupiter, and the apex of a portion of an inverted arc, visible, having a mock sun at the point of contact with the halo of 22° radius; mock suns on either side the true sun of the same altitude, and distant 22° from that luminary; these were pale and confused. Two prismatic portions of a circle of 46° radius, which had the sun for its centre, were also now formed. Above the true sun, at the distance of 46°, was an inverted arc of a circle of probably 69° diameter, exceedingly brilliant, surpassing the rainbow in brilliancy of colour—width, 1°; length of arc, 40°. The whole circles had the red colour nearest to the sun. At 4h. 50m. the phenomenon had vanished with the exception of the halo of 22°. The sky was scattered over with cirri and cumuli, which rendered the phenomenon invisible after 5h. 30m.

MUNICH, April 10th.—Professor de Liebig was last night giving a lecture on chemistry at the palace before the Royal family, and some persons belonging to the Court, when a bottle of oxygen gas, handed to him by his assistant who took it for another bottle, exploded, flying into a thousand pieces. Fortunately the explosion occurred in an inner room, the door of which was open. Still some fragments of the glass passed through the door, and slightly wounded some members of the Royal party: Queen Theresa was cut in the cheek, and the blood flowed in abundance; Prince Luitfold was slightly wounded in the forehead, Countess Luxi urg in the chin, and Countess Sandizell in the head; but the wounds were not serious. The Professor fortunately escaped with only a slight injury.

THE COURT.

The progressive improvement in her Majesty's health has been satisfactorily shown in the character of the bulletins during the past week. On Wednesday the following gratifying announcement was made through the ordinary official channel:—

"BUCKINGHAM PALACE, April 13th, 1853.
" Nine o'clock a.m.

"The Queen is convalescent.
"The infant Prince continues well.

" JAMES CLARK, M.D.
" CHARLES LOCOCK, M.D.
" ROBERT FERGUSON, M.D

"Her Majesty's recovery is so far advanced, that no further bulletins will be issued."

Her Royal Highness the Duchess of Kent has visited her Majesty daily during the week.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary called at the Palace on Monday, to make inquiries after the Queen.

The calls at Buckingham Palace to inquire after her Majesty's health during the week have included the names of the corps diplomatique, and the leading members of the aristocracy and fashionable world.

The Viscountess Canning has succeeded the Countess of Gainsborough in her duties as the Lady in Waiting to the Queen.

The *Gazette* of Tuesday last announces that his Royal Highness Prince Albert will, by the desire of her Majesty, hold levees at St. James's Palace, on the following days, at two o'clock: Wednesday, the 20th inst.; Wednesday, the 27th inst. It is her Majesty's pleasure that presentations to his Royal Highness at these levees shall be considered equivalent to presentations to the Queen.

It is understood that the Court will leave town on the 30th inst., for the Isle of Wight, where her Majesty will probably remain for ten days or a fortnight, and then return to London for the season.

Her Royal Highness the Duchess of Kent visited her Royal Highness the Duchess of Gloucester on Saturday, at Gloucester House.

The Duke and Duchess d'Aumale, and the Princess de Salerno, visited her Royal Highness the Duchess of Kent on Saturday, at Clarence House, St. James's.

The Duke of Devonshire received, on Wednesday, at dinner, at Devonshire House, the Bishop of London and Mrs. Blomfield, the Duke of Argyll, Lady Dover, Baron Parke and Lady Parke, &c. His Grace intends to enliven the fashionable season with three grand balls.

The Duke of Somerset, whose prolonged indisposition, arising from a painful accident while engaged in his library, has occasioned much anxiety to his numerous friends and family connections, is at length pronounced convalescent.

The Duke and Duchess of Norfolk intend to give a grand ball at Norfolk-house on Wednesday, the 4th proximo, in honour of her Royal Highness the Princess Mary of Cambridge.

The Duke and Duchess of Norfolk entertained a select circle at dinner on Wednesday evening at Norfolk-house. The Duchess received a small party after dinner.

The Countess of Clarendon will hold a "reception" at the official residence of the Secretary of State for Foreign Affairs, in Downing-street, on Wednesday.

The Earl of Malmesbury, on behalf of the Countess, whose indisposition we regret to announce, received a distinguished circle of the fashionable world, on Saturday evening, at the family mansion, in Whitehall-gardens.

The Countess Helen Kielmansegge, daughter of his Excellency the Hanoverian Minister, has arrived at her father's residence, in Grosvenor-place, from Hanover.

The Countess Granville gave a ball on Thursday night, in Bruton-street.

Viscountess Jocelyn has arrived in Bruton-street, from Nice.

The Lord Chancellor received the Judges, Queen's Counsel, &c., at his Lordship's residence, Upper Brook street, on Friday last, being the first day of Easter term.

Lady Stanley of Alderley intends giving a grand ball, at her residence in Dover-street, on Monday, the 2nd proximo.

We understand that a matrimonial alliance is arranged, and will shortly be celebrated, between the Lady Margaret Compton, sister of the Marquis of Northampton, and the Hon. E. F. Leveson Gower, M.P., brother of the Earl Granville.

Lady Howard de Walden and the Hon. Misses Ellis have arrived in town from the British Embassy at Brussels.

The Hon. Mrs. Sydney Herbert has issued cards for an assembly on the 27th instant.

Sir William and Lady Molesworth had a dinner party on Saturday. The company included the Duchess of Somerset, his Excellency the Russian Minister, the Marquis of Breadalbane, the Earl and Countess of Clarendon, Viscount and Viscountess Canning, Viscount Monck, Mr. Harcourt, and Frances Countess of Waldegrave.

We are sorry to learn that Colonel Sibthorp, M.P., has been prevented attending his Parliamentary duties for some days past, owing to indisposition. The gallant Colonel is approaching convalescence.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. R. A. Rackham to Wratting, Suffolk: the Rev. J. S. Whitehead to Taxall, near Macclesfield: the Rev. T. R. Govett to Alby, Norfolk: the Rev C. B. Auber to Clannaborough, Devon. *Vicarages*: The Rev. J. Lyne to Buckland Monachorum: the Rev. T. Daws to Canon Pyon, Herefordshire: the Rev. J. D. Morgan to Llanspythid, Brecknockshire. *Rural Deans*: The Rev. J. R. Young to Leamington. *Incumbencies*: The Rev J. Thomas, B.A., to Trinity Chapel, Waltham Cross; the Rev. W. Laycock to St. Anne's-in-the-Grove, Halifax; the Rev C. J. Westropp to Hanningham, Warwickshire; the Rev. W. Tait to St. Matthew's Church, Rugby; the Rev. A. H. Northcote to Dowland. The Rev. C. J. Abraham to the archdeaconry of Wainuate, in the diocese of New Zealand. The Rev. W. T. Maudson, M.A., to the ministry of Beresford Episcopal Chapel, Walworth. The Bishop of London has appointed the Rev. T. H. Greene to be his Domestic Chaplain. The Rev. A. O. Hartley has been appointed to the Head Mastership of the Faucoubere Free Grammar-school, Leeds.

CONSECRATION OF THE NEW BISHOP.—Holy Thursday has been appointed for the consecration of the Right Rev. Dr. John Jackson, Bishop elect of Lincoln. The ceremony will be performed in the private chapel within Lambeth Palace, by the Archbishop of Canterbury, assisted by the Bishop of London, the Bishop of Winchester, and the Bishop of Oxford. Dr. Jackson will be invested in his episcopal robes in the course of the following week, and will immediately afterwards enter upon the formal possession of his diocese. The new Bishop will have in his gift ecclesiastical patronage to the extent of £15,000 a year. It has not yet transpired who will be Dr. Jackson's successor in the rectory of St. James's, Piccadilly. The appointment is in the gift of the Crown.

NEW CHURCHES IN THE LONDON DIOCESE.—Her Majesty's commissioners have recommended the erection of fifty-eight new churches in the diocese of London. Of these, seven are to be erected in the parish of St. Pancras, five in Marylebone (namely, two in St. Mary's district, one in St. Peter's, one in All Souls, and one at St. John's-wood), six in Shoreditch, four in Stepney, three in St. George's-in-the-East, two in Limehouse, two in Whitechapel, two in Poplar, two in Deptford, two in Newington, two in St. James's, Westminster, two in St. James's, Clerkenwell; two in St. Giles's-in-the-Fields, one in Spitalfields, one in St. Andrew's, Holborn; one in St. Sepulchre's, Snow-hill; one in St. Anne's, Soho; one in St. Clement Danes, one in St. George's, Hanover-square; one in St. Luke's, Old-street; one in St. Paul's, Shadwell; one in St. Botolph Without, Aldgate; one at Hackney, one at Bow, one at Hammersmith, one at Barking, one at Bromley St. Leonard, one at Isleworth, one at Stoke Newington, one at West Ham. These are independent of a large number which are proposed to be erected in Lambeth and Southwark, in the diocese of Winchester.

LOSSES OF HUMAN LIFE BY WAR.—The last number of the "Companion to the Almanac" contains a return, compiled from official sources, of the killed and wounded of the various British troops in the military and naval actions from 1793 to 1815. The total number of killed was 19,756, of whom 1160 were officers. The total number of wounded was 74,269, of whom 5720 were officers. The proportion of killed in the navy, as compared with those in the army, is about one-fourth. The actions of that warlike period were not of a sanguinary character during the first few years. For example, the loss of men in 1797 was only 38, three of whom were officers. Even in the year of the arduous campaigns of Sir Ralph Abercromby in Egypt, the loss was no more than 807 men and 32 officers. In this years of the Peninsular campaigns the numbers increase to 1350 in 1809, which includes the slaughter of Corunna; and 1638 in 1811, which saw the bloody encounters of Barossa, Fuentes d'Onore, and Albera. The sum of 1813 was nearly 3000. At Waterloo there fell 171 officers, and 2341 private men, while the wounded were respectively 680, and 5065.

Note.—The sign – denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100

The mean reading of the barometer for the week, at the height of 82 feet above the level of the sea, was 30·027 inches The highest reading occurred on the 9th, at about noon, and was 30·290 inches; and the range of the readings during the week was about half-an-inch. The weather during the week has been very variable, and the mean daily temperature ranging from 5½° below to 1½° above its average value. The mean temperature of the week was 43·29, being 1·8° below the average of the same week during thirty-eight years. The highest reading of the thermometer during the week was 59·3°, which occurred on the 11th; and the lowest 32·0°, on the 14th—their difference, 27·3°, shows the range of temperature in the week. The daily differences of temperature have not been very great, their mean being 10·1°, which is 2·9° above average of the fourteen preceding weeks. Rain fell during the week to the depth of 0·26 inch, most of which fell during the thunder-storm on the 8th. Several showers of hail fell on the 13th

J. GLAISHER, April 15th, 1853.

HEALTH OF LONDON.—During the week ending April 9, the births of 1831 children were registered in the metropolitan districts of these, 791 were boys, and 990 were girls. In the eight corresponding weeks of the eight preceding years, the average number was 1388. The number of deaths registered in the week was 1340—being nearly 400 less than in the preceding week; but, still indicating that the health of London is not good, as the present number shows an excess of 238 above the estimated amount. The Registrar General says that—"With the progress of the spring months, and a warmer sky, there is ground for expectation that the public health will speedily improve." To zymotic diseases there were 323 deaths registered (their average is 191): of these, 5 were to small-pox, 17 to measles, 37 to scarlatina, 80 to hooping-cough, 12 to croup, 20 to thrush, 49 to typhus. To tubercular diseases 344 (their average is 191): of these, 165 are attributed to consumption. To diseases of the brain, nerves, and senses, 127 (their average is 172): of these, 13 were due to laryngitis, 186 to bronchitis, 93 to pneumonia; and 21 deaths are referred to violence, privation, cold, and intemperance. With reference to fatal diseases, a comparison of the facts of the last two weeks discovers, generally, a decrease. Typhus has declined from 77 to 49; bronchitis, from 231 to 186; pneumonia, from 120 to 93; consumption, from 179 to 165; but hooping-cough carried off 80 children.

THE RITE OF CONFIRMATION.—On Wednesday, at Christ Church, Newgate street, the Right Rev. the Lord Bishop of London confirmed between 600 and 700 persons of both sexes. Previous to commencing the sacred ceremony, his Lordship addressed all those in attendance for confirmation, and was most attentively listened to. The church was very fully attended.

NEW METROPOLITAN ROMAN CATHOLIC CATHEDRAL.—This edifice, on a site of ground at the north end of Hatton-garden, will be on the model of the Basilica, and is proposed to be on a magnificent scale. The architects are Signor Gualandi, of Bologna, and Mr. J. H. Stevens.

SINGULAR OCCURRENCE.—An accident of a singular nature occurred at the office of the Electric Telegraph Company, Strand, on Friday last. The usual communications were being made between the Observatory, in preparation for dropping the Strand ball. At three minutes before one o'clock there was at Greenwich a very vivid flash of lightning, followed by loud reports. This was apparently caused by a powerful atmospheric current in the wire, which dropped the ball in the Strand three minutes before its correct time! The assistant had commenced unwinding the chain when the unexpected descent of the ball caused the winch to revolve violently, and struck him down, greatly alarming those present. The ball was again raised, and was dropped by the ord nary galvanic current at the usual time. At Greenwich nothing was known of the accident until information was transmitted from the Strand.

LETTERS FOR THE ARCTIC SHIPS.—Letters for officers, seamen, and marines serving in the Arctic ships, will be in time for her Majesty's ship *Phœnix* if sent to the Admiralty before the 23rd of April.

SUNDAY OPENING OF THE CRYSTAL PALACE.—On Wednesday night a public meeting was held at the Vestry-room, King-road, St. Pancras, to consider the propriety of petitioning Parliament in favour of the above object; Mr J. Flather, churchwarden, in the chair. Mr. J. Pettie moved the first resolution, pledging the meeting to petition Parliament for the Sunday opening of the Crystal Palace, as likely to promote the mental, moral, and physical elevation of the people. The question, in reality, was one of education, and education at the present time was a subject of immense importance to the working classes. The Crystal Palace would be a great adult educational establishment; and, if closed on the Sunday, would be closed against the working classes altogether. With reference to the opposition offered to the Sunday opening, he had to complain of an unfair mode of proceeding. Petitions had been got up purporting to be from working men, but not more than one name in 500 attached was that of a working man, for he (Mr. Pettie) had had personal opportunity of proving this. He had himself last week obtained the signatures of 360 workmen to a petition in favour of the Sunday opening; and he hoped the signatures of children belonging to some remote Sunday school in Wales would not be allowed by Parliament to weigh against the signatures of working men in London. The resolutions were carried unanimously.

TRIBUNAL OF COMMERCE.—A thinly-attended meeting of the inhabitants of Southwark took place on Wednesday, at the Town-hall, under the presidency of the High Bailiff, to adopt measures to procure a substitution of Tribunals of Commerce for the present expensive, cumbrous, and tedious process of obtaining justice in the courts of law. A series of resolutions was adopted declaratory of the superiority of the tribunal over the legal system.

CITY STREET ORDERLIES.—At a meeting of the Commissioners of Sewers on Tuesday last, the following report was almost unanimously agreed to:—"It stated that "having considered the large additional expense incurred by the street orderly system of cleansing, as compared with the service rendered thereby, and being of opinion that in other respects a nuisance is created by the sweepings of the streets, they do not recommend that the Court do revert to the plan of daily cleansing as it was in use prior to the street orderly system being adopted, and we think that if your officers carefully see that the contract for the once a day cleansing of every street and place be faithfully executed, the public will have no cause of complaint. We recommend that the penalty for non-removal of dust, &c., from the houses, be raised from 10s. to 20s. for each case of neglect therein, and that the clerk do advertise forthwith for tenders for the work, according to the system we have herein advised"

DESTRUCTIVE FIRES.—On Sunday morning a fire broke out in the premises of Mr. Robson, coach-curlier, No. 39, Lisle-street, Leicester-square. Mr Robson's premises were large, and contained some thousand pounds' worth of property; and the fire was not got under until the upper part of the factory was destroyed, and the valuable contents seriously injured by water, &c. The premises of Mr. Bingham, Mr. George Chapman, and Mr. Greffenhle, were likewise damaged by water, fire, &c.——On Monday another fire broke out in the premises of Mr Hodges, a cabinet-manufacturer, Carpenter-row, London road, Southwark, and was not extinguished until the upper workshop and its valuable contents were destroyed. The origin of the fire is unknown; and Mr. Hodges was not insured.

THE LATE DR. CHAMBERS.—The coroner's jury in this case has found, as a verdict, "That the death of deceased was caused by a diseased heart, under the influence possibly of prussic acid taken medicinally."

THE CONFESSION AT MARYLEBONE POLICE-COURT.—The police in Edinburgh have tried to find some corroborative circumstances of the confession of murder made before the magistrate at Marylebone Police-office on Wednesday week last. All search, however, has proved fruitless to find the slightest trace of the alleged deed. There is no "Blair's-close" in the Canongate, as stated by the person in custody; and, though a place goes by that name on the Castle-hill, all the inquiries have been ineffectual in connecting it with the statement of the party in London, who is believed in Edinburgh to be insane. The prisoner will be brought up again on Tuesday.

NEW EXTRA-MURAL CEMETERY.—On Monday the burial board of St. Pancras ratified an agreement between the Rev. E. P. Cooper, of Childs-hill, Derby, Leicester, and the burial board, for the purchase of eighty-seven acres of freehold land at Finchley, for the purposes of a cemetery for the parish. The price was £200 per acre

COURT OF ALDERMEN.—On Saturday last, at a special court, Alderman Thompson proposed and carried an address of congratulation to her Majesty upon the auspicious event which has just taken place. —Alderman Wilson moved that it be referred to a special committee of the whole Court to consider the question of reform in the corporation of the City of London, to confer with her Majesty's Ministers thereon, and to take such measures as they may be advised. Alderman Thompson approved of the motion, with the exception of the words, "to confer with her Majesty's Ministers," and to confer with the real portion of Alderman Thompson, excluding the proposal to confer with her Majesty's Ministers, was agreed to, and the Court broke up.

SCULPTURE FOR THE CITY CORPORATION.—The Corporation, in adorning the Mansion-house with statues, avoided competition. They visited various studios, and then named by ballot six sculptors who should each produce a model of his production. Ideal figures from one of the English poets. The artists selected are Messrs. Bailey, M'Dowell, Foley, Lough, Calder Marshall, and Thrupp; and they have each submitted a sketch in clay of their respective productions. The subject which is the somewhat larger than life. The subjects are—following the same order as the names:—"Bright Morning Star," Milton; "Loah," from Moore; "Queen of the Angels," "Egeria," from Byron; "Child Harold," "Comus" "Griselda," and a figure called "The Lion-slayer," unappropriated. This last is to be withdrawn, and a substitute provided.

DEPARTMENT OF PRACTICAL ART.—On Saturday last was published a Parliamentary blue-book, containing the first report of the Department of Practical Art. The report is addressed to the President of the Board of Trade, and is signed by Mr. H. Cole. It is followed by a series of appendices, maps, and plans.

ROYAL GEOGRAPHICAL SOCIETY.—A meeting was held on Monday night in the Theatre of the Royal Institution; Sir R. Murchison, F.R.S., in the chair. Dr. Shaw read a paper by Mr. Finlay, on the subject of the currents of the Pacific Ocean. Its object was to show that it was the duty of the country to devote more attention to the currents of the Pacific Ocean, and to become as well acquainted with them as with those of the Atlantic, inasmuch as by the adoption of this principle it would open up great advantages as soon as the contemplated canal in the Isthmus of Darien shall be completed. After an elaborate description of the scheme, with frequent reference to maps and diagrams, the scheme was recommended to the attention of the society and all geographers.

ST. MATTHEW'S, FRIDAY-STREET.—On Sunday last a sermon was preached in the church of the above parish, by the Rev. F. G. Blomfield, in behalf of the Farringdon Within Ward Schools; after which a collection was made, amounting to £62 10s. The alderman and common councilmen of the ward attended

HOSPITAL FOR CONSUMPTION, BROMPTON.—On Sunday morning a sermon in aid of the above charity was delivered in St. Mark's Church, Kensington, by the Rev. Charles Lane, M.A. During a very eloquent discourse, the reverend gentleman gave a variety of statistics of the good effected by the institution, not merely among the afflicted of a single portion of the metropolis but of every district in the United Kingdom A liberal collection was made at the conclusion of divine service, to further aid of the same benevolent cause, the Marquis of Westminster has undertaken to preside over the anniversary in June next.

HANSMANS HOSPITAL.—The third annual general meeting of the above charity was held on Monday, in the Hospital, Bloomsbury-square: Lord Robert Grosvenor, M P., in the chair. The hon. secretary read the report, which stated that, during the year, the number of out-door patients had been 4236, and 332 persons had been received into the hospital, making a total of 4568. The expenditure for the past year had amounted to £1973 14s. 4d.; while the annual income was only £1186 2s. 11d.

BETHLEM HOSPITAL.—The house committee of Bethlem Hospital have resolved, that in consequence of the appointment of a resident physician, it was not necessary to continue the office of visiting physician; but that Dr. Monro should be elected consulting physician to the hospital, receiving the usual emuneration.

SCOTCH LAW REFORM AND THE AMENDMENT OF THE LAW.—On Monday evening a general meeting of this society was held at its rooms; Mr. Cocks in the chair. The committee reported, and the meeting adopted, a series of resolutions in favour of the Scottish Consistorial Courts.

ADULT ORPHAN INSTITUTION, REGENT'S-PARK.—On Monday a special general meeting of the friends to this institution was held in the board-room of the charity, Regent's-park; Vice-Admiral Bowles in the chair. The Rev. J. Caldwell was elected a member of the managing committee, and Mrs. G. Sutton a member of the ladies' committee. The annual report showed the total receipts during the past year (including a balance of £238 14s. 9d.) to have amounted to £2172 14s. 4d.; and, after all demands had been met, there was a balance of £220 6s. 7d.

THE NEW CAB REGULATIONS.—The Commissioners of Police have fixed Monday, the 2nd of May, as the day for holding, at their offices, in Whitehall-place, the sessions for the renewal of licenses to the drivers and conductors of public vehicles in the metropolis

BRIXTON TREAD-MILL.—Government has purchased the old House of Correction at Brixton, and will forthwith establish there a dépôt for female convicts only, under sentence of transportation, to replace the new establishment under the Board of Superintendence of Convict Prisons, at Fulham. A governor and matron will be appointed to rule in the convict service, is appointed chaplain, and F. S. Farkyn, steward to the same establishment.

ENORMOUS SUPPLY OF FISH.—Wednesday and the previous day, so very extensive were the consignments of fish at Billingsgate, that the market was completely glutted. Such an extraordinary supply has not been known for the last five years, and it had the effect of reducing the prices more than two thirds; coarse descriptions, plaice, soles, &c., were a complete drug, and sold at merely nominal prices. The greatest portion of this large supply was brought by the South-Eastern, South-Western, Great Western, and Eastern Counties Railways; but the line fish, cod, &c., for crimping, were conveyed by the Barking and Gravesend well smacks, as usual.

EXTENSIVE FORGERIES.—WESTMINSTER Lord Jermyn attended at this court on Wednesday, to give evidence against *Robert*, alias *Richard Pope*, alias *Richard Edwards*, his late butler, who had been remanded from a previous day, charged with committing a series of extensive forgeries. Mr Culverwell, a fruiterer, Little Chester-street, proved that he had discounted a bill for £100, signed "Jermyn;" and his Lordship was called to deny the handwriting Mr. Brittain, of Sidney-street, Brompton, also proved to two bills of £50, and two others of £25 each—all of which proved forgeries. The accused promised Mr. Brittain a boar's head in his Lordship's name, and absolutely sent a post-office order from the country for the interest upon the dishonoured bills, purporting to be signed by his master. In the case of a Mr. Curtis, £100 was obtained on a forged bill, by the accused pretending that the Marquis of Bristol and Lord Jermyn would, as governors of Christ's Hospital, give him a preentation for his son. Besides the above cases, there were £900 worth of forged bills in court.

SAD ACCIDENT TO MR. FREDERICK KEENE.—Wednesday evening a shocking accident happened to Mr. Keene, of Serjeants'-inn, Fleet-street, which has placed his life in imminent peril. Mr. Keene and a friend were examining a gun, and not anticipating that it was loaded, they handled it rather carelessly, and Mr. Keene, striking the butt end sharply against the floor, the weapon exploded, lodging the contents in his right jaw, and carrying off a portion of the cheek. The wounded gentleman was at once conveyed to St. Bartholomew's College Hospital, and from the extent of the wound his recovery is extremely doubtful.

GREAT CONFLAGRATION AT KILBURN.—On Thursday morning the inhabitants of Kilburn were alarmed by the outbreak of fire on the farm of Mr Rice, an extensive cowkeeper, in Kilburn-lane. Commencing in a hay-rick, the other ricks caught fire, as well as the out-houses. The engines soon arrived, and, after a time, the fire was extinguished, but not till a large amount of property had been sacrificed.

GREAT FORGERY IN THE CITY.—On Thursday a respectably-dressed man, named Robert Renton, aged twenty-five, a clerk in the house of Messrs. Whitecombe and Barton, metal-brokers, of Old Broad-street, was brought before Alderman Hunter, charged with forging on the 7th inst., a cheque for £1360, on Roberts and Co. It appeared a blank cheque had been signed and left in expectation of being called for. The prisoner filled up the check, marked on the counterfoil "cancelled," and obtained the money from the bankers, in two notes, £1000 and £300. These he got changed at the Bank of England for £900 in sovereigns and £500 in small notes, saying they were for Australia. Since then he has evaded the police, till Wednesday night, when he was taken in Spencer-street, Goswell-street-road. He denied himself at first; but the officers told him who they were, and, then searching him, they found £240 in notes, 836 sovereigns in a bag, 4s. 10d. in silver, a gold watch and chain and eye-glass, diamond rings, a large amounts of plate, and a new equipment of clothes, &c., apparently prepared for a voyage. He had been in Messrs. Whitecombe's service since August, 1852, and had recently been married. The prisoner, who declined saying anything, was sent to Newgate for trial.

COMMUNICATION TO THE NORTH OF EUROPE.—The Electric Telegraph Company are conveying electric wires from the Colchester station to Orfordness, in Suffolk; from thence a submarine cable will be laid down to Scheveningen, Holland, thus giving this country means of communication with the Continent. It is believed that the Electric Telegraph Company have selected Ipswich as the locality for their principal office: it is to be on the Corn-hill. Active operations will be commenced as soon as the requisite pipes are finished. These will be sunk underground to the depth of about two feet.

FINE ARTS.

LORD NELSON ON THE MORNING OF THE "BATTLE OF TRAFALGAR."
By CHARLES LUCY.

MR. LUCY has just completed a very interesting historical picture, representing England's naval hero seated in the cabin of the *Victory* half an hour before the Battle of Trafalgar, and meditating upon his immortal signal, "England expects every Man will do his Duty." Having inspected this work at the rooms of Messrs. Squire and Co., in Cockspur-street, we must bear testimony to the very great skill and taste displayed in its execution. Nelson, sitting in an easy and dignified repose, rests his head upon his hand, which is clenched in a manner which reveals the determined energy of his mind. The face, which is drawn after the original *terra-cotta* masque taken when Nelson was at Naples, bears a thoughtful and somewhat melancholy expression, as if charged with a presentiment of the fate which was awaiting him even in the hour of victory. The figure and limbs are moulded with great roundness and softness; the flow accessories—including his diary, his watch, and his celebrated testament, in which he commends his daughter to the British nation—are introduced with good effect; and the general tone is very harmonious and pleasing.

DEPARTMENT OF SCIENCE AND ART.

The following very important minute has just been issued by the Board of Trade:—

My Lords take into consideration the estimates about to be submitted to Parliament for affording aid to the Committee of Council during the year ending the 31st of March, 1854.

At the establishment of the schools it was understood that a Government grant was promised for a limited period of three years, upon the condition that a sum equivalent to it was raised in the locality, and in the expectation that after three years the schools would be so established and supported as not to require any further assistance from Government. These expectations have not been fulfilled; but, on the contrary, the tendency of the system, until very lately, has been to engender increased reliance on Government aid, rather than upon the value of the instruction or local exertions, and has been found adverse to economy. My Lords are of opinion, that by more judicious arrangements it may be possible greatly to increase the advantages which now result from the outlay of so large a sum of public money; and while they do not propose to withdraw grants from the places which now receive them, they are desirous to introduce a system of greater efficiency and economy, by which the independence of the local bodies may be increased, and the objects of the Parliamentary vote more adequately attained. My Lords desire to relieve the localities altogether from the obligation to raise a sum equivalent to the Parliamentary vote, and instead to leave the whole general management, and the control of the cost of it, entirely to the local committees. In future, the local committees will not be required to return to this board any account of their local expenditure, or of any receipts from subscriptions or donations; each local committee will, therefore, determine for itself what premises shall be used—subject, of course, to their being considered by my Lords as suitable for the purposes of instruction—what rent shall be paid, what furniture provided, what managing officers, servants, &c., shall be engaged, and what shall be the cost of general management.

My Lords on their part, propose to confine the Parliamentary grants wholly to the promotion of instruction, and even in this point to exercise control only so long as the local committee elects to receive the Parliamentary aid. Those Lordships would receive it as the highest mark of the progress and success of art education, in any locality, to find that the committee preferred independence of the Government grant altogether.

My Lords will require that the Parliamentary grant for the year ending the 31st of March, 1854, should be paid to the following objects:—The rent masters' salaries; an increase of masters where necessary, especially for affording instruction to public schools; pupil teachers; and to deserving students in holding scholarships both in local and metropolitan schools; and to students in training to become masters; lectures and examples for teaching. After communication with local committees, my Lords will apportion the grant to these respective items.

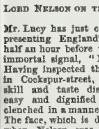
As the fees paid by the students may be considered as the product, partly, of the grants furnished by Parliament, and partly of the funds raised in the locality, my Lords will require as a condition of receiving any Parliamentary aid that an equitable portion of the fees shall be applied towards instruction; and, in accordance with the minute of the 28th of January, 1853, and for the reasons given in the letter of the 30th of June, 1853, which has been sanctioned by the Lords Commissioners of her Majesty's Treasury, they propose that such portion of the fees shall be paid to the master or masters of the school as part of their income.

HENRY COLE, Secretary.

The educational estimates for the current year give £336,402 as those annexed to these national purposes from the public purse. The vote for the Board of Trade Department of Science and Art, exhibiting a total increase upon last year's demand of £11,656, indicates the operation of the resolutions recorded in the Ministerial exposition. The "Division of Art, Central School, and Museum" are aided by a grant of £7618, instead of £4463. These are the exhibitions alluded to by Lord John Russell "for lectures, technical instruction, examinations, prizes, and scholarships, an increase being shown under each of these heads. There are, besides, attendances for all exigencies, and a "training master" in this department also for elementary teachers Over and above the particular charges thus provided for there is an allotment of £7500 for local schools of art receiving Parliamentary aid, the total encroachment of the same amount to "self supporting" institutions of this description. The latter establishments are to be supplied with "examples" or specimens at half the prime cost which Government has been furnished to them to the extent of £4090; £1000 only having been devoted to such purpose in the year last past. A "Department of Science and Art," too, is rated this year at £4585 (that of £2625; and the other £1960 for purchase of every item of these services shows how diligently the agencies thus created are now put in requisition

OBITUARY OF EMINENT PERSONS.

SIR CAVENDISH STUART RUMBOLD, BART



The death of this Baronet occurred at Nice on the 27th ult. Sir Cavendish had not completed his 36th year. He was son of the late Sir William Rumbold, third Baronet, by Henrietta Elizabeth, his wife, who was great-granddaughter of Thomas Hobler, 1st Lord Llancliffe, and sister of the Princess de Polignac, wife of the well known Minister of Charles X. of France. His first Baronet of the family was Sir Thomas Rumbold, Governor of Madras. Sir Cavendish having died without issue, the title devolves on his brother, now Sir Carlo Arthur Henry Rumbold, 5th Baronet.

RODERICK MACLEOD, ESQ., OF CADBOLL.

THIS gentleman, the Lord-Lieutenant of the county of Cromarty, died on the 13th ult., at his seat, Invergordon Castle, Ross-shire, in his 67th year. He was the only son of the late Roderick Macleod, Esq., of Cadboll, M.P., and represented a distinguished branch of the eminent family of Macleod, of Lewis. He formerly sat in Parliament as Knight of the Shire for Sutherland.

By Isabella, his wife, daughter of William Cunninghame, Esq., of Lainshaw, county of Ayr, he leaves, with other issue, a son and successor, Robert Bruce Æneas Macleod, Esq., now of Cadboll.

MR OLIVER LANG.

MR OLIVER LANG, master-shipwright at Woolwich Dockyard, who was quite well and cheerful on board the *Royal Albert* screw steam ship and *Terrible* steam-frigate on Monday the 11th inst., inspecting the progress of those vessels, died suddenly at his official residence at one o'clock in the morning of the next day. Mr. Lang was seventy-five years of age, twenty-seven of which he served as master shipwright at Woolwich. He was the only son of Mr. Lang, who was Surveyor to Admiral Montagu when superintending some works at Virginia Water, that his Majesty offered to knight him, but Mr. Lang respectfully declined the honour. He also enjoyed the friendship of William IV.; and he received numerous presents from the Emperor of Russia, the King of Prussia, and the King of Denmark. Mr. Lang introduced a great number of improvements into the construction of ships and steamers: the strength of vessels of his construction is evident to all who have inspected the *Royal Albert*, 131, screw steam-ship, and the *Terrible* steam-frigate, both at present at Woolwich, the former nearly ready for launching. Mr. Lang was the first to design a steamer for the Royal Navy, and the *Comet* paddle-wheel steamvessel, of 80-horse power, built under his superintendence at Deptford, is still in the service, and employed on the west coast of Scotland in protecting the fisheries

THE EDUCATION COMMITTEE.—The minute made by the Education Committee on the 2nd of April, cancels that of the 12th of June last. The effect of the new minute is, that, in case any difference arises in a school participating in the Parliamentary grant as to any regulation on religion, the matter is to be referred to, and to be decided by, the Bishop of the diocese; and in case any difference should happen in the Committee of Management, a request is to be made to the Lord President of the Council, and it is to be investigated, and arbitrators to be appointed.

FESTIVITIES IN BELGIUM.

THE DUKE DE BRABANT.

MR. DISRAELI said the other day of the King of the Belgians, that he was the wisest and most accomplished of living Princes, and the observation was made with the apparent concurrence of a crowded House of Commons. When the French Revolution broke out in 1848, Belgium, under a despotic and unpopular Government, would have quivered to her centre, and would probably have thrown herself into the arms of republican France: but it is hardly too much to say that Belgium at that moment did not contain a single disaffected political agitator. All the efforts of the French Socialists failed to rouse the Belgian people into insurrection. England was, to some extent protected by her insular position from feeling the shock of the revolutionary earthquake; but that a people speaking the same language, and inhabiting a contiguous territory, should regard with pity and compassion the political convulsions which appeared to bring to their changeable neighbours liberty and political power, must be regarded as no inconsiderable tribute to the wise constitutional rule of King Leopold.

The Belgian people have during the last few days availed themselves of another opportunity of evincing their attachment to the royal family. The eldest son of the King, his Royal Highness the Duke de Brabant, attained his eighteenth year on the 9th of April; and the auspicious event was celebrated with great rejoicing on Saturday last throughout the kingdom. The Duke de Brabant and Prince Royal of Belgium was born at Brussels on the 9th of April, 1835. In virtue of the Constitution, the Duke de Brabant attains his political majority at eighteen, and may succeed to the throne at that age. He also, by an article of the Constitution, becomes of right a senator on attaining the age of eighteen.

The ceremonies and festivities of the day commenced at Brussels with the installation of the Duke de Brabant as a member of the Belgian Senate. The Palace of the Nation, in which the Senate and the Chamber of Deputies hold their meetings, is a magnificent edifice, erected by Guimard, in 1783, and ornamented with six Ionic columns. On both sides of the spacious hall is a marble staircase, one leading to the Chamber of Deputies, and the other to that of the Peers. The interior of the Senate was decorated with the national colours, and fitted up with the greatest taste for the occasion. A great number of ladies were present, the elegance of whose costumes gave gaiety to the scene. The Ministers of all the foreign powers were present, and the Senators attended in full official costume. The Ministers of the King were also in full dress, and wore their orders. At about one, the Count de Flandres, the second son of the King, and his sister, the Princess Charlotte, entered the Royal tribune. In a few minutes afterwards the Prince, their brother, arrived, amidst the usual salutes from the military assembled near the place, and the cries of "Vive le Roi" from the people. The Duke de Brabant, who bowed in the most graceful manner to the assembly, was attired in the costume of a senator. He is tall for his age; for, although only eighteen, he has the appearance of being twenty-two. His countenance bears a strong resemblance to that of the late Queen, his mother. After he had taken his seat in a fauteuil prepared for him in the centre of the hall, opposite the president, the Prince de Ligne reminded the future successor of Leopold I. of the patriotic services and enlightened conduct of that monarch, "the faithful observer of sworn faith;" then, after alluding to the virtues of the beloved and much-regretted Queen, he concluded by saying, "Come forward, Prince, and swear to defend our institutions. From on high your sainted mother sees you, and here below Belgium listens to you."

HIS ROYAL HIGHNESS THE DUKE DE BRABANT

The Duke de Brabant made a very suitable reply. He congratulated himself on having entered upon parliamentary life, where he might be able to acquire experience in public affairs; and devoted himself in the strongest terms to the independence and future welfare of the country. His speech was hailed with unanimous marks of applause. The Prince afterwards took the oath to observe the Constitution, and the President declared him to be a Member of the Senate. The Duke de Brabant then left the hall, accompanied by the Ministers, and on his departure was hailed with loud cries of "Vive le Roi," as on his entrance.

After the ceremony, the Senate and the Chamber of Representatives went in state separately to the Palace, in order to present addresses of congratulation to the King. His Majesty appeared profoundly touched by the affectionate homage of the two Chambers. In his reply to the address of the Chamber of Deputies, the King said:

These fine provinces for ages sought to live their own individual life, but fortune and unfavourable circumstances frustrated their repeated attempts. To-day you have a dynasty which is entirely yours. This dynasty has identified itself with the country, and your interests have always been placed before its own. I see among you many political men who can say whether this assertion is true. (Cries of "Yes, yes. Vive le Roi!" "Vivent les Princes!") I will venture to say that my sons are worthy of the feeling which the country has manifested for them. The Duke of Brabant (the Crown Prince) has for several years studied public affairs. I have found in him very much of judgment and good sense. I have instructed him freely and without reserve in all that is essential and useful in the affairs of the nation. My second son is animated by the same feelings. Both are devoted to the country and its institutions. Should our circumstances become difficult, or danger menace us—which, however, I do not believe is to be apprehended—you will find them devoted friends, courageous defenders. ("Vive le Roi!" "Vivent les Princes!") Gentlemen, let us all hold together, and we shall pass happily through whatever trials may be in store for us. For us this union is so much the more easy, inasmuch

ILLUMINATION IN THE RUE DE LA LOI, AT BRUSSELS.

as I have rarely seen an assembly more patriotic, more wise, more moderate. Again I say, let us be united, and the future of Belgium will be prosperous.

In the afternoon, the King laid the first stone of the viaduct of the rue de la Loi; and afterwards performed the same ceremony at the Aqueduct of Ixelles, by means of which the city of Brussels will shortly receive an abundant supply of pure water, which, in the words of the authorities, will embellish the promenades, refresh the atmosphere, ascend to the top of the highest houses, disputing with fire its prey, and substituting a more wholesome beverage for the water hitherto obtained from wells. In three years Brussels will receive a large and liberal distribution of water by the completion of this undertaking. This ceremony concluded at half-past four.

In the evening, the city of Brussels was brilliantly illuminated. The illumination was universal. Palaces, churches, the public offices, the [illegible] dwelling-houses of all kinds streets, boulevards, [illegible] and were [illegible] arteries of the [illegible] blazing light. Vehicles [illegible] course of persons filled the streets, who expressed by their exclamations the [illegible] pervaded from the splendour of the illuminations and transparencies. The rue de la Loi (of which we give a Sketch) was embellished by illuminations of gas of dazzling brilliancy. The edifice on the left is the Palace of the Nation [illegible], it are the Houses of [illegible] on the right the Palace [illegible] Park. [illegible] tion before the Chamber of Representatives, was that of a gigantic escutcheon, in which figured the Belgic lion, surmounted by the Royal crown. At the angle of the street was the cipher of the King within a wreath of [illegible].

The Park of Brussels must be well remembered by all the visitors of that Paris in miniature. The walks are lined with lofty trees, and verdant slopes and thickets give it a more natural appearance than is usually found in French gardens. During the summer, concerts in the open air in the Park attract all the *beau monde* of Brussels.

The beautiful tower of the Hôtel de Ville, illuminated with Bengal-lights, was another great object of attraction with the multitudes who perambulated the streets. The Hôtel de Ville of Brussels is regarded as one of the finest buildings of the Lombardo-Gothic style of architecture. Its tower, built in the Gothic style, is 364 feet high. It is of pyramidal form, and when lit up by the Bengal-fire, its light and elegant workmanship was seen to great advantage. The illumination was accompanied by the letting off a quantity of fireworks from the top of the tower. The chief incident of historical interest connected with the building is, that, in the Great Hall, on the 25th Oct., 1555, Charles V., surrounded by a splendid Court, gave to his son, Philip II., the government of Burgundy. The next year he added the sovereignty of his other kingdoms and states; and, on the 7th of September, 1556, he solemnly abdicated the Imperial throne.

THE HOTEL DE VILLE, BRUSSELS, ILLUMINATED.

The festivities of the fashionable world were concluded by a magnificent ball at the Hôtel de Ville, to which the King and Royal suite repaired, after his Majesty had entertained the Senate at a grand banquet in the hall of the Concert Noble at Vauxhall. The Great Hall was tastefully and brilliantly decorated for the ball. The King, the Princes, and the Princess Charlotte arrived at the Hôtel de Ville at a quarter-past ten. The Duke de Brabant had for his partner, in the first *contre danse*, the Infante Isabelle de Bourbon, who was resplendent with diamonds, and who wore a robe of blue moire, over which was a magnificent *jupe* of lace. About eleven o'clock, a noise as of thunder, which filled the dancers with alarm, seemed to announce the fall of the whole building. For an instant a frightful panic seized upon the guests, when it was announced that the noise was made by the fall of the fireworks from the tower.

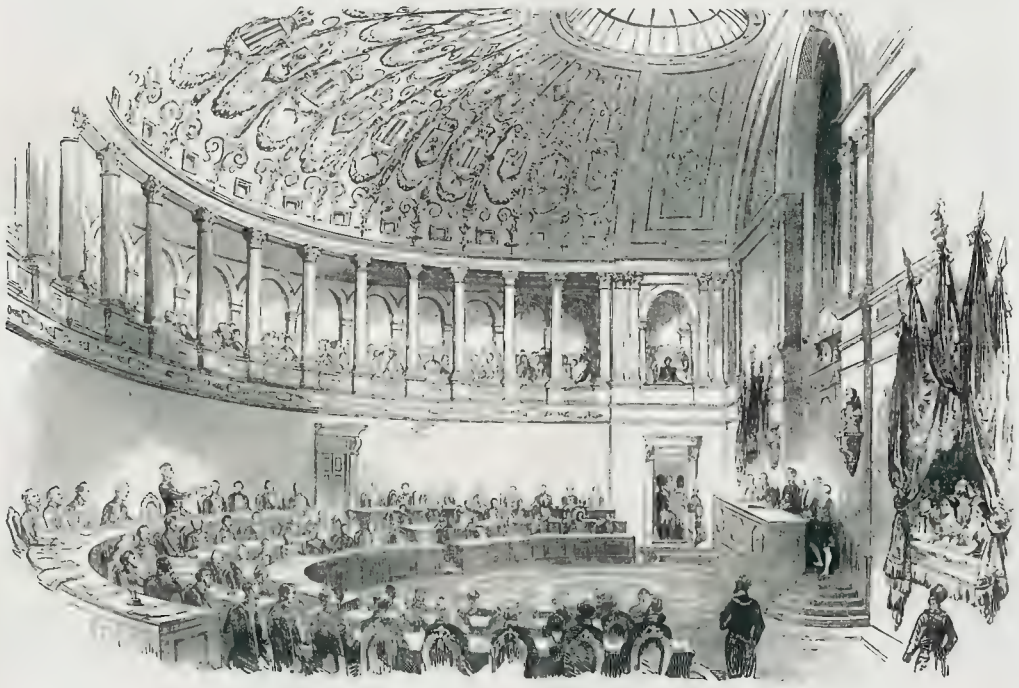
On the morning of Sunday a "Te Deum" was celebrated in the Cathedral of St. Gudule, which was attended by the King, the Royal family, the Senate, and other high personages.

The rejoicings of Brussels have been matched in the provinces, where the excitement was equally great as in the capital. At Antwerp, Bruges, Ghent, Louvain, and Malines, the happy event of the political majority of the Prince de Brabant has been celebrated with an enthusiasm which augurs well for the political contentment of the people, the permanence of the Monarchy, and the popularity of the reigning dynasty.

The young Duke de Brabant, the Count de Flandres, and the Princess Charlotte, the children of King Leopold, by the late lamented Queen Louise of Orleans, have paid several visits to Queen Victoria, to whom they are nearly related. The Duchess of Kent is the sister of Leopold, who is not only uncle to the Queen, but also to Prince Albert. The King of the Belgians is a Protestant; but his Royal children are brought up in the religion of their mother, who was a Catholic.

On the day of his majority, the King, wishing to give his eldest son a new mark of his tender affection, gave him the Grand Cordon of the Order of Leopold. On the same day, the young Prince Royal was appointed Major of Infantry; while his brother, the Count de Flandres, was promoted to be Major of Cavalry.

Madame Van de Weyer, wife of his Excellency the Belgian Minister, gave an entertainment on Saturday evening, at the residence of the Belgian Legation, in Portland-place in celebration of the coming of age of the Duke de Brabant.



INSTALLATION OF THE DUKE DE BRABANT, PRINCE ROYAL, AS MEMBER OF THE BELGIAN SENATE.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, APRIL 8.

There was a large attendance of members to-night, who awaited with great interest Mr. Gladstone's exposition of what was generally regarded as a great financial operation, and an epoch in the history of our National Debt. The right hon. gentleman is ordinarily a most fluent and rapid speaker; but his volubility to-night, in dealing with the most complex and difficult subjects of finance, was so great, that the most practised reporters found it almost impossible to follow him. In an hour and a half he had uttered matter which occupies five columns of the *Times*. Mr. Gladstone's words and ideas crowd so thickly upon him that the measured and effective delivery requisite for the higher flights of oratory is denied to him. His style is wordy and diffuse; and hon members complained that his excessive desire to make himself understood to so overlaid his subject with illustrations and explanations as to defeat his object. The Government scheme was listened to with the most anxious attention, and the warm and animated debate which followed showed how many merchants, bankers, and millionaires the House of Commons can boast who possess an intimate acquaintance with monetary and financial affairs which enables them to discuss at the shortest notice the effect of the Government proposal upon the commerce and public burdens of the country.

The House having resolved itself into a committee upon the Consolidated Fund and the National Debt Redemption Acts, Mr. Bouverie (who has succeeded Mr. Wilson Patten) in the chair,

The CHANCELLOR of the EXCHEQUER detailed the nature of the Government propositions with respect to a portion of the National Debt. He proposed to redeem and pay off the whole of the stock belonging to the South Sea Company, amounting nearly to £10,600,000. The proprietors of this stock have four alternatives:—

1. They may obtain, in lieu of every £100, a new stock, bearing ½ per cent, guaranteed against reduction till 1854 (forty years), at the rate of £32 10s. for every such £100 stock—which is equal to an interest of £2 17s. 9d. per cent, fixed for that period.

2. Or, they may receive a new 2½ per cent stock, guaranteed also till 1854, at £110 for each £100 of such stock—equal to £2 5s. per cent.

3. Or, they may receive Exchequer Bonds, bearing 2½ per cent for a period not exceeding ten years, and 2½ per cent for a further period till 1854 (forty years in all) which shall be payable by bearer, and to which coupons for the half yearly interest shall be attached, also payable to bearer.

4. Or, lastly, they may, if they reject any of the above three plans, receive the amount of their stock in cash at par.

So far this operation is compulsory on the present holders of this stock. But as so limited an operation would do nothing either to test the actual power of the Government in the money market, or to lay a sufficient foundation for great future operations, the Chancellor of the Exchequer, proposes to extend the same offers to the holders of all Three per Cent Stocks—the first without any limit to the amount; the second and third, to be each, in the meantime, limited to thirty millions of stock. With regard to the mode in which the persons desirous of changing Consols or Reduced for such portion of the Two-and-a-Half per Cents, or of the Exchequer bonds as shall remain after the holders of the £3,500,000 of the petty Three per Cents shall have made their selection is to be effected, the Chancellor proposes that the power shall be left to be exercised by the first comers, and that the books shall be closed as soon as the limit of £30,000,000 shall have been reached.

This is, in brief, the Government plan; the chief merit of which is said to be, that it lays the foundation of a permanent and irredeemable Two and a-Half per Cent Stock.

In the discussion which followed, the advantage of the Exchequer Bonds—a species of bank notes bearing interest—was strongly dwelt upon. They are to be as transferable from hand to hand as a bank note; they are to have half-yearly coupons for interest attached to them, which may be cut off and paid into any bank, and which will be a cheque on London for the amount. It was anticipated that these Exchequer Bonds will be a favourite investment for bankers, insurance offices, and commercial men; and little doubt was entertained that the Chancellor of the Exchequer will, ere long, be asked to increase the amount beyond £30,000,000; although some of the speakers expressed misgivings whether the present Income-tax will at all events, would circulate with Exchequer Bonds at 2½ per cent. On all hands congratulations were expressed that the Chancellor of the Exchequer had abandoned his original design of dealing with £300,000,000 of the great Three per Cent Stock, which would have added £10,000,000 to the National Debt in forty years, and had limited the amount of Stock to be commuted to £30,000,000, which could not add more than £3,000,000 to the nominal amount of the debt. The most effective speech against the Government resolutions was that of

Sir F. KELLY, who, treating the question as one purely arithmetical, characterised as a delusion the apparent option between the three new kinds of security. Sir Fitzroy's figures were very startling. He had we give them. He supposed the owner of £100 South Sea Stock to be considering which of the three proposals it was his interest to adopt, and he began with the second, reserving the first scheme for his last illustration:—

The second proposal would give him for his £100, £110 2½ per cent Stock, redeemable at £110 at the end of 40 years, with £2 15s. per annum interest for 10 years, or some less period that the Government might determine, and £2 10s. for the rest of the 40 years; and at the end of the 40 years this person would have his stock in the shape of a Treasury bond of £100. In the one case he would have £2 15s. for 40 years, and then be the holder of £110 stock; and in the other case he would have £2 15s. for ten years, and £2 10s. for the next 30, and then the holder of only £100 stock, liable to be paid off at that amount. What man in his senses would pause between the two proposals? The remaining proposal (the first of the resolutions) was to give for the £100 £32 10s., 3½ per Cent Stock, guaranteed against reduction for 40 years, and yielding therefore £2 17s. 9d. for 40 years, but liable then to be paid off at £32 10s., being £4 7 10s. less than if he took £110 in cash, producing £2 15s. What was the compensation for his being entitled to £2 7 10s. less under this proposal than under the other at the end of 40 years? Just 2s 9d. more interest per annum during the 40 years. Was 2s. 9d. a year for 40 years purchase-money for £27 10s. at the end of that time? Would it represent even in perpetuity more than £5 or £6?

The right hon. gentleman thought it certain that the holders of stock would accept the second and reject the other two.

Mr WILSON, without arguing in favour of the first proposition, or its attractiveness as against the second, said the hon. and learned gentleman had overlooked the convenience of the Exchequer Bonds, in being easily convertible into money. He predicted that they would soon become one of the most favourite securities with the country. The only objection he had heard was that the Government, instead of 2½ or 2¾ might have given a less rate of interest.

Other members addressed the House, including Mr. DISRAELI; but, as the right hon. gentleman had formed his calculations upon the supposition that the Government resolutions, as originally proposed, dealt with £600 000 of the debt, in ignorance of the amendment limiting the amount to £30,000,000, his argument was somewhat beside the question

The resolutions were then agreed to.

The House then for going into Committee of Supply on the Civil Service Estimates, Mr EWART spoke upon the necessity of examining candidates for the diplomatic service. Lord J. RUSSELL said the subject was under consideration. Lord PALMERSTON thought a moderate examination of candidates for the post of unpaid attaché might be established; and when in office he had taken some steps for that purpose. Lord STANLEY and Mr. DISRAELI expressed opinions in favour of adopting the United States mode of selecting men for superior diplomatic service abroad, who had shown their ability for conducting public business at home, instead of appointing only trained diplomatists to the higher offices.

A discussion took place upon the Six-mile Bridge affray, upon a motion by Lord ABERDEEN'S VANE, complimentary of Mr. Justice Ferris's charge to the jury on the trial of the soldiers. The motion was withdrawn.

HOUSE OF LORDS.—MONDAY.

On the motion of the Earl of ABERDEEN, their Lordships agreed to concur with the Commons in an address for a commission to inquire into corrupt practices at the late election for Canterbury, after some objections by Lord LYNDHURST and Lord ST. LEONARDS, on the ground that the report of the Commons' committee did not use the words of the act.

HOUSE OF COMMONS.—MONDAY.

Lord J. RUSSELL stated the opinion of the law officers of the Crown to be that, in the event of the clergy reserves being secularised by the Legislature of Canada, and of the act receiving the Royal assent, there would be no claim for any payment from the Consolidated Fund.

On the order of the day for the third reading of the Clergy Reserves (Canada) Bill, Mr WALPOLE moved to defer the third reading for six months. He objected to the bill that endowments to Roman Catholics could not be touched without the authority of the Imperial Parliament, while endowments to Protestants in Canada could be dealt with and destroyed by a majority of the Canadian Legislature alone.

A debate ensued, in which the former arguments for and against the bill were reiterated, with very little novelty. The only noticeable feature in the discussion was, that Mr. KER SEYMER and Sir E. DERING, who usually act with the Opposition, supported the bill, on the ground that it would tend to preserve the union between Canada and the mother country. Lord J. RUSSELL did not shrink from the consequence, that, if the people of Canada thought that Church establishments were not for their benefit, and preferred the voluntary principle, they must follow their own will. Self-government in local concerns was the only principle upon which we could govern Canada; and if our legislation were founded upon generous principles, the connexion would continue, and be a source of prosperity to both countries. Upon a division, the third reading was carried by 288 to 208; and the bill passed.

HOUSE OF LORDS.—TUESDAY.

Earl GRANVILLE, in reply to Lord Campbell, stated that the First Commissioner of Public Works was about to restore the site of the Crystal Palace to its original condition. The expense would be charged to the contractors, who had failed to comply with their contract herein

COMPULSORY VACCINATION.

Lord LYTTELTON, in an interesting and valuable speech, moved that the House go into committee on the Vaccination Extension Bill. He showed the wonderful progressive diminution of deaths from small-pox after the discovery of vaccination by Dr. Jenner.

The average of deaths from small-pox out of every 1000 deaths from all causes within the bills of mortality were in the 10 years preceding 1700, 100; 1710, 108, 1720, 98; 1730, 87; 1740, 88; 1750, 83; 1760, 64; 1770, 42; 1780, 32; 1790, 23; 1800, 16. In Chelsea Royal Military Asylum, in 48 years, on an aggregate of 31,705, not one death had occurred from small pox after vaccination, and only four from second attacks of unvaccinated persons in Ahmedabad, in Bombay, where vaccination was introduced in 1817, it became general in 1826, and small-pox has since been unheard of. In Hanover, in 1847, of 45,830 deaths, there were only eight from small pox In Denmark at one period small pox had entirely disappeared, so universal was the practice of vaccination England and France were now the only countries in Europe in which vaccination was not compulsory In some countries as Hanover, Bavaria, and Sweden—the law was directly compulsory, and in Prussia the system which was the plan he proposed in the present bill. In Austria, Belgium, Sardinia, Prussia, and other countries vaccination was made indirectly compulsory by various means; and in Prussia no one was allowed to be married who could not show that he had been vaccinated. In Ireland, where the greatest ignorance and prejudice might be supposed to rail on the subject, no less than 58,000 persons had died from small pox in the seven years ending 1841; and in all subsequent years, he believed, the state of matters was not much improved. In Connaught—which might be considered the part of Ireland where vaccination was most likely to be neglected—the number of deaths during the ten years ending 1841, were 69 in 1000; in Lombardy, there were 14 in 1000, or 5 deaths in 2000. These were the two extremes The average number of deaths in England and Wales during eight years was nearly 22 in 1000; whereas, in a long list of countries in which vaccination was compulsory, it ranged from 5 in 1000 in Saxony to the 14 in Lombardy, and the average was not quite five. These facts showed that, in this country, the mortality from small-pox was more than four times as much as it was upon the Continent (Hear).

The present public provision for vaccination was, that in every union the guardians were empowered to contract with a medical man to vaccinate all children whose parents were not above bringing them to be vaccinated

The result was, that there was a great want of uniformity as to the extent of vaccination in various parts of the country. In Birmingham, in 1851, the vaccinations were 81 per cent on the total number of births; in Leicester they were 41 per cent on the births; in Loughborough, 38; in Bideford, only 11 per cent upon the births. At present there was great delay before vaccination, which caused a great sacrifice of life It was the opinion of medical men, that except under peculiar and exceptional circumstances, vaccination ought to be performed within four months of birth, and he proposed to bring down the time to three months. At present vaccination was often delayed until the second or third year. No system of vaccination could be considered otherwise than fundamentally defective under which a large number of children thus remain unprotected to the age of two or three. Out of the total number of 601,830 b rths for the year ending September, 29th, 1852, there had been only 378,178 vaccinations, which were considered for this purpose. and 203,029 of those thus vaccinated were above one year, and 104,889 under one year of age. This was a point upon which all the authorities had the greatest doubt, and he had therefore offered that vaccination should be made compulsory within a cer ain time. The bill enacted that all persons coming to the coming to the Poor-law Board under a penalty; notice to be given to parents in reference to the vaccination of their children at the time when the birth was registered The act only extended to England and Wales. He had given the subject his consideration that what was wanted was one complete system of national vaccination. There now existed a good deal of prejudice among the poor against the present arrangement, which they considered a kind of pauperism, supposing that, in taking their children to the public vaccinators they were receiving pauper relief. This was a very natural feeling, and if the machinery established under the Poor-law Board, or the Board the system would probably work better. It had been objected that, after all, the bill would not be compulsory, for that a person might pay the fine which the bill imposed, and still have his child unvaccinated; but his own impression was, that, sooner than pay the fine, the great majority of parents would have their children vaccinated.

The Earl of SHAFTESBURY entirely concurred. He declared that the voluntary system had failed, and they must, therefore, resort to some other means of protecting society from this frightful disease, which was one of the most fatal that afflicted humanity. In 1835 the lives lost by small-pox in England and Wales were upwards of 16,000; the deaths registered for two years and a half ending December, 1839, were 30,000, or about 12,000 annually. But the destruction to life caused by small-pox could not be estimated by columns of deaths; where it did not at once destroy, it laid the foundation of many forms of disease—it led to blindness, deafness, active development of scrofula, consumption, and mesenteric disease. Vaccination was not compulsory in France; but the Vaccine Committee, in their last report, advised that France should at length follow the example of many other nations. He must say that he agreed in thinking that children should be vaccinated from the arm of a healthy child; for no doubt there was a prejudice against the virus from animals. If the bill were properly carried out, and remuneration given to those engaged under it, he believed they would soon exterminate the disease; and he had not the slightest doubt that generations to come would thank their Lordships for the attention they had bestowed on that important subject, and for the benefits which it resulted from it.

The House went into committee on the bill, which was ordered to be read a third time.

HOUSE OF COMMONS.—TUESDAY.

Mr. BRAMSTON reported that Mr. Keogh was duly elected for Athlone, for which a new writ was then ordered, owing to that hon. gentleman's acceptance of the office of Solicitor-General for Ireland.

Lord J. RUSSELL, in answer to Mr. Ewart, said that he should consider pauper-schools in his education scheme, but should not include schools for criminal children.

Mr. GASKELL moved an address for a commission to inquire into corrupt practices in the borough of Clitheroe. It appeared that there had been a large amount of intimidation and treating, but only one case of bribery, and a discussion arose. The motion was carried by 144 to [illegible]

Sir H. L. EVANS proposed leave to bring in a bill to alter the scale of duties on carriages, on the ground that the tax was unremunerative, that it was decreasing every year, and was open to very large evasions, besides being most vexatious to persons possessing carriages, and calculated still further to limit their use.

The CHANCELLOR of the EXCHEQUER agreed with most of the objections made to the tax; but, if the evil were to be met, it must be either by a sacrifice of revenue, or by plucking at the root of the evil. With regard to the present intention of the Government, he would only refer them to his financial statement on Monday

Sir DE LACY EVANS was satisfied with the answer of the Chancellor of the Exchequer, and withdrew the motion.

Mr. I. BUTT moved an address to her Majesty in favour of maintaining for Irish soldiers the asylum of Kilmainham Hospital the abolition of which would be opposed to the feelings of the Irish nation, and injurious to the honour and interests of her Majesty's service. Lord G. PAGET seconded, and several Irish members supported the motion. Mr. HERBERT said the question was, would the House reverse a policy which it had three times approved, and which had been acted upon by two Governments? He showed that the feeling of the soldiers was rather in favour of the out pension; that it was not the long-service and badly wounded men who sought the hospital, since they enjoyed the largest pensions and preferred living at home. Upon a division, the motion was carried against the Government by 198 against 151.

Mr. W. BROWN moved for a Select Committee to take into consideration and report to the House the practicability and advantages, or otherwise, that would arise from adopting a decimal system of coinage. The motion was agreed to, and the committee was ordered to consist of the following members:—Mr. W. Brown, Mr. Cardwell, Mr. J. Ball, Mr. Tufnell, Mr. Alderman Thompson, Mr. Dunlop. Mr. M. Forster, Lord Stanley, Mr. Moody. Mr. Hamilton, Mr. J. B. Smith, Sir W. Clay, the Marquis of Chandos, Sir W. Jolliffe, and Mr. Kinnaird.

HOUSE OF COMMONS.—WEDNESDAY.

Lord HOTHAM moved the second reading of the Judges Exclusion Bill, which was agreed to after some discussion. It appeared that the bill is principally directed against the Master of the Rolls, who, it is contended, ought not to have a seat in Parliament. Lord PALMERSTON and Lord J. RUSSELL, however, objected to the bill, the tendency of which was to exclude from the deliberations of the House of Commons persons holding judicial offices, who would be amongst the greatest ornaments of the House, and be able to render the House much assistance in discussing measures of law reform. On the other side, the bill was supported by Sir F. KELLY, Mr. HUME, Sir J. PARINGTON, and others, on the ground that it was inconsistent with the dignity of a high judicial officer to appear upon the hustings as a candidate for a populous borough, and that the judicial functions of the Master of the Rolls were incompatible with the due discharge of the duty of a member of Parliament.—Lord J. Russell would not, however, ask for a division against the bill, probably apprehending another Government defeat, and the bill was read a second time.

The House then went again into committee upon Mr Milner Gibson's County-rates and Expenditure Bill; but had made no further progress than the fourth clause at six o'clock, when the House adjourned.

HOUSE OF LORDS.—THURSDAY.

Their Lordships sat but a short time. The only business of importance transacted was the second reading of the Crystal Palace Company Bill, and the passing through committee of the Vaccination Bill.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. SPOONER gave notice that, when the Miscellaneous Estimates came on, he would bring under the consideration of the House the grant to Maynooth

TAXES ON KNOWLEDGE.

Mr. MILNER GIBSON called the attention of the House to the injurious effects of the Taxes on Knowledge, and said he would take the sense of the House separately on each of the following resolutions

1. That the Advertisement Duty should be repealed.

2. That the policy of restraining the cheap periodical press from narrating current events by making it liable to duties and other restrictions, if "any public news, intelligence, or occurrences, or any remarks or observations thereon," be contained therein, is inexpedient, and at variance with the desire now generally expressed in favour of the diffusion of knowledge among all classes, and it appears also to this House that the new relative to taxes on newspapers, and other regulations affecting public prints, is in an unsatisfactory state, and demands the attention of Parliament

3. That the Excise duty on paper, while impeding the development of an important manufacture, also materially obstructs the production of good cheap literature; and the maintenance of this tax as a permanent source of revenue would be impolitic and inconsistent with the efforts which Parliament is now making to promote education among the great body of the people.

He had proposed these resolutions in consequence of having observed that, for the last 150 years, the taxes to which they referred had been dealt with at the same time The taxes to which the resolutions had reference were part of a system which was originally adopted to restrain the press, but still he proposed that the resolutions should be put separately, and those who could not support the whole would be entitled to support such parts of the resolutions as they approved of. The right honourable gentleman said that the third resolution, which, in the eyes of the Chancellor, might be considered the most important, affected an amount of taxation of £900,600 a year. He, however, only asked the House to declare its opinion that it was a tax which ought not to be continued longer than was absolutely necessary. It was quite clear that the paper duty was impeded. Paper was made out of a worthless raw material; it employed vast numbers of people, and was essentially a rural manufacture. Complaints were made of the vast extent of emigration that was going on. Some of our best labourers were leaving the land; and it was desirable to save them the title of emigration, let them at once remove this obnoxious tax and all similar duties that oppressed the industry of the land. What was the effect of this tax upon the trade of this country? First, generally this—the foreigner came into our markets, and after purchasing up all the raw material to be obtained, carried it to countries where there was no paper-tax (Hear). It was then manufactured into paper, and the pay of itself was afterwards sent out to supply our wants. When the paper duties were first passed, in the reign of Queen Anne, an exemption was made in favour of books printed in Latin or Greek, and the time had arrived when a peculiar exemption ought to be made in favour of the books printed in the Welsh language (Hear). It retarded the spread of useful information and intelligence among the people, while it was unequal in its operation. For instance, to produce an extensive encyclopædia for the rich, the publisher would have to pay a tax of £1000, whereas, if the work was published at such a price as to be suited to the pocket of the poor man, the tax would amount to £20,000. What a mockery it was to talk about educating the people, while the inexpedient system of taxation was continued. But this tax was levied upon an exceptional rule; for, while the dealer in tobacco and spirits was allowed to sell his goods in bond, the author had no such boon conceded to him, but was obliged to pay all the tax before he could enter upon his speculations. No matter whether this tax was continued or not, cheap publications must be published, for the people would have them, and it was now for the Legislature to determine whether this class of publications should be good in quality as well as cheap in price. Having dwelt at considerable length upon the evils attending the advertisement duty; and the restraints to which the press generally was subjected, he concluded by submitting his three propositions.

The CHANCELLOR of the EXCHEQUER was not prepared to entertain any of the resolutions of the right hon. gentleman the member for Manchester, particularly at a time when no substitute was proposed to meet a reduction in the taxation involving so large a sum as £1,20,000. It was the business of the Government to bring in a bill to remove all doubts as to the state of the law in respect to this subject. (Cries of "Oh, oh!") He thought it would be most unadvisable that the House should go to make any pledges upon a subject which it was impossible for them afterwards to perform. Proposals had been made within a very short period to reduce, by such motions as the present, upwards of £7,000,000 of taxes; and if such propositions were attended to by the House, the occupation of the Chancellor of the Exchequer would be gone. He concluded by moving as an amendment the previous question.

Mr. BRIGHT supported the resolutions generally, but more especially the one applying to the reduction of the Government stamp.

Mr. W. WILLIAMS and Mr. DIGBY SEYMOUR also supported the resolution.

After some observations from Mr. J. Phillimore, Mr. Ricardo, the Attorney-General, and Mr. Wilkinson,

Lord J. RUSSELL thought that the House should wait until Monday, when the financial statement would be brought forward. He admitted the advertisement duty to be a serious interference with the business of the country, and therefore stood upon grounds different from the penny stamp duty, which carried with it some equivalent, and formed but a small portion of the price of the daily newspapers He protested against urging the question until the Chancellor of the Exchequer had made his financial statement

Mr DISRAELI reminded the House of the course he had pursued last year with regard to these taxes, when he drew a distinction between the duties on paper and the two other propositions for abolishing the advertisement duty and the penny stamp; and he also drew a distinction between the advertisement duty and the penny stamp. From what had been said by Lord Derby, it was clear that his Government thought the earliest opportunity should be taken to reduce the duty on advertisements, and he had, therefore, only to consider now how far the revenue was able to bear this reduction. They had now a larger surplus than formerly, and the amount of the advertisement duty was so inconsiderable, that although he could not at present recommend the abolition of all the three duties, yet he thought they might repeal the duty on advertisements. (Cheers). He would have the House to approach this question with caution, and he therefore recommended the House to adhere to the first resolution of the right hon. gentleman the member for Manchester.

Mr. J. BALL had intended to vote for the resolution of Mr. M Gibson, but, after the speech of Mr. Disraeli, he would never consent to make a

bridge of his right hon. friend to enable the Conservatives to get into power.

Mr. Cobden said it appeared to him that Mr. Ball had changed his mind because he found that the motion was likely to be carried. For his own part, he most heartily accepted the assistance of all parties in that House to get rid of the advertisement duty (Cheers).

Mr. J. M'Gregor said he would support the resolutions of Mr. Gibson.

Lord R. Grosvenor said that, although on the last occasion he had voted in favour of the proposition of Mr. Gibson, under the peculiar circumstances of the question at present, he would vote against him.

Sir J. Pakington thought the resolution of Lord R. Grosvenor an extraordinary one, seeing that he himself had pressed a motion for a remission of taxation against the remonstrances of the Chancellor of the Exchequer.

Mr. Maguire having made a few observations in support of the original resolutions, the House divided, when the numbers were—

For the first resolution	200
Against it	169
Majority against the Government.. ..	—31

The resolution in favour of the abolition of the advertisement duty was therefore carried.

On the second resolution a division also took place, when the numbers were—

For the second resolution	98
Against it	280
Majority in favour of the Government ..	—182

A third division also took place upon the third resolution of Mr. Gibson, when the numbers were

For the third resolution	80
Against it	275
Majority in favour of the Government ..	195

Adjourned.

Election Committees.—Since the re-assembling of Parliament, several election committees have been appointed: some have made their return, and some are still engaged in inquiries. The following have been decided:—*Dartmouth*: Sir T. Herbert, duly elected.—*Athlone*: Mr Keogh retains his seat, being properly qualified.—*Taunton*: Mr. Arthur Mills unseated: agents guilty of bribery.

Lancaster Election.—The polling took place on Tuesday. The proceedings were brought to a very quiet and orderly end, from the commencement, it was apparent that Mr. Greene would be returned. At the conclusion of the poll the numbers were:—For Mr. Greene, 668; for Mr. Armstrong, 543: majority for Mr. Greene, 125

Carlow County.—The writ for this county has been transmitted to the High Sheriff. It is stated that Mr. John Sadleir will offer himself, and with every prospect of success. Captain Keogh and Mr. Walsh are also spoken of; but, as yet, no candidate has addressed the constituency.

PROVINCIAL INTELLIGENCE.

Dublin.—In every department of the Great Exhibition Building the most rapid progress is being daily made, the time fixed for the opening being now little more than a month distant. The choral societies of this city, as well as those of Belfast, Cork, Limerick, and other towns, have been invited to attend the opening. Goods continue to arrive daily, and another temporary store room has been opened at the northern side of the building for the reception of articles of British manufacture.

The "Emma Braide."—The owners of this vessel—in consequence of her defects—will despatch her passengers to Melbourne per the ships *Asia* and *Albion*, of the same line, which were to succeed the *Ether Breeze*. About two hundred of the passengers are now stopping at the Government Emigration Depôt at Birkenhead, where they are very comfortably fed.

Mr. Alderman Andrews, late Mayor of Southampton, has again been honoured by her Majesty the Queen with an order for a new pony carriage, similar to the one which he built for her about two years ago. Her Majesty is well pleased with the phaeton which she has already purchased from Mr. Andrews, who, at the Grand Industrial Exhibition of 1851, received the prize medal for the best pony carriage, and two handsome volumes containing the jurors' reports, as a reward for the taste and ability displayed by him on that occasion.

Launch of a Steamer at Chatham.—The launch of a steam-boat, named the *Queen of the Isles*, took place on Saturday last. The vessel was built at the yard of Messrs. Green and Postcher of Rotherhithe. She is made of mahogany, on the diagonal principle, with three thicknesses of plank of half-an inch each, and an angle of about forty five degrees. Her dimensions are as follow:—Length over all, 123 feet; length on the deck, 112 feet; length between perpendiculars, 110 feet; breadth extreme, 13 feet ½ inch. Burden in tons, 91; and 30-horse power

A Good Example.—The Bishop of Durham has sent the following letter to an application for assistance to free the chapel from debt) from the congregation of Bethesda Chapel, Gateshead:—"Sir, Although my principal care is employed, as it ought to be, in the relief and assistance of those who are more immediately under my superintendence, yet I am happy in extending the right hand of fellowship to all who love the Lord Jesus. I have, therefore, much pleasure in forwarding to you £10 towards the liquidation of your debt; and can only regret that the urgent and continually increasing demands upon my purse do not allow me to send more. I am, sir, your obedient servant, E. Dunelm."

The African Mail Steamers.—The *Hope* screw-steamer, built by Mr. Laird, of Birkenhead, was tested, with highly satisfactory results, on Saturday, on the Mersey, and she sailed for London on Tuesday, whence she is to take her departure for the Africa coast from that voyage is 922, builders' measurement. Her engines are of 200-horse power, and her accommodation for passengers is on a very superior scale.

Agricultural Statistics.—A proposition upon this subject having recently been made by the Board of Trade to the Council of the Royal Agricultural Society, that body has declined to entertain it, on the ground that such matters are not simply connected with the improvement of practical agriculture, but had a direct bearing on prospective legislation, which the society is precluded from meddling with by a stringent condition in its charter. A decision of the kind obviously shuts out the society from assisting in the collection of facts, which would be of great importance to the whole landed interest.

Mrs. Harriet Beecher Stowe.—We are gratified to hear that this lady (who has recently arrived in England from the United States) has nearly recovered from her recent illness. She has been the guest of John Cropper, Esq., of Dingle Bank, Liverpool. On Monday morning, the children of "Cropper's School," went to Mr. Cropper's residence, and were introduced to Mrs Stowe. She left Liverpool on Wednesday, by railway, for Glasgow, where she attended a grand honorary soiree, on Thursday evening.

Mrs. C. Chisholm.—This lady is at present in Liverpool, the guest of W. Hashbone, Esq., Greenbank. On Saturday last she visited several ladies and gentlemen interested in emigration, including the Ladies' Committee of the Liverpool Emigrants' Home. On the 23rd, she will attend the Saturday evening concert in Liverpool, when the Mayor (Samuel Holme, Esq.,) has consented to preside.

New Graving Dock, Southampton.—Messrs. Baker and Son, of London, have the contract for the gigantic new graving dock, for the works of which will be commenced forthwith. These gentlemen built the Custom-house, and also the Queen's-warehouse, and other buildings, in the Southampton Docks

New Magistrates for Liverpool.—On Monday the following gentlemen were appointed magistrates of that borough, viz., the Venerable Archdeacon Brooks, the Rev. Rector Campbell, Mr. J. D. Anderson, Mr. Francis A. Hamilton, Mr. James Still, and Mr. Daniel Maclan—three Liberals and three Conservatives.

The "Osmanli."—This screw steamer, which sailed on Saturday for Melbourne from Liverpool, returned to that port on Monday with a slight leak, occasioned by a defective rivet, which was replaced, and she sailed again on Tuesday.

Commission of Lunacy on Mr. Feargus O'Connor.—There was a lengthened investigation on Tuesday before a commission, at Chiswick, into the state of mind of Mr. Feargus O'Connor, formerly M.P. for Nottingham, who, since June last, has been an inmate of Dr. Tuke's lunatic asylum, Turnham-green. The jury found "That Mr. Feargus O'Connor was of unsound mind, and was incapable of managing his affairs:" dating the lunacy from the 10th of June, 1852, the day on which he was committed to the custody of the Serjeant-at-Arms of the House of Commons

Absconding of a Railway Official.—Mr. H. Cole, the station master at Ipswich, has absconded. All moneys received at the station passed through his hands; and some discrepancy being discovered in his accounts, a rigid inquiry was determined upon. Apprehensive of the result, Cole took his departure by the late train on Monday night.

The Condemned Convicts at Liverpool.—Terrell and Williams, the convicts under sentence of death at Liverpool, appear very penitent, and fully sensible of their condition. Their conduct is spoken of as very orderly and becoming. Should no respite or reprieve be granted, they will suffer the extreme penalty of the law this day (Saturday).

CHESS.

TO CORRESPONDENTS.

J C., Calcutta.—The paper forwarded by the *Precursor*, though two months after date, was safely to hand, and we were much gratified by the triumph of our old and valued friend

Delta, W. S. T., Mr. Jellaby, T. J. of Wigan. The Totum, Middle, and others.—We were well aware that the solution in question was not satisfactory, and have communicated with the author on the subject.

Ricardo. If we had four columns instead of one to devote to Chess, we might, possibly, give as much attention to all our Correspondents on the games back, as it is we believe even Ricardo a legerity would hardly suffice to accomplish so desirable an object.

J. F. F. Queen right

T. J., of Shrewsbury. A private communication has been forwarded, to save you trouble, and in time.

J P. is referred to our previous notes in the Number for March 26. The positions he sends, *for the fiftieth* time, are utterly destitute of everything required to constitute a fine Chess problem.

A. M. N.—A charming little subtlety; but, if we are not mistaken, it has obtained a prize in print.

J. C. W.—The board is too crowded. Can you not dispense with some of the machinery? It seems monstrous to move so many pieces in so simple an object.

Dania. It is all bare inevitable.

H. J. H. Sutton.—Mr. Jaenisch's "Chess Nomenclature" has been received, but we are too much pressed for space to insert it at this moment.

W. Ed. Pollock. The letter is legible and correct. Send us some better specimen

C. B. P.—We have marked the shorter one for insertion, the other lacks interest.

Solution of Problem No. 477, by Rev. J. B. M. P., Ricardo, Ernest, Phiz, J. F. F., Student, Beta, and others.

Solution of Problem No. 480, by Agnes, Mr. Jellaby, Jack of Shrewsbury, Ricardo, H. P. N., Dereven, D. W. H., B. C. U., J. M., T. A. of Norwich, Stevens, B. A. of Cambridge, S. P. G. B., O. F. Q., G. S., D. D., Rugby-ner, Sailor, Bombardier, H. B., G. T., W. W., Philo-Chess, Mungo, Eclipse, J. P., Murdoch, 1852, are correct.

Solutions of Enigma by Jack of Shrewsbury, T. A. of Norwich, Phiz Alario, Ricardo, D. W. H., Dereven, J. P. F., J. P., 1852, D. D., are correct. All others are wrong.

*** *Mr. Lucenthale's challenge to Mr. Harrwitz shall appear, if possible, next week.*

Solution of Problem No. 479.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K 3rd	P takes Q, or (a)	3. P to Q B 6th (ch)	R takes P
2. B to K 6th	R to Q B 4th	4. B takes K P—Mate	

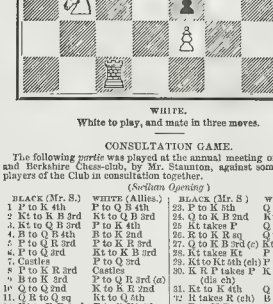
(a) 1. ... Q P takes P
... Q takes K R (best)
2. Q takes K P
2. P takes Q, becoming a Queen (ch)
3. K to Q 3rd
4. R to Q B 6th—Mate

If Black for his 1st move play P to Q 4th, White checks with his B at Q R 6th, and mates next move, or, if he take the P on Q B 4th with R, it takes K P (ch), and Q mates.

PROBLEM No. 481.

This elegant little Stratagem is the composition of R. B. Wormald, Esq., of Oxford.

BLACK.



WHITE.

White to play, and mate in three moves.

CONSULTATION GAME.

The following *partie* was played at the annual meeting of the Reading and Berkshire Chess-club, by Mr. Staunton, against some of the chief players of the Club in consultation together.

(*Sicilian Opening*)

BLACK (Mr. S.)	WHITE (Allies.)	BLACK (Mr. S.)	WHITE (Allies.)
1 P to K 4th	P to Q B 4th	23. P to K 6th	Q R to K sq
2. Kt to K B 3rd	Kt to Q B 3rd	24. Q to K R 2nd	Kt to K B sq
3. Kt to Q B 3rd	P to K 4th	25. Kt takes P	Q to her sq
4. B to Q B 4th	B to K 2nd	26. R to K R sq	Q to her 2nd
5. P to Q R 3rd	P to K R 3rd	27. Q to K B 3rd (c)	Kt to K 3rd
6. P to Q 3rd	Kt to K B 3rd	28. Kt takes Kt	P to Q 5th (d)
7. Castles	P to Q 3rd	29. Kt to Kt 4th (ch)	P takes Kt
8. P to K R 3rd	Castles	30. K R P takes P	K to Kt sq
9. B to K 3rd	P to Q R 3rd (a)	(dis ch)	
10. Q to Q 2nd	K to K R 2nd	31. Kt to K 4th	Q to Q 4th
11. Q R to Q sq	Kt to Q 4th	32. R takes R (ch)	B takes R
12. Kt to K R 2nd	P to Q Kt 4th	33. R to K R sq	B to K 3rd
13. B to Q R 2nd	B to Q Kt 2nd	34. K to B 2nd	Q to her 2nd
14. P to K B 4th	P to Q B 5th	35. Q to K 2nd	R takes Kt
15. B takes Kt	P takes B	36. P takes B	P to Q 6th
16. Kt to Q 2nd	Q to her Kt 3rd (b)	37. P to Q B 3rd (e)	R to Q sq
17. K to R sq	Kt to Q 2nd	38. B to Q Kt sq	P to Q R 4th
18. K Kt to B 3rd	K B to his 3rd	39. P to K B 5th	Q to Q R 2nd (ch)
19. P to K Kt 4th	P to K Kt 3rd	40. K to B 3rd	P takes K B P
20. P to K R 4th	R to K R sq	41. Kt P takes P	Q to K 2nd
21. K to Kt 2nd	B to K Kt 2nd	42. P to K B 6th	Q takes K P
22. Kt to K Kt 3rd	P to Q 4th	And Black mates in three moves	

(a) The careful preparation for battle required in the close openings makes them appear tedious when compared with the more rapid contingent when the Gambits admit, but the former have the advantage of affording opportunities for the development of *all* the forces on both sides before an attack begins, while in the latter the contest is often virtually decided in a mere skirmish, before one half the pieces are brought into the field.

(b) Apparently to advance Q B Pawn, and if Black take it, to win his Queen by discovering check.

(c) However annoying, Black is compelled to pause in his attack, to guard against the enemy's obtaining an opening into his territory

(d) They had better have taken the Kt off at once.

(e) Even at this moment it will be observed that some caution is necessary on Black's part, to preserve the advantage he has obtained. Taking the Q Pawn with Pawn would have been manifestly imprudent, on account of his opponent's then enabled to give check with their Queen at her 5th, and afterwards capture the Q Kt Pawn

CHESS IN THE PROVINCES.

Lively Skirmish between Mr. Löwenthal and Mr. Silas Angas, of Newcastle.

WHITE (Mr. S. A.)	BLACK (Mr. L.)	WHITE (Mr. S. A.)	BLACK (Mr. L.)
1. P to K 4th	P to K 4th	13. K Kt to K 2nd	R to K sq
2. Kt to K B 3rd	P to Q 3rd	14. Castles	P to K R 4th
3. P to Q 4th	P takes P	15. Kt to K B 4th	P to K R 5th
4. K B to Q B 4th	B to K 2nd	16. Q Kt to K 2nd (b)	Q Kt to Q 2nd
5. Kt takes P	Kt to K B 3rd	17. B to K 3rd	Kt to K 4th
6. Kt to Q B 3rd	Kt takes K P	18. Q B to Q sq	P to Q Kt 3rd
7. B takes K B P (ch) (a)	K takes B	19. B to Q 4th	Q to Q B 2nd
8. Q to K R 4th (ch)	P to K Kt 3rd	20. Q to Q B 2nd	Q to K B 2nd
9. Q to Q 4th (ch)	B to Kt 2nd	21. B takes Kt	B takes B
10. Kt takes Kt	P to Q B 3rd	22. Q takes Q B P (c)	B takes Kt
11. Q to Q Kt 3rd	P to Q 4th	23. Kt takes B	B to Q Kt 2nd
12. Q Kt to K Kt 3rd	K B to his 3rd	24. Q to Q R 4th (d)	R to K 5th
		And Black wins	

(a) From this point, we consider White has a marked superiority in position.

(b) He might have obtained an overpowering attack by playing his Queen to her 3rd, instead of retreating the Q Kt.

(c) Capturing his Pawn was certainly imprudent.

(d) He should rather have played his Queen to Q B 3rd, giving check; even Lasa, however, he would have had a difficult game before him.

CHESS ENIGMAS.

No. 880.—By H. W., of Wakefield.

White: K at K R 7th, Q at Q B 4th, R at K 4th, Bs at K R sq and K 3rd, Kt at Q B sq, Ps at K 6th and Q Kt 3rd

Black: K at Q 4th, Q at Q B 3rd, B at Q Kt 8th, P at Q 3rd.

White to play, and mate in three moves.

No. 810.—*Schachrätsel*

White: K at Q R 4th, Rs at h B 3rd and Q Kt 4th, Bs at K 4th and Q 8th, Kt at K B 8th.

Black: K at h R 5th, Q at K R 8th, R at K 8th, B at K sq, P at K R 4th.

White is in check; and, having to play at this moment, he gives mate in three moves.

The Richmond Chess-club.—In our next we shall give some account of the opening meeting of the new society, which took place on Monday last, and passed off with complete success.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A very large fire took place in Cincinnati on the 28th ult., by which property to the amount of 90,000 dollars was destroyed.

Mr. Gibson, R.A., has completed his statue of Venus, at Rome, and aroused criticism by giving a slight flesh tint to the figure, blue eyes, yellow hair, and a delicately-coloured border to the drapery. There is much difference of opinion on this proseeding.

The Select Committee on Railway and Canal Bills have issued their fourth report. It is unfavourable to amalgamation.

Cheltenham is so full at the present moment, that the influx of visitors has put it to some of the inconveniences read of in Australia.

The ship *Adrona*, for Liverpool, was totally destroyed by fire, at the south-west pass, New Orleans.

The Society of the Friends of the Clergy has just obtained a valuable accession in the person of the Marquis of Salisbury, who has consented to become the president.

Mr. Thackeray delivered his last lecture in the southern states of America on the 19th ult. He announced that from that point he should retrace his steps towards the north, and thence to England.

The operative shoemakers of Leeds have demanded an advance of wages of at least 15 per cent, and, as this has been refused, they have struck work. The employers are paying 20 per cent more for leather than they lately did.

The *Tablet* of Saturday last publishes the "balance sheet of the Irish Tenant League," from which it appears that £536 were received to the 28th January, 1853. Amongst the items of expenditure is a sum of £38 17s for deputations to Carlow and other places. The balance in hand is £62 0s. 2d.

On the 27th ult. a serious accident occurred on the Baltimore and Ohio Railroad, caused by a train running off the track, by which several persons were killed, and others injured.

Captain R. Baston, R.N., the late superintendent of the Royal Mail Steam-packets at Southampton, has resigned that situation, and retires on a pension of £200 per annum.

A young man named Poole, of Lincoln, lately, while examining an air gun which his deceased partner had purchased at an auction, found notes to the value of £70, which had lain there for forty-eight years

The promoters of the ship canal at Darien are encouraged by the success of the embassy to France. Official support by the French Government will be accorded to the project; and the Emperor has also given the positive assurance of more mater ial aid

There has been a great fire in Frederikswarn, in Norway; eighteen houses have been burned down.

The Imperial printing establishment of Vienna has just added to its typographical resources a set of Kalmuck types. By means of these, the wide researches of Professor Jug in the Kalmuck language will short y be given to the world

The Prefect of Police at Paris has prohibited the use of colouring for sweetmeats, excepting Prussian blue, cha k, and ochre. He likewise cautions the public against the use of copper vessels.

A painter, named Rogers, aged twenty-two, of Little Chapel-street, Westminster, was observed, on Monday, to stagger in the street, and fall down. He was taken to a surgeon's, but life was extinct.

Lieutenant Warren, R.N., has been appointed Admiralty agent on the Southampton station.

From a return just obtained, it appears that the number of accounts of Stock in the Bank of England is 266,479; and the number in the name of two or more holders, 117,828

There has lately been a great increase in the exportation of beer and ale, large quantities having been sent to Australia. In the last two months 68,174 barrels were exported, of the value of £138,291.

The cattle-show of the Royal Agricultural Society of Ireland, for 1854, is to be held in the province of Ulster, if the necessary pecuniary guarantee be given, and the required arrangements be entered into.

The seamen's strike at Ipswich is at an end, nearly all the shipowners having complied with the demands of the men.

The Association formed for the purpose of promoting and promulgating the views and opinions of the friends of election by Ballot, have opened an office in the Strand.

The Royal Australasian Mail Steam Company have received notice from the Government of the withdrawal of their contract.

The Duke of Saxe-Coburg-Gotha has created the tragedian, Emile Devrient, a Knight of the Order of La Maison Ernestine. This is the first instance in Germany of the insignia of an order of chivalry being confirred upon an actor.

The Lecturership of Medical Jurisprudence in the Hunterian School of Medicine, has become vacant by the death of Dr. Richard Thar pe.

The county of Dublin Grand Jury found a true bill of indictment on Monday against the mate of the *Queen Victoria* steamer, wrecked at the Island of Rathlin.

A terrible steam-boat disaster has occurred in Galveston Bay, Texas. The steamers *Neptune* and *Farmer* were racing to Galveston when the boilers of the latter exploded, killing the captain, clerk, steward, engineer, 13 of the crew, and 20 passengers

Mr. George Ogley, of Barnsley, a working man, has invented a mode of manufacturing ladies' fancy stays without a seam.

The ultimate for the restoration of the Prince of Wales's Tower, at Windsor Castle, just laid before Parliament, is £6000.

The *Sydney Empire* states that arrow-root, equal to that procured from the South Sea Islands has been prepared from some wild plants which grow abundantly near Sidney.

The subscription for a monument to Thomas Hood, having reached £400, has been closed. A bronze bust of the poet, on a granite pedestal, embellished with scenes from his writings, has been resolved upon.

Messrs. Stephenson and Co., Newcastle, are engaged upon a railway tubular bridge across the Nile. The trains are to run along the top of the tube. The line will be single, with a footway on each side.

An electro-telegraphic despatch from Marseilles, dated April 12, announces the arrival at that port of the Calcutta mail.

The Lecturer in the case of Lumley v. Gye, relative to Mdlle. Wagner, stands the third on the list for judgment by the Court of Queen's Bench, and is expected to be decided on the first day of term.

The postmaster of Whitchurch, Salop, named Cross (who was parish-clerk and sexton, and also an extensive draper, &c.) has been arrested for subtracting from letters, moneys, &c., to the amount of £200. He was on his way to Liverpool, for either America or Australia

The Government are about to take up the question of a reform of the Corporation of the city of London A Commission of Inquiry is about to be appointed, whose labours will lay the foundation for a Ministerial measure.

The will of Admiral the Right Hon. Sir Bladen Thomas Capel, G.C.B., has been proved in London by Lady Capel, his relict, a power having been reserved to the Earl of Essex, his nephew, and to Joan Drummond, Esq., the other executors. The personalty was valued at £12,000. Lady Capel takes a life interest in the estates, and is the residuary legatee.

The late Stephen George Lushington, Esq., one of her Majesty's Commissioners of Customs, died possessed of personalty amounting to £20,000, and has bequeathed to one of his sisters a legacy of £1000, and to another an annuity, appointing his brother, Charles Manners Lushington, Esq., sole executor and residuary legatee.

Henry Vernon Harcourt, Esq., late of Brampton-hall, Herefordshire, has researched the whole of his estates, real and personal, to his widow, Lady Frances Vernon Harcourt, the personalty being valued at £20,000.

It is said that the Queen and Prince Albert, the Emperor of the French, the Pope, and the Sultan, intend to contribute to the Great American Exhibition at New York

Fine merino sheep at Buenos Ayres fetch 24s. a head; but sheep farmers consider it an exorbitant price. The average price for a good common sheep is only 1s 6d.; and for the common kind (and in a lot), you pay one shilling 3d. per head.

A young man who was formerly in the printing-office of the *Liverpool Courier*, but now in South Australia, has written home to say that he is at work upon the *Melbourne Argus*, at ten guineas per week.

Lord Aberdeen has appointed this day (Saturday), at one o'clock to receive the council of the Colonial and International Postage Association, upon the subject of reducing the colonial rates of postage to a uniform rate of threepence, instead of sixpence, as first proposed.

The shock of the earthquake of the 2nd instant was felt in the Isle of Wight. A letter from St. Servan, in France, states that the shock was most alarming there and that people remained up all night. It appears that the earthquake was limited to a portion of the North English Channel comprehended between about 100 miles of the south-western coast of England and France, the superficial area of which is about 20,000 square miles

The briskness of the building trades, added to emigration, is leading to a general advance of wages in Manchester; and the plasterers have succeeded in getting their earnings raised from an average of 26s per week to 28s.

The Commissioners of Customs have called for a return of the quantity of foreign butter destroyed in bond in each year since the year 1845, with the dates at the several periods at which such destruction took place, and the quantity destroyed at each period.

THE MEET AT CROXTON PARK.

CROXTON PARK.

THE MEET.

Leicestershire nobly maintains its ascendant rank in the scale of sport; recalling Nimrod's experience of Melton-Mowbray. "In no place upon the earth is *condition* in the hunter attended to with so much care, or managed with such skill, as in this renowned metropolis of the fox-hunting world. Indeed, we conceive it would be useless to expect horses to live with hounds in such a country as Leicestershire, unless they were in condition to enable them to contend for a plate."

On Monday, the 4th inst., the day before Croxton Park Races, the Duke of Rutland's celebrated pack of hounds met. The weather proved favourable, and there was a large attendance of sportsmen; and the meet (which our Artist has illustrated) was altogether of the most animating description to be enjoyed in this country—satisfying the most determined foxhunter with his day's sport.

CROXTON PARK RACES.

We always hail with pleasure the (to use a northern phrase) "gathering" at Croxton Park, a meeting at which more gentlemen and sportsmen are to be seen than at any other in the United Kingdom. We do not mean as to the numerical *quantum*, but as to the proportion of each to the numbers of those of far different pretensions. This may be readily accounted for by the number of races appointed to be ridden by gentlemen, a circumstance that (though it does not preclude) puts a strong check on the heavy betting incident to races of mere professional character. Thus the Ring never found Croxton sufficiently speculative for its purposes, and here and there we detected a few of its members; they showed themselves, for once, to be completely out of their element. Long may such meetings prosper, where love of sport is the leading star of its patrons. Far be it from us to prognosticate this meeting may ever lose its *prestige* on the score of the aristocracy of its company; but *certes* this year there was no lack of professionals in the betting department: whether they could not withstand the attraction of the Granby of this year, or the cheapness of the conveyance offered caused their presence, we know not, but they were there in somewhat unusual numbers. However, as a set off, aristocracy was there in unusual numbers also. For this we were probably, in great measure, indebted to the fickle month being in one of its best humours, and favouring us with the lately unusual treat of fine weather. Our space will not permit us to give more than a compressed summary of each race as it came off.

TUESDAY.

Farmers' Cup of 50, with 10 to go to the second horse; presented by the gentlemen of the Belvoir (Quorn, or Cottesmore Hunts, for horses not thoroughbred, the property of and bred by farmers residing in the neighbourhood of the three Hunts, under certain qualifications—two miles. We say nothing of the artistical performance, but give the result.

Mr. G. March's, (junior), br. g. Wartnaby, by Drayton, 6 yrs., 12 st. .. .. (Mr. Hardy) 1
Mr. Vincent's br. b. Freetrader, 6 yrs., 12st. 8lb. .. (Owner) 2
Five others started. 6 to 1 against the winner. Won tolerably easy.

The Scurry Stakes, 5 sovs. each, with 25 added. Half a mile. 3 subs.

Lord Chesterfield's f. by Councillor, out of Miss Lucy, h. b., 5 yrs., 10 st., 4 lb., £40 .. .. (Mr. Berkley) 1
Mr. Goddard's Priam the Third, 4 yrs., 10 st. 6 lb., £40 (Capt. Little) 2
Count Batthyany's br. c. The Monk, 4 yrs., 10 st. 8 lb., £60 (Owner) 3
The winner was claimed.

The Granby Handicap, 20 sovs. each; ft. ft., and 5 only if declared, &c. Granby course (about one mile and a half). 65 subs., 44 of whom paid 7 sovs. each.

Mr. Hunter's ch g Orpheus, by Orlando, 4 yrs., 10 st. 6 lb. (Mr. L. Evans) 1
Mr. Saxon's ch. g. Caurire, aged, 10 st. 10 lb.. .. .. (Mr. Elwes) 2
Seven others ran.

Sweepstakes of 10 sovs. each, with 50 added. For Two-year-olds. Half a mile. 7 subs.

M. J. Adkin's Contender, by Cotherstone, 8 st. 7 lb. .. (Thick) 1
Lord Wilton's c. c. by The Hero, d. by Touchstone .. (W. Howlett) 2
One other ran.

WEDNESDAY.

The Farmers' Handicap of 50 sovs. and 5 to second, for horses who saved their distance in each heat of the Farmers' Plate. Once round.

Mr. Vincent's b. h. Freetrader, by Gambol, 6 yrs, 11 st. 12 lb. .. .. (Capt. Hayworth) 1
Mr. W. Kirk's b. c. John Hamlin, 5 yrs, 9 st. 12 lbs. (M. C. Boynton) 2
One other ran.

The Belvoir Castle Stakes of 15 sovs. each, 10 ft., 40 added, for three-year-olds. One mile. Haly-a-dozen subscribers.

Mr. Osborne's Grapeshot, by Alarm, 8 st. .. .. (J. Osborn) 1
Lord Chesterfield's b. c., by the Emperor, d. Begum, 8 st. 2 lb. .. .. (Flatman) 2
Won by a length.

The Croxton-park Handicap Plate, 100 sovs.; all ages. One mile.

Count Batthyany's b g. Jack in the Corner, by the Conjuror (aged), 11 st. 1 lb. .. .. (Owner) 1
Hon. W. E. Duncombe's c. c. Alfred the Great, 4 yrs, 13 st. 7 lb. .. .. (Mr. C. Boynton) 2
Five others started. A very close race; won by a neck only.

The 50 Sovs. Cup in Specie, added to a handicap of 20 each, h. ft., and 5 only if declared; the winner to subscribe to the same plate and the Granby of next year, also paying 15 sovs. to the fund; 24 subs., 15 of whom declared. Two miles

Mr. Saxon's c. g. Caurire, by David or Arthur (h. b.), aged, 10st. 12 lbs. .. .. (Mr. Elwes) 1
Mr. Couchron's Smuggler Bill, aged, 10st 12 lbs. (Captain Heyworth) 2
Three others ran.

The Ballesden Coplow Stakes, 3 sovs. each, 20 added; for horses or mares that have been *bona-fide* hunted with the Belvoir, Quorn, or Cottesmore since the 1st of January last. Once round. (6 subs.).

Captain Forrester's b. g. Kennington, by Slight-of-Hand, 12st. 7 lbs. .. .. (Mr. Scobell) 1
Mr. J. S. Wheatley's b. f., Tom Jolly, 12st. .. .. (Mr. C. Boynton) 2
Three others ran. This was a most hollow affair, Kennington winning as he liked.

The Granby was a rare turn-up for the fielders, Popham completely slipping Caurire at the stand. Like Weathergage he had been sold as worthless, and was not in the present race backed.

CROXTON PARK RACES.

SITE OF THE MODEL LODGING-HOUSE, ERECTING BY THE GENERAL SOCIETY FOR IMPROVING THE DWELLINGS OF THE WORKING CLASSES.

PARLIAMENTARY PORTRAITS.

SIR J. R. CARNAC, BART., M.P. FOR LYMINGTON.

The name of Carnac is honourably associated with the history and administration of our Indian possessions; and, at a season when the whole Indian question must be thoroughly discussed, with a view to permanent legislation, it is well to find the present holder of that name returned as a representative to the House of Commons, there to take part in the coming deliberations, and lend the aid of his personal knowledge. We infer, indeed, that the object of Sir J. R. Carnac, in entering Parliament at the present time, is thus to devote his attention to a subject in which he is so largely interested; and that it was with the same views that he was chosen by the constituency of the mercantile community of Lymington.

The father of Sir J. R. Carnac represented the borough of Sandwich in 1837; and in the year 1838 was appointed to the Governorship of Bombay, a post which he continued to fill till the year 1841. It was only in the year 1836 that the baronetcy was conferred; and up to the time of the grandfather of the present holder of the title, the family name was Rivett. The Carnacs trace their descent from one Thomas Ryvet, of Tritton, in Norfolk, who lived in the thirteenth century; and in the year 1715 a more immediate ancestor filled the office of Mayor of

SIR JOHN RIVETT CARNAC, M.P. FOR LYMINGTON

Derby. The present Baronet's grandfather assumed the name of Carnac in addition to the patronymic.

Sir John Rivett Carnac, M.P., is the son of the late Sir James Rivett Carnac, the first Baronet by Anna Maria, the eldest daughter of the late William Richards, Esq. of Penglais, Glamorganshire. He was born at Baroda, in the East Indies, in the year 1785; and his early associations, as well as honour and patronage, have all tended to qualify him for the duty of legislating on Indian affairs. After having gone through the usual preparatory training, he entered the army (in the 21st Foot), where he reached the rank of Lieutenant. The death of his father, in the year 1843, opened to him the succession to the baronetcy to which he had married Miss Anne Jane Sprucle, the only child of Dr Samuel Sprucle, of the East India Company's service.

Sir J. R. Carnac has hitherto taken no very active part in public life. At the last general election he came forward as a candidate for the representation of Lymington, in opposition to the old and valued member for that borough, Mr Mackinnon. The contest was a sharp one, as nearly every registered elector was polled. Sir John beat his antagonist by a large majority, polling 201 votes, while his present colleague, a former sitting member (Mr. Hutchins) polled 138, and Mr. Mackinnon only 189.

Sir John Carnac came forward on the Derby interest, professing himself a Conservative, but with some of those qualifying indications of Liberal tendencies which were adopted by the present Opposition when last appealing to the people. He was at all hazards prepared to give Lord Derby's Administration a cordial support; but, on the other hand, he expressed himself hostile to any grant of public money for the maintenance of the Roman Catholic religion. While professing his readiness to vote for a "well-digested" measure of parliamentary and legal reform, he also promised to support any measures for the relief of the shipowners and the agricultural interests generally, from the consequences of the too sudden repeal of the Corn and Navigation Laws. Upon these promises, backed by clever electioneering tactics, he was returned as a representative of the borough, and since he has been in Parliament he has consistently acted up to his engagements.

Sir John Carnac was, in 1852, appointed a Deputy-Lieutenant of Hampshire.

IMPROVEMENT OF THE DWELLINGS OF THE WORKING-CLASSES.

This important social measure is at present occupying a considerable share of the attention of the philanthropic public; and a very gratifying instance of which was manifested on Tuesday last. The scene of operation (which our Artist has depicted in the first of the accompanying Illustrations) was, a short time since, a sadly-neglected portion of the wealthy parish of St. James, long known as one of the "rookeries" of the metropolis; namely, a piece of ground in the rear of the brewery of Messrs. Goding and Co., in Broad-street, Golden-square. Looking upon this picture, and contrasting it with the courtly associations of St. James's, we may well say what extremes of wealth and want meet in this great town! However, a great clearance has been made of the crazy buildings shown in the first Sketch; and upon the site the General Society for Improving the Dwellings of the Working-classes have for some time been at work. Here was, until lately, a quadrangle of wretched hovels, in which cows and pigs shared the occupancy with thieves and other abandoned characters both male and female, who demoralised and disturbed the whole neighbourhood by their drunken orgies and *fracas*. The hovels have been cleared away, the cattle and swine sent to more fitting quarters, and all that remains of the vile place is a fractional portion of the old corner public-house, once notorious for being the haunt of the worst of characters, and soon to pass away along with the other abominations. The new building will consist of a neat front elevation, with stone copings and three entrances; and will contain 68 separate residences, each consisting of three good rooms, with water, water-closets, and other domestic appliances. The whole will be let at rents less than are at present paid for wretched accommodation; and an experiment which has already been made on a smaller scale in the district justifies the hope that the undertaking will be not only beneficial to the classes for whose use it is intended, but will combine profit with benevolent gratification for the Society.

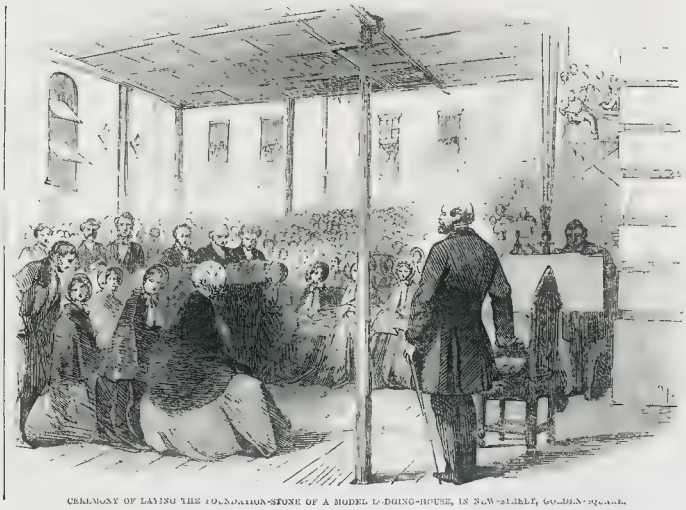
Tuesday last was the day fixed for the inauguration ceremonies at the new building in progress. By two o'clock, her Grace the Duchess of Sutherland, Lady Blantyre, Earl Talbot, Viscount Ingestre, with several other members of the nobility had arrived; and, shortly after, his Royal Highness the Duke of Cambridge, who had consented to lay the first stone. His Royal Highness was received with loud cheering by the crowds, who not only filled the enclosure, but also thronged all the approaches to the new works. The band of the 1st Life Guards was in attendance, and played frequently during the proceedings. The ceremonial (which our Artist has sketched) was commenced by the Bishop Elect of Lincoln (Rector of St. James's), who offered up an appropriate prayer; after which the children of the St. James's School sang the Old Hundredth Psalm—a remarkably fine effect being given to the music by the admirable accompaniment of the military band.

The usual deposit of coins was then laid on the stone, and a glass vessel, containing the following inscription:—"To the glory of God and the well-being of his creatures, these buildings, intended as a home for the families of the labouring classes, were erected by the General Society for Improving the Dwellings of the Working Classes, on a site once occupied by the most wretched hovels. The first stone was laid on the 12th of April, 1853, by the patron, H.R.H. George Duke of Cambridge, K.G. The Rev. J. Jackson, D.D., Bishop Elect of Lincoln, asked a blessing on the work; and Viscount Ingestre, president, and other members of the society, were present, together with Charles Lee, Esq., hon. architect."

After these preliminary preparations, and while the stone was being slowly lowered, Viscount Ingestre read an address to his Royal Highness the Duke of Cambridge, detailing the circumstances we have narrated, and concluding with these emphatic words:—

We feel that your Royal Highness, in thus inaugurating this great effort, is binding closer the ties which unite the different classes of our countrymen, whilst every recognition of the claims of labour adds lustre to exalted rank, and is a good omen for coming times. These buildings, designed doubtless long to survive those who reared them, will be one of the many monuments we bequeath to a future generation. They will show that whilst we left much still to be done, the ties of country and the bonds of brotherhood were not with us altogether an empty name. May your Royal Highness long be spared among us the honoured instrument of works of kindness, with which the name you bear has been long connected (Cheers)

His Royal Highness having listened with much attention to the



CEREMONY OF LAYING THE FOUNDATION-STONE OF A MODEL LODGING-HOUSE, IN NEW-STREET, GOLDEN-SQUARE.

address, bowed in acknowledgment of the special allusion to himself with which it terminated, and proceeded to the usual manipulations with a handsome silver trowel and mahogany mallet; and having tested the accuracy of his work by a scientific application of the plumb line, the stone was allowed to rest in its permanent location. The president, Viscount Ingestre, then briefly thanked his Royal Highness for his attendance, in the name of the society; after which his Royal Highness said:—

My Lord Ingestre, Ladies and Gentlemen.—It has afforded me the highest gratification to be permitted to lay the first stone of this good, and I hope it will ultimately prove, great undertaking. But a year since I took the chair at a preliminary meeting, and it is most satisfactory to me to see the progress that has been made in that short space of time (Hear, hear). I trust that our present ceremonial of laying the first stone will prove an earnest that the good work will be continued and extended as it has been begun, and thereby will conduce to the comforts and advancement, both here and hereafter, of numerous and deserving classes of our fellow-countrymen. I trust that it will continue to receive your steadfast and earnest support (Loud cheers).

His Royal Highness was again much cheered on his departure.

In the evening, the event of the day was celebrated by a dinner at the London Tavern, at which nearly one hundred and fifty noblemen and gentlemen were present. The Duke of Argyll, who ably filled the chair, was supported by Earl Talbot, Earl Jermyn, Earl Grosvenor, the Earl of Annesley, the Earl of Sheffield, Viscount Ingestre, Lord Emlyn, Lord Dufferin, Lord Dynevor, Lord Norreys, the Right Hon. Sir J. Pakington, Bart., M.P.; Hon. W. Cowper, M.P.; Sir J. V. Shelley, M.P.; Mr. J. E. Denison, M.P.; Sir W. Fraser; Hon. F. Byng, &c. Mr. Disraeli had accepted an invitation to be present, but a sense of public duty compelled him to be present in the House of Commons during the debate on the abolition of Kilmainham Hospital.

The band of the First Life Guards was in attendance, and supplied the place of vocalists.

On the removal of the cloth, and after the usual loyal toasts had been duly honoured, Sir J. Pakington, in giving the health of the patron, the Duke of Cambridge, the Bishop elect of Lincoln, and all who had assisted at the ceremony of the morning, paid a graceful compliment to Viscount Ingestre. The part which this young nobleman has taken in the formation of this society had been already dwelt upon by the noble Duke in the chair; and Sir J Pakington, having a strong regard for the noble Lord, and an old friendship for his family, could not refrain from expressing his satisfaction at the course he had taken. His young friend, he said, had nobly taken the path of virtue, and he would surely find it to be the path of honour.

The noble Chairman, in giving the toast of the evening, declared that the state of a great proportion of the population of our cities was more deplorable than the heathendom of Africa, and demanded more of the missionary spirit than might be required under the palms of India. A lady of his acquaintance had told him that, in her young days the condition of the poor never formed a topic of conversation with the higher classes; now they made strenuous exertions in their behalf, and such exertions had never such prospect of success as at present, because we had got Lord of the right principle, and had ascertained the inseparable connection there existed between the physical and moral condition of the people. The plan of the society contemplated partly the erection of new, and partly the adaptation of old buildings; and in the parent society, presided over by Prince Albert, that plan had produced a profit of from 4½ to 5 per cent. This advantage had been secured, in addition to an enormous saving in the rentals of the poor; and therefore he trusted that such societies would spread, and be taken up by speculators solely on commercial principles. It was a great economic law that nothing could be permanently successful that was not self-supporting: but if the establishment of the society should be successful, it would achieve the great moral result of giving to all classes the blessing of a decent Christian home. His Grace concluded by giving "Success to the General Society for Improving the Dwellings of the Working-Classes." The toast was received with great enthusiasm.

Viscount Ingestre gave "The health of the Chairman," thanking his Grace warmly for his attendance that evening, and for his able advocacy of their cause. His Lordship also took occasion to acknowledge the support he had received from the metropolitan clergy, and from the Corporation of London.

Lord Dynevor, in giving "The health of Lord Ingestre, president of the Institute," mentioned that the building would be opened in September next, at a cost of £10,000, of which £5000 had already been received in the course of the past year.

Viscount Ingestre explained that the project had been first suggested by Lord Shaftesbury. Nobody would, without seeing it, believe the misery that existed in large towns. It was impossible to do much towards the moral improvement of the people until you first ameliorated their physical condition. It was for the consideration of parties building churches until the people had first decent and Christian homes to live in.

Sir William Fraser gave the healths of the honorary officers of the society—Messrs. C. Lee, honorary architect; G. F. Smith, honorary solicitor; and the Rev. Messrs. Beames and Stamforth, honorary secretaries; bearing warm testimony to the value of their various services. One of them (Mr. Beames) had written a book, "The Rookeries of London," which he recommended every one to read; and all had unhesitatingly given up their valuable time to the cause. He believed that the undertaking would pay five per cent, and on that expectation he founded his hopes of its success.

Mr. C. Lee acknowledged the compliment, and stated that during the twenty-five years he had been in practice, the poor in London had been gradually growing worse. Every improvement had swept hundreds of them away, and it was the painful scenes he had himself witnessed in this way that had induced him warmly to promote the present undertaking.

The collection of the evening was announced to be nearly £300.

NAVAL AND MILITARY INTELLIGENCE.

FIRST TRIAL OF THE "DUKE OF WELLINGTON," 131, SCREW LINE-OF-BATTLE SHIP.—This magnificent war-steamer has more than answered the most sanguine expectations that could have been formed. Monday witnessed the largest war steamer in the world doing an average of ten knots an hour: the best judges of what might have been expected from her did not give her more than nine; the general supposition was that eight knots would be her speed. She left Sheerness at harbour at 11.45 in fine style, against a strong flood-tide; and, having passed through Spithead, proceeded to the measured mile, when she realised the following gratifying results in six runs which she made there:—

Revolutions	Time.	Knots per	Average of knots per hour.
[illegible]	[illegible]	10.495	10.099
[illegible]	[illegible]	9.47	
[illegible]	[illegible]	10.178	10.187
[illegible]	[illegible]	9.209	
56	29	5.23	10.100
56	29	5.27	

The results of the above trial gives a mean average speed of 10.103 knots an hour—a highly satisfactory speed. The draft of water of the ship was 24 feet 2 inches forward, and 25 feet 4 inches forward, with coals and stores on board, and complete for sea, her draft will be 25 forward 26 aft. Mr. Atchell, the builder of the *Duke of Wellington*, and Mr. Dupay de Lome, the builder of the screw-steamer *Napoleon*, were on board, and had a very friendly chat. Forty thousand people lined the whole way from the dockyard point, the bastions, lines, South-sea beach and common, to Southsea-castle, waving handkerchiefs.

NEW REGULATIONS AS TO CAPTAINS' SEA TIME.—By her Majesty's Order in Council, dated March 11, 1853, it is enjoined that the only exceptions to the provisions contained in art. 2, chap. 2, page 8, of the Queen's regulations shall in future consist as follows, Viz.: 1. That a captain shall be allowed to reckon as time served at sea the period during which he may have been employed afloat on surveying and other duties, provided that during such period he shall actually have had charge in command of some surveying ship or other sea-going vessel; and provided also that he shall have been borne for such service as additional to the complement on the books of one of her Majesty's rated ships. 2. That a captain superintendent of one of her Majesty's dockyards shall be allowed to reckon as time served at sea the period during which he may have been employed; but time served by an officer as superintendent of one of her Majesty's victualling yards or hospitals will for the future be no longer allowed to reckon as equivalent to time served at sea.

MASTERS' ASSISTANTS.—The following boys from Greenwich School have received appointments as Masters' assistants in the Royal Navy:—John Richards, W. F. Rowe, and G. W. Atkinson. This is a worthy distribution of Admiralty patronage, and it cannot fail to have a very beneficial effect on the school.

DEPOTS.—The following dépôts are held in readiness to move in the course of this and the ensuing month: The 30th, from Dover to Cork; the 13th Light Infantry, from Jersey to Cork; the 31st, from Fermoy to Cork, *en route* to Bristol; 71st Light Infantry, from Cork to Chatham; and the 1st battalion Rifle Brigade, from Walmer to Dover.

The reserve battalion of the 23rd Fusiliers, now in Canada, is under orders to embark for England.

Lieutenant-General Lord Raglan, Master-General of the Ordnance, and Lieutenant-General Sir John Burgoyne, Inspector-General of Fortifications, returned to town on Saturday last, from an inspection on the south-western coast.

Lieutenant-General Sir John Bell, K.C.B., is to retain the command of Guernsey and its dependencies for another year.

COMMISSARIAT DEPARTMENT.—This estimate for 1853-54 has been issued. The total sum required to be voted for the expenses of the Commissariat Department during the ensuing year is £357,136, against £481,201 for the preceding one. The estimate comprises two votes for the effective services, and for the non-effective services. For the former £311,887 is required for the present year, being an increase of £74,286 over the vote for 1852-53; for the latter £45,239 is required, against £43,799 in 1852 33. The total increase for both services for the year 1853-54, is £75,725.

THE LATE FATAL RAILWAY ACCIDENT NEAR MANCHESTER.—Mr. Caratti, the Greek merchant, who was so terribly maimed by the accident, at Dinsopfold, near Manchester Road, at the Manchester Railway, after lingering upwards of a month. Mr. R. Fitton, from Oldham, one of whose legs was broken at the time, has had to undergo amputation.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The payment of the dividends having caused money to be more abundant, and the bulk of the loans which were formed in the conversion of unemployed capital, rather an extensive business has been doing in Consols this week, chiefly on private account, and the quotations have had an upward tendency. In the next account, the large transactions have been entered into and most of the *Bulls* appear to have more than usual confidence as respects the future. The propositions of the Chancellor of the Exchequer for the conversion of the Three per Cents have met with pretty general approval, and the best test of their being favourably received is the extreme firmness of the terms market for Consols. Nominally the amount of the debt will be increased; but, virtually, a large annual saving to the country will be effected. Supposing Parliament sanctions the three propositions, and fixes the amount of debt to which each might be applied, about ninety millions may be converted before the year 1854.

The demand for money has been very active, but we have no advance to quote in the rate of discount.

The Three per Cents were done on Monday, at 100⅝; the Three per Cents Reduced, 99⅞ to 100; and the New Three and-a-Quarter per Cents, 101⅛. Long Annuities, 1860, were 6 1-16th. South Sea Stock marked 254. Ditto, Old Annuities, 98⅜; Exchequer Bills were 2s. to 7s. premium. Both on Tuesday and Wednesday the market was firm and quiet, at only the above quotations. On Thursday prices were on the advance, with a very firm market. The Three per Cents were 100⅜ for Money, and 100⅜ to 101 for the Account. The Three per Cents Reduced marked 100 to 100⅛; and the New Three-and-a Quarter, 102⅜. Bank Stock, 226. Exchequer Bills, 2s. to 8s premium.

The market for miscellaneous securities has been in a sluggish state. Australian Agricultural have been done at 8⅜ to 9. Peel River, 2¾ to 2¾ pm.; Van Diemen's Land, 15 to 17. North British Australian, 1¼ to 1⅜ pm.; Scottish Australian, 1⅞ to 2 pm.; Nova Scotia Mining, 1⅞ to 1⅞ pm.; Australian Coal, par to ½ pm.; Union Bank of Australia, 77 to 78; Bank of Australasia, 39 to 39½; London Chartered of Australia, 3⅛ to 3⅜; English, Scottish, and Australian, 1⅞ to 1⅞ pm; Bank of India, China, and Australia, ⅜ to 1½ pm.; Great Nugget Vein, 1⅛ to ⅞ pm.; Oriental Bank, 5⅜ to 6 ex div.; British American Land, 7½ to 7⅝ ex div.; Colonial Gold, 2 to 2½ pm.; Port Phillip, par to ½ pm.; Berlin Waterworks, ⅞ to ⅞ pm; North of Europe Steam, par; Metcalfe Mining, 1⅝ to 1⅝ pm.; Port Hope Mining, ⅝ to ¾ pm.; Crystal Palace, ½ to ¾ pm.; Union Bank of London, 17⅜ to 18; Royal Mail Steam, 76½; General Screw Shipping, 1½; General Steam Navigation Company, 80 ex div. and 80½; Peninsular and Oriental Steam, 76 ex div. and 76½; London Waterworks have sold at 165; London, 12 to 12½; St. Katherine's, 99½; Southampton, 58; Victoria, 68½; Ditto, New, 43½; Canada Company's Shares have marked 62 Ditto, New, 20; Globe, 12½; Ditto, New, 8½ per Cents, 1857, 115. The foreign exchanges still continue against this country—gold being 0 48 per cent dearer in Paris, 0.47 per cent dearer at Hamburgh, and 3.33 dearer at New York than in London.

Business in Foreign Stocks has not been extensive. Buenos Ayres have marked 61 to 62; Chilian Three per Cents, 82; Danish Five per Cents, 102½; Ecuador, 3½ to 4; Granada, Deferred, 11½; Mexican Three per Cents, 27½ to 3; Peruvian Three per Cents, Deferred, 6¼ to 6⅞ ex div.; Portuguese Four per Cents, 40½ to 40⅝; Russian Five per Cents, 114⅛; Ditto Four per Cents, 104 to 104½; Sardinian, Five per Cent s, 97⅜; Spanish Three per Cents, 47¾ to 48, the New Deferred, 20¾ to 20⅝; Spanish Committee, 6¾ to 6⅞; Turkish Six per Cents, 87½ to 87⅝; Venezuela, 20¼; Dutch Two-and-a-Half per Cents, 66 to 66⅜; and the Four per Cents, 97 to 97⅝ ex div.

The average weekly returns of the private and joint-stock banks in England, during last month, was £6 665,396. These banks are below their fixed issues £1,400,210, although their circulation is now £584,423. The returns of the Bank of England, for the week ending the 26th of last month ending on the 10th ult., show a decrease in the circulation of £238,858, compared with the previous month; but an increase of £2,471,945 compared with the same period in 1852. The bullion in the Bank of England is £710,231 less than last year.

At length arrangements have been made by the Turkish Government to pay off the loan contracted in this country. The notification states that the bondholders are to be repaid, with an addition of bonus and interest, at the rate of 34 francs for every 100 francs of nominal stock. The bondholders' committee, consequently, been dissolved.

The exports of the precious metals have not been large; and we have had an arrival of £ 1,000 in gold from Australia, and 600,000 dollars from New York. Large supplies of bullion are about to be forwarded to Sydney and Port Phillip.

The demand for Railway Shares has been by no means active; prices, however, notwithstanding that the supply of Scrip on sale has somewhat increased, have ruled steady. The following are the official closing money quotations on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 28½; Bristol and Exeter, 109½; Caledonian, 6¼; East Lancashire, 73; Edinburgh and Glasgow, 74; Great Northern Stock, 84½; Ditto, A Stock, 20½; Great Southern and Western (Ireland) 109; Great Western, 92½; Lancaster and Carlisle, 80½; Lancashire and Yorkshire, 76½; Ditto, Fifths, 1½; London and Blackwall, 9½; London, Brighton, and Southern, 54½; London and North-Western, 124½; London and South-Western, 90½; Manchester, Sheffield, and Lincolnshire, 30½; Midland, 76½; Newmarket, 5½; North British, 32; Shrewsbury and Birmingham, 56½; South-Eastern, 76; York, Newcastle, and Berwick, G. N. E. Purchase, 84.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire Guarantees, Six per Cent, 165; Hull and Selby Quarter Shares, —; Midland Bradford, 106½; Wear Valley, 38.

PREFERENCE SHARES.—Caledonian (£10), 16; Chester and Holyhead Five-and-a-Half per Cents, 18½; Eastern Counties Extension, Five per Cent, No. 1, 1½; Eastern Union, Scrip, Six per Cent, 18½; Great Western, Four-and-a-Half per Cent, 107½; Ditto, Four per Cent, 101½.

FOREIGN. Dutch Rhenish, 6½; Luxembourg, 7½; Ditto, Railway, 4½; Northern of France, 38; Paris and Lyons, 28; Paris and Strasbourg, 33½; Royal Swedish, 1½; Sambre and Meuse, 9½; Upper Rhenish, Scrip, 3½; Western of France, 20½

In Mining Shares the business doing has been by no means large. On Thursday Anna Fria were done, 1½; Bonthedd, ½; Ave Maria, ½; Brazilian Imperial, 5⅞; Carson's Creek, ½; Great Nugget Vein, ⅞; Lake Lanadron, ¼; Liberty, ½; Mexican and South American, 8; Nouveau Monde, ¼; Port Phillip, ½; Waller, ⅛.

THE MARKETS.

CORN TRADE.—Owing to the large arrivals of foreign flour, and the increasing stock of that article, the demand for it has been very limited, and some produce has ruled heavy, this week, at a decline in the quotations of 1s. per quarter. Foreign wheats have met a dull sale, and prices have given way from 1s. to 2s. per quarter. The malting barley has changed hands slowly, at fully previous rates, and the value of grinding and distilling sorts has been well supported. We have no change to notice in the value of oats. In beans and peas little business is doing. Beans and peas have commanded very little attention. Flour hears avoid off heavily, at a decline of 2s. per 280 lbs.

English.—Wheat, Essex and Kent, red, 41s. to 41s.; ditto, white, 42s to 45s.; Norfolk and Suffolk, red, 37s. to 39s.; ditto, white, 42s. to 44s.; rye, 26s. to 31s.; grinding barley, 27s. to 29s.; distilling ditto 27s. to 29s.; malting, 30s. to 32s.; Lincoln and Norfolk malt, 57s. to 58s.; brown ditto, 49s. to 54s.; Kingston and Ware, 55s. to 60s.; Chevalier, 58s. to 60s.; Yorkshire and Lincolnshire red oats, 17s. to 21s.; potato ditto, 20s. to 24s.; Youghal and Cork, black, 16s. to 19s.; ditto, white, 17s. to 21s.; Sligo, ditto, 16s. to 20s.; ditto, white, 20s. to 23s.; grey peas, 30s. to 32s.; maple, 32s. to 36s.; white, 36s. to 39s.; boilers, 37s. to 40s. per quarter. Town and outport, 26s. to 34s.; Suffolk, 28s. to 32s.; Stockton and Yorkshire, 26s. to 34s. per 280 lb. *Foreign*.—French flour, 34s. to 38s. 280 lb. American, 21s. to 28s. per barrel.

Seed Market.—Clover seed moves off slowly, on lower terms. All other kinds of seeds are very dull.

Linseed, English, sowing, 56s. to 60s.; Baltic, crushed, 47s. to 50s.; Mediterranean and Odessa, 45s. to 48s.; hempseed, 40s. to 42s. per quarter. Coriander, 9s. to 12s. per cwt. Brown mustard-seed, 7s. to 9s.; white ditto, 7s. to 9s.; and tares 5s. 6d. to 6s. per bushel. Rapeseed new, £21 to £24 per last of ten quarters. Linseed cakes, English, £8 to £9 10s.; foreign, £7 10s to £9 10s per ton. Rape cakes, £4 10s. to £5 per ton. Canary, 40s. to 44s. per quarter. Red clover, 40s. to 50s.; white ditto, 50s. to 60s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 6d. per 4lb loaf.

Imported Weekly Average.—Wheat, 44s. 2d.; barley, 31s. 4d.; oats, 18s. 8d.; rye, 31s. 3d.; beans, 34s. 5d.; peas, 32s. 8d.

Irish.—Wheat, in [illegible] oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—At public sale, this week, 1240 packages of green tea have been offered, and chiefly disposed of, at very full prices. The demand generally is steady, at extreme quotations, the actual value of common sound congou being 10½d. per lb. Up to Saturday last, duty was paid on 8 169,222 lbs., against 11,501,126 lbs in 1852

Sugar.—The supplies of raw qualities brought forward, this week, have not been extensive, yet they have moved quite equal to the demand. In prices we have no change to notice. Fine yellow Barbadoes has sold at 38s.; mid to good, 35s. to 37s. low, 32s to 34s. 6d. low [illegible] Refined goods have off slowly, at from 43s. to 44s. 6d. per cwt. [illegible] 1,586,412 cwt. against 1,344,197 cwt. in 1852.

Coffee.—Our market is flat, and prices are barely supported. Good ord. native Ceylon, now import, is quoted at from 47s. to 48s. per cwt

Cocoa.—The demand is heavy, and prices have given way fully 3d. per cwt.

Provisions.—Irish butter is in moderate request, at very irregular prices. In foreign but little business is doing. English parcels support previous rates, fine weakly Dorset being quoted at from 100s. to 104s. per cwt; and fresh, 10s. to 12s. per dozen lbs. Bacon steady, and quiet as dear as last week. In lard, and most other kinds of provisions, comparatively few transactions can be reported.

Tallow.—The market is steady, and prices are well supported. P. Y. C. on the spot, is selling at from 45s. 3d. to 45s. 6d. per cwt. Town tallow, 45s. per cwt., net cash, rough fat, 2s. 6d., or 8 lbs.

Oils.—Generally speaking, our market is heavy, at drooping currencies. Linseed, 28s. 6d. per cwt.

Spirits.—The demand for all kinds of rum is in a depressed state, and prices have a downward tendency. Proof East India, 1s. 3d. to 1s. 3½d.; Leewards, 1s. 10½d. to 1s. 11d.; and Havannah 1s. 8d. per gallon. Brandy, the imports of which are extensive, moves off slowly, on easier terms. No change in the value of Geneva. Hollands unsaleable.

Coals.—Hetly's West Hartley, 19s. 6d.; Chester Main, 19s.; New Tanfield, 19s. 6d.; Tyne Main, 16s.; Harlow, 17s. 3d.; Lewson, 15s. 6d.; Haswell, 19s. 3d.; Kelloe, 18s. 6d.; Stewart's, 19s.; Cassop, 18s. 3d. per ton.

Hops.—Selected qualities move off steadily, at very full prices. In other kinds, only a limited business is doing. Mid and East Kent parcels have realised from 70s. to 100s.; Weald of Kent, 45s. to 72s.; Sussex, 100s. to 115s. per cwt.

Wool.—Our market is firm, and the quotations are well supported

Potatoes.—The arrivals having been on the increase, the trade is less active, and prices are drooping. The top figure for the best kinds of Regents is 160s. per ton

Smithfield.—Each kind of stock has sold readily, at higher terms.

Beef, from 3s. 0d. to 4s. 2d., mutton, 3s. 4d. to 4s. 8d.; veal, 3s. 6d. to 4s. 6d.; pork, 3s. 10d. to 4s. per 8 lbs., to sink the offals.

Newgate and Leadenhall.—The general demand has ruled steady, as follows:

Beef, from 3s. 6d. to 3s. 6d.; mutton, 3s. 4d. to 4s. 4d.; lamb, 4s. 10d. to 5s.; veal, 3s. 4d. to 4s. 4d.; pork, 3s. 10d. to 4s. 4d. per 8 lbs.; by the carcase

ROBERT HERBERT.

THE LONDON GAZETTE.

FRIDAY, APRIL 8.

WAR OFFICE, APRIL 8.

3rd Dragoon Guards Major J. Wood to be Lieutenant-Colonel, vice Arthur. Captain R. Dyson to be Major, vice J. D. Dyson; Lieut F. Chaplain to be Captain, vice E. Dyson; Cornet J. Berkeley to be Lieutenant, vice Chaplin.

11th Light Dragoons Sergeant-Major H. Kaunitz to be Quartermaster, vice Gilliland.

2nd Foot Brevet Major W. H. Deacon to be Lieutenant-Colonel, vice Hall. Lieut G. B. Hall to be Captain, vice Wynne. Second Lieut. E. B. Prescott to be Lieutenant, vice Edgell. Ensign J. Molesworth-Allen Lieutenant, vice Warshaw. Staff Lieut. H. G. Bowden to be Captain, vice Johnstone. Lieut. R. G. Jones to be Captain, vice Bowden. Ensign J. [illegible] Lieutenant, vice Jones; Ensign H. B. Dennis to be Ensign, vice Banks. Lieut S. [illegible] H. G. Juvenis to be First Lieutenant, vice Sir H. G. K. Chamberlain, Bart. Sub Ensign W. H. Stuart to be Lieut., vice Horton. Lieut. Ensign G. R. Fairey to be Lieut., vice Alexander. Staff Ensign F. E. Medhurst to be Lieut., vice Westcropp. 54th. Lieut. C. F. Barnett to be Lieut., vice Anderson. Ensign J. Hall to be Lieutenant, vice Bagshawe. 59th Lieut M. F. Bowen to be Lieut., vice Tryster. Ensign W. S. Morgan to be Lieut., vice Kirwan. 64th Brevet to be Lieut.-Colonel Major R. Rodger, vice Dyas. 76th. Lieut. S. Le Poher to be Schoolmaster-Sergeant. D. Macdonald to be Paymaster, vice Hunt. Ensign J. Hunt, vice Macdonald. 77th. Lieut and Adjutant G. Bodle to be Paymaster, vice Hunt. Ensign E. Burrowes to be Adjutant, vice Bodle. Captain R. Pulcher to be Captain, vice Herring. Second Lieut C. Bathurst. Sub Lieut R. W. Pulcher to be Captain, vice Herring. Second Lieut C. Goddard to be First Lieut., vice Pulcher. 97th. T. Biggs to be Captain, vice M'Caskill; Ensign R. F. Holmes to be Lieut., vice Biggs

ADMIRALTY, APRIL 4.

The following promotions, dated this day, consequent on the death, on the last inst. of Admiral of the White Sir Thomas Livingstone, Bart., have this day taken place:—Admiral of the Blue Sir Hugh Pigot, Bart., G.C.B. to be Admiral of the White; G.C.B. and Vice-Admiral of the Red Sir Hyde Parker, Bart. to be Admiral of the Blue; Vice-Admiral of the Red Sir Hugh Hon. Lord William Fitzroy, K.C.B., to be Admiral of the Blue; Vice-Admiral of the White Sir Thomas Bladen Capel, K.C.B., to be Vice-Admiral of the Red; Vice-Admiral of the Blue the Right Hon. Granville George Lord Radstock, C.B. to be Vice-Admiral of the White; Rear-Admiral of the Red H. Bruce, C.B., to be Vice-Admiral of the Blue; Rear-Admiral of the White C. Sotheby to be Rear-Admiral of the Red; Rear-Admiral of the White Captain G. F. Hoe to be Rear-Admiral of the Blue

D. Trine to be Rear-Admiral of the White

BANKRUPTCIES ANNULLED.

J. R. HOUNSHAM, Hornsey, ale-dealer. W. BRYAN, Gilbert-street, Oxford-street, baker.

BANKRUPTS

G. IRELAND, Old Church-street, Paddington, draughtsman. J. S SAMUEL, Hatton-garden, Middlesex, watch manufacturer and jeweller. W. BRITTAIN London, builder. W. READ, Hyde, Gloucestershire, builder. T. [illegible] S. MAYO, Birmingham, hotel and tavern-keeper. J. MEANDON, Feunest, Staffordshire, draper.

TUESDAY, APRIL 12.

ADMIRALTY, APRIL 8.

Corps of Royal Marines: First Lieutenant and Adjutant G. W. Forbes to be Captain, vice H. D. Erskine; Fir. Lieutenant E. C. Dannville to be Adjutant, vice Forbes. Second Lieutenant R. J. E. Douglas to be First Lieutenant, vice Forbes. Second Lieutenant J. R. Lloyd to be Second Lieutenant, vice R. F. Tucker.

BANKRUPTS.

M. SAMUEL, Castle-street, Houndsditch, dealer in watches. [illegible] Tichborne-street, butcher. W. S. OAKE, Longford, Middlesex, sign painter. F. ROLLS [illegible] Lincoln's-inn-fields, barrister-at-law. J. and A. MARSHALL, Marlborough-road, Bermondsey-street, Southwark, grave-rollers, plumbers, cabinet-makers. W. MASON, Wakefield, Yorkshire, common brewer, Huddersfield. J. E. MARSHALL, Huddersfield, Yorkshire, common brewer.

SCOTCH SEQUESTRATIONS.

ANNE M'KAY, Dornoch, Sutherlandshire, merchant. J. RUSSELL, Stratton House, Stamford, Stirling, wright, builder, and carpenter.

BIRTHS.

On the 14th of March, at Varna, the wife of Lieutenant-Colonel E. St. John Neale, her British Consular Agent's Consul in Bulgaria, of a son.

On the 5th inst., at Ashgrove, Kirkcaldy, Fifeshire, the wife of James Ireland, Esq., of a daughter.

On the 8th inst., at the Inn dfield-street, Lady Pollock, of a daughter.

On the 7th inst., the Lady Francis Lindsay of a son.

On the 8th inst., at St. Cuthbert's-place, Edinburgh, the Lady Blanch Balfour, of a son.

On the 8th inst., at Enfield, the wife of the Rev. J. M. Heath, of a daughter.

On the 9th inst., at No. 1, Cumberland-terrace, Regent's-park, the wife of Lieutenant-Colonel Percy, of a son.

On the 9th inst., at Holy Rectory, Leicestershire, the wife of the Rev. Gilbert Bernard, of a daughter.

On the 10th inst., at the Wife of Mr. W. E. Whitmore, Brunswick Hotel, Liverpool, of a son.

MARRIAGES.

On the 12th instant, at St. George's, Hanover-square, by the Rev. John D. Gomm, brother of the bride, the Rev. Charles Gomm, Fellow of Trinity College, Cambridge, and Vicar of Marrow, Surrey, Esq., to Elizabeth Hugh, daughter of the Rev. J. D. Gomm, of Grosvenor-street, Grosvenor-square.

At St. George's, Hanover-square, by the Rev W W Ellis, Rector of St Clement Danes, the Hon. James Grant, second son of the Right Hon. the Earl of Seafield, to Isabella Mary, fourth surviving daughter of Sir Robert Abercrombie, Bart., of Birkenbog, in Aberdeenshire.

On the 5th inst., at Florence, Campbell Munro, Esq., Lieut. and Captain Grenadier Guards, to Henrietta Lucy, youngest daughter of the late Sir Hector Munro, Bart.

On the 7th inst., at St. George's, Hanover-square, Abel South, Esq., [illegible] Park, Hertfordshire, to Sarah Elizabeth, youngest daughter of the Right Hon. Earl of Caledonia.

At St. Andrew's Church, St. Heller's, Jersey, by the Very Rev the Dean, the Rev. J. S May, Vicar of Bramley, Kent, to Mary Reg. Ita, Esq., R.N., Deputy Assistant Commissary-General, master, late of H.M.S. *Victory*.

On the 7th inst., at St. Saviour's Church, St. Heller's, Jersey, George Birt, [illegible] Heller's, Heriot, eldest daughter of H. H. Goddard, Esq., R.N.

On the 7th inst., at St. Heller's, Jersey, by the Very Rev the Dean, the Rev. G. A. Seymour, to Elizabeth Welman, fifth daughter of the late Hon. and Rev. Gerard T. Noel, Canon of Winchester, and Vicar of Romsey.

On the 9th inst., at Oulton Church, Frederick Ernest Hooker, Lieutenant 11th [illegible] of Limerick, and magistrate and deputy lieutenant of the county of Merioneth, [illegible] Esq., late Major of the 40th, or 1st Somersetshire Regiment.

On the 9th inst., at Brighton, Frithcroft Coddington, Esq., late Major of the 40th, or 1st Regt. of Foot, aged 56

On the 9th inst., at his residence, Felpham, Bognor, Sussex, James Lonsdale, Esq., eldest son of the late Lieut.-General Lonsdale.

On the 4th of February in Burdah, Ahmedabad, Lieutenant Charles Dopff Buckley Keane, R.N. son of the late Colonel Thomas Keane, of the Honourable East India Company's service, to Georgina Margaret, second daughter of the late George Wilson, Esq., of Hermitage-hill, Hampstead, aged 32

On the 8th inst., at his residence, Brooklands, Lancashire, Edward Bayley, Esq., a Deputy-Lieutenant and magistrate of that county, aged 56.

At Olive Bank, Bombay, after a protracted indisposition borne with great Christian fortitude, Jessie, fourth daughter of the late General Wilson, Esq., Massachusetts.

EXHIBITION OF A FORTY-TWO-POUND NUGGET OF GOLD AT MELBOURNE.

The lower Illustration at page 296 is introduced by the Artist, Mr. Gillman, by observing that it has long been the practice in China, parts of Europe, and, doubtless, other countries with which we are less acquainted, to present as an *entremet*, or dessert, certain dishes which the guests are instructed from touching; inasmuch as they may be merely mock salmon, or artificial fruit, intended rather to gratify the eye than the palate, and merely serve as an ornament to the board

The Illustration shows, in miniature, the ingenuity of having expressed the opinion that the unworked gold fields of Victoria are of very great extent. The most experienced diggers agree in the impression, and say that in the districts that are acquainted it, namely -that the remaining deposits may by no means be so rich as those already discovered, and now nearly exhausted.

The above Nugget was found in White Horsegully, Bendigo, and weighs forty-two pounds. It was subsequently exhibited in the office of Jamieson and Moore, the principal gold-brokers in Melbourne, where our Artist sketched the Nugget and a group of spectators, and the general business complexion of the office. In a few days the Nugget was shipped on board the *Great Britain*, and formed part of the £600,000 freight recently arrived at Liverpool

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Monday, Wednesday, and Friday, Macbeth: Tuesday, Anne Blake; Thursday, The Corsican Brothers: and Saturday, St. Cupid; or, Doctor's Fortune; and the new drama of Marco Spada every evening.

FRENCH PLAYS.—ST. JAMES'S THEATRE.—Every MONDAY WEDNESDAY, FRIDAY, and SATURDAY. THIS EVENING, SATURDAY, APRIL 16, M. Barrault's Comedy of AMOUR. Marinoni, by M. Lafont. With other Entertainments. The performances on Saturday invariably terminate before eleven o'clock. Le Chevalier de St. Georges will be produced next week in which Mdlle Rose and Mons. Lafont will perform.—Stocks and Stalls at Mr MITCHELL'S Royal Library, and at the Box office.

ROYAL SOCIETY of MUSICIANS.—EXETER HALL.—Under the Patronage of her Most Gracious Majesty the QUEEN and his Royal Highness PRINCE ALBERT.—Handel's Oratorio, the MESSIAH, will be performed in Aid of the Funds of the Institution, on FRIDAY EVENING, APRIL 22 Conductor, Mr Costa. Principal Vocalists —Mdme. Clara Novello and Miss Louisa Pyne, Miss Williams, and Miss Dolby, Mr. Sims Reeves, Mr Lockey, Mr. Weiss, and Herr Formes. The Band and Chorus (Choral selection by the Sacred Harmonic Society) will consist of the first talent in the metropolis, and will comprise nearly 700 Performers. Tickets, 10s., 5s., and 10s. 6d. each, may be had at the office of the Sacred Harmonic Society, 6, Exeter Hall, and of the principal musicsellers.

63, Newman-street, Oxford-street. JOHN A. IRELAND, Secretary.

MUSICAL UNION.—H. R. H. PRINCE ALBERT, Patron TUESDAY, APRIL 19th WILLIS'S ROOMS.—Quartett B flat, No. 3, Mozart. Trio, C minor, Pianoforte, &c., Bee hoven. Quartett in D, Mendelssohn. Executants—Quartett: Sainton, Goffrie, H. H. and Piatti. Pianists: Mdlle Clauss, who will also play Solos. Tickets Half-a-guinea each, to be had of Cramer and Co., Regent-street. Doors open at three.—J. ELLA, Director.

SIGNOR and MADAME FERRARI beg to announce their ANNUAL CONCERT will take place at the HANOVER-SQUARE ROOMS, on TUESDAY EVENING, MAY 3rd, to commence at Eight o'Clock. Vocalists: Miss Sassaroo, Miss Kathleen Fitzwilliam, and Madame Ferrari; Messrs. Benson, Reinhardt, and Signor Ferrari. Instrumentalists: Piano, Mr. W. Kuhe; Violoncello, Mr. W. Dorrell. Miss Coles, and Herr Foster, Concertina. Signor Guido Regondi, Violin, Mr. Watson, Violoncello, Signor Piatti. Conductors: Messrs. Frank Mori and W. Dorrell. Tickets 7s. each, to be had at the principal Music-sellers; Reserved Seats, 10s 6d., to be had only at Signor FERRARI'S residence 16, Upper Norton-street, Portland-place.

MR. ALBERT SMITH'S MONT BLANC every Evening, at Eight o'clock (except Saturday). Stalls, 3s., which can be secured at the Box-office every day, from Eleven to Four. Area, 2s Gallery, 1s. A Morning Performance every Tuesday and Saturday, at Three o'clock. Egyptian Hall, Piccadilly.

ROBERT HOUDIN.—ST. JAMES'S THEATRE.—THIS EVENING, SATURDAY, APRIL 16th; Tuesday Evening, 19th; Wednesday Morning, 20th; Thursday Evening, 21st; Saturday Morning, 23rd. Doors open—Morning at Two; Evening at Eight. Stalls, 7s • Boxes, 6s.; Pit, 3s.; Gallery, 1s.

THE NEW SOCIETY of PAINTERS in WATER COLOURS will present their SIXTEENTH ANNUAL EXHIBITION on MONDAY, the 18th inst., at No. 53 Pall-Mall Dark, at their GALLERY, 53, PALL-MALL. Admission by Private Card. JAMES FAHEY, Secretary.

ROYAL POLYTECHNIC INSTITUTION. PHOTOGRAPHIC SCHOOL. The [illegible] Course with the Collodion Process, and Lalbot's Calotype, being nearly completed, Classes or Private Lessons, embracing all branches of Photography, will commence May 2nd, 1853, for Gentlemen and May 3rd, for Ladies.

ZOOLOGICAL GARDENS, REGENT'S PARK, are OPEN to Visitors daily. The only living specimen of CHOIROPOTAMUS in Europe. Admission, 1s.; Mondays, 6d.

MADEIRA COLLEGIATE SCHOOL for the Board and Education of Boys and Youths in delicate health.—"The climate of Madeira is the finest in the Northern Hemisphere. There is no place with which I am acquainted where the temporary benefit could reside with so much advantage during the winter as Madeira."—Sir James Clark. The Domestic Arrangements for young boys must be reared in Madeira, who would inevitably perish in a climate like that of Great Britain."—Dr. Ross, of Madeira. "I think the scheme a most excellent one, and one in which medical men are much interested as it will overcome the pleasance of many persons to send their children at a sufficiently early period last their education should be interfered with." Dr. Dickson. Prospectuses lie at 53, Baker-street, Portman-square.

THE CONSERVATIVE LAND SOCIETY. Enrolled under 6 and 7 Williams 4, c. 32. Established for the purpose of assisting members of all classes to become Freeholders in all Counties, and as an excellent mode of investment. Trustees—Viscount Hardinge, the Hon. Colonel Lowther, R. P. W Thompson, Esq., M.P.; Alderman and J. C. Cobbold, Esq., M.P. At the Public Dinner to be Provisionally Held [illegible] APRIL 19th, [illegible] Chair, [illegible] Esq., M.P. [illegible] Tickets, [illegible] Stewards, [illegible] Esq., M.P. [illegible] Esq., M.P. [illegible] Esq., M.P.

DESTRUCTIVE FIRE AT HUNSTANTON-HALL, NORFOLK.

THE partial destruction of this fine ancestral seat, on the 8th inst., was noticed in our Journal of last week. Hunstanton is a pleasant village on the coast, about eighteen miles from Lynn. The Hall, the seat of Henry Le Strange Styleman Le Strange, Esq., though not an entire baronial mansion, boasted of considerable antiquity. It was built of coursed rubble-work of the deep brown stone of the neighbourhood, and presented the appearance of a collegiate edifice; its clustering chimneys adding greatly to its picturesque effect in the landscape. The east front was approached from a large fore-court, bounded by embattled walls, having a fine archway over the drive, which is continued along a small bridge crossing a rivulet, and giving the mansion the appearance of standing in a moat. This drive leads through the principal gateway to the enriched entrance-door, which is placed on one side of the inner court or quadrangle. The east front and wings were erected in the reign of Henry VII., by Sir Roger Le Strange, whose arms, with those of his wife, are sculptured on the great arch. The west front of the Hall, the portion just destroyed, was, probably, of a later period than the above: the exterior presented three gables towards the inner court, as well as towards the garden, and two gables at each of the return ends; all surmounted at the foot and at the apex by a ball or other terminal. The Hall, having fallen into dilapidation, was restored and enlarged by the present owner, at great expense, in 1837. The surrounding grounds are finely wooded, and opposite the west front is a beautiful terrace walk, approached by a flight of steps, reminding one of the Elizabethan pleasaunce.

HUNSTANTON HALL, NORFOLK.—WEST FRONT, AFTER THE RECENT FIRE.

The interior of this noble edifice was rich in tapestry of great beauty and value, fine oaken panelling, carved mouldings, chimney-pieces, and doorways; with a grand staircase of corresponding magnificence. The principal rooms (including the State Bed chamber wherein Queen Elizabeth once slept), were sumptuously furnished; and the walls were hung with family portraits and other pictures.

It is curious to observe how many fine old mansions have, at various times, been burnt through the airing of bedding; and Hunstanton Hall must be added to the long list. The family were absent on the Continent; when, early on Monday morning, the 4th inst., a fire was lighted in one of the south attics for airing blankets and bedding, and it was kept burning briskly throughout the day, until seven in the evening: all the articles aired were, however, kept at a reasonable distance from the fire, which the housemaid saw properly extinguished before she retired for the night. Still, the conflagration must have originated in this room. The two servants in charge slept at a distant part of the house. At about six o'clock on Tuesday morning some workmen engaged on a new building in the neighbourhood of the Hall discovered flames issuing from the attics in the south and west fronts; one of which the housemaid, on being aroused, found a burning mass. A messenger was immediately despatched with horses to Heacham for the engines belonging to Mr. John Rolfe—between which time and their arrival, nearly two hours elapsed. Meanwhile, the neighbouring gentry, farmers, and labourers arrived in great numbers, and removed much valuable property from the mansion: the flames, however, spread with fearful rapidity from room to room on the upper floor, and by the falling of the burning timbers, communicated to the rooms below. It should here be mentioned that as soon as the intelligence of the fire reached Heacham, Mr. Rolfe, and his three men accustomed to work the engines, in three minutes started for the scene of the conflagration, which they reached when the whole of the south front was in flames. Upon this portion Mr. Rolfe set the engines to play, and the supply of water from the rivulet being plentiful, the fire was confined to the south portion of the Hall, and the wings and east front were preserved. The flames continued to rage from six to twelve at noon, by which time they were greatly subdued. Fortunately, the weather was fine; and the furniture, books, and pictures, which had been removed to the lawn, were little injured: the paintings were subsequently deposited in the church, and the furniture in the neighbouring barns.

The west front of the Hall, which has been entirely destroyed, contained on the ground floor, the dining-room, the "Priest's-hall," with its armour and stained glass; the "walnut room," a costly staircase, and the library; above was the suite of rooms, including Mrs. Le Strange's apartment, hung with beautiful tapestry—the ball-room or museum, and over these rooms were the attics. The wings of the east or entrance front, which have been preserved, include the best drawing-room, richly carved throughout; the evidence or muniment-room, in which were deposited valuable papers; the state bed room, the "Priest's room," &c. The accompanying Illustration, from a sketch by a Correspondent, shows the west front of the Hall, as it appeared soon after the fire. The devastation has been very extensive; for, although the mansion was very spacious, the existing wings and east front appear but as a skeleton in contrast with the blackened ruin to which the fairest and best portion of the Hall has been reduced. A good view of the remaining east front is given in the "Excursions in Norfolk," 2 vols. 8vo.

The exertions of all classes in saving much valuable property from the flames deserve special praise: in some instances they greatly periled their lives in their efforts.

It is highly creditable to Mr. John Rolfe, the proprietor of the fire-engines, through which Hunstanton has been in part preserved, that they are kept in constant readiness, and are tested every three months; Mr. Rolfe himself undertakes the superintendence of the engines, and they have been the means of saving much valuable property in the neighbourhood. One of the engines, though small (but, therefore, more portable), throws one hundred gallons, and the other forty gallons, of water per minute. They were built by Willett, of Lynn.

STATUE OF THE LATE EBENEZER ELLIOTT, "THE CORN-LAW RHYMER," TO BE ERECTED AT SHEFFIELD.

STATUE OF EBENEZER ELLIOTT, "THE CORN-LAW RHYMER."

Soon after the death of Mr. Elliott, at the close of 1840, it was proposed by the people of Sheffield to commemorate by some public testimonial the genius and integrity of their fellow-townsman, Ebenezer Elliott, the "poet of the poor." Such a distinction was well earned, as will be seen by reference to the Sketch of Elliott's eventful life in the ILLUSTRATED LONDON NEWS, No. 403. Accordingly, the erection of a statue was resolved on, and the model is now complete.

The figure is to be cast in bronze; its height is about seven feet six inches. It will be placed on a pedestal of Penryn granite, of from seven to eight feet high, and will occupy a prominent position in the town of Sheffield, in the front of the new Post-office. The name of the sculptor is Neville Burnard, and it is expected that the statue will be completed by Midsummer next.

SCHOOLS LATELY ERECTED AT OULTON PARK.

THE accommodation afforded by the old schools at Oulton Park not being sufficient for the requirements of an increasing population, the above structure has been erected by the liberality of Sir Philip de Malpas Grey Egerton, Bart. The style adopted is the later period of Early English, which prevailed during the reign of Edward I., from designs by Mr. C. Vickers, of London. The material employed is a red sandstone, procured from a quarry in the neighbourhood; the quoins and dressings are of freestone. The east or principal front is lighted by windows of three lights, with trefoiled heads. The northern gable contains a large window of three lights, the upper portion pierced with a quatrefoil, the cusps foliated; and the whole surmounted by a dripstone, with enriched corbels. The quatrefoil is filled with stained glass, representing the crests of the Egertons. Above this is a small bell-cot. In the southern gable is a window of design corresponding to the northern. The entrance is by a corridor, connecting the new School with the old one, and lighted on either side by three small couple-light windows of stained glass. The doorways are plain-pointed arched, the jambs being simply splayed, and without weather-tables. Adjoining the School is a house for the school-mistress. The Schools accommodate 200 children.

SCHOOLS LATELY ERECTED AT OULTON PARK, CHESHIRE.

EXHIBITION OF A 42lb. NUGGET OF GOLD, AT MELBOURNE.—(SEE PAGE 29.)

London: Printed and Published at the Office, 198, Strand, in the parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, APRIL 16, 1853.

THE ILLUSTRATED LONDON NEWS

No. 618.—VOL. XXII.] SATURDAY, APRIL 23, 1853. [SIXPENCE { WITH SUPPLEMENT GRATIS

THE BUDGET.

We think we but echo the general opinion of the country when we state that the Budget introduced on Monday night by Mr. Gladstone was the most able, comprehensive, far-sighted, and practicable scheme of finance that has been laid before the Legislature since the memorable Budget of Sir Robert Peel in 1844. Of that great fiscal reform it is the long-delayed, but necessary completion. Mr. Gladstone is thoroughly imbued with the principles of his illustrious predecessor. Like him, he aspires to legislate not for a class but for a nation. Like him, he refuses to "give up to party what was meant for mankind," and soars far above the narrow common places and stereotyped routine of red tapists and factious partizans; and surveys with impartial justice the claims, the burdens, the rights, and the necessities of all classes of the community. The test of Ministerial capability in our day is *Finance*. From that test Mr. Gladstone and his colleagues have not shrunk; and history will record that, whatever their merits or demerits may have been in the other functions and objects of Government, they introduced a measure of financial policy worthy alike of a great nation and of a wise statesmanship.

We cannot be expected to enter into a detail of the various measures and sub-measures which it took Mr. Gladstone five hours to expound to the House of Commons, in a singularly concise, ample, and lucid oration. It will be sufficient that we draw attention to the main points of a project, destined, we have no doubt, to remain but for a short time in the embryo condition of a subject of debate, but to pass, without delay, into the broad and palpable vitality of a legislative enactment. So multifarious and comprehensive is it, that it scarcely leaves untouched, unmodified, unassailed, or unamended, any of the greater or lesser sources of the national income. It provides for the renewal of the Property and Income-tax, and for its extinction at the end of seven years; it assimilates real to personal property in its liability to the Legacy-duty; it proposes to levy an additional duty of small amount on Irish and Scotch whiskey; it abolishes in one grand swoop the onerous and foolish Excise-duty upon soap and cleanliness; it extends the reform of the Customs to upwards of 120 trifling articles which are to be struck out of the tariff, and to about as many more which are to be charged at a lower and yet more productive rate of duty. In addition to all these—sufficient of themselves to earn for the Budget the title of magnificent—it provides for the reduction in the short period of three years of the Tea-duties to the uniform rate of one shilling per pound. This is a measure that has long been advocated by the profoundest thinkers and economists of our day. But the reforms of this unparalleled Budget do not end here. Among the minor, but by no means unimportant subjects which Mr. Gladstone has included in his "long range," are the reduction of the Advertisement-duty from eighteenpence to sixpence—the abolition of the Stamp-duty upon newspaper advertisement supplements — the remission and the revision of the Post-horse Duty, and the Assessed Taxes generally. The success of Lord Robert Grosvenor's motion has doubtless led to the favour which has been shown to that small, but troublesome and influential class, the attorneys, in the proposed reduction in the annual duty which they now pay for permission to practise their profession. No one will begrudge them the boon. Of a less popular character will be the proposed alteration in various trade licences; but it is probable that, even the classes which may feel themselves aggrieved by this increase of burden thrown upon them, will ultimately admit that they will receive more than compensation in the reduction of the Tea-duties, the reform of the tariff, and the gradual abolition of the Property and Income-tax. The reformation to be wrought by the substitution of a penny receipt-stamp upon all payments above £2, for the old, costly, and continually-evaded system of *ad valorem* duties, will be very great. A penny receipt-stamp upon all money payments above £2 will turn out, we have no doubt, to be a very simple and very productive tax. It is one that will never be felt as a burden by the humblest of traders or of purchasers; and it will be a security for a great many small transactions that have now no guarantee. No one will begrudge a penny receipt-stamp on the payment of sums above forty shillings, as no one begrudges the penny stamp upon a letter.

We must turn, however, to the more salient points of Mr. Gladstone's Budget. We rejoice to see that the right honourable gentleman has had the courage to resist the popular clamour directed against certain vital portions of the Property and Income-tax; and that he has, at the same time, braved the opposition of a minority in and out of Parliament, in extending its operation to Ireland—long unjustly excluded from it—and to the possessors of incomes ranging between £100 and £150 per annum. The professional classes, though denied the favour which they sought to obtain at the expense of fundholders, annuitants, and all the non-professional classes, will have the satisfaction of seeing that both their real and imaginary grievances in relation to their incomes will speedily disappear, and that the paternal Chancellor of the Exchequer has kindly provided for the diminution of the impost in two years from this date, and for its extinction in seven. Whatever outcry may be excited in Ireland by the extension of the tax to that country, this much is certain, the burden will not fall on the shoulders of the poor or the destitute. If there be no property and no income in Ireland, as some Irishmen would have us believe, Ireland will have nothing to pay. If, on the contrary, there be property and income in Ireland, no just Irishman in possession of either should or will object to pay his quota, and to consider himself in this respect as the equal of an Englishman. It is probable, too, that the extension of the tax to incomes between £100 and £150 per annum will excite some little disapprobation among the persons thus for the first time rendered liable. But their complaints will excite little sympathy, and they may think themselves fortunate in being assessed at a lower rate than their fellow-citizens, and in having enjoyed a nine years' immunity from an impost which, in strict justice, they ought to have borne during the whole of that period.

Next to the total abolition of the Legacy-duty, its extension to real as well as to personal estate will prove one of the most popular acts that any Ministry could have brought forward. It will yield a large amount of revenue; easily collected; free from all imputation of partiality or injustice; and will, at the same time, be a valuable instrument in the hands of future financiers for rendering possible the reduction or abolition of other taxes which may be found to affect injuriously the health, the morals, the industry, or the subsistence of the people.

Though we cannot afford space to run over and expatiate upon every item in so miscellaneous, yet, at the same time, so vast and coherent a scheme, we cannot avoid rendering our especial tribute of thanks to the Chancellor of the Exchequer for the boldness he has displayed in dealing with the Excise-duty on soap. We trust that an available surplus next year will enable the same sagacious statesman, to whom we are indebted for the one boon, to extend to us a second still more to be prized in a free and enlightened country. Although we are grateful for the removal of the tax upon cleanliness, we shall be still more grateful for the removal of the taxes upon literature and education comprised under the head of paper duties and newspaper stamps. It is not, we believe, for want of the will, but for want of the means, that this remission has not been already decided upon. It is, however, but a question of time, and come when that time may

HALE'S ROCKET FACTORY, AT ROTHERHITHE.—(SEE NEXT PAGE.)

we shall reckon not only upon the sympathy, but upon the support of Mr. Gladstone and his colleagues.

Upon the question of the Tea-duties we have repeatedly expressed our opinion. There is not a statesman worthy of the name, there is not a politician in or out of Parliament, who has given the subject a moment's thought, who is not decidedly favourable to the reduction of those duties to 1s. per lb. Some proposed that the reduction should be immediate; others that it should be extended over five, seven, or even ten years, but all agreed that the change, however effected, would be wise and beneficial, and that any temporary loss to the revenue would speedily be compensated by a largely increased consumption, and by the incalculable extension of our trade with one of the richest and most populous nations in the world. To effect this object alone is to deserve well of the country, and we have no fear that in this respect the country will prove ungrateful to the Ministry.

Every part of the Budget will, no doubt, be keenly debated But there is not, we think, the slightest cause to fear for it. final triumph. No such project has dazzled and satisfied the public since the days when Sir Robert Peel first entered the lists as a financial reformer. The splendid and yearly-increasing success which attended that statesman's measures is the justification and the cause of the present Budget. It carries a great work a step nearer to completion, and sets a new example to the nations of the world of the true fiscal policy which it is their interest and duty to pursue. Free-trade is susceptible of yet illimitable development; and surrounding states, kingdoms, and empires, when they see how much we are profiting by it, will awake from their present apathy, and augment our prosperity by looking after their own.

The Budget of 1844 laid the foundation of the security and happiness which, as a nation, we now, under the favour of Providence, enjoy. Similar, and even larger benefits will, in all probability, flow from the Budget of 1853.

HALE'S ROCKET FACTORY AT ROTHERHITHE.

An event of ten days since invests the barren locality, pictured upon the preceding page, with extraordinary interest. The circumstances are briefly these. In the *Times* of the 13th appeared the announcement that upon intelligence received by the Secretary of State for the Home Department and the Commissioners of Police, active measures had been taken to substantiate the charges which have long been vaguely preferred against M. Kossuth and his adherents. "Upon this legal information," said our contemporary, "a house in the occupation of M Kossuth was searched yesterday morning at an early hour by the competent authorities, acting, we presume, under the Secretary of State's warrant; and the result of this investigation was the discovery of a large stores of arms, ammunition, and materials of war."

This announcement was it will be seen in another column, the subject of conversation in the House of Commons on Friday. "Nevertheless, who the persons are against whom proceedings have been taken, Lord Palmerston," says the *Times*, "has not told the House, but, neither has he stated who they are has he refused to the Minister to exonerate M. Kossuth from the suspicion which his friends were endeavouring to shake off, is at least strong presumptive evidence that Lord Palmerston does not hold it to be altogether unfounded; and, for the present, we must be allowed to retain an opinion which was not taken up on light grounds, and can only be refuted by positive evidence."

The premises upon which the seizure has been made are the rocket-factory of Mr. Hale, on the west bank of the Surrey-canal, near the Plough-bridge, at Rotherhithe. In the building shown in the centre of the view are manufactured the rockets, which are then placed in the shed shown on the left; the premises in the rear being a rice-mill. Mr. Hale is a well-known inventor, and has been for some years past engaged in perfecting a war rocket, which rotates on its axis like a rifle-ball, and carries no stick; his patent for which he is stated by himself to have sold to America, Denmark, Switzerland, and other foreign powers. It is further stated that the rockets which were that season were manufactured upwards of three years ago On Saturday last they were put on board barges in the river, and conveyed to the Royal Arsenal, at Woolwich, and, with a large quantity of composition for filling rockets, been since placed in a safe locality.

The *Daily News* states that Kossuth's connection with the Rotherhithe explained by his being known to Mr. Hale, and having suggested improvements in rockets of his manufacture.

NAVAL AND MILITARY INTELLIGENCE.

DEVONPORT.—The *Leander*, 50, Captain King, has arrived from Portsmouth. She was towed into harbour by the *Cyclops* to be fitted to take the Earl of Ellesmere to the United States. She is to remain at New York during the Great Exhibition in that city. The *Leander* is a fine vessel of her class, and is certainly a good example of a British ship of war. The United States ship of war, the *St. Lawrence*, was at bottom upon during the Great Exhibition of 1851.

PEMBROKE.—The launch of the *James Watt*, screw line-of-battle ship takes place to-day, should no unforeseen event occur to prevent it. She is a magnificent vessel, and equal to the *Agamemnon* of the same force. It is said that the hull of these vessels is as strong as wood and iron can make them. Her armament will be 62 32-pounders, and 8 8-inch guns, with a heavy pivot-gun. After launching she will be navigated round to Plymouth, where she will immediately be made ready for commissioning.

WOOLWICH.—The *Royal Albert*, 120 guns, screw steam-ship, is now nearly ready for being launched at Woolwich. Orders have been received here to prepare for the reception and fitment of this noble ship, and all available force is to be put on to get her iron work, masts, spars, &c., ready for her immediate equipment.

CAPTAIN WARNER AND MR. HALE.—The Captain has written to the newspapers to say that there is no similarity in the inventions of himself and Mr Hale:—"I have known Mr Hale many years, and know that his rocket is the last one ever made without a stick. Still, they bear no affinity or resemblance to anything of mine, having nothing whatever in the character of a rocket. The whole of my inventions are of a very different kind and purpose, entirely interesting the use of rockets and gunnery of every description, as is well known to many scientific officers, and many in the Government."

THE GREAT ENCAMPMENT NEAR WINDSOR.—Immediate preparations are to be commenced for an encampment in this neighbourhood, and at nine o'clock on Monday morning a detachment of the Scots Fusilier Guards, under the command of Captain the Hon. J. Jocelyn, marched from Windsor to Sunningdale, near Ascot-heath, by which neighbourhood they will be billeted. This detachment, with others from various regiments, will commence operations forthwith under the instructions of Lieut.-Col. Vivian, R.E. The encampment will be made on Cholsham common, between Bagshot and Ascot-heath. The regiments are expected to arrive about the end of May, or the beginning of June.

THE DUKE OF WELLINGTON'S WILL has been administered to by the executors, and the personalty sworn as under £500,000. It is very short, and was made in 1850, on the day after his entered Paris, when his life was attempted to be taken by a pistol-shot.—The probate had not passed the seal of the Prerogative Court of Canterbury on Thursday, which excludes, at present, any further official notice being given by us.]

BEQUESTS.—Lieutenant-General Sir Love Parry Jones Parry, late residing at Madryn, in Carnarvonshire, died possessed of personal property amounting to £18,000, by his will, bearing date 1st June last, in manner following, a sum of £10,000, which had been left to him under his mother's will, viz.:—to one daughter a legacy of £1000, another £3000, and the third to £6000, and the residue to his son; the widow taking the real estate and residue of the personalty.——Major-General James Allan, C.B., who died at Cheltenham, has left his widow sole legatee of his real and personal estate, amounting to upwards of £8000.——Sir Robert Baron, K.C.H., who died in March last, whose will bears date in May, 1841, had shortly previous thereto insured his life, and has bequeathed such policy, together with all his personal estate, to his widow.

MASTER MARINERS' BENEVOLENT SOCIETY.—On Thursday the annual meeting of this society was held at the Bridge-house Hotel, Mr. George Scovill in the chair. The report stated that during the past year the amounts paid on account of deaths from accidents and natural causes was £860; of deaths by shipwreck, £300; and annuities, £200. The receipts for the year amounted to £1126 8s. 6d., and the disbursements to £1476 9s., leaving a fund in hand of £611 0s 2d. In order to increase the number of annuitants, it was agreed to call upon each member for a small additional annual subscription.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The grand solemnity of the week was the ceremony, at the chapel of the Tuileries, of the *remise de la barrette* of Cardinal to the Archbishop of Tours, by the Emperor, in presence of the members of the clergy charged by the Pope to convey the ensign of dignity from Rome, a large number of the French clerical dignitaries, the Ministers, heads of the *grands corps d'état*, and a certain proportion of invited guests. The ceremony was extremely effective and imposing, the Emperor alone occupied the throne, the Empress being in the *tribune*. At its conclusion, their Majesties and all the persons attending ascended to the Royal apartments; where the new Cardinal, arrayed in his purple robes, came to present himself.

The Emperor (whose real malady was an abscess, which necessitated an operation) is much better, but still incapable of much fatigue or active exercise.

The Théâtre Français has been the scene of a grand *représentation solennelle*, the *retraite* of Samson—the veteran who for so many years has been associated with all its fortunes, and who has contributed so largely to its successes, not only in his own person, but in those of his pupils, of both sexes. Nothing could be more *sympathique*, more delicately flattering, than his reception on the part of the audience, who, one and all, felt the gratitude they owed him for many a pleasant hour, and the regret his loss must occasion us. It is painful to own it, the principal interest of all was concentrated on the appearance of Madame Arnould Plessy—the *belle dame* who, some eight years since, threw up her French engagement in a pet, and enlisted herself under the Russian banner for good and all. Having obtained special permission from St. Petersburg, she came once more, and only once, to display herself before the admiring eyes of her deserted companions, in the *rôle of Araminte*, in "Les Fausses Confidences" of Marivaux. The effect was electric, the success unmingled; never, perhaps, was she so applauded by the public whose approbation she did her best to obtain, as by the public she had contemptuously abandoned; and the falling of the curtain left a blank of regret in every heart.

The appearance of "La Dame aux Perles" from the novel of Alexandre Dumas *fils*, is forbidden a fact which gives some hope for the ideas of morality of the powers that be.

Mesdemoiselles—a line in conclusion for you. A lady well known in the first society in Paris, has just died of an unknown and mysterious malady. On a post-mortem examination, it was discovered that three ribs were crushed into the liver—the result of *tight lacing!*

The Emperor has completely recovered from his indisposition. He drove out in a phaeton on Tuesday, accompanied only by one of his aides-de-camp. The Empress is slightly indisposed.

The *Moniteur* publishes the name of 147 persons sentenced by the mixed commissions in the departments to transportation, for having taken part in the insurrectionary movements of December, 1851, and who have been pardoned by an Imperial decree of the 13th inst.

The *Moniteur* also publishes the returns of the indirect taxes and revenues of France during the first quarter of 1853, which amounted to 129,600,000f. As compared with those of the corresponding period of 1851, there is an augmentation of 20,489,000f.; and of 14,384,000f. over their total in 1852.

Despatches have been received in Paris, stating that the French expedition against the pirates of the islands of Borneo, on the western coast of Africa, had completely succeeded, and that those ferocious marauders had been severely punished.

The products of the Imperial manufactories of Sèvres, Beauvais, and the Gobelins, which are about to be transmitted to the Exhibitions of Dublin and New York, have been exhibited during the week to the friends of M. Fould, the Minister of Finance, at his official residence. The Emperor has fulfilled the promises made to Mr. Reney and Mr. Buschek on that subject. The Sèvres collection consists of several splendid large oval vases, besides numerous pieces of minor importance; but the object which attracted the greatest attention and admiration was the great vase placed in the centre of all the objects of which the Exhibition consists.

The Correctional Police Court has delivered its judgment on the affair of the Correspondence of Marseilles. Barthélemy Lucet is condemned to three months' imprisonment and 200f fine for outrage to the Chief of the state, and the circulation of foreign journals not authorised in France; MM. Virmaitre and Planhol to three months, and 100f. fine; and M. Pandin to one month and 50f. fine, on the same charge. The Count de Rovigo and M. de Lapierre are sentenced to one month's imprisonment and 100f. fine for having fire-arms in their possession, and for outrages against the person of the Chief of the State. M de Chanclaure is acquitted, as also M. de Vallès. MM. Alasale de Coetlogon and Auberlin are sentenced by default to one year's imprisonment and 1000f fine. The parties appeal from the judgment of the Correctional Court, and, if the judgment be confirmed by the Imperial Court, a further appeal will be made to the Court of Cassation. In the course of the proceedings M. de Coetlogon said, "As long as I live, my sword and my pen shall be at the service of the legitimate Monarch." M. de Lapierre, among other things said, "It is not for having called the Emperor *Buttinguet* (a nickname derived from the workman who aided in the escape from the prison of Ham), but for my fidelity to the King that I am prosecuted." The President of the Court interrupted him at these words, thus, "There is no King in France, but an Emperor, and an Emperor proclaimed three times by universal suffrage." The other rejoined, "For you it is possible but for me there is a King." The President prevented his speaking longer in this manner, and M. de Lapierre resumed his seat

HOLLAND.

We hear from Amsterdam of the resignation of the Dutch Ministry, in connection, it is understood, with the excitement caused by the recent Papal aggression. The task of forming a new Cabinet has been given to M. Van Hall, formerly Minister of Finance. The question produces a much more powerful feeling in Holland than it did even in this country, owing to the nearer balance of the Protestant and Roman Catholic populations, the proportions being about 1,670,000 Dutch Reformed Church, 1,165,000 Roman Catholics, and 240,000 other denominations. The members of the new Cabinet already named are—MM. Van Hall, Foreign Affairs; Donker Curtius, Justice; Van Heenen, Interior; Vandoorn, Finances. The discussion in the Dutch Chamber respecting the re-establishment of the Roman Catholic hierarchy took place on the 18th. The Dutch Consul Rochberg is appointed Imperial Commissioner in the Lombardo Venetian kingdom, and Vitalini to Count Radetzky. This change has led the public to believe that the military power is about to make way for the civil authorities; but the impression is erroneous. Count Rechberg will be to the Marshal what Baron Hauer is to the Archduke Albrecht in Hungary—a confidential adviser in all matters connected with the civil administration.

ITALY.

Count Revel, Sardinian Minister at the Court of Vienna, after exhausting all the means prescribed to him by his instructions to prevail on the Austrian Government to do justice to the claims relative to the sequestration of the property of the Lombards naturalised in Piedmont, and having ascertained that all his exertions had been useless, has left Vienna preparatory to a suspension of diplomatic intercourse with Austria.

The President of the Council of Ministers has demanded of the Sardinian Chamber of Deputies a credit of £400,000 for a loan to be made to the Lombard emigrants who had become Sardinian citizens, and whose property had been sequestrated by the Austrian Government.

The official *Turin Gazette* contains a Government memoir on the difference with Austria, which proves that the decree against which Piedmont protests is a violation of the treaties existing between Austria and Sardinia. It concludes in the following terms: "From this violation *(attentat)* we appeal to the conscious knowledge of the Cabinet of Vienna, and against it we also invoke the friendly support *(bons offices)* of those Sovereigns who are our allies and friends." The King presides nearly every day over the Council of Ministers. His Majesty takes the warmest interest in the question of sequestration which aggrieves his new subjects the naturalised Venetians and Lombards.

The military government of Lombardy have ordered the construction of three new barracks in that city. At Lodi, two priests had been arrested: the first, because he had not assisted at the religious ceremony celebrated for the restoration of the Emperor; and the other, because he had sung the *Te missum est* in an anti-political tone *(in tuono antipolitico)*. A parish priest of Valtelline was also thrown into prison for an anti-political demonstration, because he had performed the service ordered on the occasion with tapers which had already been used

We have news of the definitive conclusion of the Tuscan loan contracted with M. Rothschild. It is for a million of Three per Cent Rentes at the price of 66.

SPAIN.

General Lersundi has succeeded in composing a Cabinet as follows:—General Lersundi, President of the Council and Minister of War; M. de la Torre Ayllon (at present Minister Plenipotentiary of Spain in Vienna), Minister of Foreign Affairs; M. Manuel Bermudez de Castro, Minister of Finance; M Egana, of the Interior; M. Govantes, of Grace and Justice; M. Antonio Doral, of Marine; and M. Acebal y Arrasa, of Public Works.

Lersundi opened negotiations with M. Martinez de la Rosa, M. Mon, and several other members of the Moderado opposition, to secure their support to the new Cabinet. The General states the basis of his Ministry to be "conciliation, tolerance, and morality;" and M. Martinez de la Rosa and M. Mon promised General Lersundi their support as long as he should remain faithful to his programme, and the policy of the Cabinet should not depart from legal and constitutional courses.

A private letter states that the pressing and immediate cause of the suspension of the Cortes was General Concha's intention of presenting an exposé of some curious documents relative to the slave-trade at Cuba, and in which it would be shown that Queen Christina had been deeply interested in that traffic for some time. On this subject few could be better informed than General Concha, who had been Captain-General of the island, and who was, during his command, a strenuous opponent of the trade

Spain seems returning to the worst absolutism of Ferdinand VII The Paris correspondent of the *Times* says:—

There never has been a period since the death of Ferdinand when the Queen Mother has been more thoroughly detested than at this moment by every class of Spaniards; and never was her presence more hateful to Spain. Until the whole clan of the Muñozes be shipped off to the Canaries or the Philippines the more distant the better Spain will know no peace or rest. When that lady contented herself with mere harmless amusements, people tolerated her, but there is something hateful in grasping cupidity and bigotry. Maria Christina must have put the patience of her most faithful partisans to more than one rude test, when we find such men as the Conchas and the O'Donnells abandon her and hers in disgust. She is hated on all sides; and if anything extraordinary should turn up in Spain, she had better put her house in order and leave the country. The monarchical sections of the Spanish people must be strong indeed to make them tolerate the specimens of Royalty they possess; and if a revolution break out—of which, I confess, I should not affirm there is no chance—I see nothing whatever to fall back on in any one member of the Spanish Bourbons now in that country.

The section of the railway between Aranjuez and Tembleque is to be opened on the 1st of May.

TURKEY.

M. de la Cour, the French Ambassador, arrived at Constantinople on the 6th inst. Lord Stratford de Redcliffe had reached that city on the 4th. On the 5th he assembled the English residents at Constantinople. He assured them of the maintenance of peace, and advised them to carry on their commercial operations with the utmost confidence. He said that his Sovereign had principally in view to assist the Sultan in husbanding the resources of his country, in order to secure its future prosperity by the means of friendly relations. The Turks saw with pleasure the arrival of Lord Stratford de Redcliffe and M. de la Cour, as they wished to know exactly what they had to hope for from France and England in the diplomatic struggle with Russia.

Little doubt was entertained by many persons that Prince Menschikoff was charged to exact a treaty of alliance, offensive and defensive, on the broadest basis, and copied from that which was concluded in 1798, when a Russian fleet, under the command of Admiral Ouchakoff, passed the Dardanelles in order to assist Egypt

The French squadron remained stationary at Salamis, and the British fleet was still at Malta

A letter from Constantinople, dated April 5, says:—

During the last two or three days the interviews of Prince Menschikoff with the Turkish Foreign Minister have been long and frequent. It is certain that Russia wishes to make Montenegro independent, gaining in that way the sovereignty, and forming an insignificant empire over 10,000,000 of the Christian subjects of the Porte. It seems certain, too, that the Turks have within the last day or two been hard pressed, and that the view of the approach of the fleet has given them courage. Since they have begun actively to arm and repair the forts of the Bosphorus. Several lighters, loaded with ammunition, were yesterday towed up to the mouth of the Black Sea; and Admiral Slade, a British officer in the Turkish service, and holding a commission in her Britannic Majesty's service, is said to have taken the command of the British fleet.

By the time of sailing from the harbour announced the arrival of her Majesty's steamer *Fury*, having on board Lord Stratford de Redcliffe, accompanied by Mr. Alison, Mr. Pisani, Viscount Pevensey, and Count Pisani. Soon after his arrival, his lordship landed at Tophanè, where he was received with the usual honours and ceremonials, and where an immense concourse of British and other Europeans assembled to welcome him, besides great crowds of anxious natives, both Mussulman and Christian. Hospitable arrangements for the accommodation of his lordship and suite had been made.

Despatches from Odessa state that on the 1st instant a courier had arrived from St Petersburg, bearing an Imperial order to suspend the military and naval preparations that have been going forward for some time past at that place.

AMERICA

We have advices from New York to the 9th instant

The political news from Washington is not of great interest. Mr Soule has been appointed Minister to Spain The recall of the Spanish expedition is officially denied

The California mining intelligence was favourable. Gold mines of great value had been found in Oregon.

Dates from the city of Mexico to the 21st of March state that, on the 17th, the ballot-box containing votes for the President of the Republic had been opened, and Santa Anna was duly elected.

Our latest accounts from the River Plate left its political affairs in the most unsatisfactory and disorganised state. Buenos Ayres was still besieged by Urquiza's forces, but a suspension of hostilities had been agreed upon, to allow an opportunity for further negotiations The whole of the operations on both sides consist merely of a desultory guerilla warfare, in which no decisive result is reached. General Urquiza has issued a manifesto, addressed to all the Argentine communities in justification of the course he has adopted. He is now negotiating a peace with the Provisional Government of Buenos Ayres

---

DIPLOMATIC SERVICE.—A return to the House of Commons contains a list of all persons in diplomatic service, with the salaries and allowances they respectively receive. The annual sum required is £127,856, of which £117,856 is devoted to salaries, and £9,000 as allowances for house rent. The charge for Paris is £6000, of which £800 is the salary of Lord Cowley; for Constantinople £9850, of which £7000 is the salary of Lord Stratford de Redcliffe; for St Petersburg £8000, of which the salary of Sir G. Rose is given as £700 for a house, for Vienna, £7600, of which the salary of the Earl of Westmorland is £5500, with £900 for a house; for the embassies at Madrid and Berlin £8000, of which the salaries of Lord Howden and Lord Bloomfield are £5000 each, with £400 and £500 for houses; for the United States £8500, of which £4500 is the salary of Mr. Crampton; the salary of the Ambassadors to the Two Sicilies, Portugal, and Brazil is £5000, of the Netherlands, Belgium, Sardinia, Bavaria, and Denmark, £3000; in Sweden and Hanover, £2000, at Frankfort, £2000; in Greece, £2000; in Wurtemberg, Saxony, Tuscany, and Switzerland, £1500 each; in Mexico, £1000. The expense of the legation in Persia is £7670, of which the salary of the Ambassador is £5000; the charge for this mission is defrayed out of the sum of £12,000 paid annually by the East India Company to the service.

LORD BROUGHAM IN PARIS.—At the Institute, Paris, on Monday, Lord Brougham read a paper on optics and mathematics, accompanied by demonstrations and calculations on the board. In the absence of M. Arago, whose health does not yet permit his attending, M. Jules de Gouprived the chair. In the course of the proceedings he paid a handsome compliment to M. Bertrand, the attending Secretary. The anniversary of the day on which that gentleman first took his seat as a member of the Institute. Amongst the persons present was Marshal Vaillant, the last member elected.

THE POLICE DAGUERREOTYPE.—The first appearance in the metropolis of the new portrait *Hue and Cry*, reached Scotland-yard, on Tuesday, from the detective department of the Manchester police. It looks as if the photographic portrait had been copied on a lithographic stone and further fac-similes struck off to the number required. The description of the person thus honoured has been also printed from a small hand-press; whilst the portrait itself is so well done, and truthful-looking, that the owner could be easily recognised and apprehended by it.

GRAND STEEPLE-CHASE BETWEEN ST. CLOUD AND VERSAILLES.—(SEE PRECEDING PAGE.)

JAMAICA COPPER-MINES.

CONSIDERABLE attention is at the present moment directed to a discovery recently made in Jamaica, which may, possibly, have the effect of producing an unexpected change in the commercial aspect of that island. It had been long supposed, both from tradition and from mineral specimens occasionally met with in its mountain districts, that copper would be found to be a natural product of the island Some indications of this metal, discovered about three years ago, led to an extensive mineral survey by some enterprising American gentlemen, the result of which proved the undoubted existence of the metal; and this has been followed by the establishment of several companies for opening mines in the most promising situations.

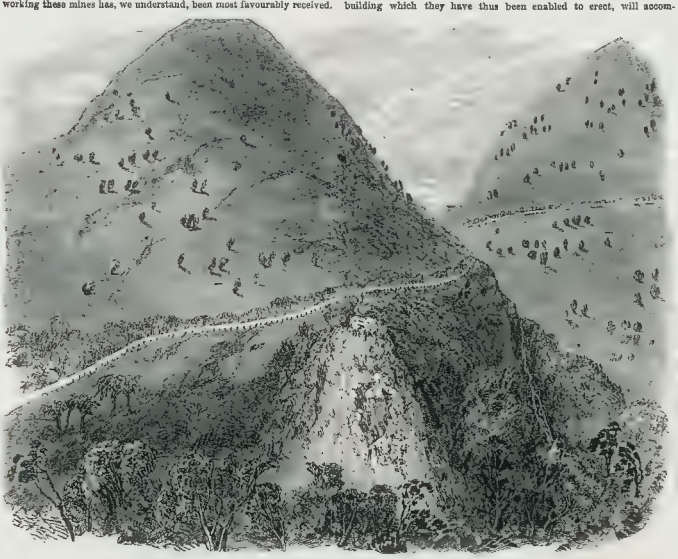
Amongst these mines are two in the parish of Metcalf, called the Job's Hill and Pembroke Plantations—two adjoining estates which have been secured by the Metcalf Mining Company of Jamaica.

The Mines are situated in one of the mountain ranges of the island. One of them—Job's Hill—is of conical form; and both are represented as being well adapted, by reason of their hilly formation, for mining operations: the works at present being carried on by means of horizontal adits on the sides of the mountains, instead of by vertical shafts; whereby machinery is for the present rendered unnecessary. The one seen in the Illustration forms part of Job's Hill, and the lower portion part of the Pembroke estate; the mountain pass dividing the two properties.

A considerable quantity of ore has been already extracted from the mines; and the last steamer from Jamaica brought a specimen weighing 880 lbs., and consisting of a very large proportion of metal. This specimen, at present deposited at the Company's offices in London, is intended to be placed in the new Crystal Palace. The project for working these mines has, we understand, been most favourably received.

The locality of the mines is described as most beautiful, presenting mountainous scenery, like other parts of the interior of Jamaica, scarcely to be surpassed in any country. The climate is also agreeable, with a temperature varying throughout the year not more than about 15°; the thermometer ranging between 65° and 80° Fahrenheit.

By reason of the advance in the price of copper, the present time is most suited for such undertakings as the present; and it is to be hoped that the enterprise already commenced will help to relieve Jamaica from that depression under which it has been for some years suffering.



THE JOB'S HILL AND PEMBROKE COPPER-MINES, RECENTLY DISCOVERED IN JAMAICA.

INSTITUTIONS FOR THE BLIND.

Two important institutions have lately been established in the midland counties of Warwick and Nottingham, well bespeaking the catholic spirit of philanthropy in which receptacles are raised in this country for every phase of suffering humanity.

The first of these establishments, the General Institution for the Blind, at Edgbaston, near Birmingham, was opened in July last; its principal object being the instruction of the blind in religious knowledge, and such branches of secular education as may enable them to obtain a livelihood, and thus become beneficial members of society. The institution originated with, and was, for two years, supported by, the unostentatious benevolence of two private individuals, and first became a recognised local charity in 1848, under the presidency of Earl Howe; since which period its rapid development speaks well for the zeal of its promoters, and the liberality of those to whom this long-neglected appeal has been made. The building which they have thus been enabled to erect, will accommodate eighty pupils; and, with the adjacent ground, occupies an area of two acres, in a healthy neighbourhood, not two miles from the centre of Birmingham. As it has been found desirable to separate the pupils, the right hand wing of the building is occupied by the boys' school the corresponding wing being appropriated to the girls' school. The two wings are connected by a corridor 90 feet long, and 6 feet broad. Intermediate are the hall, sale-room, secretary's offices, master's, mistress's, and matron's rooms, kitchen, &c.; and a music-room 48 feet by 25 feet, partially detached from the main building, has been placed at the north-west angle, affording ample accommodation for the pupils and their visitors during the performance of those musical exercises which are among the most gratifying results of the education bestowed on the blind. The dormitories extend over the wings, and the front portion of the central building. The play-grounds are separated by a range of workshops, and an open colonnade affords provision for exercise in inclement weather.

The style of architecture is Elizabethan, modified with the Italian detail, first introduced into this country about the year 1554; and the materials employed are red brick and Derbyshire stone. The windows are mullioned and transomed, and each of the wings has a bold bay-window; while the slightly-projecting centre has an oriel over the entrance doorway, which forms a principal feature, having an entablature over it, supported by semi-classic columns and pilasters The design is by Messrs. Coe and Goodwin, from a plan furnished by Mr. Hemming, of Birmingham, to whose superintendence the erection of the building was confided.

We must express our approbation of the prudent method in which the finances of this charity have been managed; for, although the handsome building, with a first-rate organ by Bishop, and appropriate furniture, has cost more than £7000, the committee collected, between 1848 and the opening of the institution last year, annual subscriptions to the amount of £800, and a building fund of £5500, principally in small sums; thus enabling them to extend the sphere of their philanthropic labours without incumbrance; an example almost unprecedented in the history of charitable institutions.

The second establishment is the Midland Institution for the Blind, at Nottingham, the first stone of which was laid in August last, by the Right Hon Earl Manvers, in the mayoralty of William Felkin, Esq. The building is of the Elizabethan style; the basement story being of Bulwell stone, and the upper portion of bright red bricks finished with white stone. It occupies a remarkably appropriate situation, on a hill immediately opposite the Arboretum. The land was given for the purpose by a philanthropic member of the Society of Friends, Mr. Samuel Fox. The building is in plan 86 feet long by 104 wide, and will accommodate about 40 inmates. It is so constructed, however, that it can be enlarged to nearly double its projected dimensions if required.

SUPPLY OF BRISTOL WITH WATER.

THE supply of large towns with water has lately occupied so large a share of public attention that the following will doubtless be read with interest.

In the year 1846 was formed "the Bristol Waterworks Company,' whose object was to furnish that city and its environs with water; the former supply being inadequate to the wants of the increasing population. After careful investigation, it was ascertained that no water in the locality admitted of such facility of conveyance, combined with all the qualities necessary for every kind of consumption, as that which flows from the Mendip Hills, near Chewton-Mendip. Accordingly, a covered aqueduct has been laid down at an inclination sufficient for the flow of the water to a reservoir at Barrow, four miles short of Bristol; whence the water, after being purified and strained through filter beds, is conveyed into the city and suburbs. But, while adopting measures which were so highly to benefit a large population, there were other paramount interests which were not to be forgotten, namely—those of the land-owners on the line of the river Chew; so that it was necessary to construct compensation reservoirs both for the supply of cattle, and also for feeding the numerous mills on the stream. The accompanying Sketch exhibits two of these reservoirs, which, together, contain an area of nearly forty acres in extent; they are formed by embankments thrown across a natural and picturesque valley. The Company, with good taste, have left the banks undisturbed, thereby allowing the water to follow the windings of the ground, so that they seem more like natural lakes than artificial reservoirs, and afford that addition which alone was wanting to complete the beauty of the landscape.

On the left of our Sketch are seen the Mendip Hills; on the right several small knolls; while in the centre, beyond the water, stretches a lovely valley, which is terminated at a distance of about twenty miles, by that great high road of commerce the Bristol Channel, beyond which some of the Welsh mountains are faintly visible.

GENERAL INSTITUTION FOR THE BLIND, EDGBASTON, BIRMINGHAM.

THE MIDLAND INSTITUTION FOR THE BLIND, NOTTINGHAM.

CORN EXCHANGE, HITCHIN.

The edifices of a nation are among the most prominent characteristics of its social condition; and no clearer proof can be given of the progress of general improvement than the rise of those public buildings in small country places which have so long been limited to the cities and large towns of the kingdom. This public architecture in the rural districts shows that our prosperity is not local, but general; and is national rather than metropolitan. In small country towns, where for many years the assembly-room of an inn furnished the only place for a lecture or a public meeting, and where the cattle-market was held in the streets, and farmer and dealers found no other exchange than the pavements of the town,—there have, of late years, been erected town-halls, mechanics' institutes, schools, and corn exchanges, vying in convenience, if not in extent, with the more imposing structures of cities.

These remarks are suggested by the recent opening of a new and spacious Corn Exchange, at Hitchin, Hertfordshire. This town is of ancient origin, is a Crown manor, and now numbers about 5000 inhabitants; it is pleasantly situated in the midst of a fine agricultural district; and though its inhabitants have always kept pace with those of the surrounding locality, yet the spirit of improvement has lately received a great spur from their closer connexion with the metropolis by a first-rate station on the Great Northern Railway. A local Board of Health has carried out a complete system of drainage and water-works; and a joint stock company has now furnished the dealer in corn with that shelter from the weather and facility for the transaction of business which he had so long wanted.

CORN-EXCHANGE, AT HITCHIN.

This new Corn Exchange is situate in the centre of the town, and approached from the market-place by an entrance-passage 40 feet in length and 10 feet wide. Above is a spacious News-room, 30 feet long by 16½ feet wide; and the roof terminates with a clock turret, in the Italian style of architecture, harmonising with the rest of the *façade*

The Exchange itself is oblong in form, 89 feet in length, and 51 feet broad, the whole area of which is covered with glass. The walls are 12 feet high, of white brick, unplastered, and windows at frequent intervals; and a glazed roof of timber rises in successive gradations, supported by cast-iron columns and pattern work girders. The floor, laid with Orsi and Armani's patent metallic lava, is divided into squares by white bands of the same material. Counting-houses have been formed along one side; the stands are arranged throughout the area, and there is also an office for the clerk, &c.

In this building the endeavour has been made to obtain that amount of light which is so essential to the dealer in corn, coupled with good ventilation and freedom from draught; which important points have, in some great measure, been attained. The light is secured by roofing the whole area with plate glass, which, as it is of the best quality, makes it as light within the building as in the open air. The ventilation is provided for by numerous openings at different levels; and freedom from draughts of cold air by lobbies with swing-doors at the points of entrance

The whole has been erected from the designs and under the superintendence of William Beck, architect, Finsbury-circus, London; and the works have been carried out by Mr. George Jeeves, builder, Hitchin. The cost of the Exchange will be about £2600, exclusive of stands and other fittings.

SUPPLY OF BRISTOL WITH WATER.—COMPENSATION RESERVOIRS ON THE LINE OF THE RIVER CHEW.

CALENDAR FOR THE WEEK.

SUNDAY, April 24.—Fourth Sunday after Easter.
MONDAY, 25.—St. Mark. Princess Alice born, 1843.
TUESDAY, 26.—Lord Somers died, 1716. David Hume born, 1711.
WEDNESDAY, 27.—Sir W. Jones died, 1794.
THURSDAY, 28. Mutiny of the *Bounty*, 1789
FRIDAY, 29.—London University founded, 1827.
SATURDAY, 30. Washington Inaugurated President of the United States, 1789

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 30.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

2 12	2 53	3 0	3 20	3 40	4 2	4 25
4 30	5 13	5 35	5 56	6 0	6 20	7 0
7 17	7 36					

TO CORRESPONDENTS.

MILLWICK.—Continue, by all means, the use of the simple shield of arms with a motto. The adoption, by grant, of a modern crest, would ill accord with the antiquity of the coat itself. There is considerable expense attending the grant or registration of a crest at the Herald's office.

LAITA. The eldest unmarried daughter of each generation is entitled to the courtesy to the simple prefix of Miss to her surname.

A SUBSCRIBER.—The Rajah of Sarawak, Sir James Brooke, K.C.B., is the surviving son of Thomas Brooke, Esq., of Widcombe-crescent, Bath, formerly in the H.E.I.C. civil service.

A CONSTANT SUBSCRIBER.—An unmarried lady has a full right to bear the arms and quarterings of her father, but not his crest.

J. V.—We believe that the present holder of the Irish barony in question is absolutely and truly entitled to it. We do not know of any other claimant.

TINEY.—Lord Brooke married, in 1632, the eldest daughter of Lord Rich and grand-daughter of the Earl of Wemyss. It is very difficult to say what exactly constitutes a city.

A CORRESPONDENT, in answer to a Walsal Subscriber, supplies the following information:—General Harry Innes commanded the Chatham Division of Royal Marines in 1801 and 1802. He retired on full pay, and died about 1806 or 1807. His widow survived him some years.

AN OLD SUBSCRIBER.—There is no published work affording a list of the names of all persons who have been presented to her Majesty.

HISTONSTONE.—A reference to Glover's "History of Derby," or to Lysons, will, we think, supply the desired information. Arms can only be granted to towns which are incorporated.

D. D.—The Earldom of Lauderdale was created by patent, and is limited to the heirs *male* of the body of the grantee. If the present Peer, his brother Captain Maitland, and the cousin, Thomas Maitland, were all to die without issue male, the title would then pass to Charles Barclay Maitland, second son of the sixth Earl

A SUBSCRIBER sends the following details in correction of the various published statements regarding the French Empress:—Baron Grivigree, of Malaga, had four daughters, the eldest of whom married Mr William Kirkpatrick (father by her of the Countess of Montijo and Teba), a Scotch gentleman by birth, and American Consul at Malaga; the second married a Mr. Newmann, Consul for Poland; the third, a Monsieur Lesseps; and the youngest, a Mr Michael N. Power, an English gentleman, of Malaga. Mr. Kirkpatrick had, besides the Countess of Montijo (mother of the Empress), two other daughters; one is now dead, and was married to her cousin, Mr. W. Kirkpatrick; the other is the present Countess, widow of, Cabarrus.

A CONSTANT READER.—A widow, when she marries, gives up altogether her first husband's coat of arms. Consequently, in conformity with the laws of heraldry, the shield on the monument of the lady in question should exhibit simply the second husband's arms, with her own as an heiress on an escutcheon of pretence.

ROYAL EMMA. The only way for a new family to have arms established is by grant from the Earl Marshal, at an expense of about 75 guineas.

W. H. J.—The arms of Hicking are: "Az three bars or in chief, as many lions' heads erased of the second." *Crest.* A leopard's head erased or, gobbetted."

MICHAEL ANGELO.—The arms (the field "vair,") and for Crest a griffin's head couped are. His family is from Boston, Mass.

R. J. B.—The arms and crest, resting on the authority of the shop or office mentioned, have no value whatever.

CANCER.—The colour of livery should be of the field of the arms.

A SUBSCRIBER.—The husband of an heiress has no right whatever to use the crest of his wife's family.

A. M.—Robert Knight, of Barrels, county Warwick, M.P., was created Baron Luxborough in 1749, and Earl of Catherlough in 1763; but, as he died without legitimate descendants, the peerage becomes extinct (when were limited to the heirs male of his body), became extinct. His Lordship's arms were: "Arg three bendlets gu, on a canton az. a spur, with rowel downwards, gold."

J. W.—The Protestant Established Church in Ireland is that which is and by the tithes and ecclesiastical revenues. The Romish Church receives no pay from the State.

J. W.—"Short Short-hand" is published by Whittaker. Ave Maria lane.

J. B.—If no written acknowledgment of the debt has been given since 1846, the Statute of Limitations will apply.

BEDFORD.—An unmarried lady is entitled to bear her father's arms and quarterings.

J. G. T.—The late John George Lambton was raised to the Peerage as Baron Durham by Lord Goderich's Administration, 24th January, 1828, and was further advanced to the Viscounty of Lambton and Earldom of Durham by Lord Grey, 15th March, 1833.

LLEWELLYN.—All the sons of a person entitled to arms have a legal right to the bearing.—Arms and Crest.

CH. W. Carlisle.—See a "Manual of Barometers," by J. H. Belville, of the Royal Observatory, Greenwich. 2nd edit. One Shilling.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 23, 1853

THE debate last week on Mr. Milner Gibson's motion for the repeal of the three taxes that in different ways retard or prevent the dissemination of literature and knowledge, was not likely, in the temper of the House, or in the present state of parties, to affect the provisions of the then undivulged and possibly unformed Budget. Yet, though Mr. Milner Gibson was defeated in two of his objects, and factiously aided to accomplish an equivocal success in the third, the question under his care has made such progress as to justify the belief that the "taxes on knowledge," properly so-called, are doomed to extinction at a period long anterior to that which the Chancellor of the Exchequer has fixed for the extinction of the Property and Income-tax. We think, however, with all our admiration for Mr. Gladstone's Budget, as a whole, that the right honourable gentleman might not unwisely have allowed the division that so unexpectedly affirmed by a majority the inexpediency of the Advertisement-duty, to have induced him to repeal rather than to modify it. To reduce the obnoxious tax from eighteenpence to sixpence, was virtually to allow that the arguments of its opponents were just and well founded. Mr. Gladstone himself, we think, will scarcely set much value upon the sixpenny duty as a source of revenue whilst the retention of any duty whatever has the same fatal objections that were inherent in the original impost. The newspaper that publishes an advertisement is still subjected to a charge and an annoyance, from which advertisements published anywhere else, and through any other channel, are entirely free. Still omnibuses may plaster themselves inside and out with advertisements, and pay no duty; still may huge advertising-vans encumber our thoroughfares, and endanger the lives of equestrians and pedestrians, without any demand from Somerset-house for the "little sixpences" with which the journalist must continue to propitiate the lynx-eyed officials of that establishment. Still, also, may those most abominable of nuisances, the bill-stickers, receive a kinder treatment from the Government than the grand disseminators of news and politics—the daily and weekly journals.

Taxation have been far better to have swept off altogether the miserable tax, and allowed mankind to advertise their wares and express their wants without let or hindrance. As Government, however, has decided otherwise, and as it is a strong Government, and has given us a Budget with which it would be alike ungracious and ungrateful to find fault, newspapers and their advertising customers must reconcile themselves to the burden of the "little sixpence," and bide the time when the taxes on knowledge shall all crumble away together.

As regards the abolition of the stamp upon newspaper supplements, we think we have some reason to complain that the Chancellor of the Exchequer has not duly, if he has at all, considered the peculiar case of the ILLUSTRATED LONDON NEWS.

The law never contemplated that a journal like ours should be compelled to pay an additional stamp duty because, on account of a mechanical impossibility, we cannot enlarge our usual sheet of paper, so as to include a supplement, whenever the importance or interest of news or occurrences renders it necessary to extend the space at our command. Although a copy of our Journal, with a supplement, forms an area of printed matter less than that which the law permits to be published with a penny stamp, yet the fact that our literary and other supplements are, of imperative necessity, printed on a separate and distinct piece of paper, makes us liable to an extra stamp duty.

The boon which the Chancellor of the Exchequer has conferred upon the journals which issue supplements filled with advertisements only, is one that will, no doubt, be highly appreciated by them; but, when it is remembered that those journals, exclusive of their supplements, are of the full size prescribed by the law, while our Journal falls short of that size to the full extent of our Supplements, if not more, we think it will be admitted that we have made out a case for the re-consideration of the Government. The mere fact of our printing upon a sheet and a half of paper instead of on a sheet as large as the daily papers, should not, we think, exclude us from the benefit of a remission so kindly offered to other journals, and so well intentioned towards them all. The simple omission of the few words which we have printed in Italics in the following resolution, to be proposed to the House of Commons by the Chancellor of the Exchequer, would fully meet the case:—"That so much of any act as imposes any stamp duty upon any sheet or piece of paper *containing wholly advertisements, and* which shall be published with and as a supplement to any newspaper chargeable with Stamp-duty, shall be repealed."

This, it may be said, is an exceptional case; but we have yet to learn that exceptional cases, if they inflict hardship or injustice, or cause impediments to trade and enterprise which were never intended by the law, are unworthy the attention of a Legislature or a Government.

THE COURT.

The Queen continues to progress most favourably towards recovery. Her Royal Highness the Duchess of Kent has visited her Majesty daily at Buckingham Palace; and on Tuesday the Countess de Neuilly and the Princess Augusta of Saxe-Coburg called, and had an audience of the Queen.

His Royal Highness Prince Albert has taken equestrian exercise daily during the week; and on Tuesday the Prince Consort, accompanied by their Royal Highnesses the Prince of Wales and Prince Alfred, and attended by Lieut.-Col. F. H. Seymour and Mr. Gibbs, went to the Royal Mint, on Tower-hill.

On Wednesday the Prince Consort held a Levee on behalf of her Majesty, at St. James's Palace.

THE LEVEE.

His Royal Highness Prince Albert held a Levee, on behalf of her Majesty, at two o'clock on Wednesday afternoon, in St. James's Palace. The Prince arrived from Buckingham Palace about two o'clock, escorted by a detachment of Life Guards, and was received by the Great Officers of State.

The Cabinet Ministers were present at the Levee almost without an exception.

The diplomatic circle having been introduced, the following presentations took place:—

By the French Ambassador—M. le Baron de Cabeul, Attaché to the French Embassy
By the Sardinian Minister—Le Comte François Versata de Castiglione, Chamberlain de S. M. le Roi de Sardaigne
By the Belgian Charge d'Affaires—M. Leopold Orban, Attaché to the Belgian Legation.
By the Mexican Charge d'Affaires—Don B. Gomez Farias, Attaché to the Mexican Legation.

In the general circle the following were the more noticeable presentations:—

Captain Karl Talbot, R.N., on appointment as Naval A.D.C. to her Majesty, by the Duke of Northumberland
The Earl Granville, on his marriage, by the Duke of Norfolk
The Lord of Auxerre, by Viscount Mandeville
Vice-Admiral Falmouth, on succeeding to the Title and Estates of Sydney
Honourable Robert Lawley, on his having [illegible] Lord Wenlock
Rear-Admiral Reserve Stewart, on appointment as Admiral Superintendent at Malta, by Sir James Graham
Colonel Challoner, on appointment to the command of the 3rd Regiment of Surrey Militia, by the Earl of Lonsdale
Mr Hubbard, Governor of the Bank of England, by the Chancellor of the Exchequer
Mr. Ingham, on being appointed one of the Commissioners of the Land Revenue, by Mr. Charles Buller, Chancellor of the Duchy of Lancaster
Mr. Charles Barton Geach, C.E., by the Right Hon. the President of the Board of Trade

His Royal Highness Prince Albert returned to Buckingham Palace after the Levee.

His Royal Highness Prince Albert dined with the Duke of Cambridge on Tuesday evening, at St. James's Palace. The Duke of Wellington, the Earl of Aberdeen, the Count Kielmansegge, the Earl of Eglinton, the Earl of Clarendon, the Earl of Malmesbury, Viscount Hardinge, Lord Raglan, Lord Adolphus Fitzclarence, the Right Hon. Sidney Herbert, and Lieut.-Col. William Fanshe had the honour of being invited to meet his Royal Highness. Lieut.-Col. F. H. Seymour was in attendance on the Prince.

Her Royal Highness the Duchess of Kent, accompanied by her Serene Highness the Princess Adelaide of Hohenlohe, and attended by Lady Anne Maria Dawson and Sir George Couper, honoured the Royal Italian Opera House with her presence on Saturday evening.

The Countess de Neuilly and the Duchess Augustus of Saxe-Coburg, visited her Royal the Duchess of Kent, on Tuesday, at Clarence-house, St. James's.

His Excellency the Belgian Minister and Madame Van de Weyer, have been obliged to postpone their receptions and dinner parties, in consequence of one of their children having been attacked with scarlatina.

The Countess Colloredo had a "reception," on Thursday evening, at Chandos-house.

The Duke of Devonshire entertained at dinner, on Thursday evening, at Devonshire House, Sir Edward Bulwer Lytton, Mr. Charles Dickens, Mr. Mark Lemon, the Earl of Carlisle, and about 20 of the gentlemen who have interested themselves in the Guild of Literature and Art. The dinner was succeeded by an evening party, at which a selection of choice music was performed by his Grace's private band.

The Countess of Clarendon intends to give a ball, at the official residence of the Foreign Secretary, in Downing-street, on the 11th proximo. Her Ladyship had an assembly on Wednesday, at which upwards of 600 members of the fashionable world assembled.

The Earl of Malmesbury had an assembly, on Saturday evening, at the family mansion in Whitehall gardens. His Royal Highness the Duke of Cambridge honoured the noble Earl with his presence, arriving shortly before midnight.

ELECTION COMMITTEES.—*Cockermouth:* Mr. H. A. Aglionby and General Wyndham, duly elected. *Taunton:* Sir E. T. Colebrooke, not duly elected—agents guilty of bribery and treating; no regards Mr. A. Mills, the sitting member. *New Ross:* Mr. C. G. Duffy, duly elected. *Barnstaple:* Sir W. A. Fraser, Bart., and Mr. Bemridge, not duly elected—agents guilty of bribery and treating. *Wigan:* Mr. O. Higgins and Mr. G. R. Moore, both duly elected. *Hereford:* The petition against Sir R. Price and Mr. H. M. Clifford has been withdrawn.

NEW ELECTIONS.—*Taunton:* Sir John Rawsden (Liberal), will be opposed by Mr. Henry Badcock (Conservative), a banker. *Tynemouth:* Three candidates are in the field—Mr. W. S. Lindsay, the ship-owner; Mr. C. Otter, of the Northern Circuit; and Mr. Dickson, a merchant of the town.—*Athlone:* The nomination took place on Wednesday. Mr Keogh was opposed by Mr. Norton: the polling was to take place on Friday.

SOCIETY FOR THE RELIEF OF DISTRESSED WIDOWS.—On Thursday the annual meeting of the governors of this charity was held at the offices of the Society, Sackville-street; the Marquis of Cholmondeley in the chair. The report stated that the society had last year relieved 273 widows with the sum of £369; but to do this they had to sell an Exchequer Bill of £100.

THE BUDGET.

The following epitome of the Chancellor of the Exchequer's Financial Statement, which we extract from the City Article of the *Times*, gives a comprehensive glance of the entire scheme. The revenue of the present year is estimated at £52,990,000, viz.:

Customs	£20,080,000
Excise	14,640,000
Stamps	6,700,000
Taxes	750,000
Income-tax	5,500,000
Post Office	900,000
Crown Lands	180,000
Miscellaneous	215,000
Old Stores	40,000
Anticipated saving from the contemplated measures for the reduction of the Three per Cents	100,000
	£52,990,000

The estimated expenditure is—		
Funded Debt	£27,500,000	
Unfunded ditto	500,000	
	28,000,000	
Consolidated Fund	2,561,000	
Army	6,925,000	
Navy	6,5[illegible],000	
Ordnance	1,[illegible],000	
Miscellaneous	4,476,000	
Commissariat	107,000	
Militia	80,000	
Kaffir War	200,000	
Packet Service	800,000	
		52,182,000
Surplus		807,000

This surplus of £807,000 (or, in round numbers, £800,000) it is proposed to increase to £2,140,000 by new taxes which will yield £1,340,000 during the present year, and whose ultimate production is anticipated to be as follows:—

Extension of Income-tax to all incomes between £100 and £150 per annum, at the rate of 5d. per pound		£70,000
The tax to remain at its present rate of 7d. per pound on incomes above that amount until April, 1856; then to fall to 6d. till 1857; and then to be 5d. till 1860, when it will expire.		
Extension of Income-tax to Ireland		460,000
		£730,000
From this is to be deducted the loss by exempting from tax all sums of income devoted to the purposes of life assurance, estimated at		120,000
Net increase of Income-tax		£610,000
Extension of Legacy duty to real property		2,000,000
Increase of 1s. per gallon in duty on Scotch spirits, namely, from 7s. 8d. to 8s. 8d.	£418,000	
Less allowance for waste on spirits in bond	40,000	
	278,000	
Increase of 6d. per gallon on Irish spirits, namely, from 2s. 8d. to 3s. 2d.	£238,000	
Less allowance as above	40,000	
	198,000	
	476,000	
Less allowance for waste in England	40,000	
	436,000	
Increase from alteration in scale of licenses to brewers and dealers in tea, coffee, tobacco, and soap		113,000
		£3,139,000

The total gain from these new sources will, therefore, be £3,139,000. From this, however, must be deducted the interest upon £3,000,000, the amount of the debt due from Ireland in connection with the establishment of the Poor-law system and the visitation of the famine, which it is proposed shortly to forego, and for which she has hitherto been liable to an annual charge of £245,000.

On the other hand the intended reduction of taxation may be stated as follows:—

EXCISE		
Abolition of the soap-tax		£1,126,000
STAMPS.		
Reduction of the duty on life assurance from 2s. 6d. per cent to 6d. per cent		20,000
Reduction of receipt stamps from the present scale, ranging from 3d. to 10s., to a uniform rate of one penny		155,000
Reduction of duty on indentures of apprenticeship from 20s. to 2s. 6d. Ditto, on attorney's certificates from £12 and £6 to £3 and £2, and on articles of apprenticeship from £120 to £80		50,000
Reduction of Advertisement-duty from 1s. 6d. to 6d., and abolition of Stamp-duties upon newspaper advertisement supplements		160,000
Reduction of duty on hackney-carriages from 1s. 3d. to 1s. per day		26,000
ASSESSED TAXES.		
Reduction of tax on men servants to a uniform rate of £1 1s. on servants above eighteen years of age, and 10s. 6d. on servants under eighteen		87,000
Ditto on private carriages to £2 10s., £2, and 15s.		55,000
Ditto on horses and ponies to £1 1s. and 10s. 6d.	£118,000	
Less alteration of duty on dogs from 14s. and 8s. to a uniform rate of 12s.	10,000	
	108,000	
Alteration in the posthorse duties, substituting licenses for horses and carriages in lieu of tax on mileage		84,000
Reduction of 17½ per cent in charge for redemption of land-tax—Not estimated.		
POST OFFICE.		
Reduction of colonial postage to a uniform rate of 6d.		40,000
CUSTOMS.		
Reduction of the Tea-duty from 2s. 2½d. to 1s. 10d. till 5th April, 1854. The duty to descend to 1s. 6d. in the following year, to 1s. 3d. the next year, and thereafter to 1s.		3,000,000
Do. of duties on apples from 2s. to 3d. per bushel; cheese from 5s. to 2s. 6d. per cwt.; cocoa, from 2d. to 1d. per lb.; nuts, from 2s. to 1s. per bushel; eggs, from 10d. to 4d. per 120; oranges and lemons, to 8d. per bushel; butter, from 10s. to 5s. per cwt.; and raisins, from 10s. 6d. to 5s. per cwt.		222,000
Do. of duties on 133 minor articles of food		70,000
Abolition of duties on 123 do.		53,000
		£5,415,000

The total amount of relief thus to be afforded is, in round numbers, £5,300,000, but for the present year it will be limited to £2,588,000, while the loss to the revenue, after allowing for increased consumption, will be £1,456,000. To meet that loss, the new taxes for the same period will produce £1,340,000, making, with the surplus already calculated of £807,000, an availa. le aggregate of £2,149,000; and, therefore, on the 5th April, 1854, a favourable balance of £493,000 is still to be anticipated. In attaining this immediate result the prospects of the nation already calculated of £805

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

THE CANADA CLERGY RESERVES BILL.

The Duke of NEWCASTLE, in moving the second reading of this bill, entered into a history of those reserves, and of all the acts of Parliament that had been passed from time to time in relation to them; and reiterated the arguments that had been used by the supporters of the measure during its progress through the House of Commons.

The Bishop of EXETER moved as an amendment that the bill be read a six-months' that day six months.

The Bishop of NORWICH and Lord LYTTLETON severally supported the bill.

Lord St. LEONARDS argued strongly against the measure as being contrary to justice and good faith

The Earl of DERBY said that he would submit a proposition if the bill were allowed to go into committee, by which the measure would be made to have only a prospective effect. He was altogether opposed to its present retrospective principle.

Earl GREY spoke in support of the bill.

The Bishop of EXETER having withdrawn his amendment in order to meet the view of the Earl of Derby, the bill was read a second time.

Adjourned.

HOUSE OF COMMONS.—FRIDAY.

THE MAIDSTONE ELECTION.

The report of the Select Committee appointed to inquire into this election was brought up. It declared that George Dodd, Esq., had not been duly elected, and that the last election was a void election.

THE NATIONAL DEBT.

On the order of the day for going into committee on the Soutl and other Annuities Commutation Bill,

Sir PETER LAURIE objected that the measure would increase the capital sum of the National Debt; and at the same time would fix an unreasonably high rate of interest for forty years. He would not, however, oppose going into committee; but would move certain amendments upon the clauses

The House then went into Committee, when the first clause was unanimously agreed to

On the second clause being proposed, Sir F. KELLY repeated his objections to the bill. He objected entirely to the second alternative, namely, that whereby the proprietors of Three per Cents might, for every £100, receive £110 at Two-and a-Half per Cent; because it would tend to the increase of the debt which he had already deprecated. He also objected to the third proposition, because, if carried into effect, he thought it would be fatal to the present system of Exchequer Bills, which, instead of being obtainable at 1 or 1½ per cent, would have to the same rate of interest as the Bonds. It was a mere delusion to call the two proposals equivalent. He concluded by moving the omission of the second alternative from the clause.

Mr. SPOONER suggested that the Stock converted by the second alternative should be redeemable at the expiration of twenty years instead of forty.

The CHANCELLOR of the EXCHEQUER defended the clause as it stood. He was willing, however, to limit the operation of the second alternative to £30,000,000.

The right hon gentleman proceeded to argue at considerable length in favour of his propositions, and concluded by saying that he would be willing to limit the operation of the second alternative £10,0,0,000 lower than he had just proposed, namely, to £20,000,000.

Mr. T. BARING stated his objections to increasing the National Debt to any amount.

A discussion then took place, in the course of which Mr. DISRAELI entreated the committee to pause before they sanctioned those resolutions, and thereby increased the National Debt, which was particularly objectionable at a time when the plea of necessity could not be urged

Mr. GOULBURN wished every success to the scheme

The committee divided, when the numbers were—For the clause, 2[illegible] against it, 170: majority in favour of the Government, 59

The clause was then agreed to, as were also the remaining clauses of the bill

The House then resumed, and soon afterwards adjourned.

GOVERNMENT IN INDIA.—A meeting of the "citizens" of Manchester was held on Thursday, "for the purpose of taking into consideration the condition of British India, with a view of securing to that great country the blessings of good government" The meeting was not a large assemblage, but highly respectable and influential The following are the resolutions passed:

1. That in the opinion of this meeting the constitution of the Indian [illegible] ought to secure the services of the [illegible] will thereby be [illegible] ... ner provided for that wise [illegible] ... ns of affairs which at the first duty of G[illegible] ... afford to the people over which it rules

2. That abundant evidence has been adduced to prove that under the British Government the progress of the people in industry and wealth has been retarded, the extinction of [illegible] ... has been effected, the nature and mode of taxation has been oppressive, public works [illegible] ... their legitimate for its purposes of communication, navigation, and irrigation; and that, [illegible] ... the people have been left in a state of misery disgraceful to their rulers

3. That a [illegible] ... is urgently called for by the present condition of India, but by a thorough reform of its legislative government, and introducing the opinion that the Court of Directors and Proprietors of East India Stock shall be entirely disconnected from the Government of India, which for the future should, in this country, consist of a Minister and Council appointed by the Crown, and directly responsible to Parliament

A resolution, as also passed, agreeing to a petition to be presented to both Houses of Parliament.

CAB REFORM.—On Thursday night, just before the rising of the House of Commons, Mr. Fitzroy obtained leave to bring in a bill to alter and amend the law relating to hackney carriages in the metropolis It proposed that in future every applicant for a license for using or letting to hire a hackney carriage shall make known his intention to the Commissioners of Police, upon whose report that the vehicle is fit for public use, the license shall be granted by the Inland Board of Revenue. That license so may, however, afterwards be revoked, in the event of the Commissioners of Police (who shall be authorised from time to time to inspect those vehicles) reporting that the vehicle in question has become unfit for public use. The fare fixed by the bill is to be 6d per mile; the hirer, however, having the option of paying by the hour, at 2s each hour. At every cab-stand, notices to be affixed in conspicuous places, specifying the amount of the different fares to the various parts of the metropolis which he by to be resorted to from those stands; in addition to which, there to be stationed there whose duty it will be to inform the hirer the, an omit of the fare to which he is subject. In case of any property being left in a cab, the driver will be compelled to convey such property to the nearest police-station, where it is to remain for the period of one year, in case, in the meantime, it is claimed by the owner. If it be not claimed it will be sold at the end of the year, and the produce will be applied towards the payment of the expenses attendant upon carrying the provisions of the act into execution. In case of a dispute with the cabdriver, the hirer is to have the option of insisting upon being driven to the nearest police-court or police-station, with the view to the settlement of such dispute by the decision of the magistrate.

HUDDERSFIELD ELECTION.—The polling took place on Thursday, and at the close the numbers stood thus—For Lord Godrich, [illegible] Mr. Stanley, 683: majority, 82. So far as could be ascertained, there was neither bribery nor treating, and good temper prevailed with both parties. It is the first election gained in the borough by the popular candidate

MAIDSTONE ELECTION.—The committee have decided that Mr. Dodd is not duly elected.

THE COBURG ESTATES.—His Royal Highness Prince Albert says the *Journal des Débats*, will shortly visit his native town of Gotha, to take a personal part in the deliberations concerning the domains of the State. In 1848 all the dominial estates of Thuringen and Gotha were incorporated with the State property. Prince Albert protested against this measure, as did several other agnates As the reigning Duke of Coburg has no children, and his eventual successor is the second son of Prince Albert, and the Queen of England, his Royal Highness is directly interested in this question

KING'S COLLEGE HOSPITAL.—His Royal Highness the Duke of Cambridge has kindly consented to take the chair at the dinner which will take place on the 4th May, at the Albion Tavern, Aldersgate-street

THE BUDGET.—ST. JAMES'S, WESTMINSTER.—At a vestry meeting held on Thursday, it was unanimously agreed "That a special vestry be called on Monday next, at eleven o'clock, to petition Parliament in favour of the adoption of the whole of the financial scheme comprised in the Budget of the present Government."—Portsmouth has also adopted similar views

CALIFORNIA AND AUSTRALIA COMPARED.—Recent arrivals having put us in possession of the yields and shipments of gold from Australia and California during the past year, we are enabled to deduce therefrom a comparison between the two districts. The actual shipments of gold dust from San Francisco, by steamer, in 1852, were to the value of 46,000 000 dollars. We will assume that one fourth more was taken away, privately by passengers; leaving an aggregate value of about £11,500,000 sterling. The shipments from the Australian ports in the form of gold-dust, were—from Port Phillip, upwards of 200,000 ounces; from Sydney, 1[illegible],000 ounces. At Adelaide, Victoria, gold to the value of £2,000,000 sterling was also received in the year. So that the total may be fairly valued at £12,500 000 sterling. This is irrespective of any amounts brought home privately, of the quantity hoarded by diggers and others in the Colonies, and of such large amounts shipped through Van Diemen's Land

RECEIPT STAMPS. The following suggestions are from letters addressed to the *Times* of yesterday:—"To have all bills made out on stamped paper, similar to the present receipt-stamps, at the uniform penny-rate proposed by Mr. Gladstone." The other suggestion is—"I generally pay my London accounts by a check: would it not add much to the amount of stamp-duties (without entailing any hardship on individuals) if bankers' checks were charged with a penny stamp before being issued to the customers?"

THE LONDON NEW CATTLE MARKET.—On Thursday, the Market Committee exhibited at Guildhall the plans and models of the proposed market in Copenhagen fields. Of the land purchased at Copenhagen fields it is intended to appropriate fifteen acres to the purpose of the market, thirty acres for lairs, nine acres for slaughter-houses, and nine for roadways. It is calculated that the market will be able to receive as many as 6,000 sheep, 6000 bullocks, with calves and pigs in proportion

GOVERNMENT DESPATCHES.—Despatches were received at the Colonial-office on Thursday, from the Governor of Ceylon, the Governor of Hong-Kong, the Lord High Commissioner of the Ionian Islands, and the Governor of Malta

DUBLIN.—THE SIX-MILE BRIDGE AFFAIR.—Mr. Wallace, of the *Anglo-Celt* newspaper, who was convicted of a libel on the 31st Regiment, was sentenced, by the Court of Queen's Bench, to six months' imprisonment, and to pay a fine of £50 to the Queen.

THE MAY MEETINGS.—The following days and places (for next week) have been appointed for the anniversary meetings of the religious and benevolent societies, popularly known as "the May Meetings."—Tuesday, April 26—British Reformation Society, Hanover-square Rooms (Lord Calthorpe, chairman); Chinese Evangelisation Society, Music Hall, Store-street (Sir John Dean Paul, Bart., chairman). Wednesday, April 27 British Ladies' Female Emigrant Society, Hanover-square Rooms (the Earl of Harrowby, chairman); Metropolitan Training Institution, Highbury College (the Earl of Shaftesbury, chairman). Thursday, April 28 Baptist Missionary Society, Exeter-hall (Mr. W. Brodie Gurney, chairman); Prayer-Book and Homily Society, Hanover-square Rooms (the Marquis of Cholmondeley, chairman); Church of England Scripture Readers' Assoc ation, Hanover square Rooms (the Bishop of Winchester, chairman); Church of England Sunday School Institute, Exeter-hall (Rev. T. J. Bevan, chairman); London Colonial Training Institution, Freemasons'-hall (the Earl of Shaftesbury, chairman). Friday, April 29 Irish Church Missions, Exeter-hall (the Duke of Manchester, chairman); British Society for the Propagation of the Gospel among the Jews, Freemasons'-hall (Sir John Dean Paul, Bart., chairman).

THE IRISH EXODUS.—It is with the utmost difficulty that men can be obtained at advanced wages, and even in the most thickly populated rural districts, to carry out the present agricultural operations. Every morning train that leaves Eyre-square terminus is crowded with emigrants, who generally belong to the small farming and labouring classes Before the end of another year we really believe that there will not be 2,000,000 of people left in Ireland.—*Galway Packet.*

RAMSGATE HARBOUR.—On Thursday was printed a Parliamentary paper, a copy of the report made by Sir John Rennie on Ramsgate Harbour, on the report of Captain Vetch, to which he made several objections; and expressing a hope that the harbour would not be allowed to go to decay, being of such national importance, and capable of accommodating the numerous shipping which now fine refuge there.

FOREIGN.

FRANCE.—Wednesday being the anniversary of the Emperor's birthday, his Majesty received the congratulations of a number of private friends and public functionaries; but all public demonstration was postponed to the 15th August, the day of St. Napoleon.

The new Bishops of Coutances and Grenoble took the oath of allegiance on Wednesday, at the Tuileries, in the presence of the Emperor and the high Officers of State.

M. Ramon received a pardon on condition of quitting France.

Great disappointment is felt here at the refusal of the Chancellor of the Exchequer to reduce the duties on wines. He is not, however, blamed. The whole blame is thrown upon the French Government, for refusing to make reasonable concessions in favour of British commerce.

The Funds declined on Thursday, the Four-and-a-Half per Cents closing at 103f. 30c., and the Three per Cents at 80f. 5c.

HANOVER.—A plot having extensive ramifications, it is said, has been discovered at Hanover, which has led to some domiciliary visits and a few arrests, but no persons of note or influence appear to have been concerned in it

SWITZERLAND.—According to the *Federal Gazette*, the affairs of Neufchatel and Ticino are assuming a rather serious aspect, and Switzerland is on the point of witnessing important events.

DENMARK.—The Danish Chambers have been dissolved by the King, the Government having been defeated on the law of succession. Two of the Ministers have since resigned.

SPAIN.—A general correspondence from Madrid, of the 15th, speaks of the liberal views of the new Ministers, but incidentally mentions that they were to be given by force of arms to Espartero by paying homage to Queen Christina. The *Heraldo* of that date claims the Administration in the name of the moderate constitutional party. It is believed that the Cortes will sit till September

TURKEY.—Letters from Constantinople of the 11th have been received, announcing that great uneasiness prevailed, owing to the report that Prince Menschikoff had threatened to leave, if the Sultan did not immediately return an answer to his demands. Another despatch speaks of a riot at Rounea; but this was a religious quarrel between the Turks and the Christians, in which fifteen of the latter were killed. The disturbance was soon suppressed.

THE WEST INDIES.—The *Great Western* steam-ship, with the West India and Pacific mails, arrived at Southampton yesterday. She left Jamaica on the 27th of March, Barbadoes on the 28th, and St. Thomas's on the 2nd of April. She brings eighty passengers and 808,855 dollars. The yellow fever had almost disappeared in the West Indies. There is little doubt but that the crops will be short throughout the whole of the Islands. A copper-mine, with a vein of beautiful malachite, had been discovered in Jamaica

POST-OFFICE, April, 1853.—A line of mail packets, established under a contract made by the Commissioners of the Treasury, is about to commence running between Liverpool and Quebec. Mails will be made up for conveyance by these contract packets, and such correspondence will be forwarded by them as may be specially addressed "By Canadian mail packet." The postage upon letters sent by these packets will be, for a letter, not exceeding ½ oz. in weight, 2s. for a letter exceeding ½ oz. and not exceeding 1 oz., and so on, according to the scale for charging inland letters, and such letters may be paid in advance, or forwarded unpaid, at the option of the sender. Upon books, the rate of postage of 6d. for a packet not exceeding 1 lb., and not exceeding 2 lb., and so on, will be chargeable. Newspapers will be free of postage. Books and newspapers, as well as letters, intended to be sent by these vessels, must be specially addressed "By Canadian mail packet."

"UNCLE TOM" AT NAPLES.—A letter from Naples of the 9th, says—"There is as much *furore* here as elsewhere about the work. There have been nine different translations from the French. It is dramatised at two different theatres. It was acted last night for the first time at the Fiorentini Theatre, and every place had been taken. The performance began at a quarter to nine, at which time I saw one of the Royal carriages driving to the theatre. Mrs. Stowe's portrait is in the windows at 6d. At the Fenice it is acted to-night for the sixth time. On Tuesday night I saw a more entertaining and less offended Toad I had expected. Mrs. Stowe would have been surprised, if not amused, with the changes in the story. *George's* wife is made, as in the Paris play at the Gaite, to be the daughter of *Uncle Tom*, that he may display his love of truth in refusing to disown her even to save her from her oppressors. Instead of Le Rouge and child escaping by aid of the *Birds*, they are caught in *Mr. Lot's* house. *St. Clair*, instead of being killed, becomes bankrupt, and his slaves, for whom he had prepared a deed of emancipation, are sold by order of justice. *George* appears at the sale, purchases his wife, proves his own freedom, and claims the slave-dealer himself as a fugitive slave. He then threatens his life with a pistol, that the good *Tom* may throw himself before his tyrant; and, with an acknowledgment of the *giustizia di Dio*, the curtain falls amidst loud applause. The cenries always a book, which is never named, but it is alluded to as The Book; and what a Book! and, the Book of Books! The Madonna is only once alluded to, and that not in an ungraceful way, by *Eliza*, who, telling of her crossing the Ohio, says, that she 'who was once also a mother helped her.'"

THE Colonelcy of the 7th Dragoon Guards has become vacant by the death of Major-General Gabriel; he has only held the appointment one month.

CHURCH, UNIVERSITIES, &c.

EXTENSION OF THE COLONIAL EPISCOPATE

A public meeting, called by the invitation of his Grace the Archbishop of Canterbury, was held in Willis's Rooms, St. James's, on Wednesday afternoon, for the purpose of taking measures to raise contributions towards the endowment of additional colonial bishoprics. The meeting was numerously attended. Among those present were the Archbishop of Canterbury, the Bishops of London, Winchester, Oxford, Exeter, Chichester, Norwich, Llandaff, St. Asaph, the Bishop Elect of Lincoln, Quebec, Cape Town, Bishop Carr, the Duke of Newcastle, the Earl of Chichester, the Earl of Harrowby, Lord Lyttelton, Lord Redesdale, the Rev. Lord J. Thynne, Mr. Cardwell, Sir H. Inglis, Sir J. Pakington, Sir C. Anderson, Sir W. James, Dr. R. Phillimore, Dr. Dean, Archdeacon Hale, the Rev. Canon Bentinck, Mr. A. J. B. Hope, Mr. J. D. Perceval, Mr. H. Pownall, Mr. Justice Coleridge, Mr. F. H. Dickinson, Mr. W. Cotton, the Governor of the Bank of England (Mr. Hubbard), &c., and a very numerous body of other members of the Church of England

His Grace the Archbishop of Canterbury took the chair.

The Lord Bishop Elect of Lincoln (Dr. Jackson,) having implored a blessing upon the proceedings,

The Archbishop of Canterbury addressed the meeting. His Grace said that a very few words, and a very few minutes, would suffice for the part it would be necessary for him to take in opening the proceedings of the meeting which he rejoiced to see so well attended. His Grace then alluded to a meeting held twelve years since, under the auspices of his venerable predecessor, for a similar purpose as the present. The result of that meeting was the creation, not only of ten or twelve, but of fifteen bishoprics, eleven at least of which had been assisted through the means that were collected on that occasion, at an expense of not less than £140,000 (Hear). One of the objects of the present meeting was to give an account of their stewardship, and also to show the friends of what was sometimes said to be the nature of gratitude—to ask for an extension of favours. If they found the funds, his Grace trusted, from the results of past experience, that they would not be disappointed in the future.

Mr. HAWKINS then read the report, which was a statement of what had been done since the formation of the fund in the year 1841.

The Bishop of London then moved, and the Bishop of Chichester seconded, the first resolution—

That the remarkable success with which it has pleased Almighty [illegible] ... recently made for the extension of the [illegible] ... have enabled therefrom, [illegible] ... to proceed in the [illegible] ... great Colonial dependencies, will have its own resident bishop

The next resolution was moved by the Duke of Newcastle, and seconded by the Bishop of Cape Town, to the following effect:

That the vast dioceses of Cape Town, comprising five distinct governments, requires immediate subdivision, by the erection of a bishopric at Graham's Town, for the eastern provinces, and of another for the new colony of Natal

The Bishop of Oxford placed the third resolution before the meeting, and moved:

That the remoteness of Western Australia from Adelaide, within the diocese of which it is at present comprised, renders it expedient that a separate bishopric be formed within that colony;—and that the rapid spread of population, and the constant formation of new settlements in the diocese of Tasmania, demand a division of that diocese by the foundation of a new bishopric at Kingston, for its eastern division.

This was seconded by Sir J. Pakington, and supported by Mr. Cardwell.

The Bishop of Quebec proposed, and the Earl of Harrowby seconded, the thanks of the meeting to the chairman, his Grace the Archbishop of Canterbury; who returned thanks, and concluded the proceedings with the usual benediction.

The following Contributions were announced before the close of the meeting: Sir Robert Inglis, Bart., £500; Mr. Wm Cotton, £100; Bishop of London, £300; Mr Joshua Watson, £500, Bishop of Winchester, £100; Marquis Cholmondeley, £100; Bishop of St. Asaph £100; Mr. J. G. Hubbard, £100; Mr. Philip Cazenove, £100; Archdeacon of Exeter, £50; Bishop of Chichester, £100; Mr. E. B. Wheatley, £100; Miss Wheatley, £100; Bishop of Exeter, £500; Rev. John Girling, £1000; Mr. A. J. B. Hope, £100; Sir John Pakington, Bart., M.P., £50; Rev. A. H. Venables, £50, Right Hon. Edward Cardwell, £100, Archbishop of Canterbury, £500; Duke of Newcastle, £100 Earl of Harrowby, £500; Lord Redesdale, £100, Bishop of Oxford, £100, Rev Lord John Thynne, £50 collected at the door, £107. The total amount subscribed in the room was upwards of £3000

THE FRIEND OF THE CLERGY.—The anniversary festival of this society was celebrated on Wednesday, with the usual ceremonial observances. In the afternoon a large number of the patrons and supporters of the society attended at St. Mary-le-Bow Church, where a full choral service was performed The Lord Bishop of St. David's preached the sermon, in which the right rev. prelate forcibly and ably urged the peculiar claims of the society upon general support. The choral part of the service was under the leadership of Mr. Francis. In the evening the usual dinner was held at Willis's Rooms, at which Lord John Russell, M.P., presided, supported by the Earl of Chichester, Lord Ebrington, the Earl of Kintore, Lord Drumlanrig, M.P., Bishop of Llandaff, Sir W. Page Wood, Mr. Baron Parke, Lord Mahon, M.P., the Hon. Mr. Duncombe, Mr. T. W. Booker, M.P., Mr. W. Evans, M.P., the Sheriffs of London and Middlesex, &c. Covers were laid for upwards of 300 persons, and the galleries were crowded with ladies. The cloth having been removed, the chairman proposed the usual loyal and appropriate toasts; concluding with the principal one of the evening—"Prosperity to the Friend of the Clergy, and may it long continue to flourish" In the course of the evening lists of subscriptions were read by the secretary, amounting to the munificent sum of £7082. The company did not separate until a late hour.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. W. Acworth, to Plumstead, Kent; the Rev. R. S. Sutton, to Ripe, Sussex; the Rev. J. E. Pigott, to Clakan; the Rev. J. B. Ludlow, to Slapton, near Leighton Buzzard; the Rev. W. J. Deane, to Ashen, Essex

THE NEW CHURCH OF SAINT ANNA, LINCOLN.—The foundation-stone of a new church, to be erected in the parish of St. Anna's Vitas, at the sole expense of the Rev. Richard Sibthorp, and which is to be called the Chapel of Saint Anna in Lincoln, was laid on Wednesday week, by the Bishop of Lincoln.

RE-OPENING OF BOSTON PARISH CHURCH.—The arrangements for the re-opening of this noble ecclesiastical edifice on Thursday and Friday, the 28th and 29th, are duly proceeding

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. C. Miller, on his vacating the curacy of Cheswardine; Rev. H. G. Eland, by the congregation of St. Paul's, Bethnal-green; Rev. J. Atkinson, from the parishioners of Feldon; Rev. W. N. Andrews, Bulmer, near Sudbury, by his parishioners; Rev. T. R. Jones, late curate of Christ Church, Battersea, by the congregation; Rev. W. J. Lee-Cock, curate of Burnley, by the girls of St. Peter's Sunday-school; Rev. R. Hill, incumbent of Royton, from the guardians of the Oldham Union; Rev. H. Tull, incumbent of Werneth, from the guardians of the Oldham Union.

NEW ZEALAND.

THE recent discovery of gold in this land of promise appears to be viewed by some of the colonists with apprehension of its checking the peaceful progress of the country. A letter from Auckland, dated October 26th, says:—"I am sorry to inform you that gold was discovered about thirty miles from here, at a place called Coromandel some few days ago. It was very doubtful at first whether the reports were true, until the arrival of the steamer Colonist Voyager, sent Major Nugent (of her Majesty's 58th), who is native secretary, and Mr. Johnson, interpreter, to the spot. These gentlemen were accompanied by seven respectable merchants of the Auckland morning part of the Auckland Gold Committee, who all returned from the above-named place on the 23rd inst. with specimens of gold. At present I am happy to say only a very small quantity has been found —some in quartz and blue clay. The land belongs to the natives, who have prevented some Europeans from digging for gold. If it should turn out to be found in sufficient quantities to yield a handsome profit by working, I consider it would be the most unfortunate discovery ever made in this colony; and, had the Auckland people offered a reward of £500 for the discovery of coal in place of gold, they would have shown more sense. We are now beginning to feel the advantage of the Australian colonies finding gold; and, should our late discovery not turn out or not worth working in a few years we shall be in a far more healthy and prosperous condition than any of the other Australasian colonies. The great advantage we have in New Zealand over the other colonies, and the southern settlements of New Zealand, is, an immense native population, which are chiefly in this vicinity, and which I consider the backbone of New Zealand. We have now nearly 1000 tons of produce waiting to be exported to the colonies, and cannot get ships to carry it thither, although we have eight ships, barques, and brigs, besides schooners, belonging to Auckland. The enormous exertions made the last twelve months by the settlers here are almost incredible. We have now about 16,000 acres of land under cultivation, and the greater part in wheat for the colonies; and I may say that the natives have far more land under cultivation, with the idea of their gaining very high prices for the produce for the colonies. People here complain about the dulness of the times, but it is many years since Auckland was in so flourishing a condition, and without the assistance of one sixpence of the Parliamentary grant, all of which has been spent at the southern settlements."

We have before us an interesting pictorial evidence of this activity at Auckland, in a series of four well-executed Views of the town and harbour, drawn by R. J. Hogan, and "published by J. Williamson, stationer, &c., Auckland." The points are admirably chosen, and show the town itself—1, from Robson-street, south; 2, from Smale's Paint; 3, from Britomart Barrack, 4, the point we have engraved upon the next page.

The accompanying View shows a portion of the town, seen from the New

AUCKLAND, NEW ZEALAND.—FROM THE NEW WHARF.

Wharf, with Queen-street and the foot of Shortland-street; the Market-house, Wesleyan Chapel and College, and "the windmill on the hill."

A late number of the *New Zealander* describes Queen-street as the least built upon, but in other respects the best and most considerable street in Auckland. It is about half a mile long, nearly level, and almost straight, and terminates at its northern extremity in a pier or quay, which runs into the harbour; and alongside of which small craft can land, on this stage, their cargoes. At its southern extremity it is overlooked by the Wesleyan Seminary, or boarding-school for the education of the children of the missionaries in these seas—a spacious brick-built and substantial structure. The Gaol is badly situated, and is by no means a conspicuous building; but by a diligent search it may be found on the west side of Queen-street, partly screened from view by the Court-house and Police-office, which abut immediately upon the street. Several shops of superior description, two and three stories high, have recently been erected; and Queen-street, as well as being the longest, is certainly just now one of the most improving streets in Auckland. Wakefield-street ascends from its southern extremity, until it joins the Cemetery-road, and is the newest and most increasing street in the town: many of the houses are built of brick, and it already bears a considerable resemblance to a new street in the outskirts of a modern English town.

PORT NATAL.

INTELLIGENCE of an interesting character has recently been received from the rising colony of Port Natal:—"We are informed," says the *Natal Mercury*, "on good authority, that Mr. Morewood has found coal—equal to the best Newcastle—on the coast near Compensation, by means of the Government boring apparatus which he has at present in use." A reward of £1000 had been offered for the discovery of gold in the settlement.

A Correspondent just returned from a three years' residence at Natal, has favoured us with the accompanying View of the capital—Pietermaritzburg—taken from the high hills called the Swarthoops. The site for the town was selected by the Dutch, and inhabited by them previous to Port Natal being annexed to the Cape of Good Hope, in 1845. Since that period, the Dutch, wishing still to enjoy their own laws and privileges, migrated some hundreds of miles into the interior, beyond the mountains forming the boundary-line between the new Dutch territory and the country they formerly inhabited. Here they have re-established themselves, and have become very extensive cattle-farmers, hunters, &c.; and many are turning their attention to the growth of wool. Pietermaritzburg stands well, and can be seen from six to seven miles distant. On either side are two main roads, for waggon travelling, that with the waggon seen in the distance leads from the sea-port town D'Urban; and the road opposite, to the over-berg route. The Little Bushnie River runs almost round the town, through which it is taken at a trifling expense, running before the houses down each side of the street, thus affording the inhabitants a never-failing supply of pure water, which gives a very cooling and pleasant appearance to the town. The houses are well-built—mostly of stone, and brick white-washed: attached are good gardens. The dwellings number about 300, besides a fort and camp, and substantial Government offices.

PIETERMARITZBURG, THE CAPITAL OF NATAL.

EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

The Exhibition of the Works of the New Society of Painters in Water Colours, for the present season, is a very good one. Among the usual variety of landscape and still life pieces, are scattered more than the ordinary number of historical and character subjects, many of them of considera.. beauty and interest; and the exect tive merit of the collection, generally, denotes a marked progress in this agreeable branch of art.

John Absolon has several works evincing taste and artistic ability. 18, Represents a "Guerilla" reclining asleep, whilst a young female watches over him with an air of deep solicitude and affection. There is a quiet interest about this simple group which is very charming. In 231, "Corner in Spain," we have personages of a somewhat similar character, but differently occupied. At the corner of a street, a young guerilla is pouring his ardent professions of love into the ears of a black-eyed damsel, who, listening attentively, and withal not weak to what he says, seems to indicate that she will "think upon it." Her hand hanging coldly within, almost withdrawn from, the grasp of her lover, shows that she is more inclined to favour than to reject his suit. 219, "The Nun," is studied upon the lines of Rogers:—

——— She arose at home
To be the show and idol of the day.
Her vesture gorgeous, and her starry heart
No rocket, bursting in the midnight sky,
So dazzling. When to-morrow she awakes,
She will awake as though she still was there,
Still in her father's house, and not a cell.

The young novice is stretched in sleep—sleep brought on by weariness of waking, and the unquiet attitude and disordered hair clearly indicate the struggle which has just been passing in her mind between the attractions of the world, and of the cloister. 20, the "Gleaners," is a pretty little sketch, of a merry party returning from the fields; a broad side light from the setting sun playing very happily upon the various figures as they recede in the distance.

L. Haghe has several pieces, in which his rich style of colouring is prominently displayed. 48, the "Happy Trio," is a family group of a father or guardian asleep in an armchair, whilst the daughter and her lover are discoursing most eloquent music at the piano. The treatment, under the influence of a setting sun peering through the window, is generally extremely warm, and the contrast afforded by the bright blue of the cavalier's velvet coat, is perhaps more striking than agreeable. In 84, the "Salle d'Armes in the Castle of Augsburg," the tone is more mellow, the various groups of armed men and armour in the ancient baronial hall being most effectively displayed.

"THE FATAL STATUE"—PAINTED BY W. H. KEARNEY.

55, The "Shrine of Santa Rosalia, Monte Pellegrino, Palermo," by Charles Vacher, is a capital interior; the architectural and other details nicely distinguished under a subdued light. Some other Italian scenes by this artist are equally to be remarked for their artistic and tasteful treatment.

The principal historical work in the room, and one which cannot fail of commanding the attention of all visitors, is (230) the "Walk to Emmaus," by H. Warren, which we shall engrave hereafter.

One of the most masterly works in the Gallery, and which we now engrave, is that entitled the "Fatal Statue" (194), by W. H. Kearney; and the story of which is well authenticated in the history of art, and runs as follows:—

Torrigiani, a Florentine artist, contemporary with M. Angelo, was much employed in England by King Henry VII., upon his chapel at Westminster. He afterwards travelled into Spain, where he was engaged to make a statue of the Virgin for a grandee, who, when the model was completed, gave a small sum to the artist for his remuneration, which so exasperated him that he broke the model in pieces; for which he was denounced to the Inquisition by the grandee. To escape the punishment of being burnt alive for sacrilege, he starved himself to death in a prison of the Inquisition.

The artist has seized the moment when Torrigiani, scornfully holding up the few coins he has just received from his patron in his left hand, has dashed the ill-paid model to pieces. The attitude of this figure is vigorously conceived, and executed to perfection: being coloured rich red and green, it stands prominently forward with the importance it should claim. The grandee, seated, is dressed in black, and, in the heat of the moment, is drawing his stiletto, in the background, an ecclesiastic raises his hands in horror at what he considers a sacrilegious act. The treatment of every part of this little picture is such as to command unqualified admiration.

Charles H. Weigall is very successful with a representation of "Dirk Hatteraick in the Cave" (195), which we engrave, and which perfectly realises the picture so admirably described in "Guy Mannering":—

The light in the fire-grate was the dark red glare of charcoal in a state of ignition, relieved from time to time by a transient flame of a more vivid or duskier light, as the fuel with which Dirk Hatteraick fed his fire was better or worse for his purpose. Now a dark cloud of stifling smoke rose up to the roof of the cavern, and then lighted into a reluctant and sullen blaze, which flashed wavering up the pillar of smoke, and was suddenly rendered brighter and more lively by some drier fuel, or perhaps some splintered fir timber, which at once converted the smoke into flame. By such fitful irradiation, they could see more or less distinctly the form

"DIRK HATTERAICK IN THE CAVE."—PAINTED BY C. H. WEIGALL.

of Hatteraick, whose savage and rugged cast of features, now rendered yet more ferocious by the circumstances of his situation, and the deep gloom of his mind, asserted well with the rugged and broken vault which rose in a rude arch over and around him.

Dirk Hatteraick, both in feature and attitude, is a perfect study; there is a lull-dog savageness of expression about him which denotes the villain who's heart is remorseless. The scene itself, and the various accessories introduced, are all in perfect keeping with the subject.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

There was a large attendance of their Lordships to-night, for the discussions upon the College of Maynooth never fail to attract great numbers of peers, both temporal and spiritual. The right rev benches were fully occupied; sixteen archbishops and bishops were present, whose attire of lawn and cambric formed a striking feature in the *coup d'œil*. The prelates themselves presented some striking contrasts—the greatest, perhaps, being afforded by the mild and Christian sweetness of expression and placidity of deportment which characterise the Archbishop of Canterbury, and the combative restlessness and energy of the Bishop of Exeter. The right rev. prelate looks extremely unwell; but neither illness nor advancing years (Dr. Phillpotts is seventy-five) appear able to quench the fervour of his political and theological opinions. The Marquis of Anglesey—who, from having twice served the high office of Lord-Lieutenant, may well be supposed to take an interest in everything relating to Ireland—came down to the House, and, scanning the intelligence of a seat, stood chatting with some friends for some time at the foot of the throne. The group was joined by his Royal Highness the Duke of Cambridge, who, after some cordial conversation with the venerable Marquis, gracefully turned him his arm, and led him into the Council-chamber behind the throne. The Marquis of Anglesey, who is now in his eighty-fifth year, walks with the same vigour as when, arm in arm with the Great Duke, the illustrious heroes shared with Royalty the admiration of the public at the opening of the Great Exhibition of 1851. Both the Duke of Cambridge and Lord Anglesey voted against the Earl of Winchilsea's motion; which was also opposed by the Archbishops of Canterbury and York, and the Bishops of London, Exeter, and Durham. When speaking of the votes of the Bishops, we might have added that only two of their members of the episcopal bench were wanting. The Archbishop of Canterbury, when Bishop of Chester, never appeared in it, and he has only resumed the wig since his translation to the Primacy. The Archbishop of York never wears it, and the only English Bishop who refuses to discard it is the Bishop of Rochester. One member of the Irish episcopacy, who seldom appears in the House of Lords, also wears the wig. The strangers' gallery was filled with persons, the great majority of whom appeared to be clergymen. The Earl of Derby, whose attendance upon his Parliamentary duties has been interrupted by the death of Lord Skelmersdale, the father of the Countess, took his usual seat upon the front Opposition bench. The discussion was soon what relieved by a humorous illustration in the speech of the late Premier, which derived much of its appositeness from the slight and juvenile figure and appearance of the intelligent Duke of Argyll. The young Duke appeared to go somewhat out of his way to make an attack upon the Earl of Derby, who said his noble assailant reminded him of a story he had heard about a great, strong, powerful "navvy," standing about six feet four, who was married to a very little woman. It was said, however, that his wife was in the habit of beating him. When asked how it happened that he let himself be beaten by his wife, he said, "Oh, let her; it amuses her, and it don't hurt me." Roars of laughter followed this joke, and it was some time before their Lordships, spiritual as well as temporal, entirely recovered their gravity. The debate itself need not occupy much of our space, the arguments for and against the College of Maynooth having been so often repeated as to have lost all novelty.

The Earl of WINCHILSEA moved for the appointment of a committee to inquire into the system of education pursued at the College of Maynooth; and, after inveighing with great vehemence upon the insult offered by the Pope to the Queen, by his recent bull, proceeded to institute most of the evils of the Romish system to the pernicious tenets inculcated by the canon law, according to which the Pope assumed temporal as well as spiritual authority over the subjects of other sovereigns. If those tenets were taught at Maynooth, it was high time that such a system of education was put down. He would, however, consent to withdraw his motion in favour of Lord Lyndhurst's amendment if the commission proposed were composed of four members, two nominated by the Crown and two by himself.

The Earl of ABERDEEN said, the noble Earl's object clearly was not inquiry into the system pursued at Maynooth, but the principles of the College which had been sanctioned by Parliament for sixty years. The Government had no objection to appoint a commission; and he moved an amendment,

That a humble address be presented to her Majesty, praying that her Majesty will be graciously pleased to issue a commission to inquire into the management and government of the College of Maynooth, the discipline, and the course of studies pursued therein; the acts into the effects produced by the increased grants conferred by Parliament in 1845.

The Earl of RODEN gave the House some reason to think that the late famine and the vast emigration going on have very much changed the numerical proportion which Protestant and Roman Catholic formerly bore to each other. The noble Lord read an estimate of the numbers of the various denominations of Protestants and Protestant Dissenters in Ireland in 1834, amounting in round numbers to 1,516,000, while the Roman Catholic population was estimated at 6,000,000, the Protestants being then but one-fourth of the population. In this estimate it was said the Protestants were understated. But in consequence of the famine and emigration in Ireland, the population, which in 1841 was 8,135,000, and which ought to have increased to 8,500,000 in 1851, was then ascertained to have fallen to 6,515,000. The Roman Catholic population had been more reduced than the Protestant population, so that at present their relative numbers were as 7-13ths to 3-13ths.

Lord Dufferin, Lord Beaumont, the Marquis of Clanricarde, the Duke of Leinster, the Marquis of Lansdowne, and Earl Grey, doubted the policy of inquiry, but preferred a commission to a committee. The Bishop of LONDON said that he would readily vote against the continuation of the grant, but would now content himself with supporting the Ministerial amendment. The Earl of SHAFTESBURY thought inquiry necessary. The terms of inquiry should embrace the consideration of the object for which Maynooth was originally founded—to train a home-bred body of priests, who would be more loyal and patriotic than those trained abroad. The commission must inquire whether this had been accomplished or not. The Duke of ARGYLL supported the amendment. The Earl of DERBY thought it fair matter for inquiry whether the system pursued at Maynooth turned out Murrays or M'Hales?—whether the text-books inculcated the Ultramontane doctrines, which favoured the loftiest assumptions of the Roman Catholic clergy, or the more moderate views known as Cisalpine, which were certainly more reasonable and more in accordance with the church of Ireland did, or, at all events, ought to stand. He preferred inquiry by a committee, but he recommended the noble Earl not to divide the House, and to be satisfied with the declaration of the Earl of Aberdeen, that he would take every possible means of securing a full and impartial inquiry into the whole of the subject.

The House divided. The numbers were—Content, 53; non-content, 110: majority, 57. The resolution was, therefore, negatived, and the amendment agreed to.

The House adjourned at a quarter past eleven o'clock, an unusually late hour for their Lordships.

HOUSE OF COMMONS.—MONDAY.

New Palace-yard exhibited an animated appearance this evening, from the number of horses and carriages which rapidly arrived at the door of Westminster Hall, with members of the House of Commons. The leading members of the Government and the Opposition arrived early; and, at about half-past four o'clock the body of the House was completely filled. We need scarcely say that the two galleries devoted to strangers were occupied as soon as prayers were concluded; so numerous, indeed, were the applications for admission with members' orders, that the seats on one side of St. Stephen's Hall exhibited a long line of persons, whose only chance of admission was that an equal number of seats should be vacated by the more fortunate possessors of places within the House. The Speaker's Gallery, and in the places devoted to Peers and distinguished visitors, were Lord Overstone, some Bank directors, and other masters of finance, who are consulted by Chancellors of the Exchequer upon monetary operations. The Members' Galleries, right and left of the Chair, were the resort of hon. gentlemen who could not obtain seats in the body of the House. All eyes were turned to the front Treasury bench, where Mr. Gladstone sat with his papers upon the table before him. Some time was lost in the preliminary questions which were put to the Government upon a variety of subjects; and, at a quarter-past five, amid the breathless silence of the House, the Chancellor of the Exchequer rose to make his great financial statement (which will be found reported at length in our Supplement). Of the merits of the scheme this is not the place to speak; but, it may be permitted to us to remark here upon the wonderful ease and winning facility with which the right hon. gentleman treated the most abstruse details of finance, so that the House listened to him for five hours almost without a sensation of weariness. To say that he never once paused for a word during the whole of that time, is only to award the right hon. gentleman the palm of almost unsurpassed fluency and command of language. The accurate construction of his sentences strikes every one who is accustomed to the confusion of Parliamentary oratory; and the effect of his exposition was materially increased by a manifest, and for the most part successful effort to restrain the rapidity of utterance which often prevents his ideas from impressing their true impression upon the minds of a popular assembly. There was little cheering throughout the speech, for the Chancellor of the Exchequer indulged in no *ad captandum* appeals, and his manner was throughout so earnest and business-like that his friends and the Ministerial benches, when they most admired, felt that plaudits would have been out of place—although neither applause nor disapprobation had power to disconcert the orator, as was proved several times in the course of his speech. The impression produced upon the minds of the crowded and brilliant assembly by Mr. Gladstone's evident mastery and grasp of the subject was, that England had at length found a skilful financier, upon whom the people of Peel had descended. The cheering when the right hon. gentleman sat down was of the most enthusiastic and prolonged character, and his friends and colleagues hastened to tender him their warm congratulations upon the distinguished success he had achieved in his first Budget. A hum of approbation went round the House, and even the fair occupants in the ladies' gallery—unseen, but not unheard—appeared to be in a flutter of excitement and delight. The House adjourned early; and groups of hon. members eagerly discussing the financial scheme poured themselves into Westminster Hall, and took the way up Whitehall, on their way to the different clubs of the west-end.

HOUSE OF LORDS.—TUESDAY.

Their Lordships were engaged to-night with the case of Mr. Kirwan, who was suspended from the magistracy for six months, by the Earl of Eglinton, when Lord-Lieutenant of Ireland, for his conduct during an election riot at Ballina, in the county of Mayo. The first step taken by Lord St. Germans, on arriving at Dublin Castle, was to restore Mr. Kirwan to the discharge of his functions, and the Earl of EGLINTON now complained of this reversal of his decision, the grounds of which he explained and defended. The Earl of ABERDEEN assured the noble Earl that Lord St. Germans had not intended to cast any slur upon him; and, after a few words from the Earl of DERBY, who bore testimony to the fairness and impartiality shown by his noble friend Lord Eglinton, in the administration of the law in Ireland, which he said had seldom been equalled, and never surpassed by any previous Lord-Lieutenant, the matter dropped.

HOUSE OF COMMONS.—TUESDAY.

The House was again very fully attended to-night, in anticipation of the discussions on the dockyard appointments and promotions of the Derby Government, which, it was understood, either impeached the personal honour of the late Secretary to the Admiralty, or that of Sir Baldwin Walker, the Surveyor to the Navy. Questions affecting the personal character of its members never fail deeply to interest the House of Commons, and the House remained crowded until the close of the discussion. The debate commenced upon a motion by

Sir B. HALL, for a select committee to inquire into the circumstances under which a circular sent to the Superintendent of the Dockyards, dated in September, 1849, was cancelled by Mr. Stafford in April, 1852, without any order of the Board of Admiralty; also into the circumstances under which a letter from Sir Baldwin Walker to the Admiralty, tendering his resignation as Surveyor of the Navy, was withheld from the Board; also into the circumstances connected with the appointment of Mr. J. Wells, as master-smith in the dockyard at Portsmouth, its long cancelled, and the appointment of Mr. G. Cotsell in his stead; and generally into the alleged undue influence and patronage of the Admiralty in the dockyards and other Government departments connected with the several Parliamentary boroughs. Three charges appeared to be made affecting Mr. Stafford's personal character: first, that he had, on the 16th of April, 1852, without consulting the Board of Admiralty, an order cancelling the order of September, 1849; secondly, that he denied, in the face of the House of Commons, the existence of this minute, the existence of any correspondence with Sir B. Walker on the subject, and his own connection by that officer; and, thirdly, that he destroyed the order appointing Mr. Wells master-smith at Portsmouth Dockyard, and then denied that it had ever existed. It may be necessary to explain that the order of September, 1849, directed that all papers respecting promotions and vacancies in the dockyards should be sent through the surveyor of the Navy to the Board, and that Sir B. Walker roundly asserts that he was put aside by Mr. Stafford for the purpose of recommending political partisans of the late Government for advancement.

Mr. STAFFORD—without denying that he cancelled the minute of September, 1849, upon his own authority, and not denying that he knew of the resignation of Sir B. Walker, and that he destroyed the minute appointing Wells—went into an explanation and justification of his conduct. He defended the cancelling of the minute, on the ground that Chatham dominered in the dockyards, and said that the Admiralty subsequently adopted and confirmed his act. With regard to Sir B. Walker's resignation, it was not addressed to the Secretary of the Admiralty, and came into the hands of Admiral Hyde Parker, who, in the exercise of a friendly discretion, withheld it; so that no memorandum of the resignation existed at the Record office of the Admiralty. He attempted to disprove the charge of political jobbing in the appointment of Mr. Cotsell, and defended the distribution of dockyard patronage. He admitted that he had done wrong in going round the dockyards in the company of the Government candidates; but this was an error in judgment which he now regretted.

Admiral BERKELEY defended the inquiry, in justice to Sir B. Walker.

Sir J. GRAHAM said, that all doubt as to the personal honour of Mr. Stafford had been removed from his mind, although he thought he had made a grave mistake in revoking the circular of 1849. The charge that political considerations had swayed the late Board of Admiralty was one deserving of inquiry.

Mr. DISRAELI bore testimony to the independent and impartial spirit in which the office of First Lord of the Admiralty had been discharged by the Duke of Northumberland, who had undertaken it with a distinct understanding that the patronage of his department was a solemn trust, to be distributed to the advantage of the country. It would be invidious, and perhaps unfair, to refuse to Sir B. Walker the opportunity of explaining his conduct, and he recommended that no opposition should be offered to the appointment of the committee.

Lord J. RUSSELL said a few words in support of the motion, which was agreed to.

HOUSE OF COMMONS.—WEDNESDAY.

The CHANCELLOR of the EXCHEQUER gave an explanation, which it is important to-date, as the readers of the Customs resolutions in our Supplement might be misled by an error which occurs in them. Under the class of articles, "Customs, No. 4," on which the Government proposes to reduce the duty, it is stated that hard soap is to be charged 16s. per cwt., soft soap, 11s.; and Naples soap, 16s. per cwt. Mr. Gladstone stated that those figures had been prepared by him before he had had an opportunity of submitting to the Government the proposition to abolish altogether the Excise duty upon soap; and, after it had been determined to submit that proposition to Parliament, in the pressure of business it had escaped him to strike those resolutions out of the duties which he had laid upon the table. The proposition of the Government was, that the duty on the importation of foreign soap should cease altogether when the Excise duty should be remitted at home.

Lord H. VANE presented the following report from the Mayo Election Committee:—

That G. H. Moore and G. C. Osseley Higgins, Esqs., are duly elected knights of the shire to serve in this present Parliament for the county of Mayo.

That there appears, from the evidence laid before the committee, that there was a great abuse of spiritual influence on the part of a great body of the Roman Catholic priesthood during the late election for the county of Mayo.

The House went into committee upon the Public-houses (Scotland) Bill.

On the order for going into committee upon the Judges Exclusion Bill, which, as we have before stated, is principally aimed at the Master of the Rolls, Mr. DRUMMOND said it had been his intention to have moved to defer the committal of the bill for six months, considering it to be one of the most destructive measures ever presented since he had had a seat in that House; but he should postpone his motion for the rejection of the bill until the third reading. The House then went into committee. A motion made by Mr. HUME, to include the Recorder of London in the schedule of judicial functionaries disqualified to sit in the House being generally resisted, was withdrawn until the third reading.

HOUSE OF LORDS.—THURSDAY.

The Earl of Stair took the oaths and his seat.

In answer to Lord Sandwich, the Earl of CLARENDON said that the Government had not at present any fixed intention of bringing forward a measure for the surrender of criminals in accordance with the convention which had been signed with the French Government. He acknowledged the importance of the object; but the practical difficulties which surrounded the attainment of the object in view rendered it impossible for him to give any pledge on the subject.

The Earl of ABERDEEN moved that their Lordships agree with the Commons in an address to her Majesty, praying that a commission be issued to inquire into the state of the borough of Kingston-upon-Hull.—Agreed to.

The Earl of ABERDEEN said that it was not his intention to move that their Lordships agree with the address of the Commons in the Cirencester case. The noble Earl then gave notice of his intention to move the second reading of the Jewish Disabilities Bill on Friday the 29th inst.

The Earl of MALMESBURY asked a question of the Government relative to the negotiations between this country and the United States on the subject of our colonial fisheries?

The Earl of CLARENDON said that the negotiations which were now being carried on in the most friendly spirit between the two Governments had not as yet concluded. He, therefore, did not think it desirable to say more on the subject than that the measures taken by the late Government to protect those fisheries were followed up by the present.

HOUSE OF COMMONS.—THURSDAY.

The Barnstaple Election Committee reported that Sir W. A. Fraser, Bart., and Richard Bremridge, Esq., were not duly elected as members for the borough of Barnstaple; having been, by their agents, guilty of bribery. The committee further reported that corrupt practices prevailed in the borough during the last and previous elections. Mr. W. O. STANLEY then gave notice that he would to-morrow move the suspension of the writ for six weeks—Sir J. FARINGTON brought up the report of the Bridport Election Committee, reporting that the influence of Mr Jeremiah Smith was carried to an enormous extent, by means of lending money to the electors; and that, at the last election, no less than 56 voters who voted in accordance with his wishes, were indebted to him. The committee did not believe that direct money bribery had been resorted to, but that the system of money lending for electioneering purposes demanded the serious attention of the Legislature, with a view to a remedy.

In reply to a question from Mr. Cowan, the CHANCELLOR of the EXCHEQUER said, the usual course, when increasing the duty on spirits, was to date the increased duty from the period when the resolution passed.

Mr. DISRAELI complained of the House being taken by surprise by the second reading, on Monday night at a late hour, of the South Sea and other Annuities Commutation Bill, and asked if the noble Lord would not postpone the committee, which was on the paper of that evening.

The CHANCELLOR of the EXCHEQUER said, the intention was on Monday to take the discussion on the Income-tax and the Legacy-duty, after which the Spirit-duties might be brought under consideration. He also said that no objection was made on Monday night to the second reading of the South Sea Annuities Commutation Bill; and as it was always desirable to pass such bills as quickly as possible, he thought it better to move the second reading, as there would be ample opportunities of discussing it in its future stages.

CUSTOMS, &C., ACTS.

Mr. WILSON proceeded to state the views of the Government with respect to the Customs regulations, as recommended by the select committee which had sat upon the subject. The Committee had classed those recommendations under fifteen heads. It was not intended, on that occasion, to deal with the constitution of the Board of Customs itself. It was, however, contemplated to adopt a system of promotion among the men employed in the lower departments of the Customs—all vacancies being filled up from the outports alone, with the present system of allowing the Customs to share in the "fines and satisfactions." At present those officers were allowed the half such fines; but, in order to do away with all personal inducement to make seizures, the practice would be done away with in all cases except those of the Coast Guard service. The abolition of *ad valorem* duties, as announced by the Chancellor of the Exchequer, would do away with a fruitful source of misunderstanding between the Customs officials and the trader. With respect to stoppages and seizures, the Board of Customs had, in August last, issued an order that in all such cases notice of the course should be immediately given to the owners or agents, and that all complaints should be heard before one of the Commissioners in open court. Her Majesty's Treasury affirmed those orders of the Board, and it was intended to extend to the outports the advantages of the arrangement, where the complaints would be heard before the collectors or comptrollers. A power of amending the entries would be given to certain officers in cases when the amount involved was small. It was also proposed to repeal the privilege enjoyed by the Crown with respect to costs, so as to place the Crown and the subject on the same footing, the party losing the suit being liable to pay the costs. It was further proposed that when the sums in questions were under £100, the Crown should be compelled to proceed in the County Court, or such other local tribunal as the Treasury might decide upon, with power to the defendant to go to a higher court if he thought proper. It was still further intended that, even when the amount exceeded £100, the case might go to a local court, if the Board of Customs thought proper. Another alteration to be carried out was, that henceforth actions for damages might be brought against the Board instead of against the officers. Facilities would be given for removing goods liable to Customs-duties from one port to another port, which would be a great convenience when intended for re-exportation; but this privilege could not be extended to goods sent by coasting vessels, unless previously examined. It was also proposed to allow the re-importation of arms duty-free, on condition that proper notice of the cargo should be given to the Custom-house. It was proposed that all bonded warehouses should be of one class; and with respect to passengers' luggage, it was intended to make arrangements for its examination on board the steamers as far as one or two packages were concerned. It was recommended by the committee that in cases of free goods it should be sufficient to send the ship's manifest, and the entry of the consignee to the Customs, with copies to the landing waiter. This, however, he considered it would be dangerous to do, as under such a system smuggling to an enormous extent might be carried on. It was, however, intended to have a separate room for free goods destined from the Long-room. With respect to the Customs laws generally, they had, up to 1825, been 1500 in number; but in that year they had been reduced to six, and in structure had been given which would result in their being compressed in a single Act of Parliament. Pending any change which may hereafter be determined upon in reference to the constitution of the Board of Customs, it was proposed to give the local authorities at Liverpool power to act independently of the Central Board in London in cases where the sum in dispute between the Customs and the merchants should not exceed £100, with a view ultimately to give that port a position perfectly equivalent and co-operative with London. Government also proposed to make an entire change in the Isle of Man. The statement was made in order that the intentions of the Government might be known as widely as possible pending the introduction of the bill, which would be introduced as speedily as possible. In the meantime the Government wished to know the opinion of the country upon the changes announced, and which they were prepared to modify upon good cause being shown.

A discussion then took place, in which several hon. members expressed their approval of the propositions generally.

The further consideration of them was then postponed.

On the motion for going into committee upon the Pilotage Bill,

Mr. TURNER moved as an amendment that the bill be referred to a Select Committee, on the ground that it would place too much power in the hands of the Board of Trade.

After a brief discussion, the House divided, when the numbers were—For going into committee, 219; against it, 83: majority, 136.

The House then went into committee; but soon afterwards the chairman reported progress, and the House adjourned.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

On the 9th inst., the shock of an earthquake was felt at Naples, about 2 40 a m , and lasted not less than ten seconds. The undulating movement was not sufficient to produce any damage, but much alarm was felt.

Kossini has been raised, by the French Emperor, to the rank of Commander of the I egion of Honour

Dr. Parkes, of Great Marlborough-street, has been appointed Registrar to the Golden-square District, St. James's, Westminster.

On Friday week, Hacket and Noonan, the two men convicted at the late Waterford assizes for the murder of O'Callaghan Ryan, Esq., were executed pursuant to their sentence.

Amongst the passengers brought by the *Asia* is Miss E. T. Greenfield, known in the United States as the "Black Swan," who has been singing with great success in the States.

The deliveries last week in the tea trade were again small, from the uncertainty as to the future duty. The quantity taken was 2 1 1 H

The Rev. James Hutchinson, head-master of the Grammar-school, Chelmsford fell down dead on Friday week. The rev. gentleman was in his 73rd year.

Letters from Alexandria give an unsatisfactory account of the health of that distinguished officer, Sir Walter Gilbert. He appears to have derived but little benefit from the climate of Egypt; and will, therefore, as soon as he is able, return to England

A stag which had been uncarted near Thingley, a few days since, got upon the railroad near Corsham station, and was making its way towards Box, just as the express train was emerging from the tunnel. The engine-driver relaxed his speed, and sounded the whistle; and the pack divided, and passed the train without hurt. The stag entered the tunnel, and cleared them.

The British barque *Josephine*, from London, had arrived in the Columbia river, with merchand se for the Hudson's Bay Company.

An inquest was held last week at West Hackney, upon the body of an infant, when it was ascertained that his grandmother had unwittingly killed the child by giving him a small quantity of laudanum to allay pain.

Viscount Palmerston was admitted a member of the Royal Society on the 14th inst

The Hon. T. F. Marshall, member of the United States' Senate, had been killed by one of his tenants near Marysville, Kentucky.

Access to the burial-place of the persons killed at Berlin in March, 1848, has been interdicted by the Prussian police, and the place has been enclosed

Mr. John Fawcett Loder, a well-known violinist, died suddenly on Saturday morning last, aged 41. The inquest returned a verdict of "Natural death."

Chesterfield gaol, South Carolina, was accidentally destroyed by fire on the 9th inst., and eight of the prisoners perished in the flames.

The American Minister at Madrid had succeeded in obtaining the pardon of eight Hungarians of the Lopez expedition, who had been sentenced to the mines

The death of Mr. Phillips, Chairman of Sessions, and subpœnaed as one of the Aborigines of King George's Sound, is reported.

Among the dramatic rumours of the day, is the mention of a new play, entitled "The Castilian," by Sir J. N. Tillnord, which, like "Ion," is possibly in private circulation before it is produced publicly

A corn-exchange and bourse on an extensive scale are about to be erected at Frankfort, the city guaranteeing an interest on capital expended in the construction.

Archbishop Hughes, of New York, was about to proceed to Rome to be invested with the dignity of Cardinal

A schooner was run down by one of the City of Dublin Company's steamers on Saturday, in the voyage from the Mersey to Dublin. The crew of the schooner was saved, and the fault does not appear to have been on the part of the steamer

Lord Brougham has arrived at Menton's Hotel from Cannes.

A petition in favour of the admission of Jews to Parliament has been signed by 300 of the Jews resident in Manchester to the House of Lords, and has been entrusted to the lib.ral of the diocese

It is said that an adaptation in verse of "La Dame aux Camelias," by Mr Wilkins, destined for Drury-lane, has been stopped by a veto from the Lord Chamberlain.

The Cherley Tavern and Gardens, near Norwood, has been sold for £6070: the lease has fifty years to run, and the yearly rental is £1-0. The premises are not far from the Crystal Palace.

A bottle was found, on the 14th inst., about three miles north of the river Adour, at Bayonne, containing the following paper: "On board ship *Estelle*, off the banks of Newfoundland, becalmed.—J. H. Wait and Will am Pa rwick, of Newcastle-on-Tyne, March 14, 1853.

Governor Ujhazy, the leader of the Hungarian settlement at New Buda, has sold his land, and leaves for Texas, where he has bought some hundreds of acres The Hungarians who remain have elected Joseph Mathey, their chairman, in place of Ujhazy.

Seven hundred bushels (or about 1,000,000) of dead-letters had been destroyed at Washington, in accordance with the usage of the Post-office department. They were carted to a convenient square, and spread over a line of 200 or 300 feet, when the match was applied.

The sum advanced by the War-office in the shape of bounties to Militia recruits, amounts already to £480,000.

The steeple of the parish church of Doncaster Church, recently destroyed by fire, now amounts to upwards of £25,000

A syphon for dairymen has recently been brought into general use in Scotland, by means of which the milk is drawn away from the cream, instead of skimming the cream off the milk.

The *Ballarat*, Captain Jones, arrived at Falmouth from Melbourne, on Monday, bringing on freight 73,060 ounces of gold (about £300,000 sterling), and many passengers.

Her Majesty has ordered that from the 31st day of May, 1853, the parish of Northaw, now in the district of the County Court holden at St. Albans, shall be in the district of the County Court holden at Barnet.

The United States' steam-frigate *Saranac*, got ashore at Warsaw Sound, on the 8th inst., on her passage from Havanna to Savanna, and remained at the last accounts in a dangerous position.

Upwards of £600 have been subscribed towards a testimonial to the Rev. R. Whiston, who, it will be remembered, was deprived of the head-mastership of the cathedral grammar-school by the Dean and Chapter of Rochester, on account of his exposure of the non-fulfilment of cathedral trusts, but who regained his position after a lengthened and expensive course of litigation.

The United States' steam-ship *Baltic* took her departure from Liverpool on Wednesday morning for New York, with 94 passengers, a full cargo, and the usual mails. The steam-ship *City of Glasgow* also left at the same time for Philadelphia, with a fair number of passengers and a good cargo

The King of Prussia has conferred the Grand Cross of the Red Eagle on Baron de Varenne, minister at Berlin.

The confirmation of the election of the Bishop of Lincoln is to take place at Bow Church, on Tuesday, the 3rd of May; and the consecration, at Lambeth Church, on the 8th, being Ascension-day; the solemnities commencing on each day at eleven o'clock.

Mr. Drury Wake arrived on the 15th inst. from Constantinople. He immediately proceeded to the Foreign-office with despatches, having made the Overland journey in twelve days.

A man angling down the Caversham Warren recently, had his bait suddenly taken with great voracity: he struggled with the fish for three hours, and succeeded in landing it, when it proved to be a ren ark bly fine jack, weighing 16 lb.

Mr. Henry Drummond has given notice of moving, on the 22nd inst. for a call of the House on whatever day Serjeant Shee shall move for leave to bring in his bill to explain or repeal the Ecclesiastical Titles Act

Lieut.-Colonel H. M. Clifford, M.P., has been appointed a Commissioner of Lunacy, in the room of Lord Seymour, resigned.

The proposed establishment of the transatlantic line of packet-boats at Cherbourg has been abandoned. If the plan should be revived, the boats will be divided between Havre, Bordeaux, and Marseilles.

Arrangements are made between the managers of the Exhibition and the railway directors, by which return tickets, for two months, will, on the 1st of May next, be carried out between Paris and Dublin, *viâ* Dover, Folkestone, and Holyhead.

A young man named Wargge, of Sheffield, while working in a garden, last week, ran a spill into the little finger of the right hand, and the wound took paw, of which he died in five days.

The Manchester city council met on Wednesday to discuss a proposition with respect to education; but, after talking from half-past ten till four o'clock (with a short interregnum for dinner) they passed an amendment without a division, declaring it inexpedient to further discuss the matter until the Government measure is before the country

Her Majesty has presented the executors of the late Mr. Neeld, who, it will be remembered, left his property to the Crown, with £1000 each. He left them only £100. The Queen has also granted an annuity of £100 to Mrs Neale, who saved Mr. Neeld's life on his making a rash attempt on it during a stay at North Marston, where he now lies buried.

CHESS.

TO CORRESPONDENTS.

British Chess-lubs.—The hon secretary of the Eglin Chess-club is thanked for the information he has forwarded.

F. R. B.—It is dull without being difficult. Aim at something like strategy and point in your problems. Let them not excess three or four moves. Those ambitious perplexities in seven and ten moves nobody takes the trouble to examine, unless they bear the name of an acknowledged master

R. W., Edinburgh. G. R., Liverpool.—Under consideration.

F. M. D., Newbury.—The little contest between Messrs. Hodges and Kentish, of Reading, has ended in favour of the former, who has won 4 to his opponent's two.

Bath Dub.—Too weak for publication. Have you no more favourable specimens of the lady's skill?

J. C., Calcutta.—Received, and replied to by letter, immediately.

Apollo-Room.—Alas! always in favour as north as Edinburgh.

Somerset.—Chess, under the auspices of Captain Kennedy, is quite in the ascendant at Bath. The chief rendezvous is the Royal Union Library, New-buildings. We presume there is a room exclusively devoted to the game.

G. R., Bradford, Devon.—When a player has his King so circumstanced, that, not being at the moment in check, he cannot move him without going into check, and, at the same time, has no other Piece or Pawn to play instead, he is distinguished.—See the "Chess-player's Handbook," p. 75.

J. A. C., Bath. We have not the back Numbers to refer to; but there can be no doubt the Problem in question was corrected

H. M. It would be better to keep games and problems in your drawer, than "barke" them by sending them to periodicals which are not seen by fifty Chess players in the kingdom

S. Newman.—You should join the Richmond Chess-club, or form a Club in your own town.

Rialto. 1. They were returned by the examiners marked "correct, but too easy." 2. We do not approve of Problems where Castling is introduced, and should never publish any unless of superlative excellence

Bolognia.—It shall be again examined

F. J., Liverpool.—The mere fact of the King having been checked, no matter how many times, does not deprive him of his right to Castle

L. D. M.—1. You should send an address and the required number of stamps (22), for postage &c., to the Editor or Publisher of the magazine in question, 5, Paternoster-row. 2. The challenge mentioned has not been accepted yet.

Solutions of Problem No. 479, by J. E. R. of Stuttgardt, Opp. E. T. V., T. G. M., Charon, Romeo, Calonia, are correct.

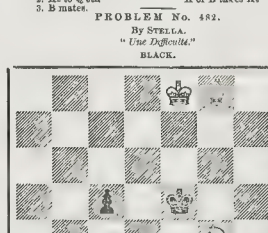
By Stella.

"Une Difficulté."

BLACK.



WHITE.

White to play, and mate in six moves.

(To the Editor of the Illustrated London News*)*

Sir, Some months since, during the progress of the contest between Messrs Harrwitz and Williams, I published a challenge in the *Chess-player's Chronicle*, offering to play the winner a match of twenty-one games, at the St. George's Chess-club, for any stake he chose. As the terms I then proposed were not accepted, and as I have reason to know Mr. Harrwitz's supporters will only back him upon conditions to which no adversary can agree, I now beg to propose to him to play a match upon our own account, entirely irrespective of any club or supporters. A large amount of stake in such a case is not required; a silver cup, or a set of chess-men of ten guineas value will be sufficient *honorarium* for the winner; and, as he objects to play at the St. George's Chess-club, and I object to play at the London Chess-club, let us meet on neutral ground I only stipulate that the games—good, bad, and indifferent—shall be made public through the chief chess-organ for the benefit and amusement of the chess fraternity. As we shall probably meet together at the Manchester chess assemblage next month, I am quite waiting, if he is so, to fix that locality our battle-field.—I am, sir, your obedient servant,

London, April 14, 1853. J. Löwenthal

OPENING OF THE RICHMOND CHESS-CLUB

The first meeting of this newly-established society was held on Monday week, at the Castle hall, and was attended by a goodly number of Chess amateurs, both from the town and neighbourhood. Previously to the commencement of the evening's play—which comprised some interesting games, contested single-handed, by the President, Mr. Staunton, and by Mr Löwenthal against various members of the Club Mr. Staunton delivered an address, in which he pointed out, at some length, the advantages arising from the cultivation of an elegant and thoughtful recreation like Chess. "It would hardly be denied, he thought, by the most rigid and practical man of the present utilitarian age, that some amusement is necessary to lighten and diversify the life of toil, mental or bodily, to which the bulk of mankind are born. In all stages of society—among the most barbarous, and among the most highly-civilised nations of the world the amusements of the people constituted a prominent object of consideration, and exercised an important influence upon their moral and intellectual character. It was gratifying, therefore, to find in this country, at the present day, an innocent relaxation for pastimes of a refined and elevating tendency, and a gradual declension of those brutal and debasing sports which were the delight of our ancestors." To show the progress Chess had made of late years, Mr. Staunton observed: "that many now living could remember when there was but one Chess-club in the kingdom, and the only allusion ever made to the game in our public prints was when Philidor or some other famous player, once in twenty years, perhaps, performed some prodigious exploit in the way of blindfold play. We have now above a hundred clubs devoted to the practice of the game; we find chess-games and chess-problems in many of the London and many of the country newspapers, we find that it is of sufficient interest and magnitude to support its own exclusive periodicals, and, above all, that its votaries, instead of being reckoned, as they might formerly have been, by scores, can now be counted by thousands."

In the course of the evening, upon the question of forming a Chess library, Mr. Bohn, the eminent bookseller, who is a resident in the vicinity, and a member of the new club, begged to present a copy of each of the works on the game which he had published, as the germ of what he hoped would prove a valuable selection of works illustrative of the beautiful game of Chess, now met together to encourage

At this, the first meeting, upwards of thirty gentlemen were enrolled as members, and it was confidently expected that this number would be speedily doubled.

The Manchester Chess Meeting.—The arrangements for this assemblage, which takes place on the 5th and 7th of May are, we learn, upon a scale of magnificence which promises to eclipse all former gatherings of Caissa's votaries. The play, which it is understood, will consist of matches between many of the finest players in the kingdom, is to extend over two days, and to be concluded by a dinner, at which the Mayor of the city is expected to preside.

PROVINCIAL INTELLIGENCE.

Dissolution of the League.—So soon as the prize essays of the Anti-Corn-law League shall have been adjudged to the successful competitors, it is proposed to summon another general meeting, and to again formally dissolve the association. The time fixed for receiving the essays was the 1st of March, and a large number have been sent in. The prizes, it may be recollected, were—one of £150, and another of £50. "on the results of the repeal of the Corn laws and the Free-trade policy upon the moral, social, commercial, and political interests of the United Kingdom"

The St. Cross Hospital Controversy.—The churchwardens of the parish of St. Faith, Winchester, in which the celebrated Hospital of St Cross is situated, have exercised jurisdiction in the beautiful church of St. Cross, as their parish church. They have also taken formal possession of the churchyard of St. Cross, by affixing a chain and padlock on its gates. All this has been done in direct opposition to the Rev. Earl of Guildford, the Master of St. Cross.

Cambrian Archæological Association.—Sir Joseph Bailey, Bart., M.P., the president, has fixed Monday, the 19th of September, and the five following days, for holding the seventh annual meeting of the society in Brecon.

Mrs. Beecher Stowe.—This amiable lady, the author of "Uncle Tom's Cabin," has been entertained at a soirée in the Glasgow City-hall, when upwards of 2000 citizens, male and female, assembled to do her honour. At this meeting resolutions and thanks were showered on this highly talented writer, for which her husband, Professor Stowe, returned thanks. From Glasgow Mrs. Stowe took the train for Edinburgh, Crowds were waiting at the station; and it was quite a triumphal procession to the residence of Mr. Wigham (with whom Mr. and Mrs. Stowe reside). The *Scotsman* says:—"Mrs. Stowe is an extremely pleasant-looking person, about the middle age, her expression homely and intelligent, her complexion dark and somewhat sallow, but relieved by her remarkably fine bright black eyes. She was very plainly dressed, and seemed both surprised and gratified with the warmth and enthusiasm of her reception." In due course Mrs. Stowe and party visited the Castle, the University, Heriot's Hospital, and other interesting points in the city. A banquet was also held in the Music-hall, which was appropriately decorated. Mrs. Stowe and her friends remain in Edinburgh about a week, having agreed to attend an Anti-Slavery and a Total-Abstinence meeting. They also intended visiting Dundee.

The Factory Question.—On Friday last a meeting was held at Bradford for the purpose of considering the present position of the factory question. The Rev. Dr. Burnet, the Vicar, presided; and the committee fully approved the following resolution:—"That the central committee is willing to co-operate with the central committee of Lancashire in an effort to secure for the operatives a strict enforcement of the law as it now stands; but, until this be effected, the committee is not prepared to join in any further agitation as to a change in the law."

Anti-Malt-tax Meeting.—On Saturday last a meeting was held at Cambridge to consider the expediency of petitioning Parliament for a total repeal of the Malt and Hop duties (the Earl of Hardwicke presiding), when the following resolutions were unanimously agreed to: "1. That the House of Commons having decided that sure-fraced competition is to be the future policy of this country, this meeting, without assenting to the wisdom or justice of such decision, is of opinion that such policy, if persisted in, should be fairly carried out. 2. That this meeting is therefore of opinion that it is unjust and oppressive longer to levy from our native produce one-fourth of the general revenue of the country; and, regarding the Malt-tax as injudiciously interfering with the profitable cultivation of the land, and alike injurious to the comforts and the wants of the working classes, pledges itself to use every means to obtain a total repeal of the Malt and Hop duties. 3. That petitions for a total repeal of the Malt and Hop duties be presented to the House of Lords by the Lord-Lieutenant of the county, and to the House of Commons by the county members."

Harwich Dock and Pier.—This bill was brought in for the purpose of empowering a company to reclaim from the sea about 100 acres of tidal land, on the west side of Harwich, and within that space to construct a wet dock and tidal basin, offering a united area of 50 acres for shipping. The amount of estimate of works and proposed capital are each £300,000, and power to borrow £83,000. The Lords of the Admiralty, acting on the report of Mr L. D. B. Gordon, civil engineer, have assented to the bill conditionally. Only 250 acres are to be embanked; and the line of embankment, the plans of the dock, town and pier, and its structure, must be submitted to the Admiralty for approval.

Engagement of a Chemist by Agriculturists.—A society has been formed at Tamworth, comprising some of the most influential landed proprietors and leading agriculturists, for the purpose of employing the services of an analytical chemist, who will be required to analyse manures, soils, stock, and other produce grown upon the land, and advise them to the members, and render such other professional assistance as may be deemed advisable.

Steam-boat Accident.—The Dublin Company's steamer *Traveller*, on her voyage for Dublin, when steaming down the river, on Sunday last, observed a schooner directly in her track. The schooner was hailed, but she did not alter her course. The captain ordered the engines to be reversed, but the result was that the two vessels came near going asleep. To avoid this she had to be moved ahead again, and an immediate collision was the consequence. The schooner went down, but her crew saved themselves by getting away in their small boat.

Defalcations at a Savings-bank, Newport.—On Tuesday week an inquiry was instituted respecting the deficiencies at the savings-bank. It appears that the accounts at the bank had been kept in the most careless manner, and that the accused (Ellis), who is the actuary, must have commenced his dishonest practices as early as 1840. It was then that he first presented a false cheque for £15, and since that period many such like memoranda have been used by him. Large sums of money must have been abstracted from the deposits by Ellis, as there is a deficiency existing of £5,765 9d. On Monday he made a full confession of his guilt, and has expressed a desire to render every assistance in taking the necessary inquiries. One great source of regret is, that, from the great loss of which the stock of not more than £30,000 has experienced, a reduction of nearly 2½ per cent will take place in the value of each person's investment

Intrepid Conduct of a Female.—On Wednesday evening week, as Mrs. Wright, of Warrington, was proceeding from Newton, and when within one mile and a half of the former town, three fellows successively made attempts, with bludgeons in hand, to stop the pony she was driving, which were fortunately unsuccessful; besides the personal injury Mrs. Wright might have sustained, she had in her possession upwards of £20. At the first interruption a fellow rushed from a hedge, when Mrs. Wright freely applied the whip to her horses, and thought she was escaping; but two other men making a similar attempt, she drew a pistol from the gig box, and, with remarkable hand and parol in the other, she was in readiness to fire upon the first man who should approach her

A Mother Accidentally Shot by her Son.—On Sunday last a shocking accident occurred to a Mrs. Holland, in Albion-street, Nottingham. At the hour of breakfast, her son, a boy about fifteen, was handling a loaded pistol, and his mother, in taking a crust of bread out of the cupboard, either touched the lock herself, or caused her son to do so, as it instantly discharged, and the contents lodged in her face, and inflicted a fearful wound. Surgical assistance was immediately procured, and the woman is now doing well.

TESTIMONIAL TO MR. GEORGE BROWN,

CHAIRMAN OF THE NORTH WILTS PROTECTION SOCIETY

On Tuesday last, a superb testimonial was presented to Mr. George Brown from upwards of 500 of the landowners and tenant-farmers of Wiltshire, as a mark of their sense of the straightforward consistent course he has pursued as Chairman of the North Wilts Agricultural Protection Society. The presentation took place at a public dinner at the Bear Hotel, Devizes, at which upwards of 120 guests were assembled, under the presidency of Mr. Thomas Brown, of Hinton.

The toast of "The Queen and Infant Prince" having been drunk with great enthusiasm, and followed by other loyal and patriotic toasts, the chairman presented to Mr. George Brown the plate, on behalf of the committee and subscribers, many of whom differ from him in their political views, but were anxious to take this opportunity of testifying their opinion of high character and private worth. The worthy chairman then referred to the great landowners of the county, members of Parliament, and leaders of the aristocracy, many of whom formerly advocated the cause of Protection, but have since altered their opinion, and disavered themselves from the Society; and, after an eloquent tribute to the great public services of Mr. George Brown to the cause of Protection, his health was proposed by the chairman, and drunk with the greatest enthusiasm. Mr. George Brown returned thanks for the splendid gift in an able speech; and next proposed "the health of the Chairman," which was drunk, and for which that gentleman thanked the company. Other toasts followed, and the party broke up after a most agreeable evening. The proceedings are fully reported in the *Devizes Gazette*

The plate, value £250, consists of a magnificent centre-piece, with

COLLEGIATE INSTITUTION, AT CUDDESDON.

TESTIMONIAL PRESENTED TO MR. GEORGE BROWN, OF AVEBURY.

I ise supporting three figures, personifying Digging, Sowing, and Reap- i g. The standard is an oak stem, with foliage, holding a glass for flowers. Around the base are agricultural emblems, omitted in the E graving, and it bears the following inscription:—

Presented to George Browne, Esq., of Avebury, by upwards of three hundred and twenty of the principal gentry, landowners, tenant-farmers, and other friends, resident in and connected with the county of Wilts, in testimony of his able, straightforward, and consistent conduct as chairman of the North Wilts Agricultural Protection Society, and as a token of their personal esteem and respect for his character as a man of business, a friend, and a neighbour. April, 1853.

In addition to the centre-piece is a unique and elegant dessert service, consisting of eight pieces, each engraved with the above inscription.

The whole service has been designed and executed by Mr. Payne, of Bath.

NEW THEOLOGICAL COLLEGE IN THE DIOCESE OF OXFORD.

On the afternoon of the 7th inst. the Bishop of Oxford, assisted by a large body of the clergy from all parts of his diocese, laid the chief corner-stone of a new Theological College at Cuddesdon, within eight miles of the city of Oxford, and in close proximity to the episcopal seat.

The clergy, and others interested, assembled at the episcopal palace, and shortly before two o'clock a procession was formed, and moved towards the site of the proposed College. It consisted of sixty choristers, selected from the chorus of Holywell, Cuddesdon, Culham, Littlemoor, St. Thomas's, and St. Peter's; the Bishop of Oxford, the Rev. H. W. Majendie, M.A., vicar of Sheen; the Rev. James Randall, M.A., rector of Benfield, the Rev. R. Thomas Farley, B.D., rector of Ducklington; the Rev. Dr. Deane, vicar of Lewknor; the Rev. Dacres Adams, vicar of Bampton; the Rev. Richard Gordon, vicar of Oakley; and about 130 other clergymen, all in their surplices.

On arriving at the ground, the choir took their places within the enclosure of the future building, the clergy and others within a space railed off for them around the site, and on the right hand and left of the bishop. The rain fell heavily during the proceedings. After one or two psalms had been chanted by the choir,

The Bishop of Oxford took his seat upon one of the corner stones of the new edifice, and addressed his auditory, thanking his rev. brethren, and his brethren of the laity, for their numerous attendance; adding, that they were met together to ask God's blessing upon the undertaking to be formally commenced, namely, to establish a training college where young men may pass the year before their ordination in the studies, meditations, habits, and employment fitted, under the blessing of God, to prepare them for that great work.

We know (continued his Lordship) that the Universities can afford advantages which no local institutions can give. But over and above these, there are every year to be ordained to the work of the ministry of the Church in this land, numbers who cannot thus push their theological studies to that limit, and they specially need further assistance than is provided for them in the Universities. Experience shows us that wherever an attempt has been made, good has followed, as the institutions already founded at Wells, Durham, and Chichester amply testify. Numbers who come before the Bishops for ordination do not resort to the Universities for that period of study after taking their degree and applying for ordination. On the contrary, there are now scattered about in different parts of the country many who are receiving help from individuals who have no settled plan, and who are in no way connected with the special organization of the Church. Now, the plan of all others to prevent the mischiefs which are apprehended by those who look carefully into the question of such theological training, to prevent any particular bias being given to the mind of the theological student—the plan, of all others, for none better can be devised, is to take care that our theological institutions shall be connected with the Bishop's residence and presence, and that they should be conducted upon principles which distinctly define what is to be the teaching, and what are to be the modes of study and habits of life cultivated in them. With this view, in this institution which we are met together here to begin, it is specially laid down in the first place that the Bishop of the diocese for the time being shall have the rule and governance of the college, because we apprehend that there can be no human institution in which it would be wise to supersede the institution of Christ and his Church. We have laid down in the trust deeds in virtue of which this land is conveyed to us, that none shall teach here who do not declare that they will teach nothing that is not according to the rule of the Church of England—nothing that is not declared to be the doctrine of the Church of England at the last revision of its formularies—nothing that cannot be proved from God's word, and which is not accordant with the doctrine of the Primitive Church as received by the Church of England. Here then we have made what provision man can make for the permanence of this institution, connecting it with the outward organisation of the Church, and defining its teaching by its prescribed formularies.

His Lordship proceeded to state that £1500 were still wanted to complete the work they had commenced; but that as it had begun in faith, he had no doubt it would be brought to a successful termination.

The Bishop then laid the stone, saying the following words:—

Inasmuch as it hath pleased Almighty God to put it into the hearts of his servants to erect this house for the better training of those who shall be called into the ministry of his holy Church in this land, we therefore, nothing doubting that He favourably alloweth this our work, do lay this chief corner-stone of this seminary, in the name of the Father, and of the Son, and of the Holy Ghost. Amen.

Underneath the stone was deposited a plate bearing the following inscription:—

Quod S. Sanctæ Individuæ Trinitatis auxilio Divinarum rerum studiis melius in provehendis feliciter cedat collegii theologice quidem hunc ein golaram, in nom nis Patris, Filii, et Spiritus Sancti, poenit Samuel, permissu Divino Episcopus Oxoniensis, vii. id. April, anno salutis MDCCCLIII. Soli Deo gloria.

His Lordship then invoked a blessing on the undertaking, a prayer was read by the Vicar: and an invocation by the Rural Dean, the Rev. Mr. Baker, of Nuneham. The choir chanted the "Te Deum" (arranged by Mr Helmore); after which the Bishop dismissed the assembly with the apostolic blessing.

The building is expected to be ready for the reception of students by Christmas next, and the Rev. Alfred Pott, M.A., vicar of Cuddesdon, has been appointed to the office of principal.

The new College, which will face the Bishop's palace, is in the Middle Pointed or Decorated style: it is intended to accommodate twenty-one students, each with a sitting-room and bed-room. There will also be apartments for the Vice-Principal, lecture-room, oratory, dining-hall, and common-room. The building has been designed by Mr. Street, the diocesan architect; the contractors are Messrs. Myers, of London.

MEMORIALS OF SIR ISAAC NEWTON.

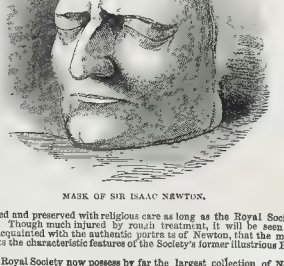
THE Royal Society have recently received a valuable and interesting addition to their collection of Newton memorials, by the bequest of the late Rev. Charles Turnor, F.R.S. Amongst the articles bequeathed is a very handsome gold watch, which the philosopher wore during the latter years of his life. It was presented to him by his niece, Mrs. Catherine Conduit, on the 4th January, 1708, as an inscription on the inner case records. The chasing on the outer case (of which our Artist has given a very faithful drawing) is beautifully executed.

We take this opportunity of engraving another memorial in the possession of the Society, namely, the original mask of Sir Isaac Newton's face, from the cast taken after death, which belonged to Roubiliac. Mr. Weld, in his "History of the Royal Society" (Vol. I., p. 446) states:

For this truly-interesting relic the Fellows are indebted to Samuel Hunter Christie, Esq., secretary to the Society, and Professor of Mathematics at the Royal Military Academy at Woolwich, who presented it to them in the year 1839. The history of this mask, as related to me by Mr. Christie, is extremely curious. Being desirous of purchasing a bust of Sir Isaac Newton, Mr. Christie entered the shop of a dealer in statues, in

GOLD WATCH PRESENTED TO SIR ISAAC NEWTON BY MRS. CONDUIT.

Tichborne-street. To Mr. Christie's question, whether he had any bust of the philosopher to dispose of, the dealer replied that though he had no bust, he had an old mask of Newton, which his father had purchased fifty or sixty years before, at the sale of Roubiliac's effects, and which he had kept on his shelves amongst various articles of his trade. It was evident that the dealer regarded the relic as little better than useless lumber, and this is confirmed by his having consented to dispose of it for a few shillings. Mr. Christie, having borne off his prize, had a few casts taken from it, and subsequently enjoyed the great satisfaction of placing it in a repository, not only the most fitted for its reception, but where it will be



MASK OF SIR ISAAC NEWTON.

hallowed and preserved with religious care as long as the Royal Society exists. Though much injured by rough treatment, it will be seen by those acquainted with the authentic portraits of Newton, that the mask presents the characteristic features of the Society's former illustrious President.

The Royal Society now possess by far the largest collection of Newton memorials and relics extant; and it is gratifying to know that they are in the keeping of so illustrious and ancient an institution over which Newton presided for a quarter of a century.

DEPOT OF THE BALTIMORE AND WASHINGTON RAILROAD, AT WASHINGTON, U.S.

(From our own Correspondent.)

DEPOT OF THE BALTIMORE AND WASHINGTON RAILROAD, AT WASHINGTON.

This new Terminus of the Railroad to the north is but just finished. It was commenced in 1851. It is situated about a quarter of a mile north of the Capitol, on a small brook to which the high-sounding name of the Tiber has been given, although it is equally well known by the appellation of Goose Creek. It was designed at one time to have built a city to be called Rome on the banks of this streamlet; and it is even said that in ancient times—*ancient* for this side the Atlantic—a member of the Carroll family predicted that this spot—then a tobacco plantation—would become the site of a great capital! Whether this story was ever in circulation before Washington fixed on this spot I cannot ascertain.

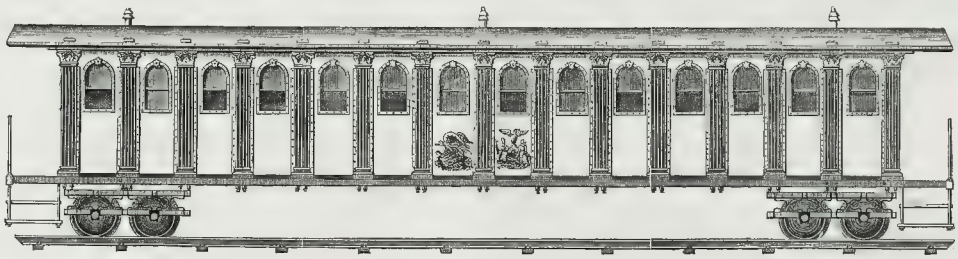
The buildings of this station are not very extensive. The principal traffic is that of passengers; there being no trade of any importance connected with Washington itself. The construction is of brick almost exclusively, covered with a cement of a reddish brown colour, to assimilate to that of a fine stone used in the window-sills and copings. Granite columns support the light iron roof, under which the cars arrive and take their departure. These are perfectly plain, and square in form. The saloons for gentlemen and ladies are small, but commodious. The walls are paneled with wood, painted to imitate oak; and an agreeable mellow light is distributed through the rooms by the use of yellow curtains. The furniture corresponds in colour and character with that of the walls; while the arm-chairs, benches, &c., are enriched by seats of crimson plush.

Before the erection of the present Dépôt the railroad turned slightly to the west, and ran for half a mile further, until it reached Pennsylvania-avenue, the great promenade of the Washingtonians. The City Council only permitted this encroachment for a limited period, making arrangements with the company for the construction of a station in a more eligible site, while they carried out great improvements in the grading and filling up of the ground between it and Goose Creek, alias the Tiber.

The distance between Washington and Baltimore is forty miles: the charge, 1 dol. 80c., or about 2¼d. a mile. This, for a road having only one line of rails, and that constructed in the rudest manner as a general thing, must be considered a very high rate of fare. There is, perhaps, no line in America so ill contrived, badly managed, and dear as this line to New York. There is a break at Baltimore, and a change from one dépôt to another. In passing the Susquehanna there is another change, the lines being connected only by a ferry-boat. At Philadelphia a third change takes place, with all the inconveniences and annoyances of a long omnibus ride through that city. And finally, when arrived at Jersey City, a ferry-boat carries you to New York, which makes a fourth change. The inconvenience to passengers is very considerable; and the excuse (good in some cases), that this is a new country, does not hold here, as the remedy is easy. But the companies are not of accord, and they slum the expense which the making of a continuous line, and the construction of a bridge over the Susquehanna, would entail. It takes, therefore, longer to travel over the 234 miles from New York to Washington than over any other line of equal distance.

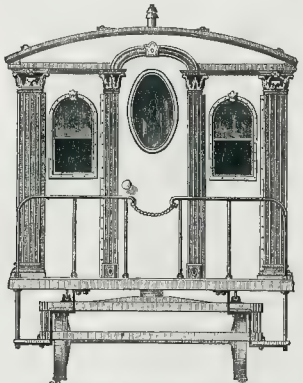
The square tower to the left of the entrance to the Station is of an Italian character, and is the only thing which gives lightness and beauty to the building.

The Railroad Car, of which we give a couple of drawings, is a good specimen of those in general use in the United States of America. You will perceive that it runs on eight wheels, four at each end of the car, and at a considerable a distance from each other as not to be affected by curves on the line. Passengers enter at the end (*See Engraving*). There is a clear passage right through the centre of the car, and thus from car to car along the whole train. On each side of the passage are the seats for passengers, the backs of which being moveable, there is no necessity for turning the car round at the station, as often occurs in Europe. There is another advantage in this, that if you prefer sitting with your back to the engine, you can gratify your wish in a moment, if the cars are not crowded, by changing the position of the back. The same luxurious comfort peculiar to our first-class carriages is here unknown; yet some of the latest-built cars are as comfortable as such republican vehicles can be made. In winter they are heated by a stove, the neighbourhood of which is, in general, quite intolerable. Each car will hold about sixty persons. There is a car for ladies, and a division for invalids, with accommodations of various kinds. It is difficult in this country to find that exclusiveness—privacy, as we call it—to which we are accustomed in Europe. Here, if you must move about, you must make up your mind to mix in the world—not the little world of your own clique, but the great world of humanity; a world which, if you have not been bred in the uncharitable spirit of self-sufficiency, contains so much to amuse, to interest, and to surprise, that its manifold faults, bad habits and peculiarities are worth overlooking for a while, in order to increase the enjoyment prevented by observation. A gentleman, named Warren, proposes building railroad cars of metal instead of wood, as safer in cases of collision, or fire. His designs are good, and would save many lives. Railroads are here, rarely of double track. The guage is the old narrow one; the speed attained is scarcely ever twenty miles an hour; and arrangements at stations



UNITED STATES RAILROAD CAR.

about as poor as they can be. In the north, some lines are better both as to management and speed; but there is much to be done to attain to the perfection of European roads, as to system and rapidity. Jonathan wants time. His capabilities are great, and he is deserving of much credit for doing a great deal with small means, and against many difficulties. There are now nearly 14,000 miles of rail in this country, almost all single track. You can travel from Boston to St. Louis or to New Orleans by rail. Lines now lie between Baltimore, Philadelphia, and the West; and the southern States, in one of which the first line was laid, are not now much behind the north in their desire for rapid communication and transit. Some of the longest lines are in those States; their superficial area being generally greater than that of the Northern States. Roads are projected from the north-west, through slave states to Richmond and Norfolk, in Virginia; also to Charlestown, in South Carolina; and Savannah, in Georgia, which cannot fail to have an important influence on the progress and material prosperity of that section of this great republic. The influence of these lines in changing the course of trade is very considerable. So great are the facilities, both as to cheapness as well as speed, created through the Northern States by the increased rapidity of transit, that New Orleans has greatly suffered by the change. A great proportion of the productions of the Mississippi Valley, which used to go through New Orleans, now finds a more convenient way to New York by the northern route. If the Crescent City would maintain her preeminence, she must look to creating other sources of prosperity in the South. New York is almost too much for all other cities. By the abundance of her capital she controls the southern trade, and draws to herself much of the profits the southern ports would willingly wrest from her. With Liverpool she divides the advantages of the great cotton trade, and will control it, in spite of the efforts made to obtain what is called "direct trade" with Europe. The southern planters, who talk so much of their peculiar rights and institutions, are too dependent on the northern capitalist to venture upon any secession movement of a serious character. And these northerns are not the most backward in sustaining the rights of the slave states, and defeating the efforts of the abolitionists. Every new line of railroad there will only tend to strengthen the bond of union and interest between north and south, until that time comes when, by reason of the amount and superiority of free white labour, slave labour shall become profitless and undesirable; and, with the increase and pressure of population in the north, that day is fast approaching. The tide of emigration cannot much longer run entirely westward.



UNITED STATES RAILROAD CAR.—END.

PARLIAMENTARY PORTRAITS.

MR. HUMPHREY BROWN, M.P. FOR TEWKESBURY.

The recipe against railway accidents propounded by the wittiest of our divines was given at a day when these catastrophes were not so frequent as at the present moment; and it may be doubted whether the Rev. Sydney Smith, were he now living, would have considered the peculiar sacrifice he proposed sufficient to abate the perils to which railway travellers in the year 1853 are subjected. The remarkable extension of railway communication within the last few years, with the corresponding liability to accident which it has entailed, has not been met on the part of railway boards or Boards of Trade by any adequate system of supervision; and, were it not for the exertions of men like Mr. Humphrey Brown, the apathy of directors and of Government officials might still offer a premium to neglect, and afford excuses for wanton sacrifices of life. The subject of this memoir is, however, emphatically what is called a "railway man;" and, although he has brought the practical knowledge he possesses to bear upon the question of safety in railway travelling, he has made the whole subject of railway management his peculiar study, as the subjoined remarks will show.

Before Mr. Humphrey Brown's election to Parliament, he was considered as an authority on railway matters out of doors; and since his appearance in the House of Commons, he has in a greater degree manifested his acquaintance with all the details of the subject. The increase of railway accidents, and the efforts he has made to induce the Government to adopt proper measures for the public safety, have brought him prominently forward of late in the House. The alarm that has been occasioned by some of these fearful "casualties," and the past unwillingness of the Government departments to cope with so powerful a body as the railway interest, have tended to throw additional responsibility on individual members. To his credit it must be admitted, that Mr. Brown has stood almost alone in maintaining what is called the "independent policy. Both as a writer and as a speaker, Mr. Brown has for some years been engaged in promoting the cause of railway improvement—as a means of personal transit, and as an instrument of commercial progress. In 1849 he published a work on the extension of railways in Ireland, under the title of "Irish Wants and Practical Remedies," and he followed this up by supporting Mr. Fitzstephen French's parliamentary proposals on the same subject. The cause of railway supervision has always found an advocate in Mr. Brown. Towards the end of last year, upon the promulgation of gigantic schemes of railway amalgamation and monopoly, coincidently with a fearful increase of railway accidents, he published a series of letters, under

MR. HUMPHREY BROWN, M.P. FOR TEWKESBURY.

the signature of "A Gloucestershire Man," which appeared in the *Morning Chronicle*, evincing much acquaintance with railway management, and laying down a practical system of legislation and administration on every point in which the public interest can be affected. These letters Mr. Brown has been induced to re-publish in a separate form

under the title of "Railway Accidents, Railway Amalgamation, and Railway Management," as an aid to a measure he intended to bring before Parliament to establish a definite course of legislation on railways, and an efficient system of administration, under Government supervision—without, however, trenching upon the legitimate action of private enterprise. Put, in consequence of the delays of the Select Committee now sitting, Mr. Brown had to postpone any exertions on this subject. He accordingly—and with great perseverance—addressed himself to the question of railway accidents.

On the 14th March, and again on the 8th of this month, Mr. Brown brought under the notice of the House of Commons the present condition of railway management, and its relation to accidents, and pointed out the consequences which the want of system and discipline on railways had given with which he concluded was acceded to by the President of the Board of Trade. One point he advocated was the extension of the same system of inspection and licensing to railways as applied to steam-boats, ships, mines, factories, and all other branches of enterprise in which the public safety is concerned.

Mr. Humphrey Brown has not led a life of political inactivity, although of late years his energies have been principally devoted to the subjects to which we have adverted. He commenced public life as a Free-trader, and rejoices to have lived to witness the success of principles which, when first broached, were considered doubtful. He has written much on statistics, and various practical subjects, such as commercial enterprise and monetary science; and he has also published a series of letters on Church Reform

Mr. Brown represents his native town, on what are termed "independent" principles. He was solicited to stand for the borough in 1847, against what was then considered a very powerful influence, and has being returned without opposition seven times for the estimation in which he is held by his constituents. His return at the last election by a large majority argues well, also, for his past Parliamentary career

Mr. Brown was born in 1803; and, in 1834, married Caroline, daughter of Charles Edward Chandler, Esq., of Tewkesbury. He is the son of the late Mr Humphrey Brown, an extensive carrier and merchant of that place, and was educated at Tewkesbury and Rugby He has erected large silk-mills in the borough. is a large shipowner, and a director of several railway companies. As a speaker, Mr. Brown is plain and unaffected. Full of statistical information, he supplies the raw material of others' speeches. Like Mr. James Wilson, he deals in facts and figures rather than in rhetoric; but he, nevertheless, speaks with clearness and perspicuity.

MUSIC

PHILHARMONIC SOCIETY.

The symphonies in the second scheme were Haydn's ever fresh and blooming No. 98 in E flat, and Beethoven's No. 2 in D, in which the composer first asserts his originality of his genius. The overtures were Mendelssohn's "Ruy Blas" and Cherubini's "Lodoiska"—the former exciting a veritable enthusiasm, so magnificent was its execution by Costa's band. Mozart's charming Notturno for two oboes (Nicholson and Nialech), two clarionets (Williams and Lazarus), two bassoons (Baumann and Waetzig), and two horns (C. Harper and Rae), enabled the expert executants to display delicious quality of tone and admirable precision in passage playing. Mr. Winterbottom performed a trombone concerto by Lavis, very cleverly. Madame Clara Novello and Herr Formis were the vocalists: they sang duos from Meyerbeer's "Robert le Diable" and Beethoven's "Fidelio": the prima donna also selected "Robert, toi que j'aime," and the basso, Schubert's "Erl King." Madame Novello was evidently completely out of voice, and so unlike herself, that she will have to take her revenge for an evening's mishap, while it was as much to her admirers' delight as she proved painful to herself. The debût of Miss Arabella Goddard, after four months' retirement, was the great feature of the concert. It was unanticipated, and its reports were circulated as to the cause of her non-appearance at this concert. An *encore* was even announced without trouble; our readers will find a difference between "Twedle dum" and "Twedle dee," we will state it, having heard both sides, and blame can be ascribed to the directors, to the conductor, nor to Miss Goddard, for the disappointment; and it is really to be regretted that two eminent musicians should have been brought into collision by the injudicious meddling of "good-natured friends."

The fourth concert will be on the 2nd of May.

THE MUSICAL UNION.

For the second programme, the indefatigable director had engaged Vieuxtemps to lead in Mozart's Quartet in B flat, No 3, and in Mendelssohn's Quartet in D, No. 2, Op. 44—Goffrie, Piatti, and Platti being associated with the en-peror of violinists. When to this treat was superadded the poetic touch and facile finger of Mdlle. Clauss, in Beethoven's Pianoforte Trio in C minor, even the purist, Ringelhan himself, the most vivid ideal standard of rendering great works, must have been gratified with the amount of skill and artistic sentiment displayed on this occasion.

NOTES OF THE WEEK.

The Misses Cole (vocalists) and Mr. Alfred Gilbert (pianist) gave a soiree of classical chamber music on Wednesday, at the Queen-Anne-street Rooms; assisted by Miss Bassano, Mr. Alfred Pierce (tenor), Signor Algarra (basso), and Mr. F. Bedale; with Messrs. Williams, Nicholson, Baumann, Platti, and Bennett Gilbert, as solo instrumentalists

Mr. Lucas held a musical evening on Wednesday. The quartets were—No. 83, Onslow; and Beethoven's Sonata for piano and violoncello, No. 3, was performed by Herr Pauer and Mr. Lucas. Sainton, Cooper, and Hill aided in the quartets.

The annual performance of Handel's "Messiah," in aid of the funds of the Royal Society of Musicians, took place last night, at Exeter-hall, under Costa's direction. The principal vocalists were—Madame C. Novello, Miss Dolby, Miss Williams, Mr. Sims Reeves, Mr. Lockey, Mr. Weiss, Herr Staudigl, and Herr Formes.

It must be a satisfaction to a large number of amateurs and professors, both in town and country, to learn that a committee has been formed including Messrs. Costa, Anderson, Brownsmith, J. A. Novello, H. Westrop, J. B. Harrison, H. C. Selous, W. Winsor, Whitchorn, W. Broadwood, &c.—to raise subscriptions to present Mr. Gauntlett, the honorary librarian of the Sacred Harmonic Society, with some enduring token of the estimation in which his invaluable services in behalf of the society is held.

Mr. Hullah got will sing at the great Rhine Musical Festival prior to his arrival in London. Madame de la Grange, Bottini, Belletti, and Formes (a new basso) have been singing at the Italian Opera, at Paris, in "Lucia." A new three act opera, "Le Roi des Halles," has been produced at the Opera Comique, Paris, the music by Adolphe Adam, and the libretto by Leman and Brunswick, with moderate success.

THE THEATRES.

THE ROYAL ITALIAN OPERA.

The revival of Rossini's "Guglielmo Tell" has been signally successful. When Rossini failed to do what Mario did, in the tenor song, in *Arnoldo*, Tamberlik has achieved; he has triumphantly competed with Duprez in the hitherto considered unapproachable delineation of the French tenor's part. The manners are widely different, both in acting and singing; and Duprez and Tamberlik have their special attributes, which afford an equal fair unit to their respective partizans to claim superiority for their favorite. In Tell, the features of dramatic declamation will, probably, never be equalled; in Tamberlik, the refinement of method cannot be excelled, the notes liable energy of the French tenor was unceasing; the fire and enthusiasm of the Italian singer are perceptible in particular points. But in the concluding act Tamberlik's chief notes were more penetrating and thrilling, even than those of Duprez. And the latter never had the good fortune to be aided with such a quartet as Ronconi and Formis in the famed trio—certainly the most admirable example of part singing that has ever been heard. Ronconi's *Wilhelm Tell* is one of his best studies, in a dramatic point of view, although the music is not altogether within his register. The apple-shooting scene, as acted by him, possesses the greatest sensation; and his delivery of the air, prior to the essay of this perilous feat, in which the life of a son is involved, is most masterly. Formis' aid, in the cast, as *Walter*, is invaluable—his voice is of the richest quality in the concerted pieces, as solid as granite. Mdlle. Castellan's *Matilda* is one of her most charming creations; she sings the opening romance deliciously, although the encores might be judiciously omitted. Gassier's *Gesler*, Polonini's *Jelebtal*, and Lucchesi's *Pescators* are efficient. The *Edwige*, and *Jemmy* (a son) exact more telling soprano in the first act than the present representatives of these parts. It is another most singular liberty in the libretto that the noble finale of the opening act should be thus handed to such secondary characters. Let justice, however, be rendered to Mdlle. Brilmi in the third act, in the scene between *Tell* and his son, for her natural acting and pleasing singing. The orchestral accompaniments and choral singing are beyond all praise—the overture is superbly played, the *pianissimo* and *staccato* observed in the chorus, "Guglielmo per tempo," in A major, are quite marvellous. Costa's entire supervision of the Italian opera is indeed one of his most finished achievements. The ballets, marches, and processions, under the direction of Mr. Harris, are arranged with tact and taste.

Let us hope that, whilst the wondrous *ut de poitrine* of Tamberlik excites such a tremendous outbreak enthusiasm from our audiences, that they will not, in their just admiration of the Roman tenor's vast vocal feats, be insensible to the infinite beauties with which the score of Rossini's "Guglielmo Tell" is gorged. The opera was repeated on Saturday and Tuesday last, to numerous and fash onable audiences

On Thursday night the house was crowded to excess with Royalty, rank, and fashion, to greet the first appearance this season of Grisi, or rather of *the Norma*. She is the marvel of the age. The sweet and tear that would kill, and have killed, twenty *prime donne*, with her only seem to have the effect of increasing her enormous energy; and the voice has been so kindly preserved, that all tenderness, all pathos, that title it affords was the most severe censor to cavil at. Her reception was rapturous—her singing wondrous in power, and her acting sublime. Several times did the house rise "at her," at the consummate points of the perfect performance. The new *Adalgisa* is Mdlle. Bellini—very timid, very interesting, and very promising. She has a nice voice and a good method—and, with work, and good advice, will prove a worthy successor to Grisi. Tamberlik, in *Oroveso* and *Pollio* sustained their fame. The execution was highly finished and effective, under Costa's baton.

DRURY-LANE.—The season closed on Saturday to a full house. The play performed was "The Hunchback," in which Miss Kate Saxon, who was a *bénéficiaire*, on the occasion, performed the part of *Helen*. In a new piece that followed, entitled "Love's Disguise, or, the Mad Cap," she sustained the character of *Polly Peepo* with much comic effect. In the course of the evening Mr. Smith delivered an address, thanking the public for their support and the performers for their exertions.

OLYMPIC.—A new farce, under the title of "Uncle Crotchet," was produced on Monday, for the evident purpose of suiting Mr. Farren with an appropriate part. The aim and character of the piece are sufficiently apparent in the title.

ADELPHI.—Messrs. Reade and Taylor's clever dramas of "Masks and Faces" has been transferred to this theatre. The chief novelty consists in Madame Celeste performing the part of *Peg Wafington*.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the contents of the Budget have been tolerably well received at the Stock Exchange, and that the payment of the dividends has produced a plut of unemployed capital, the Consol Market has been less active. In the early part of the week the previous advance in the quotations was well supported; but, subsequently, prices have shown a tendency to decline. The leading cause of the comparative stagnation in the markets may be chiefly attributed to the non-settlement of the differences between Russia and the Other Powers.

On Monday Bank Stock was quoted at 225½ to 225¾; the Three per Cents Reduced were 99⅝ to 100; the Three per Cent Consols, 100⅝ to ⅞; the new Three-and-a-Quarter per Cents, 100⅜ to ⅝; and Long Annuities, to Jan., 1860, 6 1 16th. India Stock sold at 260½ to 261½; India ₹1000 Bonds, marked 288, to 85; ditto, under ₹1000, 86; Exchequer bill s, 4s. to 7s pm.; Consols for account, 100⅝. Most of the quotations were a shade lower on Tuesday and Wednesday. Consols having been done at 100⅝. The dealings on Thursday were by no means extensive, and, in consequence, the market was very heavy. The Three per Cents Consols were offered at 100⅜ ⅝ for May ey, and 100⅝ ⅜ for the Account; the Three per Cents Reduced were 99⅝ ⅜; and the New Three and a Quarter per Cents, 103⅜. In Bank Stock very little doing. Exchequer Bills were heavy, at from 4s. to 6s. pm. India Stock was done at 261. Long Annuities sold at 1 16th.

Foreign Bonds have commanded very little attention; nevertheless, the quotations have been fairly supported:—Brazilian Five per Cents have been done at 103½; Ditto, Four-and-a-Half per Cents, New, 90½; Buenos Ayres Six per Cents, 86½; Chilian Six per Cents, 104; Danish Three per Cents, 85¾; Grenada (ex Dec. Coupons), 9¾; Greek (overdue) Bonds, 9; Mexican Three per Cents, 28; Peruvian Crystal Bonds, 19; Portuguese Four per Cents, 40¾; Russian Five per Cents, 120 and 119, the Four-and-a-Half per Cents, 104; Spanish Five per Cents, 48¾, the New Deferred, 24; the Certificates, 15; Belgian Four-and-a-Half per Cents, 100¾ (for account, 25 francs); Dutch Two-and-a-Half per Cents, 66¾; Ecuador, 6¾; Spanish Old Three per Cents, 46¾; the Committee's Certificates, 7¾ per Cent; and Venezuela Deferred, 8 3-4ths per Cents, 8¾. Nearly the whole of the holders of Turk sh Scrip have received back the first instalment of the Loan; hence the Scrip is no longer quoted in the market.

We have had an import of £300 000 in gold from Australia, and a few parcels of silver from New York. The shipments have been heavy, especially to the East and Sydney—the latter, perhaps, for those quarters having announced to nearly £350 000.

Some slight alterations have taken place in the foreign exchanges, and from which we perceive that gold is 0·48 per cent dearer in Paris than in London. At Hamburgh it bears the same relative value as here; but in New York the exchange is 9 per cent against us (hence, consequently, we are not in a position to anticipate shipments to this side.

The last returns of the Bank of France show a decrease of £880 000 in the discounts; and a further increase of £1 200 000 in the bullion.

On the whole the Market for Miscellaneous Securities has been inactive, and prices have shown a tendency to decline. Australian Agricultural have been 82 to 84; Canada Company, 108½ to 110; Hudson's Bay, 20½; South Australian Land, 8⅜ to 9; South British Australian, 1¾ to ⅞ prem.; Scottish Australian, 1½ to ⅝ prem.; Nova Scotia Mining, 1½ to 2 prem.; Australian Agricultural Company, 30 to 31; Bank of Australia, 70 to 72; Bank of Australasia, 38 to 39; London Chartered of Australia, 3 to 4 prem.; Royal, Scottish, and Australian, 1 to 1 prem.; Bank of India, China, and Japan, 6 to 6½; Commercial Bank, 4 to 4½; British American Land, 79 to 81; Berlin Waterworks, ¾ to ⅝ prem.; North of Europe Steam, ⅝ dis to par; Great Fire Office, 1¾ to ⅞ prem.; London Lock, 126; St. Katharine's Dock, 100½; Royal Mail Steam, 74; Peninsular and Oriental Steam, 83; ditto (£25 paid), 46¾; Submarine Telegraph, 1; Hudson's Bay Scrip, 3 to 4 prem.; East London Waterworks, 72¼; Grand Junction, 69; Kent, 84½; New River, 60.

Money for commercial purposes has been in steady request, and the rates of discount have been well supported, although the supply of unemployed cash has considerably increased.

RAILWAY SHARES have changed hands to a moderate extent, and prices may be called somewhat lower than last week. The following are the official closing prices on Thursday:—

4 ORDINARY SHARES AND STOCKS.—Caledonian, 64; Chester and Holyhead, 22; Cork and Bandon, 21; East Anglian, 2¾; Eastern Counties, 1¾; Boston Union, B. and C., 7¾; East Lancashire, 72, Edinburgh, Perth, and Dundee, 22; Great Northern Stock, 83; Ditto, A Stock, 40; Ditto B Stock, 126; Great Southern and Western (Ireland), 93¾; Lancaster and Carlisle, 30; Leeds Shire and Yorkshire, 77¼; Ditto, Fifths, 11¼; London and Brighton 103¾; London and North Western, 109¾; Ditto, Fifths, 11¼; London and South-Western, 81¾; Manchester, Sheffield, and Lincolnshire, 29¾; Midland, 74¾; Norfolk, 62¾; North British, 34¾; North Staffordshire, 13; Oxford, Worcester, and Wolverhampton, 50¾; Scottish Central, 99; Shropshire Union, 3¾; South Eastern, 75; York, Newcastle, and Berwick, 52; Ditto, G.N.E. Purchase, 9; York and North Midland, 58.

LINES LEASED AT FIXED RENTALS.—Clydesdale Junction, 63¾; Midland Bradford, 107

PREFERENCE SHARES: Eastern Counties, No. 1, 2 prem.; Eastern Union, 6 per Cent, 18¾; Great Northern, 5 per Cent, 129; Ditto, Redeem able at 10 per Cent prem., 112¾; Great Western, 4½ per Cent, 109¾; Ditto, 5 per Cent, 104; Londonderry and Coleraine, 10½; Consolidated Bristol and Birmingham, 149½; North Eastern, 4½ North British, 4½; Shrewsford, Worcester, and Wolverhampton, 14½; York, Newcastle, and Berwick, 102; York and North Midland, B, and S. Purchase, 109.

FOREIGN.—Dutch Rhenish, 5½; Madras, 2½; Grand Junction of Italy, 11½; Madras, 9½; Northern of France, 36¾; Paris and Lyons, 24¼; Sambre and Meuse, 6¾; Quebec and Richmond, 6¾; South-Eastern of Spain, 1; West Flanders, 4½; Western of France, 34¾.

3 per Cent Shares have been inactive. On Thursday, Agua Fria were 23½; Australasian, 24½; Australian Cordillera, 1¾; British Australian Gold, 1½; British Iron, 9; Imperial Brazilian, 6; Carson's Creek, 4 to 4½; Colonial Gold, 2 to 2½; Linares, 11½; Nouveau Monde, 2¾; Nova Scotia Mining, 5¾ to 6; Quartz Rock, 14; United Mexican, 6¾; Waller, 1¾; West Mariposa, 1¾; Yuba, 1¾.

FRIDAY EVENING.—The Consol Market has been in a sluggish state to-day, the prices, however, have undergone little change from last week. The Three per Cents, for Money, have been done at 100⅝ ⅜; ditto for the Account, 100⅝. The Three per Cents Reduced are 99⅝ ⅜; and the New Three and-a-Quarter per Cents, 103⅜. The Long Annuities, to Jan., 1860, 6 1 16th. Foreign Bonds and Railway Shares have commanded very little attention.

THE MARKETS.

CORN EXCHANGE, (Friday).—The present week a arrival of English wheat up to our market qualities have been very moderately supplied with fresh samples. 7240 quarters, chiefly from Essex and Kent, up to day the receipts of land carriage fresh up. The show of samples of both red and white was limited, particularly the latter. At to-day's supply, in a sluggish state, at Monday's prices from abroad the imports of wheat into London last week were 16,170 quarters, being very large, particularly as we had a trade at Monday, and currencies. In other descriptions of grain during the week we have no variation to notice. Finding ranges were pretty well supported. Barley the show of which has by no means extensive, sold steadily, at previous rates. We have had a limited supply for malt, for which prices remain unchanged. Oats, Beans, and Peas. The demand for beans, peas, and

ARRIVALS.—English: wheat, 2240 barls.; barley, 1,06, malt, 1800; oats, 910; flour, 620. Irish.... Foreign: wheat, 14 040; barley, 4200; oats, 3710; flour, 1020 sacks

... Wheat, Essex and Kent, red, 41s. to 51s.; ditto, white, 45s. to 56s. North and ... red, 37s to 41s.; ditto, white, —s. to —s.; rye, 30s. to 34s.; grinding barley, 22s. to ... ; malting ditto, 27s. to 30s.; malting ditto, 30s to 33s.; Lincoln and Norfolk malt, 52s.; ... brown ditto, 48s. to 50s.; Kingston and Ware, 52s. to 60s.; Chevalier ... York ... and Lincolnshire feed oats, 17s. to 21s.; potato ditto, 20s to 24s.; Youghal and Cork ... black, 16s. to 18s.; ditto, white, 17s to 21s., tick beans, new, 30s. to 32s.; ditto, old ... grey peas, 30s to 32s.; maple, 32s. to 34s.; white, 30s to 32s.; harlers, 37s to 40s. per quarter. Town-made flour 39s. to 42s.; norfolk, 32s to 35s.; Scotch and Yorkshire 31s to 34s per 280 lbs. *Foreign.*—French flour, 34s. to 38s. 280 lbs.; American, 21s to 30s. per ...

Seeds.—Generally speaking the demand has been in a very inactive state, but we have no decline to notice in prices.

Linseed, English, sowing, 54s. to 56s.; Baltic, crushing, 47s. to 50s.; Mediterranean and Odessa, 45s. to 50s.; hempseed, 40s. to 42s per quarter; Coriander, 9s to 12s. per cwt. Brown mustard, 7s. to 8s.; white, ditto, 8s. to 9s.; tares, new, 30s. to 36s. 6d. per bushel. Rapeseed, new, £21 to £23 per last of ten quarters. Linseed cakes, English, £8 0s. to £9 10s.; ditto, foreign, £7 10s. to £8 0s. per ton. Rape cakes, £4 10s. to £5 0s. per ton. Canary, 40s to 44s. per quarter. Hempseed for bird seed, 40s. to 45s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d to 8d, and of household ditto 5d to 6d per 4 lbs loaf

Imperial Weekly Average.—Wheat, 41s 10d.; barley, 31s. 11d.; oats, 19s. 9d.; rye, 30s. 5d.; beans, 34s 9d.; peas, 34s 7d

The Six Weeks Average.—Wheat, 45s. 10d.; barley, 32s. 6d.; oats, 19s. 10d.; rye, 31s. 1d.; beans, 35s. 6d.; peas, 32s 9d.

Duties.—Wheat, 1s.; barley 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s

Hops.—The business doing in the present week has been very limited, but the market has become very firm, and the quotations have advanced. The lowest value of common sound remains at 80s per cwt. The previous sales have passed off steadily. Up to Saturday last, duty was paid on 28 lbs., against 12,551 47 duties in 1852

Potatoes.—The supplies on offer have not been to any extensive; yet the demand for most kinds of raw stock has ruled less active, and prices have ruled the turn in favour of the trade. Fine yellow Barbadoes has sold at 65s. per ton; inferior to good ditto, 55s. to 57s. 6d.; brown, to 50s. 6d., ordinary yellow Jamaica, 30s. 6d. to 35s.; good to fine yellow Mauritius, 30s. to 32s. 6d.; pinky yellow, 25s. to 28s. 6d.; brown, 20s. to 22s., good and fine grey Cork mixed, 19s. to 20s.; ordinary white ditto, 16s. 6d. to 18s.; white Penang, 18s. to 20s. 6d. per cwt. Better grades have moved off steadily, at from 45s. 6d. to 46s. for brown, and 46s. 6d to 48s. for good to fine grocery. The retail observations for the Irish markets were 1,175,000 tons and 1,175,000 tons.

Clover.—Plantation kinds are in fair request, at full prices. The present value of good ordinary mixed is 42s. to 48s. per cwt. In fine, prime cuttings very little is to be had.

Coals.—The arrivals of coals into the Thames from the Tyne, Wear, and Tees, during the week ending this day, were 180 vessels, and from Hartlepool, Seaham, and Sunderland, 54 vessels. Total 234. Fresh sales were reported, and quotations were fully supported, whilst the demand from the country was very active. Fine coals, 17s. to 18s.; seconds, 16s. to 16s. 6d.; steam coals, 15s. to 15s. 6d.; Wallsend, 18s. to 19s.; Hetton, 18s. to 19s.; Lambton, 18s. to 19s.; Hartley, 18s. to 19s.; Stewart's, 18s. to 19s.; Russell's, 18s. to 19s.; Eden Main, 18s. to 19s.; Braddyll's Hetton, 18s. to 19s.; Tanfield Moor, 18s. to 19s.; Cambois, 18s. to 19s.; Delaval, 18s. to 19s.; Tees, 17s. to 18s.; Clarence, 17s. to 18

MARBLE STATUE OF THE KING OF SPAIN.

MARBLE STATUE OF THE KING CONSORT OF THE QUEEN OF SPAIN.

We this week engrave a view of the Statue of the King of Spain, which has just been completed by Francesco Perez Valle, a Spanish artist of considerable and deserved repute. The figure is a little above the size of life, and represents the King Consort of the reigning Queen of Spain dressed in the robes of the Order of Carlos III. The Statue is destined to occupy a place in the Royal Gallery of Sculpture, in the Madrid Museum.

The Consort of the Queen of Spain, Francesco d'Assis, is the eldest son of the Infant Don Francesco de Paula, uncle to the Queen, and brother of the Don Enrique, who was also a suitor for her hand. It is as the aspirant to this dignity, and not on account of any distinguishing characteristics as a statesman or a warrior, that the subject of this memoir received, during the year 1846, an amount of attention throughout Europe that might otherwise have been withheld from him.

Amongst the number of those who had pretensions to be considered as candidates for the Queen's hand in marriage was, as we have said, Don Enrique, the second son of Don Francisco de Paula. This young nobleman was in the navy, and it was generally thought that he was the most formidable rival whom Count Trapani (another suitor), the youngest brother of the King of Naples and Christina, the Queen-mother, and therefore uncle of the Queen, had to fear in the negotiations which were about actively to commence for providing a Royal consort. On the 5th of January, some questions having been put in the Cortes respecting the marriage of the Queen, General Narvaez replied, "Her Majesty has not yet expressed the desire to contract a matrimonial alliance. Her Ministers have not thought it advisable to kindle such a feeling in her heart." Afterwards, on the 26th of the same month, General Narvaez said that "Ministers had resolved not to exclude the pretensions of any Prince, not even though he should come from the centre of Africa; much less of any one connected with the Queen by ties of blood and amity." During the period these playful speculations as to the Queen's feelings were going on, and the minds of French statesmen were also busy on the same subject, Don Enrique's star seemed to be in the ascendant. Don Francisco had not then been named.

But about this time Don Enrique published a manifesto to the Spanish nation, in which he avowed himself a partisan of the Progresista, or Liberal party, and thereby gave great offence to the Government, who resolved to remove him from Spain, which he quitted accordingly, and not long afterwards took up his residence at Ghent. The position which England and France professed to assume was that of perfect neutrality; but the latter power, as is well known, insisted upon one important proviso, which was, that the choice of the Queen should be restricted to a Prince of the house of Bourbon. Truly has it been remarked, that "the course taken by events rendered what ought to have been an occasion for the display of loyalty at home and for congratulations abroad, a dark and ill-omened passage in the history of the Spanish nation." Other considerations than a regard for the personal predilections of the Queen were allowed to enter largely into the question. In the course of the autumn of 1846 it was made known throughout Europe that the Queen of Spain was about to marry her cousin, Don Francisco; and that her sister, the Infanta, would, at the same time, bestow her hand on the Duke de Montpensier, the youngest son of the King of the French. Don Enrique transmitted to the Spanish Cortes a protest against the intended marriage of the Queen, but subsequently annulled it. Both marriages took place on the 10th October, 1846, and gave rise to much subsequent political discussion.

The King of Spain (the honorary title conferred on him immediately after his marriage) was born on the 13th of May, 1822. In addition to his other offices he was made Captain-General of the Army in 1846. He is addressed as "his Majesty," a form for which precedent was adduced by the Queen's Ministers. In the report made to the Queen by Signor Isturitz and his colleagues, it is stated that "the constitution of the Monarchy directs that the husband of your Majesty shall take no part in the government of the kingdom, but that does not prevent the person selected by your Majesty as your august spouse from enjoying the honours which are as it were annexed to the exalted position to which your Majesty has deigned to raise him, and which the reigning Queens of Spain have invariably conferred on their consorts."

SILVER VASE PRESENTED TO MR. SCHOLEFIELD, M.P.

PRESENTATION OF TESTIMONIALS TO MR. SCHOLEFIELD, M.P.

On Friday evening, the 15th instant, a large number of the inhabitants of Birmingham assembled, at the Odd Fellows' Hall, Temple-street, to present Mr. Scholefield, one of the members for the borough, with a series of testimonials from the non-electors, and many of the electors, in approbation of his general political conduct; and, more especially, of the vote he gave on the Ecclesiastical Titles Bill, which, it was thought, would endanger Mr Scholefield's return at the approaching election. The large hall was tastefully decorated for the occasion, being garlanded with evergreens and flowers, with flags, mottoes, &c.

At five o'clock, a numerous party, including many ladies, took tea together; and at seven the more public proceedings of the evening commenced. H. Hawkes, Esq., the Mayor, presided.

"The Queen" having been given from the chair, the National Anthem was sung most effectively; and then Mr. Langford gave "the People."

Mr Taylor, the secretary, read letters of apology for non-attendance from Mr. Joseph Sturge, and Mr. Geach, M.P. The latter gentleman said, "I should be very glad in any way to evince my respect for the character of my friend Mr. Scholefield; for no man's political conduct has been more straightforward, honest, and consistent, or more deserving of the tribute of respect that is about to be paid to him by the working-classes, of whose interests particularly he has ever been mindful."

Mr. George Dawson then addressed the company, and gave "Civil and Religious Liberty."

Mr. W. Beddows then submitted a resolution expressive of entire confidence in William Scholefield, Esq., M.P., as the representative of the non-electors in the House of Commons, and cordially to assure him of its agreement with the liberal policy which has ever distinguished him in the Legislature of the country; and, Mr. Beddows having explained the origin of the testimonial, Mr. Fiskering seconded the motion.

The Mayor expressed the pleasure he felt at presiding on that occasion, and paid Mr Scholefield a high compliment in reviewing his career as High Bailiff, then the first Mayor of Birmingham, and now their representative in Parliament.

The resolution was carried amid much cheering.

Mr. Alfred Taylor then read an appropriate address, which was beautifully lithographed by Mr. T. Underwood, illustrated with vignettes of the principal manufactures of the town and neighbourhood. He then made the presentation. The Testimonial is a handsome silver vase, Italian in style, nearly 17 inches high, and of exceedingly elegant contour and proportions. On the raised scroll of the body are disposed symbols of labour—not mere representations of the tools used in the chief manufactures of Birmingham, but, in reality, pretty little silver working models, which are so admirably subordinated as to add to the ornamentation. On the centre shield on one side is the following inscription:—

Presented by the Non-electors of the borough of Birmingham to Wm. Scholefield, Esq., M.P., as a mark of their respect for his able and consistent advocacy of their rights in the House of Commons.—15th April, 1853.

On the shield on the other side are the arms of the honourable gentleman. An oak branch forms the handles, which are surmounted, the one by a well-executed figure of an engraver, the other by a gold-beater. The apex is crowned by a statuette of James Watt, the symbols of whose fame lie at his feet. The scroll work on the body of the vase and the figures, are in frosted silver, and the pedestal and cover are relieved in a similar way. The frosting is very judiciously applied, and is in parts again relieved by some excellent engraving. The whole is very creditable to the designer, Mr. Kirk, second master of the School of Design; and Mr. Gough, the manufacturer.

The Birmingham glass-makers, through Mr. Thomas Careless, then presented a large and elaborately cut cup. It is of ruby-coloured crystal, with pure white cutting of the rose, the thistle, the shamrock, and sprigs of flowers. Upon one side are engraved Mr. Scholefield's coat of arms, and on the other is the following inscription:—

Presented to William Scholefield, Esq., M.P., by the Birmingham District of the United Flint Glass Makers' Friendly Society, as a token of esteem and respect for his advocacy of the cause of education and the franchise.—April 15th, 1853.

Then followed an unexpected presentation—namely, a handsome water jug and two elegant goblets *en suite*, of the purest crystal, from the flint-glass makers of the Stourbridge district. These articles are engraved with appropriate emblems, and an inscription.

Mr. Scholefield, on rising, was received with great cheering: having thanked his fellow townsmen and neighbours for the handsome gifts, in conclusion, he counselled the working-classes to take advantage of Mr. Slaney's act for the encouragement of industrial partnerships, which he regretted to see was not in operation in Birmingham, and by means of which the artisan became the capitalist. He then referred to our foreign policy: taking lower ground than Mr. Dawson, he thought that commercially Turkey was most important to this country, consuming a much larger proportion of English goods than Russia, Prussia, and Austria combined, and admitting them at three per cent. Mr. Scholefield concluded a long and interesting address, which was applauded throughout, by again thanking them.

Several sentiments followed; and the proceedings terminated with votes of thanks to the Mayor, and the Non-Electors' committee. In the course of the evening, a musical choir executed some appropriate pieces.

RUBY CRYSTAL CUP PRESENTED TO MR. SCHOLEFIELD, M.P.

London: Printed and Published at the Office, 198, Strand, in the parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, APRIL 23, 1853.

THE ILLUSTRATED LONDON NEWS

SUPPLEMENT.

VOL. XXII.] SATURDAY, APRIL 23, 1853. [GRATIS.

TO SUBSCRIBERS AND ADVERTISERS
IN THE
ILLUSTRATED LONDON NEWS.

The New Budget proposes a reduction from 1s. 6d. on all Advertisements to 6d., and relieves Supplements from the Newspaper Stamp. As soon as this important measure is passed into a law

THE SCALE OF ADVERTISEMENTS
IN THE
ILLUSTRATED LONDON NEWS
WILL BE
REDUCED ONE HALF OF THE PRESENT CHARGES.

It is further proposed to publish every week

A SUPPLEMENT, GRATIS.

This announcement will be received with satisfaction by Advertisers and the Public generally, and is also a proof of the great benefit to be derived from the proposed new fiscal arrangements of the Chancellor of the Exchequer.

The ILLUSTRATED LONDON NEWS has now the largest circulation of any newspaper in the world; and the proposed reduction of charges for Advertisements will enable all classes to avail themselves of the advantages of advertising in its columns.

The new Scale of Charges, with further announcements, will duly appear.

Office, 198, Strand.

MR. GLADSTONE'S BUDGET.

The House of Commons, on Monday, having resolved into a Committee of Ways and Means,

The CHANCELLOR of the EXCHEQUER (the Right Honourable W. E. Gladstone) rose and said—The annual exposition of the financial state and prospects of this country, upon ordinary occasions, affords abundant materials of interest to this House and to the country, and of anxiety to the person charged with the preparation of that exposition; but, on the present occasion, perhaps, that interest on the one hand, and certainly that anxiety on the other, are greatly enhanced by a variety of circumstances, including among them the number of motions which have recently been made in this House, indicating the increasing eagerness of the people with respect to financial questions (Hear, hear). Political events, shocks which have enfeebled or overthrown Administrations, and which have made it necessary to adjourn from year to year questions of taxation, have likewise greatly accumulated on the present Government the task they have to discharge in that regard; and in connexion with those questions there have of late been raised discussions of a nature most deeply interesting, descending to the first elementary principles of taxation, and almost to the first principles on which men are united in civilised society (Hear, hear). With a task so formidable before me, I feel warranted in addressing a special appeal to the committee for their kindness and indulgence, for I am certain that only by their kindness and indulgence can I be enabled—I will not say to discharge the task as it ought to be discharged, for that is wholly beyond my power—but to discharge it so as in any case to be at least intelligible to my hearers (Hear, hear)

The first portion of my duty will be to lay before the committee the account of the country. I think I shall best discharge it by taking up the state of that account from the point at which it stood last year, when the financial department was in the hands of the right hon. gentleman opposite (Mr. Disraeli), and it will be satisfactory to the committee to observe, that as our experience grows with the lapse of time, so do we obtain larger and still larger proof of the elasticity of the revenue and of the progress of the productive and consuming powers of the country (Cheers) On the 30th of April, 1852, the right hon. gentleman opposite estimated the revenue for the year at 51,625,000*l.*, and in the month of December, 1852, when the right hon. gentleman had occasion to return to the subject, he was able to present to us an estimate which placed the revenue of the year at 52,325,000*l.*, exhibiting an increase upon his estimate in April amounting to not less than 700,000*l.* And now, within the few months which have elapsed since last December, we have further evidence of the same gratifying character, for the revenue which the right hon. gentleman then judiciously estimated at 52,325,000*l.* amounted to no less. when we reached the termination of the year, than 53,089,000*l.*, showing an increase of 1,464,000*l.* upon the estimate formed at the commencement of the year (Hear, hear). The expenditure of the last year, as estimated by the right hon. gentleman opposite, on the 30th of April, 1852, was taken at 51,168,000*l.*, but the actual expenditure has only reached to 50,782,000*l.*, and consequently you have had figures presented to you in the balance-sheet which must have been gratifying to every member of the committee in showing a surplus of income over the expenditure to the amount of 2,460,000*l.* (Hear, hear)

But having reached this point by a smooth and easy progress, it is now my duty to entreat hon. gentlemen to make large deductions from the very sanguine estimate—so sanguine as, considering the quarter from which it came, to excite my surprise—that because our balance yields 2,460,000*l.* of surplus, therefore we have that sum available for remission of taxation. That would be a too precipitate inference. Unfortunately, before we arrive at that conclusion, there is one circumstance rather material to examine, and that is—what is the estimated amount of expenditure of the year that we have just commenced? Well, when I look to that, and compare it as estimated, and as it appears on the votes before the House, with the estimates of the last year, I find it stands as follows:—The expenditure for 1852-53 was 50,782,000*l.*; but the expenditure for 1853-54, the great bulk of which is already voted, and upon which I can anticipate, on the whole, no diminution, amounts to 52,163 000*l.* Therefore, without going into other particulars, which, I am sorry to say, occasion a further deduction from the surplus of 2,460,000*l.*, I beg to point out that no less than 1,400,000*l.*, or nearly three-fifths of that surplus, are already disposed of by the charges to which you are liable under acts of Parliament, by the votes to which the House has come for the defence of the country, and by the charges on account of the miscellaneous services, which, I apprehend, this House will not be inclined to refuse or to diminish (Hear, hear). The right hon. gentleman opposite, in December, 1852, estimated as follows his surplus for the present year:—He took a total sum of 1,600,000*l.*, of which, I think, he stated that, on the ordinary revenue, he would venture to anticipate a surplus amounting to between 1,300,000*l.* and 1,400,000*l.*, and by decrease of charge for the Kaffir war a sum of 200,000*l.* or 300,000*l.* These two sums put together gave a surplus as the basis of his calculation for the year, amounting to 1,600,000*l.* At that period the right hon. gentleman thought that the only charge against that surplus on account of coming expenditure would be the sum of 100,000*l.*, which he proposed to apply to light dues and purposes connected with shipping, and 400,000*l.* for the increase he anticipated on the great services of the country. His successor in office has not been so fortunate; nor has he thought it wise to confine the votes for the year within these limits.

I shall now state to the House how that surplus of 1,600,000*l.* has been swallowed up. The increase on the navy estimates, including the packet-service, as voted in 1852, and as we found it prepared for this year (making the comparison with the estimate of April, 1852, not including the supplemental vote of December), amounts to 617,000*l.* The increase on the army and commissariat, but almost entirely on the commissariat, is 90,000*l.*, and that increase on the commissariat is to be accounted for by the fact that we have now reached, we trust, that stage in the hostilities at the Cape when we may consider our extraordinary votes at an end, and when the provision to be made has passed under ordinary expenditure; therefore, though it is our duty to submit to the House, during the present session, an extraordinary vote for 200,000*l.*, which is essentially retrospective, we have likewise to submit a vote for 70,000*l.* in commissariat expenditure, which in its character is prospective, and analagous to our ordinary estimates So the durable expenditure, as far as the Cape is concerned, is charged on the service of the present year. The increase on the ordnance is 616,000*l.*

The militia estimates have not yet been brought to the shape in which they will be laid on the table; but I am sorry to say that there will be a large, and I believe unavoidable, increase on the amount taken last year by my right hon. friend then Secretary for the Home Department. The estimate for the present year cannot, I fear, be expected to be much less, if at all less, than 530,000*l.* I doubt if it was expected twelve months ago by my right hon. friend that the amount would be more than something like 300,000*l.* If so, there would be a considerable increase in the expense of giving effect to that plan; and it is right that the House of Commons should know the expense of giving effect to any plan, and especially one which has realised, in other respects, all the favourable anticipations formed of it (Cheers). The increase of expense for the militia, as compared with the reckoning of my right hon. friend, will be about 230,000*l.* The last item in these augmentations of expense is the sum of 100,000*l.*, added to the votes during the present year for the purposes of public education. If the committee take the pains to put together these five items, they will find that, though the right hon. gentleman opposite (Mr. Disraeli) anticipated a surplus of 1,600,000*l.* for the financial year of 1853-54, the augmentations of charge, principally voted already and in part yet to come, amount to no less than 1,654,000*l.* As I have already stated to the committee, there has been some further improvement in the revenue of the country, and there are likewise some few items of public expenditure on which the Government have been able to effect some small saving.

With respect to the important and unsatisfactory charge for the packet contract service, it has been our most anxious desire to see what, consistently with justice. was to be done to amend the position of the public. We think that the amount of charge which that service has reached is wholly disproportionate with the benefit derived (Cries of "Hear"). I am not at present in a condition to lay the estimate on the table, or to state exactly what the estimate may be; but I venture to anticipate, at any rate, for the first year, we may be able to effect a saving on it of not less than 75,000*l.* There will also be a saving on the charge for Exchequer-bills, owing to the diminution of interest, amounting to about 65,000*l.*; and there will be a sum, which the House must observe is occasional in its nature, of 135,000*l.*, arising out of repayments to the Crown revenues, and available under the provisions of the law as ways and means in consequence of the bill passed by the House having reference to metropolitan improvements; and also there will be produced a sum, by the liberation of the Crown revenues from a charge which heretofore affected them on the same account, to the extent of about 27,000*l.* These various items will give a fund amounting to about 301,000*l.*

I will now state more particularly to the committee the items of anticipated revenue and expenditure of the country, from which it will see precisely the amount of the surplus we have to deal with. I should at the outset explain that I think it would be convenient that I should in all cases, disregarding minute inaccuracies, give the sums in round numbers. I will now present to the committee an account of the estimated revenue and expenditure for the year 1853-54. With regard to the expenditure, the charge for the funded debt is put down at 27,500,000*l.*, and the charge for the unfunded debt at 304,000*l.*; making a total for the debt of 27,804,000*l.* The charges on the consolidated fund will be 2,503,000*l.*; the army estimates, 6,025,000*l.*; the navy, 6,235,000*l.*, not including the packet service; the ordnance estimates, 3,033 000*l.*; miscellaneous, 4,476,000*l.*; commissariat, 557,000*l.*; the militia, as nearly as I can judge, 530,000*l.*; the extraordinary vote for the Kaffir war, 200,000*l.*; and the packet service, I think, may be fairly taken at 800,000*l* for the present year. These items give a total of estimated expenditure amounting to 52,183,000*l.*

I now come to the estimate of anticipated revenue. I take the revenue of the Customs at 20 680,000*l.*; Excise, 14,640,000*l.*; Stamps, 6,700,000*l.*; Taxes, 3,250,000*l.*; and Income-tax, 5,550,000*l.* From the Post-office we expect 900,000*l.*, and from the Crown lands, swelled by the addition I have already referred to, 380,000*l.*; from miscellaneous sources of receipt (including, I think, about 160,000*l.*; being the capital of the Merchant Seamens' Fund, out of which we shall have to pay 80,000*l.* during the present year on account of pensions, and the whole of the remainder, I need not say, will be absorbed long before that charge for pensions ceases) we expect about 320,000*l.*, and from old stores 460,000*l.* To these I venture to add, though the item is necessarily one of uncertainty and conjecture, that I anticipate a saving of no less than 100,000*l.* from the operations which have been proposed to the House in connection with the exchange and redemption of stock. It may, certainly be less, and it may, on the other hand, be more—the final result, I hope, will show a considerably greater saving. I venture now to take credit for 100,000*l.* on that account

Adding up, then, these various items, the committee will find that they give a total estimated income for the year of 52,990,000*l.*, against which we have to set the total estimated expenditure of 52,183,000*l.*, showing an apparent surplus of 807,000. Anxious, above all, to avoid raising undue expectations, I am desirous to impress on the committee that it must bear in mind that out of this sum of 800,000*l.* an amount of 215,000*l.* consists of moneys which do not proceed from permanent or recurring sources, but of moneys due simply to the year, and not to be repeated. Likewise, with the uncertainty connected with the items for the packet-service and for the Channel Island harbours, on which my right hon. friend at the head of the Admiralty and I am not quite sure whether we can or cannot venture to make a reduction in the sum printed in the estimates, it is possible that the surplus I have mentioned may not be realised to the extent of 100,000*l.* Therefore, it will be more secure for the committee to assume that the surplus, instead of 800,000*l.*, will be 700,000*l.*, and to bear in mind that 215,000*l.* out of it consists o occasional payments. At the same time, while giving this explanation by way of caution, my sanguine hope is that we shall realise a surplus of 800,000*l.*

This is the state of the account of the country, as I have endeavored to bring it up to the present moment. The committee will not have failed to observe, that in reckoning the estimated income I have included a large sum, amounting to more than one tenth of the whole revenue which, from 1842 up to the present time, we have been deriving from the Income-tax. However, the Income-tax has at this moment legally expired, and it will be for the committee to consider whether or not they shall revive it. Upon that subject I am afraid that it will be my duty to trouble the committee at some length; but before I venture on a detailed and continuous exposition of the views of the Government with respect to prospective finance, there are two questions to which I must briefly advert, on account, chiefly, of the position they occupied in the financial statement of my predecessor in the office I now fill.

The first of these has reference to a particular class. Now, as regards the shipping interest, the House knows, from a statement already made by my right hon. friend the President of the Board of Trade, that her Majesty's Government propose to afford what they trust will be found considerable benefit and relief to that interest, without inflicting an annual charge upon the public (Hear, hear). But there was another interest mentioned by the right hon. gentleman opposite (Mr. Disraeli) which has so much claim upon the general sympathies of the House, that respect and consideration demand that I should not leave it without mention; I mean that which is called the West Indian interest (Hear). With regard to that interest, I regret to say that there is, indeed, little, if anything, that can be done by a Government, in our view, consistently with its more extended duties to the public, in fulfilment of the requisitions which that interest has preferred. With regard to a reduction of the duty on sugar, which is one of its requests, in proportion to the fall in the duty upon foreign sugar, so as to maintain the differential rate that now exists between them, it is entirely impossible for the Government to hold out the smallest hope of their recommendation being adopted (Loud cries of "Hear, hear"). With respect to the question of refining their sugar in bond, which is of a different character, my hon. friend the Secretary to the Treasury (Mr. Wilson) will take a future occasion of entering more at large into that question; but I regret to say, that we have not discovered any method of granting that privilege in the present state of the law with respect to sugar which would be satisfactory to the West Indians and to the refining trade, and which, at the same time would not inflict very heavy loss upon the revenue (Hear, hear).

With respect to the equalization of spirit duties, again I fear that really nothing remains to be done in that respect. I believe the distillers of this country consider that already the duties have been somewhat more than equalized, all things considered, in the case of the West Indies. At all events, we are not prepared to propose any change in the law in the nature of equalization of spirit duties as between colonial and domestic produce (Hear, hear). There is but one way in which it has occurred to the Government that they might entertain a sanguine hope of being able, at a very slight charge to this country—perhaps at no charge—to confer material benefit on the West Indies; and that is a way which, if it can be effected, will, I am sure, command the approbation of this House, because it is by enabling them to economise the heavy expenditure of their own governments (Hear, hear)—a heavy, and now in many cases, almost a ruinous expenditure (Hear, hear). In the case of Jamaica, for example, there is a public debt, the minimum rate of interest upon which is 6 per cent, and the maximum 10 per cent, the capital of the debt amounting to about 500,000*l.*; and if it were possible for the Government to induce the Assembly of Jamaica to amend the vicious constitution of that island, and to place it upon a foundation that would give scope for a strict control over expenditure, her Majesty's Government would then be disposed to recommend to this House to employ the credit of this country in a guarantee for the island of Jamaica (Hear, hear).

I do not now inquire whether that would entail a charge upon you; I believe it would entail none. I would be the first to assert that there should be the utmost jealousy as to the interposition of the credit of this country between debtors and creditors out of this country (Hear, hear) but, considering all that has happened to the West Indies, considering the effect that British legislation has had in precipitating their difficulties, I do believe that if we were able to point out a prospect of great and effectual relief to Jamaica, to be indirectly obtained through an effectual reform in its government, this House would look with a generous and a considerate eye upon any proposal for using the credit of this country in the manner that I have mentioned (Hear, hear). That refers to Jamaica, which presents at this moment by far the most urgent case of distress among the West India colonies (Hear, hear); I am not sure that there is any other among those colonies which would be in a condition to request a similar interposition (Hear, hear); if they did, it would depend upon the case they showed. I do not think it likely that such a case will arise; all I mean to say at the present moment is, that the door will not be absolutely shut against them (Hear, hear).

I pass on now from the collateral topic of the West Indian interest to another topic—that connected with the Exchequer Loan Fund. After all that passed in debate in December last, it was evidently the duty of her Majesty's Government to make a full investigation into the trans-

sections of that board. We have instituted that investigation; we have presented the results in print to the House; they are in a form so simple that an inspection occupying only a few minutes will exhibit them to any hon. member. It appears from the figures there presented, that after debiting the Exchequer Loan Fund—I won't say with every folly of Parliament, but with every questionable or ambiguous grant that was made—after charging the whole of this to the last farthing, yet such has been the sound discretion exercised by the members and officers of that board in the loans they have made, that while they have afforded an immense amount of local accommodation, they have likewise realised, after paying every expense that belongs to the office, a net balance of not less than 227,000*l.* (Hear, hear), which balance, if we put values such as sanguine men might perhaps put upon certain investments that have not yet been realised, it is far from impossible may be raised to nearly 1,000,000*l.* of money to the credit of the entire transactions of the board (Hear). It is our candid opinion, under these circumstances, that the sentiments expressed by my right hon. friend the First Lord of the Admiralty, in December last, in regard to the Exchequer Loan Fund, are justified by the facts (Hear, hear); and it is not our intention to propose the abolition of that system, which we think has been both honourable to those who have administered it, and highly beneficial to the country (Hear, hear)

I now approach a difficult portion of the task that I have to perform—the discussion of the Income-tax (Hear, hear). The first question that this committee has to consider is, whether or not it will make efforts to part with the Income-tax at once. I do not say that such an alternative is impossible. On the contrary, I believe that by the conjunction of three measures—one of which must be a tax upon land, houses, and other visible property, of perhaps 6*d.* in the pound; another, a system of licenses upon trade made universal (Hear, hear), and averaging something like 7*d.* in the pound.; and the third, a change in your scheme of legacy duties (" Hear, hear," from Mr. W. Williams, and other members)—it would be possible for you at once to part with the Income-tax. But her Majesty's Government do not recommend such a course to the committee (Hear). They do not recommend it because they believe, in the first place, that such a system would, upon the whole, be far more unequal and cause greater dissatisfaction than the Income-tax; they believe, likewise, that it would arrest other beneficial reforms of taxation (Hear, hear); and they believe that it would raise that difficult question in regard to the taxation of the public funds of this country in a form the most inconvenient (Hear). I might dilate upon this subject, but it is needless to do so. I leave it to those, if such there be, who are prepared to recommend the immediate abandonment of the Income tax. Such is not the recommendation of her Majesty's Government (Hear).

Now, in regard to the Income-tax, I wish that I could possess the committee with the impression that constant study has made upon my own mind of the deep and vital importance of the subject. We are too apt to measure the importance of the subject by the simple fact that we draw from this tax 5,500,000*l.* of revenue. Sir, that sum is a large one, but the mention of it conveys no idea to the committee of the immense moment and magnitude of the question (Hear, hear). If you want to appreciate the Income-tax you must go back to the time of its birth; you must consider what it has done for you (Hear, hear); in times of national peril and emergency (Hear, hear); you must consider what, if you do not destroy it—and I will explain afterwards what I mean by "destroy"—what it may do for you again, if it please God that those times shall return (Hear, hear). Sir, it was in the crisis of the revolutionary war that, when Mr Pitt found the resources of taxation were failing under him, his mind fell back upon the conception of the Income-tax; and when he proposed it to Parliament that great man, possessed with his great idea, raised his eloquence to an unusual height and power (Hear).

There is a description of the speech of Mr. Pitt on that occasion, written by a foreigner, a well-known writer of the day—Mallet du Pan—which I may venture to read to the committee; I believe, after the lapse of fifty-five years, it will be read not without interest (Hear). This is an account which, in a periodical that he edited, he gives of Mr. Pitt's speech in 1791:

From the time that deliberative assemblies have existed, I doubt whether any man ever heard a display of this nature equally astonishing for its extent, its precision, and the talents of its author. It is not a speech spoken by a minister, but a complete course of public economy; a work, and one of the finest works, upon practical and theoretical finance that ever distinguished the pen of a philosopher and a statesman. We may add this statement is the learned researches of such men as Adam Smith, Arthur Young, and Stuart, whom the Minister honoured with his quotations

(Hear, hear). I do not know whether this committee are aware how much the country owes to the former Income-tax, but, because I deem it to be of vital importance that you should fully appreciate the power of this colossal engine of finance, I will venture to place before you, in what I think an intelligible and a striking form, the results which it once achieved. I will draw the comparison between the mode in which your burdens were met during that period of the war when you had no Income-tax—during that period of the war when you had the Income-tax in a state of half efficiency—and during that last and most arduous period of the war, when the Income-tax was in its full power. From 1793 to 1798, a period of six years, there was no Income-tax, from 1799 to 1802 there was an Income-tax, but the provisions of the law made it far less effective in proportion to rate than it now is; and from 1806 to 1815, a period of eleven years, you had the Income-tax in its full force

Now, every one of us is aware of the enormous weight and enormous mischief that have been entailed upon this country by the accumulation of our debt (hear, hear); but it is not too much to say that it is demonstrated by the figures that it need not at this moment have existed if there had been the resolution to submit to the Income-tax as an earlier period (Hear). This test, I think, you will admit is a fair one; I put together the whole charge of government and war, together with the charge of so much of the national debt as had accrued before 1793, so as to make (if I may so express myself) a fair start from 1793 (Hear, hear). The charge of government and war, together with the charge of debt incurred before 1793, amounted on the average of the six years down to 1798, to 36,030,000*l.* a year the revenue of that period, with all the additional taxes that were raised on, amounted to 20,626,000*l.* a year; there was, therefore, an annual excess of charge above revenue—charge for government, war, and debt contracted before 1793, including the charge of debt contracted since 1793—of no less than 15,404,000*l.* (Hear). In 1798 you just appreciate the Income-tax, and immediately a change begins. In the four years from 1799 to 1802 the charge for the same items that I have mentioned, which had been 36,500,000*l.*, rose to 47,413,000*l.* a year, but the revenue rose to 35,794,000*l.* a year, and the excess for those four years was diminished by about 2,000,000*l.* a year; instead of an annual excess of 15,450,000*l.* over revenue, it was 13,689,000*l.* (Hear).

But now look to the operation of the tax from 1806 to 1815, during the time when your exertions were greatest and your charges were heaviest. The average annual expenses of war and government from 1806 to 1815, together with the charge upon the debt contracted before 1793, was 65,794,000*l.*; but you had your Income-tax in its full force, and the revenue of the country now amounted to 52,795,000*l.* (Hear), and the deficiency, in actual hard money, which represented something like double the amount in debt, owing to the rate at which you borrowed instead of being 15,404,000*l.* a year, or (as it was in the second period) 13,689,000 a year, was only 2,004,000*l.* a year from 1806 to 1815 (Hear, hear). Such was the power of the Income-tax (Hear). I have said there was a deficiency annually of 2,004,000*l.*, but it is fair for you to recollect, and it is necessary in order to present to you the fact I want to place in clear view, that out of the 65,794,000*l.* of charge that I have mentioned, about 3,509,000*l.* were due for charge of debt contracted before 1793; so that if you compare the actual expense of government with the whole expense of war from 1806 to 1815 with your revenue when you had the Income-tax, it stands thus before you—that you actually raised 7,000,000*l.* a year during that period more than the charge of government and the charge of war (Hear). That, I must say, is to me a most remarkable fact (Hear, hear). It affords to me the proof, that if you do not destroy this fiscal engine—I do not raise now the question whether it is to be temporary or permanent, which I hold to be quite a different question, and I will go into that by and by—it affords you the means, should unhappily hostilities again break out, of at once increasing your revenue 50,000,000*l.* and your fleet to 100,000, with all your establishments in proportion (Loud cries of " Hear, hear"). And, much as may be said of the importance—in which I concur—of an army reserve and navy reserve, and of having your dockyards and your arsenals well stored, I say this fiscal reserve is no less important (Hear, hear); for, if it be used aright, it is an engine to which you may resort, and with which, judiciously employed, if unhappily necessity arise—which may God in his mercy avert (Hear, hear)—with it judiciously employed, you may again, if need be, defy the world (Loud cries of " Hear, hear ")

This, then, is the purpose which the Income-tax has served—that in a time of vital emergency it enabled you to raise the income of the country above its expenditure of war and civil government (Hear), and that service so performed was performed at a time when men do not minutely inquire into the incidence of taxation; they do not then indulge themselves in the adjustment of details, but are afraid lest they should lose the mass and the substance (Hear, hear) Buttimes when the hand of violence is let loose and when whole plains are besmeared with carnage are the times when it is desirable that you should have the power of resort to this mighty engine, to make it again available for the defence and the salvation of the country (Hear, hear). Well, Sir, the Income-tax dropped along with the purpose of the Income tax in 1816. But it was destined to be revived. Sir R. Peel, when he laid the foundations of this giant, who had once shielded us in war, to come and assist our industrious toils in peace (Hear, hear); and, if the first Income-tax produced enduring and memorable results, so I am free to say at less expenditure by far in money and without those painful accompaniments of havoc, war, and bloodshed (Hear, hear)—so has the second Income-tax (Hear, hear).

The second Income-tax has been the instrument by which you have introduced, and by which I hope ere long you may perfect, the reform—the effective reform, of your commercial and fiscal system (Hear, hear); and I, for one, am bold enough to hope and to expect that, in reforming your commercial and commercial system, you have laid the foundations of similar reforms—slow, perhaps, but certain in their progress—through every country of the civilised world (Cheers). I say therefore, Sir, that if we rightly use the Income-tax, when we part with it we may look back upon it with some satisfaction, and may consider ourselves for the annoyances it may have entailed by the recollection that it has been the means of achieving a great good, immediately to England, and ultimately to mankind (Cheers).

Let me now attempt to present to the committee a closer analysis of this duty. I shall assume that it is your view, as it is the view of the Government, that we cannot at the present moment, with a due regard to the public interests, dispense with the Income-tax. Let us look a little into its composition. Let us attempt to investigate the charges which are alleged against it. I am not one of those who make light of those charges (Hear). In my own individual opinion it is perfectly plain, from the mode in which the Income-tax was put an end to at the termination of the war, that it is not well adapted for a permanent portion of your financial system (Hear). Whether it is so or not—on which there is a great difference of opinion—yet I think this is on all hands agreed that it is not adapted for the permanent portion of your fiscal system, unless you can by re-construction remove its inequalities (Hear). Even if you could remove its inequalities, into which we will patiently investigate by and by, there would remain in my mind objections of the gravest character (Hear, hear). The re-construction of your Income-tax would, I think, under any circumstances, be found to open up social questions of the most serious import; and the machinery of the Income-tax, involving, as it necessarily does, to large an extent, the objectionable principle of self-assessment, in my opinion can never be satisfactory to the country (Hear, hear). First, because self-assessment leads to grievous frauds upon the revenue, and renders the real inequality of the tax more trying than those inequalities which immediately strike the eye and feelings; and, secondly, because of the tendency to immorality, which is, I fear, essentially inherent in the nature of the operation.

But now let us examine the composition of the Income-tax. First, let me observe, that we are too much in the habit of speaking of this impost as merely a simple tax; it is rather a code or system of taxation. In mere bulk it is a volume; it has been drawn by many successive strokes in successive years; it combines a large mass of precedents, and, in short, it is a vast and complicated system of taxation, by which we succeed in raising, in round numbers, 5,600,000*l.* a-year. One-26th part of this sum is 200,000 (Laughter). Now, if the conclusions of schedule A you will find that land and houses—which I take together, because their position is substantially analogous including the incomes charged upon them in respect to mortages and settlements, pay no less than 12-28ths of the tax, or about 2,800,000*l.* (Hear). Now, let us look at the other great element of this tax namely, the payment that proceeds from trades.

In order to get at this payment accurately, we must descend a little deeper than the mere classification of the schedules. There are, in schedule A, some considerable classes of property which pay duty along with land and houses, to the extent, I think, of something like 270,000*l.* a year, which are essentially trading concerns. For the purpose which I have in view I must likewise take out of schedule B the sum paid for the occupation of land, and place it along with trades, with which it is essentially analogous in character (Hear). This gives me 320,000*l.* more, and then I come to what I may call trades proper—namely, those which appear in schedule D, and which pay a sum of something like 1,200,000*l.* These three branches of trades in schedule A, B, and D contribute an income of no less than 1,800,000*l.*; or twenty-eighths of the whole tax; and the two together—that, is to say, land and houses, and trades—pay 4,200,000*l.*, or twenty one twenty-eighths of the whole tax. There remain the funds in schedule C, which pay 750,000*l.*, or one-seventh of the whole tax; and salaries and professions, which pay about one-seventeenth of the tax. Professions in schedule D, after striking out those which partake rather of the character of trades, pay 250,000*l.* or about 1 32nd of the tax. Thus we see the funds, salaries, and professions, make up the remaining fourth of the tax; three-fourths being paid by land and houses, and by trades.

It is said that gross inequality is the characteristic of the tax, and that it ought not to be levied that it is unjust to tax precarious and realised income alike. What income is precarious, and what income is realised (Hear)? Income derived from trade would, I presume, be called precarious; and, without wishing to anticipate the judgment of the committee, I may correctly assume that this is their opinion. Observe that, after all, the main question is between land and trade Everything else, in respect of bulk and magnitude, forms but a mere outline of this, the main question (Hear, hear). Land and houses, we find, pay an Income-tax of 2,400,000*l.*, and trade pays 1,800,000*l.*; between them they pay three fourths of the whole tax. It is, therefore, evident that the justice of the present relations between land and trade must go a considerable—I do not say the whole—way towards the solution of the great question whether the tax is, in the main, a just tax or not. Let us, then, look at the case as it stands between land and houses and trade, and, if the committee will do me the favour to follow me in the estimate I am about to enter upon, it shall be my endeavour to place the matter before them in as clear a light as possible. My first object is to show the amount of tax really paid by land. When persons say that realised and precarious incomes ought to pay different rates, and that, therefore, the tax should be reconstructed, they forget to discriminate at the present moment, realised and precarious incomes, as represented by land and houses on the one hand, and by trades on the other, do not pay different rates (Hear, hear). That is, in the first place, as at what rate land and houses pay. Land pays in the gross 7*d.* per pound upon an income not assessed by the possessors of the property, but by strangers independent of them (Hear); and this sum is paid without any the smallest deduction in respect of the difference between gross and net income (" Hear, hear," from the Opposition). It is obvious that, in order to estimate how much land and houses really pay, we must deduct the whole difference between the gross and the net income. Nay, we must do more than this; because the owners of land and houses are not the only persons beneficially interested in this description of property; for instance, a large body of mortgagors, encumbrancers, and life-renters, who, although they pay 7*d.* in the pound on their share of the proceeds of land and houses, do not make up the difference between gross and net receipts.

In the estimate I am about to submit to the committee I have been guided by inquiries which every member is as capable of making as I am. I can only say that the estimate has been framed in a spirit of moderation, and tested, as well as the case admitted, by reference to persons most familiar with the subject. About 80,000,000*l.* the gross income of land and houses, pay the tax. At 7*d.* in the pound, this gives, in round numbers, 2,333,000. What are the deductions which ought to be allowed for the difference between gross and net income—I will not say according to an arbitrary standard of equity; but, if we should break up the present scheme, and construct a new one, what should we be called on, and of course I must say, what should we in justice, be compelled to allow, on this score? In Scotland the difference allowed between gross and net income from land is known by the designation of " public burdens." We have no analogous phrase in England, but we have the burdens. The first great item is the large charge for repairs; and under this head I include hedging, ditching, and draining. Repairs constitute a large charge upon land; but as regards houses it is still larger (Hear). You must allow for insurance, and also for law charges, without which it is impossible to conduct business connected with landed property and houses (Hear, from the Opposition). You must allow—I will not say all the cost of management, but as much of it as you allow to a merchant under schedule D—you must allow for clerks, sub-agents, ground-bailiffs, offices, stationery, receipts, and so forth You must allow for arrears of rent, and you must allow for what is called abatement of rent, which is a real deduction from income (Hear, hear, from the Opposition) How much shall we allow under these heads? What is the gross deduction we must make from the income of 80,000,000*l.*, supposed to be received by the owners of land and houses? I take it at 1*s* per cent. I do not think this an unfair estimate; I am certain that it is, in some instances, a very low one (Hear, hear, from the Opposition). If 1*s* per cent be a fair deduction, it is evident we should reduce the 80,000,000*l.* subjected to a tax of 7*d.* in the pound by the sum of 1,200,000*l.*, which is actually expended before the income reaches the pocket of the owner; and, therefore, we have arrived at this point, that we have proved, instead of 80,000,000*l.* of income, only 67,200,000*l.*, and this reduced amount pays a tax amounting to 2,333,000*l.* (Cheers).

Then I come to another question upon which I must again resort to conjectural estimate. What is a fair estimate to make of the total amount of charges on land and houses, all over the kingdom, in respect not only of mortgages, but of settlements and all other arrangements of that kind? I estimate that one-fourth part of the gross income derived from land and houses goes into the pockets, not of persons beneficially interested in them, properly speaking, but into those of mortgagees and others who receive under settlements. If that be so, then it appears that the owners of land and houses do not receive 67,200,000; but from that sum you must deduct the fourth part of 80,000,000*l.*, which reduces their income to 47,200,000*l.* This sum of 47,200,000*l.*, is, then, the net receipt of those beneficially interested in land and houses (" Hear," from the Opposition). But you will say that the encumbrancees, who receive the 20,000,000*l.* pay the Income-tax. Well, let us see what their quota amounts to. Sevenpence in the pound on 20,000,000*l.*, gives 583,000*l.* Deduct this sum from the 2,333,000*l.*, paid by the owners of land and houses, and the sum of 1,750,000*l.*, will be left, and this is the amount actually paid on an income of 47,200,000. If hon. members will take the trouble to apply the figures I have stated, they will find the result to be this—that the income derived from land and houses is taxed at the rate, not of 7*d.*, but 9*d.* in the pound (Cheers from the Opposition benches)

Then, what I want to know is this—supposing there be a *prima facie* case for breaking up the Income-tax on the ground of inequality between the two classes of payers, namely, the owners of land and houses, and those engaged in trades, do you, on the whole, think that if a difference ought to be made between the two classes, the difference ought to be greater than that which now exists? (Hear, hear). I do not raise the question whether there ought not to be any difference whatever between the two classes; I pass that question by; but I show you that, according to a rational estimate, land at this moment pays 9*d.*, and trade 7*d.* in the pound (Cheers); and I ask any moderate man whether, if we were now about to establish a different rate of payment between the two classes, he would think of making the difference greater than exists at this moment? (Cheers). In December last the right hon. gentleman opposite (Mr. Disraeli) proposed that realised income should pay a tax of 7*d*, and precarious income one of 5½*d.* Now, if any one will have the kindness to compare my figures with the right hon. gentleman's proposal, it will be found that, within a fraction of a farthing, the rates paid by the two classes of income-tax are at present equivalent to 7*d.* and 5½*d.* (Hear, hear)

If we break up the present Income-tax it must be for some object. If that object be to relieve trade at the expense of land and houses, it is well that those who may be called upon to sanction that purpose should consider where they are to begin in fixing the proportions of the payments to be made by different classes, and where they are to end (Hear, hear). If it be desired to settle the question into views which have pressed themselves on the minds of many moderate and intelligent men, according to the view taken by the right hon. gentleman opposite, and by my hon. friend the member for Wiltshire in committee—namely, by making land pay about six-sevenths and trade about 2nd, then I say that object is accomplished, for the payments of the two classes bear that proportion to each other at this moment. But let us go further in the consideration of this vastly important question. I protest against the doctrine of those who propose to tax trade upon the two kinds of income by establishing average classes in each kind. This is the course advocated by the hon. member for Montrose. The hon. member is always consistent, and always intelligible, and never sees a difficulty he takes no pains to avoid it (Laughter). His instinctive sense of fairness and scorn of artifice lead him, in his attempts to reform the Income-tax, into difficulties which a man acting as a tactician would avoid

The common notion was that incomes should be classed in averages. In the name of reason and common sense I ask, how those who demand equality can obtain it by averaging classes of income? Look at annuities. The tables give the value of female life at 15 years of age at 25 years' purchase, but go upwards to 70 or 75 years of age, and the value of the life is only five years' purchase. Yet you propose to average these dissimilar classes—to bring up the value of five years' purchase, and bring down the value of the 25 years' purchase. What possible average can these interests admit of? A life of 25 years' purchase is five times the value of one of five years' purchase. Will it be any consolation to the life of five years' purchase, when called on to pay three times as much as he ought that the life of 25 years' purchase pays only half as much as he should do (Hear, hear)? Still more absurd would be the attempt to average trades. Many trades are worth 25 years' purchase. I venture to say, that, if the matter be closely investigated, it will be found that many trades are better, on the whole, than perpetuities; and for this reason, that trade affords opportunities for providing for children and relations such as no other pursuit presents (Hear, hear).

Let us, however, state the case moderately, and say that some trades are worth 25 years' purchase; there are others not worth more than five, four, or three years' purchase. How are you to average the interest of a trade worth three and another worth 25 years' purchase? I must enter my protest against this averaging of classes. There is another topic of a painful nature connected with this branch of the subject, to which I must likewise allude. We have seen that land pays 7*d.* in the pound, according to a standard of value which does not depend on the will or testimony of its owner. Trade, on the other hand, pays 7*d.* in the pound assessed by each trader on himself (Hear, hear). I have no doubt that, in the majority of instances, the returns of the traders are fairly and honourably made. There are many cases, in trade, in which it is a matter of extreme difficulty to know what return to make, and I believe that in numerous cases the doubt is solved by the honourable trader against himself, and that he returns his profits greater than they really are. Let it not be supposed that I am going to impute to the trading classes of England generally the conduct which is pursued by certain individuals. I am going to state an extreme case. It is an example, not of what has been generally done, but of what can be and has occasionally been done. I will mention no names—I will violate no confidence—but I will state what happened in a great town where a new street was built The persons who lived and carried on business in the old street, which was pulled down to make way for the new one, had been charged a certain amount to the Income-tax. They had also, of course, made returns to a certain amount under the Income-tax. When the new street came to be built they claimed compensation for the loss of their business. The amount had to be assessed by a jury.

Without wearying the committee with details, I will state the amount of compensation which these persons—a number twenty-eight—claimed; the amount awarded them by the jury, which may be taken as, on the whole, an approximation to the real value; and the amount at which they returned their profits under the Income-tax. Were I to descend to individual cases, it would be almost impossible adequately to describe the partly ludicrous and partly shameful aspect which they assume. I will, therefore, deal with the matter generally, and say that the twenty-eight persons claimed the sum of 48,180*l.* as compensation for their profits for a single year. The amount of compensation awarded by the jury was

26,97*l.*, or a little more than half what was claimed; but what was the amount at which they returned their profits for assessment to the Income tax? They claimed 48,000*l.*; they got from the jury nearly 27,000*l.*; but the return of profits for assessment to the Income-tax which they separately made amounted only to 3000*l.* (Much laughter). I deeply regret that the great body of honourable men who have made the name of British commerce famous throughout the earth, even more for its truthfulness than for its energy, should be degraded by association with persons who could perpetrate frauds like these (Hear, hear). But at the same time frauds of this kind, and in many other cases, do exist; they are inseparable from the character of the impost, human nature remaining as it is; and it is impossible when you are called upon to consider the question of the re-adjustment of the tax wholly to dismiss them from consideration.

Now, Sir, I leave this part of the question with this proposition, which I think will hardly be controverted—that as regards the state of the case between land and trade, reserving other cases for separate consideration, there is no sufficient ground to attempt the reconstruction of the Income-tax (Hear). I have three other cases to consider; and first I will take the case of schedule E, which contains the payments that are derived from the incomes of the salaried servants of the public. I think that no class of persons is included in schedule E, with the exception perhaps connected with the Board of Excise, who may not be called, in one sense or another, public servants. Some of them may be servants of local or separate authorities, as, for instance, of the East India Company, but they are generally servants of her Majesty's Government. With respect to the case of these public salaries, I think it is scarcely possible to distinguish between such incomes and life incomes. As they are usually held almost for life, with retirements in prospect, their durability is little inferior to that of life incomes; and their superiority in respect of durability, is upon the whole compensated by this—that they are usually progressive incomes, while life incomes are fixed. It is impossible, I think, for any dispassionate man to draw a distinction between the case of salaried and life incomes. With regard to remissions upon salaries, the case seems to be argued rather high both ways. At present there is a movement among the civil servants of the Crown for a change in regard to their superannuation funds, which would amount to an increase of salary. The tide has but lately turned, for it is not very long since the right hon. member for Oxfordshire (Mr. Henley) made a motion in this House—and, unless I am much mistaken, he all but carried it—for reducing salaries of this description by one-fifth. Now, if the right hon. gentleman thinks that such salaries ought to be reduced by 10 per cent, I would suggest that it would be better to reduce them by a little less than 10 per cent rather than break up the Income-tax on this account; but it would be much better to deal with public salaries, if they are to be dealt with, by a separate arrangement than to make them the occasion of an attempt to perform an operation which, up to this time, all those who have been responsible have unanimously declared to be impossible and absurd.

Now, Sir, I come to what is supposed to be the sore place of the Income-tax—schedule C; and when the committee have heard what I have to say, I will appeal to their love of justice, and put it to them whether, schedule C, even if it stood alone, is not rather a reason why they should not break up the Income-tax than why they should do so. I know this is a bold challenge, but see whether I don't establish my position. In the first instance I will read to the committee a testimony that has come from across the Atlantic, in order to impress upon them the conviction that when we approach schedule C we begin to tread upon very delicate ground. We wrote to the United States, to ascertain what was done in that country, where taxes of this nature are levied, with respect to the public stocks or funds, and I have here a short letter, signed by Mr. Everett, dated "Department of State, Washington, 10th of February, 1853," in which he says—

Sir,—I have the honour to acknowledge the receipt of your note of the 8th instant, inquiring, by direction of her Majesty's principal Secretary of State for Foreign Affairs, whether the public debt of the United States is subject to Property or Income-tax in the hands of those who hold the stock, and also whether, in the acts authorising the contracting of the debts, any provision was made, exempting them from taxation.

In reply, I have the honour to inform you that there is nothing in the constitution of the United States, or in the laws creating the public debt, which prohibits this Government from levying a tax on that debt; the Governments of the respective States, however, can levy no such tax, as this would be an act impairing the obligation of a contract, which is expressly forbidden by the federal constitution.

Now, it appears to me, upon a fair review of the case, that we must set out with this doctrine admitted on all hands—that we are bound to give some rational construction to those words in the loan acts which provide that the public dividends shall be paid free of all taxes and charges whatsoever. I think we are bound to give that construction. (Hear, hear). Mr. Pitt thought the rational construction to give to them was, that you should not look at all to the nature of the obligation, but that you should consider the dividends simply in relation to the receiver as so much income. I am bound to say that I think Mr. Pitt's proposal was the safest and wisest. It has, at any rate, been acted upon for more than fifty years, and under it the great bulk of the public debt has either been borrowed or re-borrowed (Hear, hear). I do not mean now to urge the claim of the fundholder upon the case of these acts in proceeding at this time to impose a new construction, but what I do beg you to acknowledge is, that there is only one other construction, in any sense rational, to be given to the words in the loan acts, and it is this—that we are entitled to look, if we choose, not at the mere amount of annual income, but at the durability of the income, as tested by the price of stock when it is sold

I will suppose, then, the case I proposed now is, that we should re-construct the Income-tax, in order that we may levy the tax upon something like the capitalised value of the income. Considering the circumstances under which the Income-tax was first imposed, and the circumstances under which that change is now suggested, I never can believe that it would be adopted by a British Parliament. Observe the effect which it would have upon the interest of the fundholders. When Mr. Pitt imposed the Income-tax, he said to those persons—"We have nothing to do with capitalised value, or with price; we can look to nothing but what you receive from year to year." At that time, when the fundholder was taxed upon his income from year to year, what was the capitalised value of his income? Sixteen years' purchase (Hear). That was the average capitalised value of the fundholder's income for seventeen years of the Income-tax, until the conclusion of peace. Suppose your new doctrines had been in vogue then, the fundholder would have paid only one half of what he paid, and shall I be told that, after adopting one construction unfavourable at the moment to the fundholder, and after taxing him on the full value of his income for seventeen years, when he could only have got sixteen years' purchase for his property in the market, England and the English Parliament will now turn round upon that man, in the manner suggested, when the value of his property has risen to thirty-three years' purchase? If you now determine that the capitalised value of the freeholder's income ought to be taxed, I say that you inflicted the grossest wrong upon him in time of war. When he then consented to pay 10 per cent upon the value of his income, he had confidence that peace would be restored, that his income would become more valuable, and that faith would be observed with him—I mean faith according to the common principles of equity and justice—and that no advantage would be taken of that rise in value. But, if the British Parliament sets the example of establishing in time of war that funds are low, the doctrine that you have nothing to do with capitalised income, and then, in time of peace, when the funds are high, sets up the opposite doctrine—I will not merely say that the character of this nation will not stand as in the time of your fathers it has stood—I will not say that you must abandon the idea of taking the lead among all the borrowers of the world, and that you must prepare for a charge in your relations with those who have hitherto trusted you (Hear, hear).

There are persons who say, "We ought to tax incomes at different rates, accordingly as they proceed from property or from skill." In fact, they would place industrious incomes on the one side, and lazy incomes on the other. Now, in my opinion, a great deal may be said in favour of that doctrine, but observe the effect it must have with regard to the public revenue. The landholder must exert himself with respect to his land, the householder as to his house, and the mortgagee must either look out himself, or pay his lawyer for looking out after his money; and I do not believe there is any income which is perfectly and entirely a lazy income, except the income of the fundholder (Hear, and a laugh). If that were so, the fundholder would enjoy an entire pre-eminence in taxation, and the degree of that pre-eminence it would rest with you to fix. I honour the sense of justice of the hon member for Montrose, and so I honour the sense of justice of those gentlemen—the actuaries—who have recommended the fundamental reconstruction of this tax, and who do look at the durability of incomes. If they had made their proposals in 1798 I do not know that the fundholders would have had much right to complain; but, on the contrary, I believe that, upon the whole, the would have been gainers. I think, however, that the proposal of the actuaries is unsound in principle. I conceive that it is unsound in principle to levy the income of the country in substance by a tax upon its property, for I think that income is the proper basis of taxation.

I do not mean, however, to hold that as an extreme doctrine, but, if we have a Property-tax at all, let us have in substitution for the Income-tax a good and honest Property-tax, such as the actuaries propose. Unfortunately the actuaries have the plan which they recommend entirely to themselves, and no one has ever been found to propound it in this House. In fact, nobody will propose that plan, for every one knows it is a mathematical speculation upon paper. It is not a project to be submitted to an assembly of men whose bounden duty it is to provide by practical means for the constantly recurring wants and services of the country. The project of the actuaries I pass by, because, while it is of all others the most self-consistent, it is also, I will not say the most difficult, but it is placed the farthest beyond the reach even of imagination as a possible measure.

Now, I will request the committee to go yet further with me upon one more point with regard to the Funds, which I think to be highly practical in its character, and which I beg to commend to their particular attention. I have used every means in my power to analyse the manner in which the Funds are held. In old times there was a very general belief in the existence of hobgoblins. [An hon. member exclaimed, in a tone of earnestness, which occasioned much laughter, "Of what?"] Of hobgoblins (the Chancellor of the Exchequer replied, amid renewed laughter); and now throughout the country you may here and there find those who have a somewhat analogous conception of an awful being they call the fundholder, whom they picture as rolling in wealth, and living in worthless indolence upon the toil and sweat of his country (Hear, and a laugh); but it is very difficult to find out whether the existence of the monster is a fact or a fiction. I cannot obtain a complete analysis of the manner in which the funds are held. The State, as we know, has no knowledge upon the subject. The Bank of England, which pays the dividends, knows only one circumstance, and that is whether the dividend is paid to a joint account or to a sole account

A very remarkable change has been taking place of late years in the manner in which the Funds are held. About fifteen years ago the Funds were chiefly held in sole accounts by individuals, and I think you may, upon the whole, take it nearly for granted that the sole accounts indicate—and I speak in the presence of practical authorities—absolute property, with some few exceptions. So lately as fifteen years ago much more than one-half of the stocks were held in sole accounts, and therefore represented absolute property; but, mark the change that has taken place. At present it is otherwise. The whole amount of stock held in sole accounts is at the present moment 230,000,000*l.*, and out of that about 60,000,000*l.* represents the incomes of persons who are exempt from the Income-tax by reason of their incomes being under 150*l.* a year. There is, therefore, a sum of about 220,000,000*l.* held by persons who may be considered as holding perpetuities in the Funds, and upon which the reformers of the Income-tax would regard as entitled to the distinction of exemption from that tax. Now, the amount held in joint accounts was, in February, 1852, 427,000,000*l.* (Hear, hear), and I have no doubt that it is at this time much more. One-third of the Funds, upon the whole, are held in sole accounts, and two thirds in joint accounts.

Now what do these joint accounts mean? I will tell you very nearly what they mean. These joint accounts may be divided, I believe, into five classes, one or other of which may be taken as including very nearly the whole. In the first place, the joint accounts include a large class of charities, comprehending the great account of the Commissioners of the National Debt for savings-banks, amounting to 53,000,000*l.* These sums are all by law exempt from Income-tax. Then, in the second place, we have the Chancery and Bankruptcy accounts, amounting to between 50,000,000*l.* and 60,000,000*l.* I don't imagine that it is the desire of this committee, or of the Government of the country, that the large sums moneys locked up in Chancery and Bankruptcy an exceptional tax. A third class which enters into the joint accounts is made up of those cases in which English firms particularly banking firms, but other firms also—hold large sums of money on account of foreign consignors. I imagine that, although Englishmen who have investments in the Funds very commonly hold them in their own names, it is very common for foreigners to have stock held in the name of their banking or mercantile correspondents. It has been a popular doctrine to tax the foreigner, but I think that no person in this House would wish to tax the foreigner in this particular form. It has been a long-contested question with respect to Income-tax whether England ought to be entitled to exemption altogether. The late Sir Robert Peel subjected him to taxation in 1842, but the proposal was strongly opposed, and I think every member of this House will agree that it would be very impolitic to lay an exceptional tax of this kind upon foreigners. The fourth class interested in joint accounts, and a very large class too, is the class indicated by life interests less than perpetuity.

When Mr. Horsman made a proposal with reference to the Income-tax in 1848, one of his main arguments was founded on the absurdity of taxing life-interests at the same rate at which perpetuities are taxed. Of late the Income-tax reformers have had much less compassion for the life-income men, and few of them now contend that they ought to pay at all. My opinion is, that if the Income-tax were re-constructed, it would be very difficult to shut out the life-interest men; but surely it would be very hard to raise the tax upon the Funds as far as regards that large portion of holders who have in them life-interests. The fifth class interested in joint accounts consists of trading companies and associations holding funded property. Now, are you to lay an exceptional tax upon the capital of persons so engaged in trade? I think not. It is very much better to leave English trade where it is, paying 7*d.* in the pound, in the place of the 9*d.* paid by land and houses, and with the power of investing money in the Funds, when it is convenient, for purposes of banking, or for other trades, without the fear of exceptional taxation, than to break up the whole system, and ensconce the trader in schedule C, that you may reimburse him by exceptions in schedule D. Now, the strongest case urged for the reconstruction of the tax is the case of schedule C; but in schedule C, against 220,000,000*l.* held by persons in their own right, you have 430,000,000*l.* not held by persons in their own right as mere individual property; and when you have established your exceptional tax against the Funds, your very next step must be to exempt the whole of this 430,000,000*l.* Well, that is what I have to say upon schedule C.

I shall now touch very briefly upon the remaining case of schedule D—that is, Sir, of schedule D as it represents professional incomes. I have made it my business, Sir, to ascertain what proportion of the whole payment under schedule D proceeds from professional persons, and I find that, including certain amphibious classes, it is about 300,000*l.*, or rather more than one-twentieth part of the whole Income-tax; but there are several persons who are returned as professional persons who, for the purpose of a new classification of the Income-tax, must be considered as traders—such as auctioneers, house-agents, and others. Then the whole surgeon frequently combines with his profession the trade and capital of a druggist and apothecary. Solicitors, again, in many places, are, to no small extent, considerable capitalists; their capital is invested in their trade, and the Income-tax must be charged upon it as upon capital invested in any other trade. Taking these mixed cases out, the net sum that may be said to be paid by the professions is about 250,000*l.*, which is about 1-22nd part of the whole Income-tax.

Now, sir, I do not at all deny that the case of professional men appeals to the sympathies. In my opinion it is one of the reasons which indicates that the tax ought to be compulsory; but I hope the committee will pause before it rushes to the conclusion of exempting the case of professional men (for I think I have in some degree disposed of the other cases) they will proceed to such a labour—I will not call it an Herculean labour, because an Herculean labour means a labour that Hercules could accomplish, but this I am persuaded he could not—but to such a labour as that of breaking up and reconstructing the Income-tax ("Hear," and a laugh). It would be a pity to and yourselves compelled to break up the Income-tax on account of those whose case is so limited in comparison to the whole range of the tax that they only pay 1-22nd part of the amount. But then you may say, "Why not exempt them altogether; why not give them a favour?" And there is a great deal in point of feeling to recommend that, but there is a great deal in point of feeling to recommend many things in this world of ours, upon examination of which you find insuperable obstacles in the way of your giving scope to that feeling (Hear, hear).

Now I will tell you why you cannot exempt professional incomes without breaking up the scheme of the tax. In the first place, there are the auctioneers, house-agents, farm-agents, and others I have referred to, now resting within the professions, with whom there would be considerable difficulty if there were an attempt to exclude them from benefits to which persons in the position of professional men were to be entitled. Again, you would have great difficulty in knowing what to do with the clergy. Your feeling [illegible] this I am persuaded he could not—would think it extremely offensive to reconstruct the Income-tax on behalf of professional men, and yet to make the clergyman with 150*l.* or 200*l.* a year pay the higher rate (Hear, hear). But, if you let him in, I am not so sure that you would be pleased to extend the same favour to the Dean and the Bishop (Hear, hear). You would find the same difficulty there, but there are other and more serious difficulties than those Many persons holding salaried offices—not public servants—now charged in schedule D, have certainly a much worse tenure, and an inferior interest in their incomes than professional men. Above all, there is what I warned you of in respect to averaging classes

A large class of retail traders have an interest in their trades much inferior to that of professional men. Their shops, and trades, and businesses change hands much quicker. They are creatures of to-day, gone to-morrow; and professional men, as a class, putting aside the exceptional case of sickness, are persons over whom, generally with a certain description of the smaller class of traders (Hear, hear). I must warn the committee likewise that they will find the greatest difficulty when they come to consider, in the midst of their breaking up of the Income-tax, the case of the life annuitants Let me for a moment put it to you who these people are. Professional persons, at all events, are men charged by the Almighty with the care of wives and children, and, generally, with a capacity to discharge that duty. But when you come to life annuitants, you then deal with the desolate widow with the orphaned daughter, with the defenceless woman, whose right it is to expect at your hands justice, tenderness, and protection (Hear). Are their domestic precautions, or are they not? I will take some lady who has been bred in the lap of luxury, and who then, upon the death of her parent, finds herself with the interest of 5000*l.* or 6000*l.* to live upon for the remainder of her days. I want to know whether that is to be subjected to the higher tax as an income from realised property? Will you then tell me that upon the daughter and the widow you will lay that exceptional tax, and yet speak of doing justice, because you put the higher tax upon her in order that you may put the lower tax upon bankers and brewers, and physicians and lawyers? (Hear, hear.) I appeal to you as men upon this point. I am convinced, whether the views of the present Government be right or wrong, whether our propositions meet your approbation or whether they do not, that you never will consent to draw that distinction in favour of the great and energetic commerce of this country, and against the pittances on which the great portion of these women subsist (Hear, hear).

Sir, the unparalleled indulgence of the committee (Cheers) has brought me nearly to the close of this portion of the subject, and there is but one more point that I need refer to (Hear, hear). It is commonly supposed that it is either some crotchet of an individual, or the general laziness and inattention of official persons to their duties, that prevents them giving effect to the wishes which many gentlemen laudably entertain to see these inequalities of the Income-tax, which I do not deny, removed by a re-construction; but I will point out the kind of difficulty to which you find yourselves involved when you set about that work; for I can truly and fairly say—and I think if I do not command credit for it as an individual, yet that the characters of my colleagues will demand full credit for them—I can truly and fairly say that it has been our most earnest desire, if we could with justice attain that object, to consult the public feeling in regard to the proposition which we might make about the Income-tax (Cheers). We have, therefore, studiously and laboriously turned over the question again and again, and have put it, I believe, in every light in which it is capable of being viewed.

And now I will just give you a specimen of the way in which, when you set about a re-construction of this tax, you find yourselves involved. I will suppose that, if the Income-tax be differentiated, you will extend the favour to what are called terminable annuitants. The terminable annuities expire in 1860, and they afford a favourable case for those who wish to break up the Income-tax. Of course, they will get the benefit of it. They are worth so many years' purchase, and no more, and you can tell exactly how much represents interest and how much capital. You proceed, then, by exempting the terminable annuitants. Is that all? By no means. What do you do with Government life annuitants? Must you not exempt them also? Is not their case substantially the same with the others? A man lays out money on an annuity for his life. Although the term of life is uncertain, such an annuity has just as fixed a price in London as an annuity of the expiry of which you fix the date. On the same principle, therefore, you must exempt the Government life annuitants, as you do the terminable annuitants (Hear, hear). But, if you do that, you cannot think of anything so monstrous as taxing interests for life, or for a term upon leasehold properties. How will you be able to tax a man who has, suppose, a lease on which he has paid a heavy fine, and of which there is a term of five or ten years unexpired? Is the great bulk of the interest in the property is not his, but the landlord's, the reversioner's; and you must evidently give him, therefore, a share of the exemption.

Then I must again remind you of the class holding life interests in the Funds. You can't draw a distinction between life interests in the Funds and life interests in leaseholds. They must help to swell the goodly column of exemptions. After that come those who hold jointures and other annuities upon land. Certainly, a life annuity in the Funds is one thing, and a life annuity upon land as another; but the life interest of the individual is alike in both cases. When you have got those in, what do you do with life reversers, and with the successor of entailed estates, who may be a second cousin, living in the East Indies, whom his predecessor may never have seen, and in whom he has no interest? This may be tedious to the committee, but these are practical questions (Hear, hear.) I do not say that there are no distinctions between these different parties. There are distinctions between each of them. But what I say is this, that when you come to define those distinctions, and to treat them on the ground upon which you take your stand, and say, "Here you will be exempt—there you will pay the exceptional tax," there is not one of the classes I have mentioned with respect to which arguments for exemption might not easily be applied. The tendency of all these exemptions, however, is the breaking up and destruction of the tax I do not say the "re-enactment," because relinquishment is one thing and breaking up is another. Relinquishment at a time and with an emergency such as may do as your fathers and forefathers the weapon from the shield to take it serve you again for the ends of duty (Cheers). To relinquish it altogether safe, because it is altogether honourable. But to break it up is to encourage the House of Commons to venture upon schemes which may look well on paper, and may serve the purpose of the moment, but which will end in the destruction of the tax by the absurdities and iniquities which they involve.

Sir, if that is to be done, it must be by those whose connexions enable them to take a different view of the character and of the destiny of this great country. It will not be done by men who believe that, if you enter upon that fatal and seductive path, it will lead you into quagmires, will throw the whole finances of the empire into confusion, and will deprive you of that ready and effective resort to which, hitherto, you have been able in all times to look as a course open to you in circumstances of difficulty and trouble (Cheers). Sir, the general views of her Majesty's Government with respect to the Income-tax are, that it is an engine of gigantic power for great national purposes; but, at the same time, that there are circumstances attending its operation which make it difficult, perhaps impossible—in our opinion, not desirable—to maintain it as a portion of the permanent and ordinary finances of the country (Cheers). The public feeling of its inequality is a fact most important in itself. The inquisition it entails is a most serious disadvantage. And the frauds to which it lends are evils which it is not possible to characterise in terms too strong (Hear, hear). One thing I hope this House will never do, and that is, nibble with great public questions. Don't let them adopt the plan of re-constructing the Income-tax to-day, and say, "If that does not work well, we'll try our hands at it again to-morrow." That is not the way in which the relations of classes are to be treated.

Depend upon it when you come to close quarters with this subject, when you come to measure and see the respective relations of intelligence and labour and property, and when you come to represent those relations in arithmetical results, you are undertaking an operation which I should say it was beyond the power of man to conduct with satisfaction, but which, at any rate, is an operation to which you ought not constantly to recur; for if, as my hon. friend once said very properly, this country could not bear a revolution once a year, I will venture to say that it could not bear a re-construction of the Income-tax once a year (Cheers, and a laugh). Whatever you do in regard to the Income-tax, you must be bold, you must be intelligible, you must be decisive. You must not palter with it. If you do, I have striven at least to point out as well as my feeble powers will permit, the almost desecration I would say, certainly the gross breach of duty to your country of which you will be found guilty, in thus jeopardising one of the most valuable among all its material resources. I believe it to be of vital importance, whether you keep this tax or whether you part with it, that you should either keep it or leave it in a state in which it would be fit for service on an emergency, and that it will be impossible to do if you break up the basis of your Income-tax (Hear, hear). Then you will ask me, "On what principle do you mean to proceed?—you have made an argument, so far as you have gone, to show that the tax cannot be re-constructed or amended." What we wish to do, and what we shall [illegible] doing by the measure which I shall propose, is this:—We wish

in the first place, to put an end to the uncertainty respecting the Income-tax (Cheers). We think it unfortunate that political circumstances have for the last two or three years led to a state of doubt in regard to the continuance of the tax—and have even begotten by degrees a feeling on the part of the public that the country is about to be entrapped unawares into its perpetuity (Hear, hear) My belief is, that much of the uneasy feeling that prevails is traceable to that source, and I am very far from thinking that the mere asking of the committee to renew the tax for a given term, in opposition to asking you to make it perpetual, would be sufficient to allay that anxiety or to remove that doubt

There are a certain class of transactions with regard to which the uncertainty about the Income-tax tends most unfavourably—such as the terminable annuities, for example. It is very desirable that certainty should be restored to these transactions. I think it also most desirable that effectual measures should be taken to mark this tax as a temporary tax. But I do not so much mean to commit the Government to an abstract opinion to be acted upon in future years My own opinion is decidedly against the perpetuity of the tax as a permanent ordinary portion of our finances. But while I state the wish of the Government to propose it as a temporary tax, I do not ask you to rely on their words to bind them or yourselves as to what you will do under all circumstances at the expiration of the term which we propose to fix for its continuance now. I propose by positive enactment, by the measures which I shall invite you to adopt, to lay the ground for placing Parliament in such a position that at a given time it may say, if it think fit, part with that tax (Cheers). We are most anxious to do what can be done, in order to meet the public feeling as to the inequality of the tax. For that public feeling we have not only respect, but sympathy, while we do not admit that it is our duty, as persons charged with the conduct of public affairs, to shape our measures according to any feeling or sentiment whatever, until we have examined the practical form which they are to take, and tried it by the light of our understanding (Hear, hear).

We propose, sir, to introduce certain mitigations into the operation of the Income-tax. We propose to extend the principle of commutations, which is now applicable only to trades, to professions also (Hear, hear). A more important mitigation which we propose to make is this—There is a general feeling that a man ought to have, at any rate, the opportunity of investing the savings he may make from his income without being liable to the Income-tax upon them. We do not think it possible to make provisions of that kind applicable to savings simply as such. All we can do is to say, "If you choose to invest your savings in the form of a deferred annuity or life assurance, the premium which you may pay upon that deferred annuity or life assurance up to one-seventh of your income shall not be chargeable to your Income-tax, but may be deducted from your Income-tax before it is charged" (Hear, hear). I am not at all prepared to say that we would stop at that, if it were possible to do more. At the same time, this plan has considerable recommendations. I do not say that it will meet the case of persons who being afflicted with sickness cannot, except under peculiar circumstances, insure their lives, because, unfortunately, cases of that sort it is beyond the power of the Legislature to meet. But what I do say is this—that it is a relief which will admit of very extensive application. I cannot reckon that the reduction from the receipts of the tax in consequence of it will be less—though, of course, it is an uncertainty, when we look to the total amount of life assurance in this country—than 120,000*l.* a year. It establishes, however, no invidious distinctions between one class and another. It is open to all those who choose to avail themselves of it; but while it is open to them all, we know that practically the classes who are in the habit of assuring their lives are just those very classes whom it is your main object to relieve by the reconstruction of the tax—namely, the classes of professional men and of persons who are dependent upon their own exertions.

I think it will be necessary to propose that Government should itself become assurers of life. If it be undertake that charge, as will probably be the case, it will assure on the same principles as those on which it is now a vendor of life annuities. But while I say that our object is to meet the public feeling as to the inequality of the tax, and while I specify these modes of giving relief, they are by no means all. I have more to lay before you upon this subject And pray understand me. Do not let me through my neglect be misunderstood, or fail to state clearly the position of the Government. What we understand to be the sentiment of the country, and what we ourselves, as sharing that sort of feeling, are disposed to share in, is, that the Income tax bears upon the whole too hard upon intelligence and skill, and not hard enough upon property as compared with intelligence and skill (Hear, hear). I hope that I state with accuracy—not the precise measures that we propose, but the object which the reconstructors of the Income-tax have in view. Well, if that be their object—if they think that at present skill and intelligence are too severely pressed, and that property under the Income-tax pays too little, let me remind them that they must not form their judgment of the condition of classes from one single tax or from another single tax, but that they must look to the general effect of the whole system of taxation (Hear, hear). And with the view of them in that respect at this moment is, that they will reserve their decision upon the question whether the Government proposition sufficiently meets the case of skill and intelligence as compared with property until they have heard me throughout, if their kindness will permit them to do so (Hear, hear)

Our proposition, then, in regard to the Income tax is this—We propose to renew it for two years from April, 1853, at the rate of 7d. in the pound. The committee will recollect that I said we thought it our duty to look the whole breadth of this difficulty in the face—not to endeavour to escape it, not to endeavour to attenuate, but to settle, if the committee would enable us, the whole question of the Income-tax (Hear, hear). We propose, then, to re-enact it for two years, from April 1853, to April, 1855, at the rate of 7d. in the pound. From April, 1855, to enact it for two more years at 6d in the pound (Slight murmurs) and then, for three more years (Laughter and murmurs from the Opposition benches, which prevented the conclusion of the sentence)—I don't wonder at the laughter—for three more years, from April, 1857, at 5d. (Hear, hear). Under this proposal the Income-tax will expire on the 5th of April, 1860. Sir, we think it far better—far more in accordance with our own obligations, and far more likely to advance the interests of the country—that we should present to you what we think—and I will tell why we think it by-and by—a real substantive plan (Hear, hear), which will not disturb the Income-tax may, if Parliament should think fit, be got rid of, than that we should come with some paltry proposal to shirk the difficulty by renacting it for two years, or re-assuring it for one year, and thereby prolonging the uncertainty and dissatisfaction, and giving rise not only to doubts as to the position of the tax, but as to the perfect good faith of Parliament in dealing with the country (Hear, hear).

Now, Sir, we think that the descending scale which we have embodied in the proposal for the renewal of the tax will tend to show Parliament and the country that our intention to part with it, or, at all events, our intention to put Parliament in 1860 in a condition to part with it, is a real *bonâ fide* intention (Hear, hear) But you will say, and say justly, that that intention does not of itself put Parliament in a condition to part with the tax—that it is very well to say that it shall for two years remain at 7d. in the pound, that for two years more it shall be 6d., and for three years more 5d.; but that, when it comes to that, you may find that there is still a deficiency, and that you again want the 7d.; or that when you come to the end of the period for 5d. in the pound you may find yourselves pressed with it (Hear, hear) With respect to the [illegible] we think that before the [illegible] I will further venture to say, that, whatever you may think of the plan I have to propose, no gentleman in the committee will think that the Government are pattering with the House of Commons, or that I am not presenting a proposal which is at any rate substantive and intelligible (Hear, hear). I say, Sir, that our principles with regard to the Income-tax (which is the corner-stone of our whole financial plan)—our principles with respect to the Income-tax required of us these things.—In the first place, to mark it effectually as a temporary tax; in the second place, to meet, in a way which we think good and effectual, the public feeling with respect to the inequality of the tax; and I will explain how we mean to do this by-and-by. But, beyond this, I wish to ask—and this is the important question to which I wish to call the attention of Parliament—if you determine to renew the Income-tax, will you make its early extinction your first and sole object; or will you, in order to bring to completion the noble work of commercial reform which is far advanced, associate with the Income-tax more with a remission of duties, extensive in itself and beneficial to the community?

We have considered fully these two questions; and we have decided deliberately in favour of the second (Hear, hear). While we propose to renew the Income-tax, we propose to associate it, during the years which it has still to run, with a great and beneficial remission of taxes (Hear, hear). But the statement which I have already made with respect to the surplus is one not altogether promising in this respect. He would be an ingenious minister of finance who should found [illegible] extensive remission of taxation on a surplus of 800,000*l.* [illegible] 900,000*l.* or 300,000*l.* of which he regards as uncertain If we are to propose a remission of taxes, we must have funds out of which to make the remission. This is, of course, an elementary truth; but I am sorry to say that it is not wholly useless to impress it upon the House (Laughter) We have, therefore, to consider—and this, Sir, is the invidious part of my task, upon which I am now about to enter—how we are now to consider what are the means upon to us, in consistency with justice, for creating a fund which, in conjunction with our present surplus, we can apply to an extensive and beneficial remission of taxes

Now, the first question which is raised is this—if the Income-tax is to be continued, shall it also be extended? (Hear, hear) And the view of the Government is this that the late Administration was right in stating that, if the Income-tax was to be continued, the exemptions under it should be narrowly considered (Hear, hear); and, therefore, we are prepared to deal with the question of exemptions (Hear, hear) What, in the first place, let me ask, is the case of persons enjoying incomes immediately below 150*l.* per annum? There may be those who say that it is dangerous to attempt to levy the Income-tax on incomes below 150*l.*; but it is my opinion that the safety of the measure depends in a great degree—I may say mainly—on its justice; and if you can show that it is required by justice or other classes, and that it would be advantageous to the country, and even to the parties themselves who would be immediately affected by it, I am not afraid with the confidence I entertain in the feelings of the English people that there would be any danger attaching to such a measure (Hear, hear). There were apprehensions, we know, entertained in 1842 that the imposition of the Income-tax in any shape would be found unpopular; but the sense of justice and enlightened prudence of the people appreciating, as they did, the great benefit achieved by its instrumentality diverted it, if not of the unpopularity, certainly of the odious character which it was thought might generally have attached to it (Hear, hear). Well, now, what is the case of persons enjoying incomes below 150*l.*? It is well known that persons of that class have very largely benefited by the measures consequent on the Income-tax up to the present time (Hear, hear) Twelve millions of taxes have been remitted, and they have enjoyed their full share of this, without the charge of contributing (Hear, hear)

I don't propose that we should carry the tax down to the regions where it would trench on labour. To my view it is a right and expedient principle taking it in connexion with all the circumstances of the case that we should not trench upon what I would call the territory of labour That territory will probably be defined sufficiently for my purpose by the figure of 100*l.* a year; and what I am saying now has reference to the case of incomes between 100*l.* and 150*l.* Their case is, that they have enjoyed up to the present time the full benefit of the remission of the 12,000,000*l.* of taxes to which I have referred But that is not all. If we were going to continue the Income-tax for a short period without any compensating advantage, then, indeed, it might not be expedient that I should ask you to extend it to a lower amount than at present; but I am going, before I conclude, to ask you to support the Government in enacting a great and beneficial remission of taxes; and I say, before you confer that great additional benefit, let us consider whether the results of our plan can be distributed equitably among the various classes of the community. I will present to the committee what I think they will consider some interesting results with respect to the past operation of our recent legislative remissions

With a view to the decision of the question which I am now opening, it appeared to me a matter of extreme interest to collect a number of *bonâ fide* cases of the distribution of the expenditure of part ular families receiving different rates of income, marking the proportion in which they had each profited by the adoption of the Income-tax and the measures connected with it My right hon friend, the head of the Poor-law Board (Mr. Baines), kindly lent me his most effective aid, and we have collected a body of intelligence of the kind which I am now about to present to the committee. I shall not trouble you with the details, but merely give the general results of a few *bonâ fide* cases of actual expenditure, and I believe they are fair average cases, which will exhibit the actual savings which have been realised by persons whose incomes are below 150*l.*, and also by those whose incomes are above 150*l.*, in consequence of the adoption of the Income-tax, and of the remission of taxes and changes in our commercial system which were brought about through its medium. But it should be recollected that, in estimating the savings, I have taken credit for the further remissions which I have promised as well as for those which have already taken place

I have collected six cases of incomes varying from 100*l.* to 400*l.* a year; and, after deducting from each of these cases the sum requiring down the various items which go to make up their incomes, I find that their gross incomes amount to 1850*l.*, and their gross savings to 63*l.* 1*s.* 3*d.*, making a saving of above 3 per cent upon the gross amount of their incomes. I find that the deficit in the Income-tax which they paid there will still remain a saving of 22*l.* 16*s.* 6*d.*, or nearly 2 per cent upon their incomes. This, I think, is not an unsatisfactory result which I have presented to the committee (Cheers) But I have likewise got four cases of the actual expenditure of families with incomes between 100*l.* and 150*l.*, and these, the committee should understand are not cases which have been selected for the purpose of arriving at a particular result, but cases which have been fairly and honestly collected for the purpose of showing the actual distribution of expenditure of the two classes to which I have referred. One is the case of a country tradesman with 120*l.* per annum; the second is the case of a retired Liverpool tradesman (with children) with 130*l.* per annum; the third is the case of a widow in the country with an income from 120*l.* to 130*l.* (say 125*l.* per annum); and the fourth is the case of a clerk in a country town with 100*l.* per annum: making a total income of 475*l.*, and their gain has been 23*l.* 6*s.* 11*d.* or between 5 and 6 per cent Deducting Income-tax at the rate of 6*d.* in the pound, the savings would amount to 19*l.* 9*s.*, or more than 4 per cent. So that you see clearly from this that the persons with incomes between 100*l.* and 150*l.* have apparently profited by the changes in our legislation to a greater extent than those with incomes above 150*l.* (Hear, hear). I ought to say that in estimating the savings I have endeavoured to keep strictly within the bounds of moderation, and that I have no doubt that the result could easily have been swelled if we had chosen

Now, sir, it appears to us that these facts offer a rather strong reason for considering whether, when we [illegible] to renew the Income-tax in the case of persons with incomes above 150*l.*, it would be demanded by justice that we should exp[illegible] that persons with incomes below 150*l.* should moderately become sharers in the burden (Hear, hear). Her Majesty's Government think that in justice we ought to do so (Hear, hear). What we propose is, that we should continue to collect the tax as to introduce a provision that incomes between 100*l.* and 150*l.* shall be liable at the rate of 5*d.* in the pound for the whole time during which the tax is to be levied, so that, for the next two years, incomes above 150*l.* will pay 7*d.* in the pound, [illegible] incomes below 150*l.*, 5*d.*; for the next two years, the one will pay 6*d.* and the other 5*d.*, and for the following three years both classes will alike pay at the rate of 5*d.* in the pound. I [illegible] [illegible] will produce [illegible] but as it will not be levied till the latter half of the present [illegible] 900*l.*, only will come to credit in the financial year of 1853-54 (Hear

I now come to another [illegible] Ireland, in [illegible] me-tax through the [illegible] but the same time, the equivalent [illegible] not been enacted That equivalent was twopence In the first place it consisted of a duty upon spirits of 1*s.* a gallon, which was abandoned all on as soon [illegible] In the second place it consisted of an [illegible] which successive governments have handed down for two years; but in 1850 my right hon friend, the President of the Board of Control, Sir C Wood, made a great reduction in the stamp duties. [illegible] of this concession and of Ire[illegible] increase which we [illegible] tax. I am not able to speak will [illegible] make out, it would appear that [illegible] stamp duties on her transactions as nearly as possible on an average, the same as it was in 1842 (Hear). It is, indeed, true that since the first enactment of the Income-tax Ireland has been visited with an awful calamity, and although that scourge has been mercifully withdrawn, yet traces of it still remain in many social and economical conditions of the country especially in the form of a very heavy and bu[illegible]lensome debt (Hear, hear). That is but a fraction, indeed, of the generous aid accorded by the Imperial Parliament to the necessities of Ireland, but at the same time it cannot be denied that it is very heavy and enduring burden, not on Ireland generally, but on its most distressed parts

But those who look at Ireland cannot avoid being struck by the fact that all Ireland is not alike—that there are certain districts that do not need to shrink from their full taxation and which have no reasonable claim or plea to offer for exemption (Hear, hear). Let me remind the committee what exemption means It means that we have not got a bottomless purse, and that we cannot dispense [illegible] without injuring another; that the exemption of one man means the extra taxation of another, and exemption of one country the extra taxation of another (Hear, hear). And as this applies to changes in the Income tax generally, so it applies to Ireland relatively to England. What we think therefore, is, that the case of Ireland demands very special consideration in connection with the burdens that have been imposed on her, with respect to which I will say more by-and-by, as a sequel or corollary to the present branch of my subject; but, in the meantime, I have to say that we see no reason why the Income-tax should not be levied on Ireland (Cheers), as she has received a great portion of the benefit attending the remission of taxes up to the present time, and is likely also to profit largely by the remissions I have to propose to the House. The produce of the Income tax which will be laid on Ireland under precisely the same conditions and for the said term as in England and Scotland—the produce of the Income-tax in Ireland I estimate at 400,000*l.* a year; but as the tax will not be levied till June next, there will be only 280,000*l.* to come to credit in 1853-54

I will now give the committee an account of how my estimate stands, as a whole, with respect to the Income-tax. The estimated produce of the tax—supposing there were to be no change in the existing system—is 5,550,000*l.* Deduct life assurances (120,000*l.*), of which one half only comes to charge this year, 60,000*l.*; there will be left 5,490,000*l.* The extension below 150*l.* we reckon at 125,000*l.*; and the extension to Ireland at 230,000*l.*; making the total for the year 1853-54 according to the proposal plan, 5,845,000*l.* (Hear, hear).

I now come to another general [illegible] the augmentation of taxation. to which I invite the special attention of the committee. It is one of great importance. It involves both economical and social considerations of the highest nature I have stated to the committee that we propose to enlarge our means by new taxation with a view to further beneficial changes in our fiscal system. That is one object we have in view. Another object is—and it is likewise an important object—to meet the public feeling, which we recognise and share, that the operation of the Income-tax is severe upon intelligence and skill as compared with property. I frankly own my total inability to meet the feeling which has been excited upon the subject of the Income-tax, and that I think I should be guilty of a high political offence if I attempted to do so. But let me now point out to you, that if you think that intelligence and skill under our system of taxation pay too much, and property too little, there are means of equalising the burdens of the two classes in a manner which would be on the whole safe, honourable, and effectual.

Sir, I refer to the question of the Legacy-duty (Loud cheers) a question which, it is perfectly plain, cannot be dismissed from the consideration of the House [illegible] which it is a question of which the earliest settlement will likewise be the best (Hear, hear). It requires settlement The tax is not just as it stands. And how is it unjust? I frankly confess that I have always thought that the view of the case, as stated by the hon. member for Lambeth (Mr. Wilkinson)—who has asserted himself effectively on the subject (Hear, hear)—I have always thought that his view—if I may say so without offence—was a most inadequate view of the state of the case (Hear, hear). The tax is supposed to favour landed property, which I do not deny; but it also favours property which has not that claim to favour which landed property and household property might [illegible] fairly urge as a ground of exemption from taxation (Hear, hear) From Mr. Wilkinson I am glad to hear the hon member echoing that sentiment I wish to set aside the impression that the question bears on its front the odious aspect of a question of class It does no such thing (Hear, hear) We propose to deal it, and, subject to conditions which I will state, to extend the Legacy-duty to all successions whatever (Hear, hear)

With respect to the Probate-duty, at the present moment we do not venture to deal with it The Probate-duty itself, I grant you, calls for reform, and if the Government had the means of carrying out that reform in the present year it would have been satisfactory to have done it. As it is, we are obliged at present to postpone it, but we hope that in a future and early year it may come under consideration. It is said that the Legacy-duty is in the nature of a tax upon property. It is a tax upon property, and because it is a tax upon property it meets the views which have been so much favoured by a large portion of this House and of the public generally, that the Income-tax is to bear unequally upon intelligence and skill as compared with property, then it property ought to be redressed in some way or other. I think this is a safe mode in which to redress that inequality, and if this is a tax upon property it is one which I think that equals the taxation of property generally. The mischief of taxes upon property is the inability of a constant recurrence of those struggles of classes. But in marrying and in the effect this tax has in the Legacy duty you have this great advantage, that the liability to pay it is spread over the whole population which the law of a higher power have ordained; that it only occurs once, on the death of a man; and that no man can die more than once in a lifetime (Laughter) But I would beg to remind the committee that it appears to me that this is a most weighty consideration for those whose duty it is to inquire how they can best neutralise the social [illegible] grave incident to all questions connected with the taxation of property You find the principle of the Legacy-duty in our law; you find its operation also limited by the very condition under which it exists, that there is no reason to apprehend the disturbing of a fair settlement of the property of one man's death, and you will, I think, be of opinion that this is a fair and right tax to a certain extent in itself, and that it is one which in other respects meets, in the best, safest and most effective manner, the feeling which is I know prevalent in the House—that the present operation of the Income-tax [illegible] were upon intelligence and skill as compared with property (Hear)

I propose to retain the present scale of consanguinity, with one change. (Oh, oh) We cannot go into that now, because the emotion of the hon member for Bridport renders a duellum between him and me that would [illegible] the course of my general statement, and we must adjourn the consideration of that to another time (Hear, hear). We propose to retain the present scale with one mitigation Under that scale relations of affinity are treated [illegible] son [illegible] and a daughter-in-law] a duty of [illegible] We propose to place them on the footing of relations by blood [illegible] We propose that the exemption of real property should no longer be subject to the conditions I am about to mention The Government propose that the exemption of settled personalty should no longer exist, and as we abolish the exemption, I now come to the question a most grave one for the Government to consider, and which I will probably consider—I mean it be just that all descriptions of property, personal and real property, should be taxed at the same rate of duty to the Legacy-duty? Our opinion is that it ought not; and we think that [illegible] ought to be taken, but not taken carelessly. I have to point out to you, when we regard the burdens upon property in the country, that there is a great mass of taxation that attaches to property which may be roughly called land, and which is not [illegible] property, which includes, along with [illegible] property, a great amount of leasehold, copyhold, and so forth, which is not real property, but which is subject to the burdens of real property, which is subjected to taxation by the Income-tax, which is subject to the land-tax, [illegible] and the duties, which is subject to the extra charges on the transfer of property, and which is subject generally to all the charges that affect visible property as contrasted with invisible property, and which is liable to the great weight of local taxation. There is between [illegible] and [illegible] 60,000*l.* or 65,000,000*l.* of taxes laid entirely on rateable property, to which not real property only, not land only, but leasehold and copyhold property also are subjected. This property is now subject in both ways to the Legacy and Probate duties, and to all the burdens attached to real property

The Government propose to [illegible] the whole foundation of the law, by a new discrimination, and by [illegible] that whatever exemption or partial advantage shall be given to real property shall be given in conjunction to other property which is now subjected to special burdens We propose, therefore, to abolish the effect of settlement, so that the person who succeeds to personal property will pay according to his interest. He will pay upon the capital, if he succeeds to the capital; and if he succeeds to a less interest he will pay on the value of that less interest The Government, then, thinking it just that a less amount shall be taken from rateable property than from property that does not pay these special burdens, have to propose that

has only a minor interest. It is difficult for me to enter upon a full discussion of all the reasons that have led us to that conclusion The question is very much connected with the great difficulty of any attempt to ascertain the capital values of real property. As a matter of fact, under the social arrangements of this country, our great estates are settled estates.

Leaving this subject, however, for future discussion, it is our view that our proposal ought to include the Legacy-duties, and that some remission ought to be granted to property which is now subject to a great weight of peculiar and exceptional taxation; and we think that the best mode of framing that provision would be to charge the succession at rateable property upon the life interest after the deduction of incumbrances. We propose that the duty should be leviable, as was proposed by Mr Pitt, in eight half yearly instalments. In cases where there is a succession to a life interest, our proposal would be that the duty should stop in the case of a new successor before the new instalment is payable; but in the case of a succession in fee the whole will be paid, and if death occurs before the remaining instalment is paid the duty will be a debt to the Crown against the estate. That is our proposal with regard to the Legacy duties.

I now come to the results which we anticipate. The produce in the first year will be small. We do not propose to charge the duty upon any succession anterior to the period when the committee shall adopt the resolution. The law allows twelve months for the payment of the Legacy-duties, and it will be impossible to fix the payment of the duty upon rateable property, if the committee should adopt it, until after one of the ordinary periods of rent day. The duty in personalty cases will come in more quickly, but I cannot reckon upon a larger receipt from the alteration of the Legacy-duties for the year 1853-54 than 800,000*l.* additional duty from this source. In subsequent years the amount will be greatly enlarged. I have no objection, as far as I am able, to state the results of my investigation as to future years, and I think I do not exaggerate when I say, that this tax, if it is adopted by the committee, while it will add 800,000*l.* to the income of the present year 1853-54, will add an increase of 700,000*l.* to the year 1854-55, 400,000*l.* more to the year 1855-56, and 400,000*l.* more to the year 1856-57, making a total addition to the permanent taxation of the country of not less than 2,000,000*l.* per annum (Cheers). And this I must remind the committee is a tax which will leave wholly untouched the intelligence and skill of the country (Cheers). It is a tax that gives the relief, and more than the relief that you aim at by the re-construction of the Income-tax, but does it without the danger which would necessarily attend that re-construction (Cheers)

MR. DISRAELI.—Does that apply to the three kingdoms?

THE CHANCELLOR OF THE EXCHEQUER: It is a general change of the law in the present Legacy and Probate duties, and one which takes no cognisance at all of one kingdom or the other. One great object of our financial policy would be the equalisation of the Spirit-duties between the three countries. It is, however, a very difficult problem. It is very doubtful whether it will ever be entirely attained, but such an approximation to it as would stop smuggling might, perhaps, be reached. It is quite plain that such an equalisation could be obtained at present by a reduction of the Spirit-duties in England You must take the English duties as the ruling point, to which the others must be raised In the present year we do not propose to make any change in the English Spirit-duties, for that question is so much mixed up with the licensing system, and would involve so great a change in the principle of licenses in populous districts that for the present the English Spirit-duties must stand over. But the Government are of opinion, after a careful consideration with regard to Scotland, that there is no reason why, in the case of Scotland, there should not be a moderate increase in the duty upon spirits. I believe that an increase of the duty, confined within due bounds, would not be opposed to public opinion in Scotland, or unacceptable in Scotland (Cheers). An increase on the duty upon home made spirits would render necessary an adjustment of the duty upon colonial spirits, which I only mention now, without going into details. Our proposal will be that a duty of 7*s.* be added to the 5*s.* a gallon upon Scotch spirits—the malt drawback to remain as at present. The consumption in Scotland is 7,170,000 gallons. The actual revenue is 1,315,000*l.* The expected revenue is 1,633,000*l.* which is a gain of 318,000*l*

I may here stop to congratulate a noble Lord opposite (Lord Naas) on having attained a triumph. I ought to have reserved this until I came to Ireland, but his victory is at length achieved. We propose to relieve the distilled and like trade in Ireland of this House (a laugh). We propose an allowance for waste upon spirits in bond (Hear, hear). That allowance for waste will be in Scotland 40,000*l.*, which will give the net increase of revenue from the increase of the duty upon spirits in Scotland 278,000*l.* The Government have also anxiously considered this question as it regards Ireland. It is quite plain, I am afraid, that an allowance for waste upon spirits in bond will entail a diminution of revenue; in fact, that will amount to a considerable proportion of the revenue derived from the duty upon spirits At present the Spirit-duty in Ireland is extremely low in comparison with the duty in the two other countries There has been found to be great difficulty as to the means of levying the tax, and we think it would be safe to levy an additional duty of 1*s.* 8*d.* a gallon upon home-made spirits in Ireland. But we have looked carefully to the means at our command for enforcing the levying of this tax In Ireland there is a revenue police, which has hitherto been the exclusive charge of enforcing the duty. But there is also maintained in that country at the public cost a large force—the constabulary—which has had no share whatever in giving information to those who have been engaged in levying the Spirit duties. We contemplate a change in the relations of these two forces. I cannot say whether it will be by an absorption of the one force into the other, or in what way it will be done; but the constabulary will in some manner give their assistance in the levying of the duty upon spirits.

We think we may fairly propose an increase of duty of 8*d.* per gallon on Irish spirits—namely, from 2*s* 8*d* to 3*s.* 4*d.*, subject to the deduction of 4*s.* 000*l.*, the allowance for waste spirits in bond. This will give us a gross gain of 328,000*l.* Upon the consumption of Irish spirits, but, deducting the allowance for waste of 40,000*l.*, we have a net gain of 198,000*l.* That gives from both countries—Scotland and Ireland—an increase of 476,000*l.* But it is necessary that I should make an allowance for waste in England, not for the sake of English distillers, but for the sake of Irish and Scotch distillers, with whom it is a great object to bond their spirits here (Hear, hear). There will therefore be an allowance of 40,000*l.* for waste in bond in England, which will leave a net gain from the increased duty upon spirits of 436,000*l.* a year (Hear, hear).

There is one very small augmentation of revenue that I propose, and that is, the revenue upon certain classes of licenses. If the committee examine the present scale of licenses, they will see that they bear very unequally upon the minor and greater tradesmen; upon some it is uniform, as upon grocers and tea-dealers, and they pay the same sum whether they pay rent to the value of 5*l.* or 500*l.* We do not propose to take up the more important questions as to the licenses which are connected with the sale of spirits, wine, and beer; but we propose, in regard to the licenses of brewers, dealers in tea, and coffee, tobacco, and snuff, to make an additional scale of [illegible] upon them at the upper end of the scale to an *ad valorem* value [illegible] gross license of revenue arising from licenses is 113,000*l.* The whole amount of increased taxes which we propose to levy, and which will come into the accounts of 1853-54, is Income-tax, 800,000*l.*; Legacy-duty, 800,000*l.*; duty on spirits, 436,000*l.*; licenses 113,000*l.*; which amount to a total of 1,344,000*l.* (Cheers). We assume that the anticipated surplus of 803,000*l.* will give a fund of 2,143,000*l.* available for the remission of taxation (Cheers).

I cannot proceed further without stating the nature of our intentions with regard to Ireland. The committee have found that we propose to make the income-tax payable in Ireland for a moderate term, and at a descending rate, as in England; and that we propose to levy an increased tax of 8*d.* on spirits in Ireland, which may be a net tax of 6*d.* or 7*d.* a gallon, after allowing for the waste of spirits in bond. But I have now to refer to that case which I lately mentioned of rent-charge formed by the Consolidated Annuities. It was the opinion of the Government that it was impossible for them to arrive at a final decision upon this important subject. They represent a capital of 4,616,000*l.* of public money; and, in dealing with them, the Government must have regard to the actual situation of Ireland, recovering, as it is, from a season of the deepest distress; and having, also, regard to the harmony of the relations between the two countries. The Government thought it could not come to a final decision till they had considered [illegible] plan of finance which it was their duty to recommend, and its bearing upon Ireland They now recommend a measure which, if you agree to it I trust you will—will advance us one great step towards establishing an equalisation of taxation between the three countries (Cheers). It is true that the Income-tax is of temporary duration, and that you will show, by levying it, that there is a *locus poenitentiæ* and a rational prospect of equalising the taxation. But, at the same time, it is important that you should consider the great necessities of a portion of that country; and, when you come to consider these things, it will be plain that the disposition of Parliament will be to adopt large and generous measures, and not consider this as a mere question of money You will consider this—you will consider all that it represents—the recollections of the famine, the peculiar character of that awful visitation, the feelings of England to Ireland, and of Ireland to England, whatever made a more kindly tone between the two countries, and made this debt less of a national creditor and debtor account.

The Government has determined to make a large proposition. The 4,500,000*l.* of Consolidated Annuities represent 1,500 000*l.* of debt that strictly belongs to the establishment of the Poor law in Ireland. That was a great social and national good—a great and vast good to Ireland. But every good to Ireland is also a good to England (Hear, hear). The other 3,000,000*l.* consist of debts entirely connected with the famine. A committee of the other House of Parliament have sat on this subject, and they have recommended a remission of 2,000,000*l.* of this taxation. Sir, the policy of the Government, after maturely considering the whole question, is to propose to Parliament that, from and after the 29th of last September, the Consolidated Annuities shall be wholly wiped away (Cheers from the Irish members). They propose that the whole sum due from Ireland to England shall be remitted. In remitting these charges, and in proposing an Income-tax upon Ireland, you will make a great stride towards that, the advantage of which I hardly know how to appreciate, which refuses to bringing the two countries towards the establishment of the principle of equalised taxation. On that subject I do not say only add, because I am asked what I mean to do with the arrears, that all arrears in respect to Consolidated Annuities due to the 29th of September will be paid as they would have been if the law had continued in force. On the other hand, nothing will be collected which has become due since the 29th of September; and any money which has been so collected will be returned to those who have paid it, so as to take care that the non-paying classes obtain no advantage over those who have paid (Hear, hear)

We are inviting you to remit a capital sum, which was nearly 4,500,000*l.*, and is still above 4,000,000*l.*, and to remit an annual charge of 245,000*l.* Three fourths of that amount would continue for forty years, and one-fourth for from ten to thirty years. The taxation we propose for Ireland would in the first two years be considerably higher than the taxation we propose to remove; but if we look to the time when, as I say, Parliament will be in a position to part with the Income tax, [illegible] would enjoy, and for a long term of years, a much larger remission of Consolidated Annuity than it would be subject to additional [illegible] in the shape of the Spirit-duty So much for the case of Ireland; and now I have done with that most offensive part of my task, the imposition of taxation, I feel—as it is said men are wont to feel, and as some of us have felt—when they have come an up-hill journey to the top of the Alps.

Now I have got to the downward road, and the plains of Italy are before me (Hear). I come to consider the more agreeable subject of the remission of taxation—that remission of taxation which up to this moment, not from obstinacy, and not from perfidiousness, but from a conviction of our public duty, we have thought it right steadily to decline acceding to (Hear, hear). The first remission of taxation I shall propose has reference to the Excise department. It is impossible to deny that there are great evils connected with the Soap-tax (Cries of Hear, hear). In the first place, the system of drawbacks which is a system incident to the use of soap in our manufactories, entails an immense loss. In the second place, this is an article of taxation which is most injurious both to the comfort and to the health of the people (Hear, hear). In the third place, this is an article on which the pressure of the tax is so severe that, notwithstanding the general wisdom and fairness with which your Excise laws are administered, notwithstanding the drawback you grant on exportation, your productive power is crippled (Hear, hear). You cannot compete with the foreigner; your export trade dwindles day by day; and gentlemen who come from the East represent that, with respect to soap—well-informed gentlemen have stated that if we only take that bold measure with respect to the Soap-tax which we recommend, over and above the entire rate of duty, the consumer of soap would benefit to the extent of from 20*s.* or 30 per cent in consequence of the cheaper production (Hear, hear) Therefore, for every penny of duty we remit you to surrender we feel that we are giving you double that advantage (Hear, hear).

There is one other point to which I cannot but feel that I must advert. The question of the African Slave-trade is one which excites different feelings. We have but one feeling with respect to the existence of the Slave-trade, but there is a difference with respect to the measures to be taken for that extinction. Some have thought the means of force used are unavailing, but that the promotion of legitimate commerce would be the most satisfactory (Hear, hear), the most effective and the most desirable of all instruments you can employ (Hear, hear). It may be said there is a wide interval between the premises and the conclusion if I say, in order to extinguish the Slave-trade, repeal the Soap-tax but I must remind you that the [illegible] Although it is [illegible] to [illegible] to [illegible] and [illegible] from that source of [illegible] There are the great materials for the trade with Africa, if you can remove the checks, will show that the energy, the capital, and the intelligence of the country are as well entitled to carry away the palm in this particular [illegible] and a laugh) as they show themselves to be so many respects the gross receipt from the Soap-duty is 1,497,000*l.*; the drawback, 271,000*l.*; the net receipt, 1,120,000*l.*; the cost of collection, 15,000*l.*; the net loss, 1,111,000*l.* But with reference to the general duty for fixing a time to commence the remission of the Soap-tax, we have come to the time for this purpose in regard to the Soap-duty, which is the 1st of July. But there was always a power of keeping in bond if it were thought fit to do so. There is already a sum due with reference to the quarter just expired of 140,000*l.*, and before the present quarter is due probably 200,000*l.* will be due. We have to crave [illegible] 40,000*l.*, and the net loss for this year will be 771,000*l.*

I come next to the division of the Stamp-duties. It is not possible for the Government, with all the means at their service, to deal with all the articles they would wish. There are articles—such as fire insurance and marine insurance—on which they would gladly, if they could, grant remissions of taxation But they have made the best choice at their power One subject that naturally presented itself to them, both in connexion with the Income-tax and likewise as bearing directly as a tax on prudence, and bearing especially on the poorer classes, is the present tax on life assurance It bears very heavily on the poor classes, though not severe in itself. At present it amounts to half-a-crown per cent. We propose to reduce it from 2*s.* 6*d.* to 6*d.* The produce is 40,000*l.*—the immediate loss or relief will be 29,000*l.*

We propose next to deal with an article which in its present state is most unsatisfactory, and that is stamps on receipts (Hear, hear). This is a duty which does not grow as it ought with the transactions of the country, a duty which is evaded wholesale, and a duty which is open to many entirely very considerable inconveniences. It is not a serious question of charge, but the necessity of dealing in particular papers, stamped with particular amounts, which you have to send and get as occasion requires, are all little things which enter very much into the question of inconvenience (Hear, hear). What we propose is, to make an entire change, and adopt a system analogous to the system found so convenient for the public with reference to postage—namely, that of penny stamps. We propose by a penny stamp on instruments for any payment in money, as contrasted with negotiable instruments, to make [illegible] payment valid. Though the first loss to the revenue will not be inconsiderable—namely, 125,000*l.*, it is not a loss without hope of recovery (Hear, hear). We think that is a loss which the committee, for the sake of so great a convenience, would be disposed to accede to. [Mr. Bright put a question] The penny stamp would be necessary to constitute a valid document [illegible] you have to pay 1*s.*, 2*s.*, 5*s.* at present, so we propose to annex the single condition of adding a penny head as sufficient

We propose to make a change with respect to those indentures of apprenticeship which are known as indentures without consideration This is a duty which produces very little, from the charge being too high; from 20*s.* we propose to reduce the duty to 2*s.* 6*d.*

The next question is popular with the majority unpopular with the minority. It is the case of the attorneys (A laugh). I must confess that I don't think the vote of the House of Commons taken upon this question would have justified the Government in proposing a remission of this duty, because we feel strongly that a vote of the House of Commons, even on a particular duty, is given necessarily on considerations attaching to that particular duty, and without reference to the comparative and relative claims of others (Hear, hear) But we do think, on consideration of large sums of moneys which have been lately made, [illegible] have tended, by indirect as well as direct action on the law, to diminish the business of attorneys, that there might be a remission of taxation. What remission should it be? We are not satisfied with the proposal made by the profession. The profession is subject to three charges. The first is on admission to practice, which is small. The charge for the annual certificate is 12*l.* for the metropolitan solicitors and 8*l.* for country solicitors; and the charge for articles of clerkship is put at the enormous amount of 120*l.*—a charge on capital paid by solicitors in anticipation, though they may die, though they may turn out incompetent. The profession say, Take the tax off the annual certificates for those who are in the profession, leave those who have to enter to pay precisely the same" (A laugh). We don't think that would be a fair mode of dealing (Hear, hear). Having made up our minds that we may propose a remission of probably about 50,000*l.*, we propose to reduce certificates from 12*l.* and 8*l.* to 2*l.* and 3*l.*, and articles of apprenticeship from 120*l.* to 80*l.*

I come now to the question as to advertisements (Hear, hear). With respect to that question, I hope the committee will not consider that it indicates any disrespect for the judgment to which the majority of the House arrived, if, having the same object in view, and desiring to bring about some or a more effective classification of taxation, we, having been led by our examinations to believe that there is a better mode of proceeding than that which the House adopted, think it our duty respectfully to submit that mode of proceeding to the deliberate consideration of the committee; and it is right I should say that the plan I am about to state was a plan which the Government had adopted at the time of the debate on Thursday last (Hear, hear). It may, perhaps, be said, "Why did you not say so?" My answer is this—that it was from no motives of mortification, that it was from no desire to practise an undue reserve; it was because we feel that, if the Executive Government is, with advantage to the country, to discharge the functions of the Executive with respect to finance, it is absolutely necessary that the strictest silence should be observed (Loud cries of Hear, hear), not only in contempt of pressure, but yet, notwithstanding pressure—till the time arrive when the views of the Government shall be disclosed. What we propose with respect to the duty on advertisements is this and financially our proposal comes within a mere trifle (within 20,000*l.*) of the other. The present duty on advertisements is 181,000*l.* We propose to reduce the duty from 1*s.* 6*d.* to 6*d.* (A cry of Oh, followed by cries of Hear, hear). The hon. gentleman could not wait on Thursday last for four days, and now he cannot wait for as many minutes (A laugh) May I make that moderate demand on his patience? It is absurd, and most of all would it be so, to take only the plan of the right hon. gentleman the member for Manchester, who has considered this question and considered the duty on advertisements alone. You must consider it with reference to the other duties which affect the journals in which these advertisements appear (Hear, hear)

I venture to say that, if you repeal the duty on advertisements simply, and leave the duties on the supplements on newspapers as they are, it is very doubtful whether a great part of your reduction will not go into the pockets of newspaper proprietors. You want a large increase in the number of advertisements, but you must [illegible] people to taxation in another form by multiplying their advertisements. Take the case of the *Times* You know it is obliged to limit its [illegible] by the size of its sheet. I will not go into that subject, but there is a point beyond which, in consequence of the 1*d.* stamp on supplements, and the 3*d.* stamp on supplements, it does not pay to insert advertisements, on account of the supplement; and, therefore, the time comes when they must have a limit to the advertisements, and put a higher price on them, on account of the supplement.

What we propose is this—to reduce the duty on advertisements to 6*d.*, and, instead of taking off the remainder of the duty on advertisements, to repeal altogether that with which the right hon gentleman did not propose to meddle namely, the 1*d.* and 3*d.* stamps on the supplements of newspapers which are used for printing advertisements (Hear, hear). And I venture to say the plan we propose is far more sure to secure to the advertiser the benefit of the reduction than the plan which you propose; because, if you remove the Advertisement-duty altogether, then when advertisements come into a newspaper, they must either be limited to the present sheet of the newspaper, with the present limited space, and no competition, or they must be liable to that heavy Stamp-duty which discourages the printing of supplements. The first loss on the Advertisement-duty and on the supplement stamps will be 170,000*l.*

The only other change we propose is contingent on a bill, by which the noble Lord, the Secretary for the Home Department proposes to effect a [illegible] for the benefit of the metropolis. It is proposed to [illegible] taxation on hackney carriages. A common hackney carriage pays 10*s.* a week. We think there ought to be a reduction. We propose to reduce the duty from 1*s* 8*d.* a day to 1*s.* a day, which will give a relief of 26 000*l.* The relief from the remission of taxation on the division [illegible] duties will be 413,000*l.*

With reference to the point of the duty on advertisements, I hope that, in addition to the proposition I have stated as regards the bearing of the 1*d.* stamp here and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

We propose, also, to the committee that they should attempt to make a new house and the bearing of that proposed by the Government, the committee will be willing to consider the effect that is likely to be produced by sweeping away all branches of the revenue, if they are not revenue of a description which does not seriously interfere with the general burden of the community. I really don't see how it is possible to maintain any duty on fire and marine insurance [illegible] only on a great many articles which I fear have over long been the objects of taxation—if the arguments against the present Advertisement-duty are to be pushed to such a length as to stop nothing short of absolute remission (Hear, hear)

Another change under the head of Assessed-taxes is proposed with the view of giving greater facilities for the redemption of the Land-tax. The present provision of the law for the redemption of the Land-tax is very stringent, and its operation is exceedingly limited. You may redeem a tax of 1*l.* levied on the land, by transferring to the Commissioners for the Reduction of the National Debt 22*s.* a year in the Funds; but these are extremely unfavourable terms; and, instead of recovering 10 per cent more than the amount of the tax, we propose to reduce it by 17½ per cent, to take 7½ per cent less than the same amount of stock in land (Hear, hear). The committee should be aware that any change made with relation to these matters cannot come into operation during the present year; and if at a future period of the session we should ask the House to pass an act called the Assessed tax Act, we shall then fix the date for 5th October, 1853, and not for 5th April, 1853! Out of all these losses of revenue, or commutations of taxes, under this branch of the Assessed-taxes only 54,000*l.* of post horse duty would come into effect this year, and only one-half of it would be charged from 5th October.

I have still an important branch of remission to mention. There would be a loss of revenue in the plan proposed with reference to colonial postage, but on that I do not enter, as I doubt if any part of it would come into the present year. Now, with reference to the Customs-duties, I may state that no branch of revenue has attracted more the attention of the Government, as they feel that it is here, after all, that the elasticity of the powers of the country have been shown (Hear, hear); and they think that it is by these powers they are supported in the proposal they make to produce an effective result as regards many articles of Customs-duties (Hear, hear). I will first mention an article of importance in which we can make no change, and that is the article of wine. I refer to this tax, as it is a subject of peculiar susceptibility, and the cause of an agitation out of doors, which is almost as perilous to Wine-duties as certain climates are to the growth of wine itself (a laugh); and because it is desirable that if the House and the Government think no change can be made in the duty, that opinion of the House and the Government should be clearly and intelligibly expressed (Hear).

There are three plans, any one of which might be followed with regard to wines. One would be to reduce the duty to a low uniform duty of 1*s.* 6*d.*, or 2*s.*, or 2*s.* 6*d.* the gallon. Now, you cannot do that unless you are prepared to sacrifice an amount of revenue for the first year of 700,000*l.* besides an increased difficulty in the duty on stock on hand, with respect to which it is not impossible that the Government might form a sturdy resolution in which the House of Commons might afterwards be induced to concur (Hear, hear). But whether that be so or not, a loss to the revenue of 700,000*l.* or more is not to be put in comparison with other objects that the Government have in view (Hear, hear). Another plan would be to fix a duty of several rates on wine of different values, somewhat resembling the duty on different qualities of sugar. But if that is attended with difficulty in the case of sugar, with how much greater difficulty would it not be attended in that of wine? (Hear, hear). It has the recommendation, certainly, that it would admit low classes of wine at a less loss to the revenue. But the Revenue department would have the greatest difficulty in carrying out such a system; it would be complex in its operation; the wine trade, almost to a man, is opposed to it; and I cannot say that public opinion is so much in its favour as to induce us to attempt to carry it into effect (Hear, hear). That being so, there is no choice for us but to say that, whatever be our opinion of the operation of the present Wine-duties, we are unable to propose any change in them; and that, while we cannot propose any change in them at the present time, neither can we see any early prospect of a change hereafter (Hear).

I go to the next article, which is tea (Hear, hear). I won't discuss the reasons that exist for reducing the Tea-duties. It would be idle to do so, for they are already settled in public opinion (Hear, hear). And, as we have agreed to make a reduction in the Tea-duties, so we have acceded to the general principle recognised by the right hon. gentleman (Mr Disraeli) as that of the late Administration, that it would be most unwise to make the reduction to 1*s.* by a single leap (Hear, hear). It is almost demonstrable, as far as a negative is capable of demonstration, that you cannot have the slightest hope of such an increase of supply as would indemnify the revenue, or even bring less within measure of demands; and, what is of yet more importance, secure the main benefit of the reduction to the consumer (Hear, hear). What we propose is this—to take the first step that was taken by the right hon. gentleman opposite last year, and reduce the duty at once from 2*s.* 2½*d.* to 1*s.* 10*d.* (Hear.) We have carefully considered the state and prospects of the supplies of tea. The condition of the Chinese empire at this moment is certainly not favourable to such extended supplies as we could wish. We cannot entertain very sanguine expectations that any large addition will be made in twelve months to the quantity available for the wants of this market; but, in the end, we hope and believe, if there be not a chronic state of revolution in China, that, so far as the production of tea is concerned, a short time a couple of years or so—would be sufficient to put us in possession of a large addition to our supply (Hear, hear).

We propose, therefore, to take the first step in the right hon. gentleman (Mr. Disraeli) took it, but we propose thereafter to proceed somewhat more rapidly (Hear, hear). We shall take the duty from the date when the House, if it coincides with us in opinion, shall adopt the resolutions. To the 5th of April, 1854, it will be 1*s.* 10*d.*; to the 5th of April, 1855-5, it will be 1*s.* 6*d.*; to April, 1855-56, 1*s.* 3*d.*; and from April, 1856, it will be 1*s.* (Cheers). The whole time occupied in effecting the descent from 2*s.* 2½*d.* to 1*s.* would be less than three years. We hope, with favourable circumstances, thus to bring in the supply necessary to meet increased demand, but we could not venture to recommend to the House the adoption of any shorter period for effecting the change (Hear, hear). The must not suppose that this is a change which, if we take a clear and dispassionate view of it, can be effected without a heavy loss to the revenue in the first instance (Hear, hear). The amount of remission, indeed, will be enormous. If any gentleman will calculate the difference between 2*s.* 2½*d.* and 1*s.* on the amount of tea consumed during the last year, he will find it come to 3,000,000*l.* a sum much too large to reckon upon recovering all at once. By the arrangement I have stated, the loss for the first year will be 300,000*l.*; for the second year, 510,000*l.*; for the third year, 454,000*l.*; and for the fourth year, 604,000*l.*; making altogether a loss in Customs revenue in these years of 1,954,000 (Hear, hear). But at the same time the loss, we trust, will undergo a rapid and steady diminution (Hear, hear).

In proceeding to consider more generally the state of our tariff, we have been desirous to carry out something like a new revision of taxes, and to apply to it the following general rules—first, to abolish altogether the duties which are unproductive, except in cases where there may be some special reason on account of their relation to other articles; and, in the next place, to abolish, as far as considerations of revenue will permit, duties on articles of manufacture except such as are in the last stage, and commonly connected with hand-labour, in regard to which cases we have thought it more prudent and proper to proceed in the mode not of abolition, but of reduction; and in these cases we have endeavoured to fix the scale in such a way that they should not reach, as to any class of goods, higher than 10 per cent on their value. We have referred to 10 per cent, I may state that we have not thought it right to propose a reduction in the Silk-duties, which are 15 per cent. The question of the Silk duties is mainly a question of revenue, and in regard to it we do not think it is an article that has the strongest claims upon our consideration—for, in so far as it is an article into the manufacture of which machinery enters, the protection has mainly reference to certain classes of operatives, with respect to whom it would be the disposition of Parliament to proceed carefully and cautiously (Hear, hear). We desire further, whenever it can be done, to take the mode of substituting for duties *ad valorem* duties of specific rate, and to get rid in every case, except in a few instances, where it is important on account of revenue, of the 5 per cent, Customs-duties made in 1840, which, besides raising duties, greatly complicate the transactions of business (Hear, hear).

We propose, in many instances, where there are at present differential duties in favour of British possessions, to sink those differential duties altogether by lowering the foreign article to the level of the colonial; but where we are able to lower the foreign article to the level of the colonial we have not thought it would be considerate in any case to raise the duty on the colonial article (Hear, hear). Lastly, we have been desirous to favour the duties that press on those articles of food which enter largely if not into the necessaries of life, at any rate into the solace and comfort of the people (Hear, hear). Now, the application of those rules is this: First, as to articles of food, we propose to lower the duty on a number of articles, of which the principal are as follows:—Apples from 2*s.* a bushel to 2*d.*; cheese, from 5*s.* to 2*s.* 6*d.* per cwt.; cocoa, from 2*d.* to 1*d.* per pound; nuts, from 2*s.* to 1*s.* per bushel; eggs, from 10*d.* to 4*d.* per 120; oranges and lemons, to 2*d.* per bushel; butter, from 12*s.* to 5*s.* per cwt.; raisins, from 12*s.* 6*d.* to 10*s.* per cwt. (Hear, hear) The produce of these articles to the revenue at the present moment is 571,000*l.*; the immediate relief given by the reduction on the same quantities would be 267,000*l.*, but, with the allowance which we think may be made for an immediate increase of consumption, the probable net loss will be 185,000*l.* (Hear, hear.) Besides these articles of food, which are 18 in number, including tea, there are 123 articles which we propose to set altogether free from duty, involving a loss of 53,000*l.*, and 153 articles which we propose to reduce, involving a gross loss of 76,000*l.*, but which, with increased consumption, may be taken at 52,000*l.* (Hear, hear)

The effect of this will be to create a simplification of the present system; but at the same time I must draw attention to the fact that the changes of *ad valorem* duties into rated duties will call for greater specification, and the regulations I shall lay on the table will enable the House, when they come to the consideration of them, to assist the Government in determining whether in any of the cases I have stated it will not be better to adhere to the *ad valorem* duty (Hear, hear). All I now say is, that the proposal does not wear the appearance of complicity that may be desired, it is because the change tends to multiply specification (Hear, hear). The effect of these various changes in the Customs duties, as applicable to the year 1853-4, will be to produce a gross loss of 1,338,000*l.*; but a loss which, we trust, will again be reduced by increase of consumption to 658,000*l.* (Hear, hear). The remission of taxes we propose as applicable to 1853-4 will cause a gross loss in the Excise of 756,000*l.*, or a net loss of 771,000*l.*; in stamps, a gross loss of 417,000*l.*, or a net loss of 200,000*l.*; in post-horses, 27,000*l.* in Customs, altogether, the gross amount of 1,338,000*l.*, or a net loss of 658,000*l.* (Hear, hear); thus showing a remission of taxation for the present year of 2,563,000*l.* (Cheers); and a loss incurred by the revenue, after allowing for the degree in which the remission will be placed by increased consumption, of 1,656,000*l.* (Cheers)

Therefore, Sir, the state of the account for 1853-54 stands thus:—We have a surplus of 896,000*l.* We invite you to grant us the means of raising by new taxes the sum of 1,344,000*l.*; making an available fund of 2,240,000*l.* We propose to enact, and to take effect at once, a remission of taxes that will entail a loss to the revenue of 1,656,000*l.* There will remain a surplus sum of 468,000*l.*, of which 268,000*l.*, exceeding 200,000*l.*, will be, not from permanent sources, but money that will not come in again. The committee will be of opinion that it would not be prudent, especially as we have in contemplation a scheme affecting the debt, to proceed with a surplus less than this (Hear).

I have still the important duty to discharge of redeeming the pledge which I gave the committee, to the effect that the Government were not pattering with you nor with the people of England about the Income-tax, but that when we state we propose to place you in a condition to remove it at a future day, which we are prepared to define, we make that proposal on the basis of calculations which, though they might not be tried as minutely as if they were for the present moment may, yet, I think, are on a most safe and secure calculation (Hear, hear). First let me present the balance sheet of 1854-55. We left the year 1853-54 with a surplus of about half a million, a considerable portion of which does not consist of permanent income. In 1854-55 I give you an additional source of income that will be available. That additional charge will be—on the Tea-duties, 510,000*l.*; on post-horses, 27,000*l.*; the remainder of the Soap-duties, 340,000*l.*; Assessed-taxes, 179,000*l.*; Colonial-postage, 40,000*l.* All the additional charges which we now write you to calculate upon for 1854-55 will be 1,087,000*l.* (Hear). Then the Legacy duty will be available for the second year to the extent of 1,000,000*l.*; the 2½ per Centy, of which, according to the usual principle of computation, one half is taken credit for, will give a sum of 312,000*l.* The second moiety of the extension of the Income-tax will add to this income 296,000*l.* Putting these sums together, you will find that the whole additional charge proposed to be made for 1854-55 will be 1,087,000*l.*; and the additional income which I propose being 1,367,000*l.* there will be, so far as that year is concerned, a profit which will justify the House, I think, in giving its assent to the remissions which I have proposed for relief

At the same time it is right that the committee should have fully and clearly in view the complete extent of these remissions of indirect taxation. They will be as follow:—Soap-duties, 1,126,000*l.*—(I am now taking the extent of the relief); stamps, 418,000*l.*; Assessed-taxes, 290,000*l.*; post-horses, 54,000*l.*; total so far as the Board of Inland Revenue is concerned 1,888,000*l.* Then in the Customs-duties the gross loss will be no less than 3,584,000*l.* in articles of food—butter, cheese, and so on -262,000*l.*; on minor duties, 120,000*l.*; or a total relief under the head of Customs-duties of 3,446,000*l.* (Hear, hear). Adding to these various amounts the sum I have described under the head of colonial postage—40,000*l.*—the entire amount of remissions of indirect taxation to which the Government now invite the committee to assent will be not less than 5,384,000*l.* (Cheers). With this remission of indirect taxation, I am deeply convinced that the measure in which the question of the Income-tax had been taken up. He was satisfied that the taxation of the country would never be placed on a proper footing until a Property-tax to a large extent, and justly regulated, became a permanent source of revenue. From such a tax eight or nine millions a year might be easily raised. He regretted, too, that any increased taxation should have been proposed, considering, as he did, the expenditure which gave rise to that increased taxation worse than useless. He thought a reduction of nine years was almost making it a perpetuity, without giving the House the advantage of deciding whether or not it should be so. If they were to add to the taxation, he must express his regret that they had not adopted a simple, easy, and possible mode of raising the required amount of revenue without one-tenth of the difficulties which the Chancellor of the Exchequer had felt in his Budget.

Mr. Fenwick hoped the right hon. gentleman would give some explanation of what he meant to do with the Land-tax.

The Chancellor of the Exchequer said that under the present system they might redeem a given amount of Land-tax by transferring to the Commissioners of the National Debt as much stock as would produce a dividend the amount of the Land-tax and 10 per cent more. What he proposed was, that, instead of being bound to give as much stock as would produce the amount of Land-tax and 10 per cent more, they might redeem it by giving as much stock as would produce the duty less 7½ per cent; that was, altogether, 17½ per cent less than at present.

Mr. Ball had been prepared to receive the Budget of the right hon. gentleman with very great approbation, but he received it with deep regret, and should do all he could to induce the House to vote against it when it came regularly before them. When the Corn-laws were repealed, it was expected that some relief would be given to the agriculturists, and he was exceedingly surprised, therefore, that the right hon. gentleman had neglected to afford them the relief of the repeal of the Malt tax. A large reduction of the duty on tea, the poorer classes would derive no benefit from it, for it had been ascertained that the greater part of the tea that was consumed was purchased in quantities from a quarter of an ounce to a quarter of a pound. The late Government was prepared to do away with the right hon. gentleman below him, and it was not unlikely the present Government might be wrecked from the same cause.

Mr. Maguire understood that, as to the Advertisement-duty in England, there was to be a reduction to 1*d.*, so that it would be 6*d.* only instead of 1*s.* 6*d.* But the advertisement duty in Ireland was but 1*s.* He should wish therefore, to know what the duty was to be in future. In Ireland there was no such thing as a supplement to a paper known, and he believed that even in London, too, the *Times* alone published a supplement.

The Chancellor of the Exchequer was understood to say, that, with respect to the Advertisement-duty, he was willing to compound for it in Ireland at the same amount as in this country.

Mr. Corden wished to know whether the right hon. gentleman proposed to remit the stamps on all supplements, or whether he meant to put the stamp on supplements with new-

The Chancellor of the Exchequer said the remission of the stamp would not extend to supplements that were simply an extension of newspapers.

Mr. Cobden: Did the right hon. gentleman mean that supplements might go by post?

The Chancellor of the Exchequer: Certainly

Mr. Corden believed that there was but one newspaper in the kingdom that published a supplement full of advertisements.

Mr. Hume wished the Government would take into their consideration this absurdity—that ships built with foreign timber might be brought into this country free of duty, but timber to build ships here cannot be brought in without paying duty

The Chancellor of the Exchequer was extremely sorry to say his want of means, and not his want of will prevented him from taking off the timber duty. If his hon. friend would give him 300,000*l.* or 400,000*l.* more he might be able to do so (A laugh.)

Mr. Hume said that if the Property-tax was fairly levied, it would give 10,000,000*l.* and would enable the Chancellor of the Exchequer to take off the timber duty and do much more

The House then resumed, and the Chairman reported progress, and asked leave to sit again

RESOLUTIONS

to be proposed by the Chancellor of the Exchequer in accordance with h's speech on Monday last:—

I.—CUSTOMS.

No. 1.—That the Duties of Customs chargeable upon the Goods, Wares, and Merchandise hereafter mentioned, imported into the United Kingdom, shall cease and determine, viz.:—

Agates or Cornelians, cut or manufactured; Amber, manufactures of, not enumerated; Anchovies; Aquafortis:

Bandstring twist; barytes, sulphate of, ground; bast ropes, twines, and strands; blacking; brass, powder of; bricks and clinkers, Dutch and other sorts; bronze powder; brushes, paint; buttons of metal and other sorts.

Cables, not of iron, new and old, tarred and untarred; cameos, not set; camphor, refined; canthurides, carmine, carriages of all sorts, casts empty, castings, milk prepared or manufactured, and not otherwise enumerated; chicory or any other vegetable substance applicable to the uses of chicory or coffee, viz., raw or kiln-dried; cider, citron preserved in salt; cobalt, oxide of; cork rope, twine, and strands; copper, ore of, regulus of; old, fit only to be re-manufactured; unwrought, viz., in bricks or pigs, rose copper, and all cast copper, part wrought, viz., bars, rods, or ingots hammered or raised, in plates and copper coin; or brass wire. Cordage, tarred or untarred, including standing or running rigging; corks, fishermen's; crayons; crystal, cut or manufactured; cucumbers preserved in salt.

Elder-flower water, extract of chesnut bark and wood, gamelitron bark, logwood, safflower.

Fish, viz.:—Eels, turbots, of foreign taking, oysters, salmon, soles, turbs; fresh, not otherwise enumerated; cured, not otherwise enumerated; frames for pictures, prints, drawings, or mirrors; furniture woods, excepting ash, beech, birch, elm, oak wainscot.

Gauze of thread, Glass—any kind of window glass, white, or stained of one colour only, not exceeding one-ninth of an inch in thickness, and shades and cylinders of glass exceeding one-ninth of an inch in thickness, all silvered or polished glass of whatever thickness, however small each pane, plate, or sheet; painted, or otherwise ornamented; all white flint glass bottles, not cut, engraved, or otherwise ornamented, and beads and bugles of glass; wine glasses, tumblers, and all other white flint glass goods, not cut, engraved, or otherwise ornamented, bottle of glass covered with wicker (not being cut glass), or of green or common glass; articles of green or common glass, manufactures not otherwise enumerated or described, and old broken glass fit only to be re-manufactured; gold, leaves of; gunpowder.

Hair, manufactures of hair or goat's wool, or of hair or goat's wool and any other material not particularly enumerated or otherwise charged with duty; hams of all kinds, harp-strings, lute-strings, silvered; honey.

Ink, Indian; isinglass.

Latten-wire; lead, pig and sheet; linen, or linen and cotton, viz—cambrics and lawns, commonly called French lawns, whether plain or bordered, lawns of any sort not French, damasks and damask diaper, sails of all sorts; liquorice root.

Mats and matting, mead, or metheglin, meat preserved in any other manner than salted; mercury, prepared; metal, leaf metal.

Naphtha.

Oil of rosin, olive, orange-flower water, orsedew.

Painters' colours, manufactured; pencils, of slate and not of wax; perry, phosphorus, pickles and vegetables preserved in salt, pictures, pomegranates, pots, viz., melting pots for goldsmiths, of stone; poultry and game, alive or dead.

Rose-water.

Saccharum saturni, sausages or puddings, silkworm-gut, skins, articles manufactured of skins or furs, smalts, spectacles; spelter or zinc, viz., rods and oxide of, stone and slate, hewn; marble sawn into slabs, or otherwise manufactured.

Tamarinds; tiles; tin, viz., in blocks, ingots, bars, or slabs; tobacco-pipes of clay; tongues, truffles; turpentine, at a greater value than 12s. per cwt., oil or spirit of; twine.

Vanellees; varnish, not otherwise described; verdigris, verjuice, vinegar.

Wafers, wax (sealing), whipcord; wire, viz., gilt, plated, silver, and brass, waste-wood, viz., billets-wood or brush-wood, used for the purpose of stowage.

Yarn, of silk and worsted, spun together and not dyed; yarn, worsted yarn, not dyed or only partially dyed, and not being fit or proper for embroidering or other fancy purposes; yarn cable-yarn.

No. 2.—That in lieu of the Duties of Customs now chargeable on Tea imported into the United Kingdom, the following Duties shall be charged; that is to say, upon every Pound of Tea:—

To 5th April, 1854, inclusive.	From and after 5th April, 1854, to 5th April, 1855, inclusive.	From and after 5th April, 1855, to 5th April, 1856, inclusive.	From and after 5th April, 1856.

II.—EXCISE.

No. 1.—EXCISE LICENSES.

That from and after the 5th of July, 1853, the Duties of Excise payable under any act or acts now in force, for or in respect of licenses to be granted in England, Scotland, and Ireland, respectively, to persons trading in or selling Coffee, Tea, Cocoa-nuts, Chocolate, or Pepper; to dealers in or sellers of Tobacco or Snuff; to Manufacturers of Tobacco or Snuff; to Maltsters or Makers of Malt; to Brewers of Beer for sale; and to Makers of Soap respectively, shall severally cease and determine; and in lieu thereof there shall be paid for and in respect of the several licenses hereinafter mentioned the several Rates and Duties of Excise hereinafter specified, that is to say:—

DEALERS IN COFFEE, &c.	Annual License Duty. £ s. d.
For and in respect of every license to be taken out yearly by every person trading in or selling coffee, tea, cocoa-nuts, chocolate, or pepper:—	
If the house and premises at which any such trade or business shall be authorised by such license to be carried on shall not be of an annual value exceeding £10	0 11 6
And if the annual value of such house and premises shall exceed £10, then, in addition to the duty aforesaid, for every twenty shillings, and for any fractional part of twenty shillings of the excess of such annual value above £10, the further duty of	0 1 0

DEALERS IN TOBACCO AND SNUFF.

For and in respect of every license to be taken out yearly by every dealer or seller of tobacco or snuff:—

If the house and premises at which any such trade or business shall be authorised by such license to be carried on shall not be of an annual value exceeding £10	0 5 3
And if the annual value of such house and premises shall exceed £10, then, in addition to the duty aforesaid, for every twenty shillings, and for every fractional part of twenty shillings, of the excess of such annual value above £10, the further duty of	0 0 6

MANUFACTURERS OF TOBACCO OR SNUFF.

For and in respect of every license to be taken out yearly by every manufacturer of tobacco or snuff:—

If the tobacco entered for manufacture by the person applying for such license within the year ending the 5th day of July previous to taking out the same, shall not have exceeded 20,000lb weight	5 5 0
And if such tobacco shall have exceeded the weight aforesaid, then for every 20,000lb weight thereof	5 5 0
And for any fractional part of 20,000lb over and above the first, or any multiple of 20,000lb weight of such tobacco, the further duty of	5 5 0
And every person who shall first become a manufacturer of tobacco or snuff, on taking out such license as aforesaid for that purpose, shall pay the sum of £5 5s., and shall, within ten days after the 5th day of July next, after taking out such license, pay such further sum as with the said sum of £5 5s. shall amount to the duty hereinbefore mentioned, according to the quantity of tobacco entered for	

	£ s. d.
[illegible] within the preceding year or part thereof, which such license was granted	0 5 0

MALTSTERS

For and in respect of every license to be taken out yearly by every maltster or maker of malt.

If the quantity of malt made by the person applying for such license within the year ending the 5th day of July previous to taking out the said license shall not have exceeded 50 quarters 0 7 10

And if the quantity of malt so made shall have exceeded 50 quarters, then for every 50 quarters thereof 0 7 10

And for any fractional part of 50 quarters or more than above the first, or any multiple of 50 quarters of malt so made, the further duty of 0 7 10

And every person who shall first become a maltster or maker of malt, on taking out such license as aforesaid for that purpose, shall pay the sum of 7s. 10d., and shall, within 10 days after the 5th day of July next after taking out such license, pay such further sum as with the said sum of 7s. 10d. shall amount to the duty hereinbefore mentioned, according to the quantity of malt made by him within the preceding year, or period for which such license was granted.

BREWERS

For and in respect of every license to be taken out yearly by every brewer of beer for sale:—

If the quantity of beer brewed by the person applying for such license within the year ending the 10th day of October previous to taking out the same shall not have exceeded 20 barrels 0 10 6

And if the quantity of beer so brewed shall have exceeded 20 barrels and shall not have exceeded 50 barrels 1 1 0

And if the same shall have exceeded 50 barrels and shall not have exceeded 100 barrels 1 11 6

And if the same shall have exceeded 100 barrels and shall not have exceeded 200 barrels 2 2 0

And for any fractional part of 200 barrels over and above the first, or any multiple of 200 barrels of beer so brewed, the further duty of 2 2 0

And every person who shall first become a brewer of beer for sale, on taking out such license as aforesaid for that purpose shall pay the sum of 10s. 6d., and shall, within 10 days after the 10th of October next after taking out such license, pay such further sum as with the said sum of 10s. 6d. shall amount to the duty hereinbefore mentioned, according to the quantity of beer brewed by him with in the preceding year or period for which such license was granted.

SOAPMAKERS

For and in respect of every license to be taken out yearly by every maker of soap for sale :—

	£ s. d.
If the soap-house and premises at which such trade or business shall be authorized by such license to be carried on shall not be of an annual value exceeding £10 ..	2 10 0
And if the annual value of such soap-house and premises shall exceed £10, then for every £10 of such annual value	2 10 0
And for any fractional part of £10 over and above the first, or any multiple of £10 of such annual value, the further duty of ..	2 10 0

No. 2.—EXCISE DUTY ON SOAP.

That from and after the 5th of July, 1853, the duties of excise now payable on soap which shall be made in Great Britain, or imported or brought from Ireland into Great Britain, shall cease and determine

No. 3.—EXCISE DUTY ON SPIRITS.

That there shall be paid, in addition to the duties of excise now payable on spirits in Scotland and Ireland respectively, upon every gallon of spirits of the strength of hydrometer proof, which shall, on or after the 5th July, 1853, be distilled in Scotland and Ireland respectively, or be in the stock, custody, or possession of any distiller in Scotland or Ireland, or which, having been distilled in England, Scotland, or Ireland, shall on or after the said day be in warehouse in Scotland or Ireland, and be taken out of warehouse for consumption in Scotland or Ireland, or which, having been taken out of warehouse in England for removal to Scotland or Ireland, shall on or after the said day be brought into Scotland or Ireland, the additional duty following (that is to say):—

In Scotland	1s. 6d.
In Ireland	1 0 6

No. 4.—DUTIES ON LICENSES TO LET HORSES FOR HIRE

That, from and after the 10th of October, 1853, the duties of excise payable under any act or acts now in force on horses let for hire, and on licenses to let the same; and also the duties of assessed taxes payable under any such act or acts as aforesaid, in respect of carriages of any description *hand fide* kept and used solely for the purpose of being let for hire with any horse or horses to be used therewith, by any person licensed to let horses for hire, shall respectively cease and determine; and, in lieu thereof, there shall be paid for and in respect of every License to be taken out yearly by every person who shall let any horse for hire, with or without any carriage to be used there with, the following duties of Excise (that is to say):—

Where the person taking out such license shall keep or at one and the same time to be let for hire—	Annual Licence Duty £ s. d.
1 horse or 1 carriage only	5 0 0
More than 1 horse and less than 4 horses, or more than 1 carriage and less than 3 carriages	10 0 0
4 horses and less than 8 horses, or 3 carriages and less than 5 carriages ..	15 0 0
8 horses and less than 12 horses or 5 carriages and less than 7 carriages ..	20 0 0
12 horses and less than 16 horses, or 7 carriages and less than 10 carriages ..	25 0 0
16 horses and less than 20 horses, or 10 carriages or more	30 0 0
20 horses and no more	30 0 0

And if more than 20 horses, then for every add. sional number of 10 horses, and for any additional number less than 10 over and above 20, or any other multiple of 10 horses, the further additional duty of .. 5 0 0

No. 5.—HACKNEY CARRIAGES.

That upon and after the 10th day of October, 1853, the duties now payable upon and in respect of licenses to keep and let to hire hackney carriages within the distance of five miles from the General Post-office, in the city of London, shall cease and determine; and in lieu thereof there shall be paid the following duties (that is to say):—

	£ s. d.
For every license to be taken out yearly by any person to keep, use, employ, or let to hire any hackney carriage within the limits of seven miles from the General Post-office, in the city of London ..	1 0 0
And for and in respect of every license, weekly and every week during the continuance thereof	£ s. d. 0 5 0

III.—PROPERTY AND INCOME-TAX.

That it is the opinion of this committee, that towards raising the supply granted to her Majesty, there shall be raised annually, during the terms hereinafter limited, the several rates and duties following (that is to say)

For and in respect of the property in any lands, tenements, or hereditaments, in the United Kingdom, and for and in respect of every annuity, pension, or stipend, payable by her Majesty, or out of the public revenue of the United Kingdom; and for and in respect of all interest of money, annuities, dividends, and shares of annuities payable to any person or persons, bodies politic or corporate, companies or societies, whether corporate or not corporate; and for, and in respect of the annual profits or gains arising or accruing to any person or persons whatever, resident in the United Kingdom, from any kind of property whatever, whether situate in the United Kingdom or elsewhere, or from any annuities, allowances, or stipends, or from any profession, trade, or vocation, whether the same shall be respectively exercised in the United Kingdom or elsewhere; and for and in respect of the annual profits or gains arising or accruing to any person or persons not resident within the United Kingdom from any property whatever in the United Kingdom, or from any trade, profession, or vocation exercised in the United Kingdom; for every 20s. of the annual value or amount thereof .. .. £ s. d.

For two years from April 5, 1853 ..	0 0 7
And for two years from April 5, 1855 ..	0 0 6
And from three years from April 5, 1857 ..	0 0 5

And that, on April 5, 1860, except as the collection of money then due, the said rates and duties shall cease and determine.

And for and in respect of the occupation of such lands, tenements, or hereditaments (other than a dwelling-house occupied by a tenant distinct from a farm of lands), for every 20s. of the annual value thereof, one moiety of each of the said sums of 7d., 6d., and 5d., for the above named times respectively.

IV.—ASSESSED TAXES.

That, from and after the 5th day of April, 1854, the duties of assessed Taxes payable in Great Britain, under or by virtue of any Act or Acts now in force, for in respect of male servants, carriages, horses, mares, or geldings, mules, dogs, hair-powder, and armorial bearings or ensigns respectively; and all compositions for the said duties or any of them, shall respectively cease and determine; and, in lieu thereof, there shall be paid the several duties contained in the several schedules following, marked respectively (C), (D), (E), (G), (I), and (K); (that is to say):—

SCHEDULE (C).—SERVANTS.

For every male servant retained or employed in any of the several capacities mentioned in Schedule (C), annexed to the Acts 46 George 3, c. 55, and 52 George 3, c. 93, respectively :—

	Annual Duty. £ s. d.
For every such servant of the age of 18 years or upwards	1 1 0
And for every such servant under the age of 18 years	0 10 6

SCHEDULE (D) CARRIAGES.

For every carriage with four wheels, of any of the descriptions mentioned in Schedule (D) of the said Acts 46 George 3, c. 55, and 52 George 3, c. 93 respectively :—

	Annual Duty. £ s. d.
Where any such carriage shall be drawn by two or more horses, mares, geldings, or mules—	
If such carriage shall be kept and used solely for the purpose of being let to hire ..	3 0 0
And if kept and used for any other purpose, or on any other occasion	3 10 0
And where any such carriage shall be drawn by one horse, mare, gelding, or mule only	2 0 0
And for every carriage with less than four wheels of any of the descriptions aforesaid :—	
Where the same shall be drawn by two or more horses, mares, geldings, or mules	2 0 0
And where the same shall be drawn by one horse, mare, gelding, or mule only ..	0 15 0

And for every additional body kept to be successively used on the same carriage or wheels, the additional duty of one-half of the said rates or sums respectively.

SCHEDULE (E).—HORSES.

For every horse, mare, or gelding, of the height of thirteen hands or more, kept or used for the purpose of riding or drawing any carriage chargeable with duty :—

	Annual Duty £ s. d.
Where any such horse, mare, or gelding shall be kept or used for the purpose of racing or running for any plate, prize, or sum of money, or other thing, or kept in training for any of the said last-mentioned purposes	3 17 0
And for every such horse, mare, or gelding as aforesaid, of the height of fifteen hands or more, not kept or used for the purpose last-mentioned	1 1 0
And for every other horse, mare, or gelding, and also for every mule, of whatever height respectively	0 10 6

SCHEDULE (G). DOGS.

	Annual Duty.
For every greyhound kept by any person ..	£1 2 0
For every other dog, of whatever description or denomination the same may be ..	0 12 0

SCHEDULE (I).—HAIR-POWDER

	Annual Duty
In respect of hair-powder used or worn by any person	£1 5 10

SCHEDULE (K).—ARMORIAL BEARINGS.

In respect of any armorial bearing or ensign, by whatever name the same shall be called, used, or worn by any person :—

	Annual Duty
Where such person shall be chargeable with any duty of assessed taxes for any carriage	£2 12 9
Where such person shall not be so chargeable for any carriage, but shall be chargeable to the duties on inhabited houses ..	1 6 4
And where such person shall not be so chargeable to any of the said duties ..	0 18 2

V.—LAND TAX REDEMPTION CONSIDERATION

That, in lieu of the consideration mentioned in the 42nd George 3, chap. 116, sections 22 and 23, and the 53rd section of (L) annexed to the said Act, to be given or paid for the redemption of the Land-tax, the consideration for such redemption shall be so much of the capital stock of the Three Pounds per Cent Consolidated Annuities and the Three Pounds per Centum Reduced Annuities, or one of them, as will yield an annuity or dividend less than the amount of the Land-tax to be redeemed by and at the rate of seven pounds ten shillings per £100; or, where the sum to be redeemed shall not exceed £25, such consideration may be the payment of a sum of money less by and at the rate of seventeen pounds ten shillings per £100 than the amount of the money consideration calculated and ascertained according to the table in the said schedule (L).

VI.—STAMP DUTIES.

No. 1. -STAMPS.

That from and after the 5th of July, 1853, in lieu of the Stamp-duties now payable upon or in respect of the several instruments, matters, and things hereinafter described, there shall be paid the several Stamp-duties hereinafter specified (that is to say):—

	£ s. d.
Upon every indenture, or other instrument or writing of apprenticeship or clerkship (except articles of clerkship to attorneys and others, in order to admission in any court, or any office in any court)	
Where no sum of money or value shall be paid, given, assigned, conveyed, or secured to or for the use or benefit of the master or mistress, the duty of ..	0 2 6
And upon or in respect of any assignment or transfer of any such indenture, instrument, or writing as aforesaid, where there shall be no sum of money or value moving to any new master or mistress, the duty of	0 2 6
Upon articles of clerkship, or any contract whereby any person shall first become bound to serve as a clerk in order to his admission as an attorney or solicitor in any of her Majesty's Courts at Westminster or in Ireland, or any other Court of Record in England holding pleas where the debt or damage amounts to 40s.; or in order to his admission as a proctor in the High Court of Admiralty in England, or the Court of Admiralty in Ireland, or in any of the Ecclesiastical Courts in Doctors' Commons or in Ireland; or in order to his admission as a writer to the Signet, or as a solicitor, agent, attorney, or procurator in any court in Scotland, and by every person admitted or enrolled as a notary public in England, Scotland, or Ireland—	
If he shall reside in the City of London, or City of Westminster, or within the limits of the two-penny post in England, or within the City or Shire of Edinburgh, or in the City of Dublin, or within three miles thereof; if he shall have been admitted for the space of three years or upwards	80 0 0
If he shall not have been admitted so long	40 0 0
If he shall reside elsewhere, and if he shall have been admitted for the space of three years or upwards	30 0 0
If he shall not have been admitted so long	15 0 0
Upon any policy of assurance or insurance, or other instrument by whatever name the same shall be called, whereby any insurance shall be made upon any life or lives, or upon any event or contingency relating to or depending upon any life or lives—	
Where the sum insured shall not exceed £50	0 0 6
And where the same shall exceed £50 and shall not exceed £500, the duty for every £50	0 0 6
And for any fractional part of £50 over and above the first, or any multiple of £50, the further duty of	0 0 6
And where the same shall exceed £500 and shall not exceed £1000, then for every £100	0 1 0
And for any fractional part of £100 over and above the first, or any multiple of £100, the further duty of	0 1 0
And where the same shall exceed £1000, then for every £100	0 10 0
And for any fractional part of £1000 over and above the first, or any multiple of £1000, the further duty of	0 10 0
Upon any receipt or discharge given for or upon the payment of money, amounting to £2 or upwards	0 0 1
For or in respect of any advertisement contained in or published with any gazette or other newspaper, or any other periodical paper, or in or with any pamphlet or literary work	0 0 6
Upon any draft or order for the payment of any sum of money to the bearer on demand, and drawn upon any banker, or any person acting as a banker, who shall transact the business of a banker at any place where such draught or order shall be payable, such place being distant fifteen miles or more from the place where such draught or order shall be issued, provided such draught or order shall bear date on or before the day on which the same shall be issued, and provided the same do not direct the payment to be made by bills or promissory notes, the duty of	0 0 1

No. 2.—NEWSPAPER SUPPLEMENTS

That so much of any Act as imposes any Stamp Duty upon any sheet or piece of paper containing wholly advertisements, and which shall be published with, and as a supplement to, any newspaper chargeable with Stamp Duty, shall be repealed

No. 3.—LEGACY DUTY

That the Stamp Duties payable by law upon, or for, or in respect of legacies, shall be granted and made payable upon, and for every succession to, the beneficial enjoyment of any real or personal estate, or to the receipt of any portion or additional portion of the income or profits thereof that may take place upon, or in consequence of the death of, any person, under whatever title, whether existing or future, such succession may be derived.

ADVERTISEMENTS.

MADAME PAULINE begs to inform the Nobility, &c., that she has RETURNED from PARIS with an entire New and Elegant Assortment of LINGERIE, ROLVEAUTES, DRESS CAPS, and TOQUES BLANCHE; also, a great choice of Patterns for Bridal Outfits, Prince-street, Hanover-square

FOOT COVERING of every description for LADIES now ready at COOPER'S and HANCOCK'S, 3, COVENTRY-STREET, Regent-street, Bootmakers to her Majesty, and Purveyors of the Most Honourable Royal Watering-place Club.

DO YOU KEEP LIVERY SERVANTS?—DOUDNEY'S LIVERIES please masters and servants. Footman's suit, 3 to 4 guineas. 17 and 18, Conduit-street, 4 Burlington-arcade, and 5, Cleveland-row. Established 1784.

CAPPER, SON, and MOON, 164, REGENT-STREET, LONDON.

(newly opposite New Burlington-street.)

GLENFIELD PATENT STARCH, used in the Royal Laundry,

And WOTHERSPOON and Co.'s Steam-made COMFITS and LOZENGES

Have obtained H. Wotherspoon, 40, Dunlop-street. London Depôt: Wotherspoon, M'Kay, and Co., 60, King William-street, City

£45,000 is now ready to be advanced in Sums of from £100 and upwards, at a moderate rate of interest, by a responsible SOLICITOR, on mortgages of real and personal security. Address (in the first instance), with full particulars, JOHN BOLTON, Esq., care of Mr. Kerr, law stationer, Chichester Rents, Chancery-lane, London.

CHUBB'S FIRE-PROOF SAFES and LOCKS.—These Safes are the most secure from fires, fraud, and fire. Chubb's Locks, with all the recent improvements. Cash and Deed Boxes of all sizes. Price Lists, with prices, will be sent on application.—CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley Wednesbury.

FIRE ANNIHILATORS.—Their practical value is now proved incontestably by several cases of use at all fires, and formally acknowledged by the decision of the Essington Commissioners of Patents. Prospectuses may be had at the Fire Annihilators Office, 75, Cornhill. Apply to the Secretary of the Fire Annihilator Company, No. 105, Leadenhall-street, City. Agents—Messrs. Horton, Liverpool; Batchelor and Leeds; Hulme and Co., Lewis-street, Chippenham; Small and Co., Glasgow; Mr. Carmichael, Dublin; Mr. Rogg, Limerick; Mr. Fynn, Galway, Little and Co., Londonderry.

PURE ROUSSILLON, 26s. per dozen, from the vineyard direct. One of the finest known red wines, firm bodied, of high colour, and rich tinge, has the deep glow of Burgundy, a bouquet resembling the finest Port, but fresher, smoother on the palate, and a merit of not smaller utility in these temperate days which are sent to it as not like as Port, is rich, racy, soft, and one glass only will keep it a great age, some 30 years and upwards of a very modest kind are its character state. POSTEL and INGLE, Wine-growers, Mula Rosery, Ste. Chapelle, Perpignan. Sold by Standard or natural, but a ruby-looking Port for each carriage free.

PRICE'S DISTILLED PALM CANDLES. 1lb. Weight and 10 Box for 9d., can now be had from all dealers. Manufactory, Battersea. Price's Patent Candle Company. Sole Address, Belmont, Vauxhall Surrey

IMPORTANT to SLOPPERS, TAILORS, and CORSET, SACK, and BAG MAKERS. The Lancashire Sewing Machine Company beg to call the attention of all persons interested in sewing or attaching fabrics of any kind to a new MACHINE for this purpose. It is patented by themselves, presents the following advantages over any other or hand lock-stitch. The stitching is more uniform and firmer, as every stitch is possible for hands to make it. The machine is simple in its action and constructed, and will produce more work than any twenty hand sewers. It will work a fine, heavy, or turn a square corner, as well as sew a straight line; and can be worked by any person. Illustrated Prospectuses, recipe books, and patterns of the Machine, may be had on application at the Company's Offices, 7 Lower-mosley-street, Chapel-le, London, or 86, Blackfriars-st. eet Manchester.

THE ILLUSTRATED LONDON NEWS

No. 619.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, APRIL 30, 1853 [SIXPENCE.

THE OPPOSITION TO THE BUDGET.

It was not to be expected that a scheme so great, and dealing with such a variety and complexity of interests as the new Budget and the amended Tariff, should be introduced into Parliament without exciting opposition. Some curiosity, however, was naturally felt throughout the country as to the form which opposition should assume. It was not destined long to remain unsatisfied. The leaders of the last Administration, unable as they were to introduce a Budget without exciting public derision, have sufficient tact and ingenuity to pick holes in the Budget of their successors. But then any one can object to a Budget. Nothing is so easy as criticism, especially that kind of criticism which is determined not to be pleased, and which has made up its mind to be ill-natured, sarcastic, unreasonable, and unjust. The point chosen by the opponents of the Budget for their first attack is the re-imposition of the Property and Income-tax. The assault was commenced on Monday night, by Sir Edward Bulwer Lytton—who as a novelist every day grows better and better, and as a politician every day grows worse and worse. But in the speech of the hon. Baronet, and in those of the hon. members who succeeded him in the discussion, there was no adherence to the one subject selected for the first outburst of hostility. Almost every item in the statesman-like project of the Government was in turn assailed, for reasons the most opposite and inconsistent. Sir Bulwer Lytton and others objected to the Property and Income-tax because it did not establish a minor rate for precarious income; and yet, while they thus insisted that incomes derived from landed property ought to bear a heavier burden than incomes derived from trades and professions, they very inconsistently complained that the Government, in its Budget, showed a disposition to press, with undue severity, upon the landed aristocracy and the other possessors of the soil. But of all the objections to the Property and Income-tax, the most thoroughly Irish, and we might, therefore, not unreasonably add un-English, came, as was to be expected, from Ireland. Because it is proposed that those who have property and income in Ireland should pay three per cent upon it, as Englishmen and Scotchmen do, a cry of robbery is raised. "The Income-tax," said the honourable member for an Irish borough, "would be a crushing blow for Ireland. The sword was taken from the sheath to strike her down in her weakness." If Irish paupers and bankrupts, and other people without any income whatever, were called upon to pay an Income-tax, the arguments of this speaker might have something like a foundation, and his bold metaphor might pass unquestioned. The Government would, in this case, show its malevolence to that country; but would deservedly get nothing for its pains. Is it not a time-honoured maxim, that out of nothing nothing comes? and that a housewife cannot skin a flint, or a creditor get blood out of a stone, however desperately she or he may try? Another Irish member was even more unreasonable than his compeers, for he maintained that because the reduction of the Tea-duties was a boon in which England and Scotland were included as well as Ireland, it was, therefore, no boon to Ireland at all! This, as the Irish themselves might say, "bangs Banagher," and, if Irish members will argue in such a manner, we can forgive them with a good conscience for the mirth they excite in us, and be grateful too, that dull debates are occasionally thus enlivened.

There has long been a loud clamour about justice to **Ireland**; but, as we understand it, justice to Ireland includes justice to England. Undue favour to one section of the Empire is an act of injustice towards all. It is an act of injustice to Ireland to treat [illegible] of England, and to [illegible] whose false friends have persuaded her so long that she is afflicted with this hopeless malady, and with that incurable disease, that no persuasion can induce her to believe that she is not made of more delicate and brittle stuff than her neighbours. She dreads to be allowed to walk about like other people, lest her legs should break to pieces like rotten crockery, or her head topple off

LAUNCH OF HER MAJESTY'S SCREW STEAM-SHIP-OF-WAR, "JAMES WATT" (90 GUNS), AT THE ROYAL DOCKYARD, PEMBROKE.—(SEE NEXT PAGE.)

her shoulders and be smashed to shivers. Fortunately for Ireland, and fortunately for the character and utility of Mr. Gladstone's budget, Ireland is not so bankrupt as some of her false friends would have us believe. There are rent-rolls of from £20,000 to £50,000 per annum, even in that part of the empire. There are rich merchants and manufacturers in Cork, Dublin, and Limerick; there are sturdy and solvent yeomen in the black north; and there are linen manufacturers in Belfast and its neighbourhood who may vie in opulence with the men of Manchester; all of whom must be made to pay the Property and Income-tax, or justice will not be done either to Ireland or to England.

Next to the Property and Income-tax, the great object of attack appears to be the extension of the Legacy-duty to Real Estate. As the opposition proceeds in its development, it will probably be found that the party of Lord Derby and Mr. Disraeli, and of the heterogeneous regiment that is for awhile marching under their colours, attach far more importance to this item of the Budget than to any other. Nor in so doing would they be wrong as reasoners, though perhaps they might be unskilful as tacticians. The re-imposition of the Property and Income-tax for seven years, important as such a measure may be, and intimately as it is bound up with the whole scheme of the Budget, is, after all, a matter of less importance to the landed aristocracy than a tax upon successions to real estate. If, as the opponents of the Budget have just discovered, a tax upon successions be so great a grievance, why did they not, when in power, and when they had the means and the opportunity of doing so, abolish it as affecting Personal Estate? If such a tax be a bad tax it ought not to extend to the personal property of the defunct trader or manufacturer; and if it be a good tax when affecting the money, scrip, jewels, books, and other personalty of the trader, it ought to be equally good as affecting the broad acres of landed proprietors. Either there should be no such tax at all, or it should extend to real as well as to personal estate. Unless the Opposition be prepared to pledge themselves to the abolition of the tax as at this moment existing, they ought not, in justice, to object to Mr. Gladstone's equitable scheme for extending it. But the fact is, no party is prepared to abolish the tax on successions, and it is by no means so unjust, according to Mr. Gladstone's amendment of it, as its opponents would have us believe. A similar tax exists, we believe, in every country in Europe; and in England, as we learn from the unquestionable authority of one of the most instructive speakers in the House, Mr. H. Drummond, it dates its origin from the Conquest. That honourable gentleman humorously described the tax to be one "upon elder brothers." These gentlemen form an estimable portion of the community, no doubt, but they are not very multitudinous, and not entitled to any extraordinary sympathy for their liability to pay the Government a reasonable per-centage when they succeed to the enjoyment of their estates. Sir Edward Bulwer Lytton thought this tax "likely to break up the aristocracy." Not so thought Mr. H. Drummond. "Who," inquired that honourable gentleman, "were the persons who broke up the landed aristocracy in France? It was the younger brothers in the National Convention—it was the jealousy they felt when their fathers made a will. The elder brothers who inherited the land, paid no tax; while the younger brothers, if left a sum in money, had to pay upon it." Whatever value there may be in the historical illustration of Mr. Drummond, there can be no doubt of the fact that, if it be expedient that personal property should be liable to this tax, it is politic and just that real property should be liable to it also. We have no fears whatever that the landed aristocracy will be broken up or in the slightest degree affected by the new liability that is preparing for them. The aristocracy of Great Britain is too firmly rooted, and too broadly based, to be broken up by such a trifle as the tax that has so scared the imaginative member for Hertfordshire; and will flourish, we trust, strong and respected, after many generations of elder sons shall have cheerfully paid the tax to Mr. Gladstone, in common fairness, has proposed to levy upon them.

Though the symptoms of opposition are so decided upon these, as well upon other items in the Budget, there is reason to believe that the trial of strength which took place on a minor issue, on the 22nd inst., has sufficiently proved that Ministers will be able to carry their financial project by a satisfactory majority. They have wisely and courageously determined to stand or fall by their Budget; and, if defeated in the present Parliament, they will appeal to the country. But a dissolution would be too inconvenient, and the result too surely in favour of the Mini-try, to render it very likely that such a step will become necessary.

LAUNCH OF H.M.S. "JAMES WATT."

THE launch of this noble screw steam-vessel of war, sister ship to the *Agamemnon*, took place on Saturday afternoon last, at her Majesty's dockyard, in Pembroke.

The weather, which for some days previously had been most boisterous and unfavourable, cleared up on Friday night; and Saturday was as fine a day as could be wished for for the ceremony, a bright sunshine adding much to enliven the beautiful locality of the dockyard. Sheltered on all sides by lofty hills; forming one of the most picturesque and beautiful bays in the world; with great depth of water; capable from its position of safely admitting at all times, and in all states of the tide, and affording anchorage and refuge for ships of the largest tonnage, under all circumstances of weather; Milford Haven must, at no distant period, become the greatest and most important harbour in the United Kingdom.

The ship of war, whose launch we have illustrated, is not the first vessel Government have contemplated naming after the great engineer. The *Retribution* steam-frigate was laid at Sheerness as the *James Watt*, but the name was altered during construction; and this noble monument of naval architecture in combination with steam, has the honour of helping to perpetuate the memory of this most eminent name in the progress of steam.

The event, though far from causing the interest which the late launch of the *Duke of Wellington* occasioned through Wales, was not without its attractions; and, though market-day in Pater, it brought nearly the whole population of the place, and the surrounding neighbourhood, to witness the sight.

The building of the *James Watt* was commenced by Mr. Abethell, the master-shipwright, now at Portsmouth; and completed by Mr. Rice, the present master shipwright at Pembroke; she is a noble specimen both of model and excellent building, and a credit to every one concerned in her construction.

The ceremony of naming the ship was performed by Miss Pasley, the daughter of Sir Thomas and Lady Pasley, the Superintendent of the Dockyard; and at a little before five o'clock the gallant ship was safely and beautifully consigned to her future element, without accident or mishap, under a salute of 21 guns from H.M. steam-sloop *Magicienne*.

Ample accommodation had been provided by the authorities for the convenience of a large body of spectators, and every eminence and point from which a view of the interesting event could be obtained was crowded.

The *James Watt* is fitted with Robinson's patent slide valve, which is necessary, as the shaft of the screw comes up through the cabins; and it is therefore requisite, in order to clear the casing of the shaft, to have recourse to a long tiller. She will be fitted and commissioned at Plymouth. Her dimensions, power, and armament are as follow:—

	Feet	In.
Length, over all	265	3
,, between perpendiculars ..	230	0
,, keel for tonnage	194	6½
Breadth, extreme	55	6
,, for tonnage	54	7
,, moulded	53	9
Depth of hold	27	7½

Burthen, in tons, old measurement, 3083 7-94ths; new, 2093 5-20ths.
600-horse power.

Armament: Sixty-two 32-pounders, of 56 cwt., and 9 feet 6 inches in length; twenty-eight 8-inch guns; and one 68-pounder pivot gun, of 10 feet in length.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Paris danse, Paris se promène, Paris s'amuse, Paris va aux courses, preparatory to emigrating to the country, or to the square boxes stuck by the road-side, in the middle of treeless parterres, which in the environs of Paris occupy the place of our suburban villas and cottages. There are still fêtes, balls, soirées, and dinners going on. The last *toilettes* of the parting season—a little, a very little *fanées*—are bidding adieu to the public; the first of the coming one are proudly displaying their fresh charms, oddly intermingled by the caprices of the weather, which mixes furs and gauze, velvets and muslins in strange confusion, and obliges the *beau sexe* to sally forth with a parasol in one hand and a muff in the other, the latter, however, being much the more useful appendage.

The ball at the Tuileries, which will, probably, be the last of the season, was sufficiently brilliant and well attended, though some strange *toilettes*—and wrong, *par conséquent*, suppose some strange guests—found their way there. The Emperor, whose anxiety about the state of health of the Empress is considerable, only passed through the *salons*, and immediately returned to the private apartments.

The illness of the Empress, resulting from the imprudent use of a warm bath, is, it is feared, likely to be of some duration. This will at least defer, if not put an entire stop to, the morning *fêtes*, which it was anticipated would be given at St. Cloud in the early summer. It is, however, to be hoped that proper care and advice will re-establish the health of her Majesty sooner than the period named as possible for the continuance of her indisposition

The Faubourg St. Germain continues to *bouder*, and only gives dinners and *soirées en famille*; which present, for the most part, few attractions to excite the jealousy of the excluded of these exclusives. Most of the galeties, *à part* the official fêtes, are kept up by foreigners, especially Russians. Madame Nathalie de Demidoff and Princesse Sophie de Galitzin particularly distinguish themselves—the first by the representations of an admirably-constituted troupe of theatrical amateurs; the second by a concert, splendid both as to execution and attendance. Concerts, both public and private, continue to take place at all sides: there are *grands concerts, matinées musicales, soirées de musique*, right and left. Pianists, violonists, harpists, bassos, singers, seem to drop from the clouds; each presenting you with a ticket bearing, for the most part, a name you never heard before, and demanding ten francs in exchange—a sum you would, in eight cases out of ten, willingly give to be excused from appearing.

Notwithstanding the hail-storms and showers, and cutting blasts, the races—those of the Champs de Mars succeeding the steeple-chases of La Marche—are abundantly attended, and really present a very brilliant *coup d'œil*. The steeple-chases revealed a new phase in female caprice; or, more properly speaking, developed one which for some time has been growing into notice—that of adopting masculine habits, expressions, ideas, and tastes, among a class of women whose positions and education ought to place them above the ridiculous and offensive affectation of such a style. Fencing, smoking, betting, gaming, and the use of sporting terms, are among these accomplishments; and, as in the last-named the men are but little skilled, we may guess the frightful confusion of the women on the subject. But it is the French pronunciation of the English names of the horses and jockeys that forms the mystification of us insulars, who hear for the first time in our lives the names of *Tozfaces* (Tiger), *Glenlyon* (Glenlyon), and *Flimg-bunk* (Flying Buck), as those which we have bestowed on our coursers!

The Grand Opera is taking up some of the popular old ballets, "La Fille mal Gardée," and "Giselle;" with Mdlle. Mathilde Besson, a youthful, graceful, and agreeable dancer, of a certain amount of talent; and Mdlle. Regina Forli, varied by Orfa, the Spanish dancer. The Opéra Comique gives, this evening, a *représentation extraordinaire* for the benefit of the *œuvre des familles du 10me arrondissement*; consisting of two new operas—one composed by Duprez, the singer, and written by MM. Scribe and de Courcy; the music of the other by M. Montfort, the words a posthumous work of M. Bayard. A *pas* by Certo, and a piece selected from among the most popular of the Théâtre Français, complete the entertainment, which promises to be brilliant in every respect. Perhaps its greatest attraction will be the re-appearance, for this single occasion, of Mdme. Volnys, the *Léontine Fay*, who turned all heads in her childish parts, some no matter how many—years ago, and who still retains the name. Arnould Plessy has got an express permission from Russia for the purpose. The Italian Opera has risen from its ashes by the immense success obtained by Madame de la Grange—a success which has not only repaired the desperate failure of the commencement of the season, but assures its safety for the next. It is said that she has been offered an engagement *en blanc*, and has promised to accept it, filling up the blank with a sum only reasonable. The fortune reported to be left by the late banker, gives M. Corte, the manager, hopes of obtaining for next season the assistance of Grisi, Mario, and Tamburini, in exchange for the services of Mdlle. Cruvelli, who has the modesty to demand, *à elle toute seule*, a sum sufficient to satisfy the requirements of the three great talents put together.

A French paper states that an *appartement* has been taken in the *quartier* Montmartre, for Mrs. Stowe, who is coming to Paris to remain three months, previous to going to Italy; still *flying*, as we suppose, from her black persecutors.

A sale has taken place within a few days, which offered in every way points of high interest. It consisted of the paintings on porcelain of Mdlle. Perlot, sister of the actor, whose *Comédien d'Etampes*, *M. Pirne Austeins*, and other characters, so enchanted the public of the St. James's Theatre, some six or eight years since. Mdlle. Perlot, pupil of Ingres and Madame Jacotot, has carried the art of painting on china to an artistic perfection rarely attained; and the collection in question is nothing less than a series of chef-d'œuvres. Among subjects of all classes and periods, the portraits of Talma, Mdlle. Mars, Pasta, and a sketch, done almost in childhood, of Mdlle. Rachel, attracted particular attention.

A new "infernal machine" has been discovered. A vessel called the *Empereur du Brésil*, from Rio Janeiro, arrived at Havre on Monday last; and, in consequence of letters sent on shore by the captain, was immediately taken possession of by the police. Two large cases were seized on board, which, on being opened, were found to contain an "infernal machine" completely accoutred. A locksmith who had been concerned in the fabrication of the machine, and who had been residing for several years at Rio, and who was on board at the time, has been arrested with his wife, and lodged in prison. The original information proceeded from the French Minister at Rio; but against whom the infernal machine was directed, we have nothing more than rumour.

The French Government have adjourned the concessions for the service of the Transatlantic steam navigation lines, appalled by the subsidy of 15,000,000f. demanded by the companies. A line to the Brazils is, however, promised.

The Emperor has placed a sum of 3,000,000f. at the disposal of the Minister of the Interior, to be distributed among proprietors who convert their houses into healthy and cheap lodging-houses for the working-classes.

The *Moniteur* publishes a decree granting to the Count of Morny and to Messrs. Masterman and Co. the railroads from Clermont to Montauban, from Limoges to Agen, and from Lyons to Bordeaux.

Marshal de St. Arnaud, Minister of War, has recovered, and arrived at Paris, to resume his duties.

The Bourse was firm on Wednesday, with little business doing. The confidence of the speculators in the maintenance of peace was increased by a report that the French fleet had been recalled from the Bay of Salamis. The Three per Cents opened at 80f. 40c., and closed at the same price for the end of the month. A further rise would have taken place but for the numerous calls for joint-stock companies. The Four-and-a-Half per Cents closed at 103f. 50c.

SWITZERLAND.

The Sonderbund party has again raised its head. Encouraged by Austrian demonstrations and Prussian predilections, they have incited their dupes among the peasantry, headed by Colonel Perrier, of the Federal army, to invade the city of Friburg, where, through their instigators, they obtained possession of the college; but they received a severe defeat from the civic guard, who after some severe fighting remained masters of the ground. Many of the insurgents were captured, some killed, and not a few wounded, among whom is the military leader of the insurrection. Though the foolish and criminal attempt has been defeated, it is to be feared that its very failure may be made the pretexts for precipitating external intervention. A letter from Friburg of the 23rd says —

The city is in a state of siege. The gates are closed. Soldiers are to be seen in every direction, and the most profound silence everywhere prevails. The conquerors do not boast of their victory. Several civic guards killed in the encounter, are deeply regretted, and a collection made in their favour produced 200f. Perrier has been tried by court-martial. On a table, in front of the Court, were placed a seven-barrelled revolver, and the rifle, sword, and cartridge-box he carried. He boldly defended himself. His wound in the head is slight. Major Gerber saved his life by warding off a thrust of a bayonet, which would have run him through the body. His brother-in-law, Captain Lederrey, who commanded the artillery against the insurgents, pleaded his cause. The public prosecutor asked that he should be condemned to irons during thirty years. The civic guards unanimously demanded his condemnation to death. The Council adopted the conclusions of the public prosecutor. This decision produced a painful impression on the civic guards, who observed that, in six months, probably, after he had been pardoned, they would again encounter him in the field. Perrier refused to name his accomplices. The Civic Guards fought very bravely and under great disadvantages, for they had to ascend two flights of steps, and to advance through a narrow street in order to reach the college. They were obliged to bring up the artillery by that difficult passage. The riflemen soon dislodged the peasants posted in the windows. The greatest number of the latter then took refuge in the church, where they were fired upon with grape-shot. Finally, they surrendered, the white flag of Torny having been displayed forward, holding a white flag in his hand. He was arrested. The Government has made many arrests. The state of siege has been raised. Among the prisoners taken are several curés, two former mayors, and a high bailiff. A flag was captured having on it the effigy of the Blessed Virgin.

The Government of Friburg has made a report of the affair to the Federal Executive, without, however, invoking its assistance, which is taken as a proof that the cantonal Government rules by no other strength than that which it derives from the sympathies of its people.

GERMANY.

We hear from Berlin that the principal article of the bill relating to the prohibition of the sale in Prussia of foreign publications has been rejected by the Chamber of Deputies. The rejection of this article is equivalent to the rejection of the whole bill. The check experienced by the Government has excited considerable sensation.

The Police Director, Stieber, has left Berlin for London, in company with the privy-councillor Hahn, in order to follow up certain clues and indications which the late discoveries and detections have thrown in their hands.

In consequence of the severe measures adopted in the province of Posen against the Polish Refugees, 200 of them have thought fit to take refuge in London.

The 1st of *May* is an important day in the history of the jurisprudence of the Austrian Empire, as on it the Austrian Civil Code comes into operation in all the provinces, with the exception of Transylvania and the Grand Duchy of Cracow.

HOLLAND

The Second Chamber is dissolved. The elections are fixed for the 17th of May, and the meeting for the 18th of June. The programme of the new Government has appeared. There is to be no change in the constitution. Freedom will be extended to all religions, under strict superintendence. The manifesto announces the changes in the organic laws, by which the executive power will be really vested in the King, and concludes with an appeal to the wisdom of the nation. The late Government declares that it had no cognisance of the intentions of the Pope to pronounce an allocution on the question of a hierarchy in Holland.

DENMARK.

On the 18th inst. the question of the succession was brought to a division and lost, the majority of 87 to 45 not reaching the requisite proportion of three-fourths of the votes present. On the following day the Diet of Rigsdag was dissolved. The announcement of the dissolution in the Volksthing produced a thundering "bravo" for the King and for the 45 minority.

The official list of the new Ministry is as follows:—Oersted—President of the Council, Minister of the Interior, and of Education. Bluhme—Minister for Foreign Affairs. Graf Sponneck—Finance. Scheel Justice. Hansen War. Steen Bille Marine. Graf Carl Moltke. Schleswig. Holstein. Grimlil Holstein and Lauenburg. It was rumoured that Bang would not only retain his *portefeuille*, but also that of Simony; subsequently, however, he seems to have had misgivings as to the stability of the Ministry, and Oersted to have taken the two vacant *portefeuilles* under his management.

TURKEY.

We learn from Constantinople that the proposals of Prince Menschikoff have not been accepted. Indeed, it is said the Divan, at the recommendation of Lord Stratford de Redcliffe, raises great objections to them. An excellent understanding prevails between the English and French embassies.

AMERICA.

By the *Atlantic* we have advices from New York to the 16th inst. The President, it is said, resents the interference of England in Central America, and Mr. Buchanan, the new Minister to England, will make a representation on the subject.

General Santa Anna arrived on the 1st inst. at Vera Cruz, where he was very coldly received.

The Canadian Assembly had adopted a bill making various alterations in the tariff, by which goods that ascend the St. Lawrence Canal will pass the Welland Canal free, and *vice versâ*.

Jamaica advices of the 6th inst. had reached New York. A perfect political fever appeared to prevail in the Island, in consequence of the rejection by the Council of a retrenchment bill passed by the House of Assembly.

INDIA AND CHINA.

The Overland Mail has arrived with advices from Bombay to the 29th ult.

The news from Burmah is by no means definitive. No Burmese envoy have yet arrived at Meaday, and several divisions of the Burmese army being still en route to Ava, considerably prevails regarding the issue of the struggle now going on at that capital between the war and peace parties. It is reported that the former has lately been gaining ground. At Prome and Meaday all is quiet. Near Donabew a combined attack was made on the encampments of the robber chief Meatoon. Sir John Cheape, the Commodore, and Captain Tarleton were each advancing by a different route, so as to surround him, all the creeks by which he could escape being guarded by gunboats; the result was not yet known.

General Steel has reached Tonghoo, and opened communications with Prome and Meaday. His march has been performed with great rapidity, considering the country (the last ninety-three miles in eight days), yet without distressing his force. During his last few marches his cavalry came up with some of the baggage and struggles of the retreating Burmese, and captured about a dozen elephants and a great number of horses. At Tonghoo a rather extensive magazine, containing guns, muskets, and ammunition, was taken possession of. It is not probable that any general move will be made during the little that remains of the hot season, but the commencement of the Burmese monsoon, a month hence, will open the high road to Ava to our large steamers, if anything then remains to be done.

The Chinese mail of the 26th of February has brought important intelligence regarding the progress of events in the Celestial Empire. The rebels have now got so far north as to threaten Shanghai, and are stated to have a force of 50,000 men within a few marches of that port. Seu-Kwyng-Tsin, appointed by the Emperor to the chief military command of the combined attack which had been ordered on the rebels, has been worsted, and has fallen according to some accounts, by his own hand; according to others, by that of the enemy. Altogether, the affairs of the Tartar dynasty are considered to be in a most critical state, though the young Emperor is endeavouring to meet the emergency with a degree of energy, and a disregard to antiquated Chinese maxims, which proves him to be far in advance of his predecessors. He has appealed to an edict which, printed on yellow paper, is now posted up in every place of public resort in the empire. He attributes the frequency of the reverses which his troops have met with to a slothful and trifling spirit on the part of the local officials, absence of discipline in the army, and a want of union, energy, and public spirit among all classes. "Above all," says the edict, "it is necessary in reporting to us to state the truth, without the least glossing over of facts." The Emperor details the military movements he has ordered for the annihilation of the rebels. Seu-Kwyng-Tsin was to lead the main body of the troops in person, detaching troops under his subordinate commanders to drive the enemy towards Woochung; three other Generals were to ascend the Yang-tse-Kiang with troops; and a fourth, with 10,000 picked men, had been despatched to defend the southern border of Honan, and to relieve Hookwang. All these were to be reinforced as rapidly as possible by troops sent forward from other provinces. All "were to unite, without regard to territorial distinctions, and advance straight

to Hoopah, to make a combined and annihilating attack." Of the military movements sketched out in the above edict, the portion assigned to Sen and the main body of the army has already turned out a failure, and it is reported that the other generals have been equally unsuccessful. The provinces already overrun by the rebels are stated to have been completely ravaged, and to be at present in a state of anarchy, and any further successes of the rebels would, it is thought, very seriously affect the commercial interests of all the powers trading with China. An absurd suggestion has been thrown out that England, France, and America should assist the Emperor to maintain his throne a design which will probably be scouted by every public man in Parliament.

A powerful American squadron is on its way to the China Seas, and it is stated that a powerful Russian land force has been despatched thither to watch its proceedings. Under these circumstances, and in the present position of affairs in China, it is complained that our naval force in the seas is inadequate for the protection of British interests.

The Emperor has legalised the importation and sale of opium This may lead to the extensive cultivation of the plant in the southern provinces of China, in which case the East Indian Company's revenue would receive severely.

Whatever may be the immediate issue of the present struggle in China, it is evident the old, exclusive, and bigoted system of that nation has received a shock which it is not likely to recover. Our successes in China destroyed the prestige of the empire, at least in the provinces on the coast, and the rapidly increasing communication with California and Australia, and the tens of thousands of Chinamen now annually returning from that country, with the intelligence and experience of three or four years' residence in the most "go-ahead" country in the world, cannot fail to have a great effect in a country, where printing is so cheap and education so general as in China.

AUSTRALIA

By the *Pirarire*, we have received accounts from Sydney to the 21st January. The field of gold operations is widened; several new fields have been discovered, and one of them, on the confines of the territory of New South Wales, is likely to prove a second Mount Alexander. The whole of the city has been got in, but great delay is experienced in bringing it to market. High prices are ruling for both wool and tallow. An improvement in the rate of exchange (the banks now selling at 4 per cent and buying at 5½ per cent discount) has caused a corresponding advance in the price of gold-dust, which is now selling at from 75s. to 78s. 6d. for Victoria, New South Wales being 2s. per oz. lower. Business of every denomination was thriving, and the arrival of emigrants was constantly on the increase. The Government escort, which arrived at Melbourne from Bendigo and Mount Alexander on the 8th of January, brought down 20,007 ounces of gold, the quantity received from the same places by a previous escort amounting to 17,500. Gold was still coming in in considerable quantities, although a large proportion of the miners were engaged in prospecting, or, at least, in surface digging, seeming to have an aversion to expending any great amount of labour in sinking deep shafts or pushing tunnels into the hills. Some heavy swindling transactions have been carried on for a number of months past in Australia in the manufacture of spurious gold. It is stated that £160,000 had been made in five months by operations in the gold frauds, one bank alone having been mulcted in £50,000.

NATIONAL SPORTS.

NEWMARKET FIRST SPRING MEETING

MONDAY.—Many years have expired since the opening day of the First Spring meeting at Newmarket presented so wintry an appearance: snow and rain fell alternately in heavy showers, and the day was comfortless in the extreme. The master on the Heath consisted chiefly of the indefatigable clerk of the course, who, in spite of wind and weather, will congregate together. At the Rooms, in the morning, even money was betted on West Australian for the Two Thousand, 5 to 2 'gst Sylphine for the One Thousand, and 100 to 8, five times, 'gst Ormoco for the Derby.

HANDICAP SWEEPSTAKES of 20 sovs. each.—Petrel 1. Jullien, 2. SWEEPSTAKES of 50 sovs. each.—Alarmode, 1. Diomedia, 2.

FIFTY GUINEAS. Arfasio, 1. John of Berwick, 2.

TUESDAY.—The cheap and the regular trains brought down a large accession of visitors; but, notwithstanding a strong list of attractions, and the one ordinary interest attaching to the principal feature of sport —the Two Thousand—the still stormy state of the weather had the effect of limiting the attendance of general company. There was, however, a goodly display of fashionables, and the ring was well thronged with sporting men.

QUEENS PLATE of 100 Guineas.—Pancake, 1. Hesse-Homburg, 2. MATCH: 100 sovs. Hesperus, 1. Semanta 2.

HANDICAP SWEEPSTAKES of 10 sovs. each. Child of the Mist, 1. Tittle Tattle, 2.

MAIDEN PLATE. Little Kitty, 1. Filly by Melbourne, 2.

MAIDEN PLATE. Knight of the Garter, 1. Nathan, 2.

TWO THOUSAND GUINEAS STAKES West Australian, 1. Sittingbourne, 2.

MATCH 200 sovs.—Dabchick, 1. Colt by Assault, 2.

MAIDEN PLATE. Filly by Don John, 1. Feversham, 2

HANDICAP SWEEPSTAKES of 10 sovs. each.—Peacock walked over.

SWEEPSTAKES of 200 sovs each.—Ilex received forfeit

WEDNESDAY

SWEEPSTAKES of £50 sovs. each.—Filbert walked over.

SWEEPSTAKES of £50 sovs. each.—Diomedia, 1. Cobnut, 2.

SELLING HANDICAP SWEEPSTAKES of 10 sovs. each.—Cock Pheasant, 1. Bromedary 2.

PLATE of 50 sovs.—Desdicona, 1. Beaucler, 2.

HANDICAP PLATE of 50 sovs.—Esquire, 1. Waverley, 2

HANDICAP SWEEPSTAKES of 20 sovs. each.—Jullien, 1. Jonie, 2

RENEWAL of the SWEEPSTAKES of 50 sovs. each Seized the Plough walked over

SWEEPSTAKES of 50 sovs. each —Filbert received forfeit.

A most pleasant change of weather made some amends for the discomfort experienced on the two previous days. The day had its average of sport and a fair attendance of company.

THURSDAY.

QUEENS PLATE. Alfonso, 1. Comdt, 2.

HANDICAP SWEEPSTAKES.—Mentmore Lass, 1. Comdt, 2.

HANDICAP SWEEPSTAKES. Prism, 1. Assault, 2.

MATCH.—Petrel by Inexpugnia.

MATCH.—Hesperus beat Sophistry

LATEST BETTING AT NEWMARKET ON THURSDAY

10 to 1 'agst Lord Lieutenant	15 to 1 'agst Talbrand	20 to 1 'agst Peggy
25 to 1 — Tridle (off)	30 to 1 — Mindvu (c)	50 to 1 — Woolwich

DERBY.

7 to 2 'agst West Australian (c)	100 to 6 'agst Chanos	40 to 1 'agst Spread Eagle
9 to 1 — Orlando	20 to 1 — Beacket	(t & c)
9 to 1 — Honeywood	40 to 1 — Jerry Sneat (t & c)	40 to 1 — Blue Jammer

IRELAND.—CURRAGH APRIL MEETING.—TUESDAY.

SWEEPSTAKES of 5 sovs. each. Patrick, 1. Jenny Lind, 2.

HER MAJESTY PLATE of 100 guineas. Chit-Chat, 1. Redmond O'Hanlon,

SWEEPSTAKES of 10 sovs. each.—Isabella, 1. Fuze, 2

MAIDEN STAKES of 25 sovs. each.— Helena, 1. Sly Fox, 2

MATCH: 50 sovs.—Ben Bieder, 1 Knight of the Thimble, 2.

MATCH: 100 sovs.—Split the Wind received from Gleam.

LONDON MODEL YACHT CLUB.—This nursery for yachtsmen sailed their opening match on Tuesday, on the Serpentine. The races were in heats, for a silver cup and other prizes:—In the first heat, Wallergrange (cutter) was 1; and Gloriana (bugger), 2; seven started. In the second heat, Scud (cutter) was 1; and Nil Desperandum (lugger), 2: seven started. The third heat was won by the Storm Witch; and the fourth, by Wellington (These two heats were formed of the ten losing boats from the first and second heats). The grand heat ended with—The Scud, 1; and Weathergauge, 2

HER MAJESTY AND THE DUBLIN EXHIBITION.—Within the last few days there have been despatched from Windsor Castle several large cases, containing cabinets, and articles of *vertu*, selected by her Majesty the Queen and his Royal Highness Prince Albert, for exhibition at the forthcoming Industrial Exposition at Dublin. Among the articles sent are Winterhalter's full-length portraits of the Queen and the Prince Consort, from the Throne room.

BRADSHAW'S NEW RAILWAY-MAP (Adams, Fleet-street).—This new railway-map of Great Britain exhibits at one view all the railways, railway junctions, and stations, as well as the lines of electric telegraph, canals, navigable rivers, and mineral districts, with their geological peculiarities. The lines belonging to the various companies are each coloured a different tint; and the distinction between the broad and narrow gauge is clearly indicated. To the traveller by railway this map will be highly acceptable

NATIONAL FREEHOLD LAND SOCIETY.—An estate at Clapham, Surrey, of fourteen acres, and one (being the third) at Walthamstow of thirteen acres; also a smaller one at Leighton Buzzard; have just been purchased for distribution among the members. These will make 100 estates purchased by this society since its commencement.

NEW RAILWAYS.

The Directors of the London and North-Western Railway have issued the following Circular to the proprietors

In conformity with the intimation given at the recent half-yearly meeting, the directors have convened a Special General Meeting of Proprietors, to be held on the 30th instant

The Select Committee appointed by the House of Commons on Railways and Canals have made a preliminary report. Impressed, apparently, with the magnitude and importance of the questions referred to them, and finding themselves unable to complete their investigation in time to make any final recommendation for the guidance of the House in its legislation during the present session, the committee advised that the consideration of all bills involving the principle of amalgamation between existing railways, or railways and canals, should be postponed for a year, and the House have resolved accordingly.

In reference to this subject, the Board reported to the meeting held on the 18th February, as follows:—

"The Directors believe that inquiry must lead to the conclusion that the attempt to supply the requirements of the country, and to maintain competition, by granting rival lines, is an error; and if, on the recommendation of the Select Committee, the Legislature lays down a wise and just course of policy in regard to the future, it will be alike the duty and the interest of the existing companies to furnish all needful accommodation, by the formation of lines, which, though not profitable in themselves, would certainly throw upon the main line a large amount of traffic which could not otherwise be developed.

"The steps which your directors have thought it expedient to adopt will enable them to act upon such a decision of Parliament"

Although the committee have not yet concluded their inquiry, it is satisfactory to find it stated in their report, that they "infer from the evidence that in some shape or other ultimate combination of interest will result from the temporary competition of rival companies," and they cite instances as examples of what appears to be the general arrangement in respect of competition and combination between railway companies."

The bills promoted by this company were specified in the report read to the general meeting, on the 18th February last, viz.:—

"A line connecting St. Albans and the district round Amersham and Chesham with the main line at Watford, eighteen miles; estimated cost, £132,000

"A line from the Oxford, Worcester, and Wolverhampton Railway, at Oxford, through Thame to Tring, thirty-one miles; estimated cost, £400,000

"A short branch, forming a junction between the Buckinghamshire line and the line of the Oxford, Worcester, and Wolverhampton Company, near Oxford, two miles; estimated cost, £37,000

"A line from Northampton to Market Harborough, eighteen miles; estimated cost, £260,000

"A line from near the Oldbury Station, on the Stour Valley Railway, to Stourbridge, eight miles and a half; estimated cost, £300,000.

"A line from near Welington to Coalbrookdale, with branches, ten miles; estimated cost, £160,000

"A line from Shrewsbury to Newtown, with a branch to Oswestry, for four miles; estimated cost, £360,000

"A line from Crewe to Shrewsbury, thirty-three miles; estimated cost, £350,000: also for power to widen the line from Primrose Hill to Willesden, and to take land for additions to stations at Warrington, Rugby, and Bushbury, and to divert road at Weaste-lane.

"A bill to make a deviation of the Oldham branch (for which powers were granted to the Manchester, Sheffield, and Manchester Company), by which the expense will be materially lessened."

The branches from Watford to St. Albans and Amersham, at an estimated cost of £70,000 and £82,000 respectively, are projected with a view to the development of the resources of districts in the immediate vicinity of the main line; and, having regard to the position of the proposed lines with reference to the metropolis, and the small cost at which they can be formed, the directors entertain a confident expectation that the united earnings from the new traffic on the branch and main line will fully remunerate the outlay

The line from Tring through Thame to Oxford, if sanctioned by Parliament in the present session, would afford mid-western steamers, will place the towns and districts accommodated by the proposed Oxford and Cheltenham, and by the Oxford, Worcester, and Wolverhampton companies, in direct communication through the London and North Western Railway with the metropolis. The distance from Oxford to Euston Station will be sixty two miles, against fifty nine miles to the terminus of the South-Western Company at Station-road. The object of the through communication would be effected, viâ Tring, by the construction of thirty-one miles, at an expenditure of £400,000, whilst the scheme of the Mid-Western is estimated at a million. The requirements of the district, lying between the lines of the London and North-Western and Great Western Companies, can be better and more economically supplied by short lines of railway from the main lines than they can by any single through communication.

The Northampton and Market Harborough Branch is identical with the project sanctioned by Parliament in the year 1847. It is strongly supported by the town of Northampton, and the landed proprietors in the district—now become still more important by the recent discovery of iron ore, of excellent quality, and in great abundance.

The lines to Stourbridge, and from Wellington to Coalbrookdale, pass through rich mineral and very populous districts, and must prove remunerative, worked in connection with a system of railway to extensive mineral districts of the London and North Western.

The proposed line from Shrewsbury to Newtown, with a branch to Oswestry, is of an inexpensive character—the estimate, confirmed by the offer of a contractor to execute the works, being under £11,500 per mile. There is also before Parliament, promoted by parties locally interested, an extension from Newtown to Llanidloes. Parties in the interest of the Shrewsbury and Chester, and Great Western Companies have before Parliament a line from Newtown, which, although strongly objected to by the landowners and others interested in the matter, would no doubt be passed, if the superior project of this company were not proposed, and thus the entire district of Central Wales would be transferred to the opposing companies.

The line from Crewe to Shrewsbury passes through a district free from any engineering difficulty; and many of the landowners having agreed to dispose of their land at fair rates, and to dispense with needless or costly works, the whole length, 33 miles, can be constructed for £350,000, about £10,000 per mile; its formation will bring Liverpool, Manchester, and Yorkshire into direct communication, by the lines of this company, with Wales

By reference to the published statement of accounts, it will be seen, that in order to encourage and aid the extension of railways in connexion with the several lines now forming the system of the London and North-Western Company, the proprietors have, from time to time, subscribed to other undertakings; the capital so invested amounting to £ [illegible]. The market value of the shares so held now amounts to £2,905,270 The proprietors have the option, should they think fit, to order the disposal of the whole, or any portion, of this property

A comparison of the market price of the shares during the past four years shows the following result

Market value of the capital invested in other undertakings (£2,292,826) calculated at the prices quoted at the close of April in each year	1850 £1,744,040 1851 .. 2,681,265 1852 .. 2,[illegible] 1853 .. 2,905,270

Having regard to the steady increase thus shown to be taking place in the value of the property, to the still depressed condition of a portion of it, and to the reasonable prospect of further and considerable improvement, as also to other considerations connected with the objects which induced the investment in the first instance, it appears to the directors inexpedient to realise the property at present; such a step, however, even if determined upon, would not meet the immediate requirements of Parliament in reference to new works to be sanctioned; and they recommend, therefore, the creation of ordinary share capital (to be offered to the proprietors entitled to participate, in the proportion of one share of £100 for every £100 of stock), to the amount of £3,054,630; they further recommend that a deposit of £2 10s per share of £[illegible] be made on the creation of the capital thereby created, and several successive calls will apprise the proprietors when any additional call will be required during the succeeding six months, a dividend after the rate of 4 per cent being allowed until the whole be called up, when the new creation will be converted into stock.

With respect to the Manchester and Birmingham £10 shares, upon which £5 per share remains unpaid, and the London and Birmingham £20 shares, upon which £8 remains uncalled, the directors will feel it due to the holders of these stocks to make further calls upon them at an early date.

The report is considered satisfactory. GEORGE AXSON, Chairman

THE WILL OF THE LATE DUKE OF WELLINGTON not containing any direct appointment of executor, letters of administration, with the will annexed, are being prepared for the present Baronet, his grandson.

THE WILL OF THE LATE GENERAL SIR EDWARD KERRISON, Bart., K.C.B., G.C.H., of Oakley-park, Suffolk, has been proved by his son, Sir Edward Clarence Kerrison, Bart., M.P., and Richard Denny, Esq.; a power being reserved to Lady Kerrison, the relict, to whom is bequeathed all plate, jewellery, carriages, furniture, and the residue of real and person al estate. To Sir Edward, the present Baronet, he devises his freeholds in Suffolk and Norfolk, and elsewhere in Great Britain, as well as the estates bequeathed by his father, and over which he had a power of disposition. To his married daughters he makes up their marriage portions to £40,000, and a legacy of £5000 to his other daughter. The personalty was estimated at £90,000.

THE SCHOLEFIELD TESTIMONIALS.—The Engravings in our Journal of last week, page 312, were from Daguerreotypes by Pickering, of Birmingham.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Sir Henry de la Beche, Director of the Geological Survey of the United Kingdom, and of the Metropolitan School of Science, has just been unanimously elected a Corresponding Member of the Institute of France, in the place of M. Mitcherlich, who has been promoted to an Associate Foreign Member of the Institute.

The Chepstow Tubular Bridge is at length completed; and, after having undergone an examination by the Government Inspector of Railways, has been certified to be fit for traffic

No less than 250 pike were captured last week, with a net, at Newark, in Nottinghamshire.

Two lines of submarine telegraph between France and Algeria are under consideration; one by way of Piedmont, Sardinia, and Corsica, to Bone; and the other from Perpignan, along the Spanish coast as far as Gata, and thence to Oran

Professor Aytoun, of Edinburgh, author of the "Lays of the Scottish Cavaliers," intends delivering in London, early in May, a course of lectures on "Poetry and Dramatic Literature."

William Tyrrell and Charles Williams, who were left for execution at the late assizes for Lancashire, for murder, have had their capital sentences commuted to transportation for life.

The Anti-Slavery Society of Belfast has succeeded in obtaining an explicit promise of a visit to that town from the distinguished authoress of "Uncle Tom's Cabin," as soon as her health will permit.

Colonel Kemeys Tynte was prevented by illness from voting with the majority on Mr. Gladstone's resolutions on Friday night.

A spot, named Olivais, about three miles east of Lisbon, has been chosen for the commencement of the projected railway. The 24th inst. has been set apart for the ceremony of "turning the first sod." The Queen is anticipated to be present.

Honora Gibbons and Bridget Gerrally, who were left for execution at Liverpool, for murdering a child, for the obtainment of burial fees, have been reprieved, and transported for life.

A powder-mill exploded, near Wilmington (U. S.), on the evening of the 5th inst., killing the engineer on the spot

The Earl of Rosse, as President of the Royal Society, gave his annual soirée for the season on Saturday last On the tables were a number of exceedingly beautiful drawings of nebulæ, observed by Lord Rosse's gigantic telescope during the past winter.

The inhabitants of Bracechurch-street have memorialised the Court of Sewers, praying that the wooden pavement might be continued in that very noisy thoroughfare, the residents having derived a great comfort and quiet for eleven years during which it had been down.

The departure of the *Argo* steamer, belonging to the General Screw Steam Shipping Company, has been postponed from Wednesday, the 4th, to Saturday, the 7th of May next.

The Queen has appointed Mr. William T. Fraser to be Consul at Miramichi, New Brunswick, for the king of Prussia

A Chinese child, named Keo, who had been brought to Europe, by M. Pallegoix, apostolic vicar of Siam, was christened on Thursday week in the church of St. Sulpice, in Paris

The salmon-fishing in the rivers in Scotland has been very successful hitherto: and promises well for the remainder of the season.

From Egypt, letters state that the cultivation of the sugar-cane, introduced into that country by Mehemet Ali during the latter part of his reign, had lately acquired considerable development

In consequence of Mr. T. B. Macaulay's (M.P.) state of health being still anything but satisfactory, he has been ordered shortly to proceed to a warmer climate.

Victor Hugo is writing another vehement and eloquent book against the Bonaparti*st regime*. One portion is said to be so terrible in its sting that "it would make a statue move."

The declared value of steam engines and other mill-work exported from the United Kingdom in the month ended the 5th ult., was £62,824.

The number of season tickets for the Dublin Exhibition, sold up to Tuesday evening was 5312. There are nearly 1300 men employed at the building every day.

The Siamese twins, who have been for years flourishing farmers in North Carolina, are about again to visit the principal American and European cities

Great disease prevails amongst the vines in the neighbourhood of Zante, Morea, and Cephalonia, which will seriously affect the crop of grapes

Colonel Colt is rapidly becoming a millionair, from the immense demand for his revolver.

Mr. Thomas Dax, the senior Taxing Master of the Court of Exchequer, died suddenly, near the Mansion-house, on Monday evening. He had been connected with the Court for about half a century. The appointment is in the gift of the Chief Baron, and the salary is £1200 a year.

Several thousand workmen were last week discharged from the manufactories in Vienna, in consequence of stagnation of business

On Tuesday Mr. Rowden was elected Registrar at Oxford, by 301 votes, against 266 for Mr Cornish, and 162 for Mr Rawlinson

The first legion of the National Guard of Turin, has elected the young Prince of Piedmont, heir apparent to the Throne, for its Colonel

The annual cricket match between eleven of all England (not Oxford), selected from the first players of the day, and fifteen from the undergraduates of Oxford University, will take place on Christ Church meadows, on May 23rd.

The last accounts from Tunis represent the health of the Bey as improving, and state that he hoped to be able to visit Europe in June.

A bazaar in aid of the movement for ocean penny postage has been opened at the Manchester Exchange. The goods gratuitously furnished are valued at from £1500 to £2000; and 17 stalls have been taken

The Manchester police have memorialised the watch committee for an increase of wages, and their memorials are under consideration. The force comprises 800 men, arranged in four divisions.

The railway across the desert in Egypt progresses rapidly: in about two months, 97 miles of the line will be open.

Since the 5th of March, 82 persons have renounced the Roman Catholic religion in the church of St. Paul's, Bermondsey.

H. Walley, agent of the projected submarine telegraph between England and Ostend, has returned, viâ Brussels, after receiving the most satisfactory assurances of co-operation from the Prussian authorities.

Mr. Gurney, who had the charge of lighting the House of Commons for some time, and discharged his duties most satisfactorily, has resigned; and the duties are in future to be performed under the superintendence of the Office of Works.

The Mormons are passing through St. Louis (U. S.) by hundreds a day, mostly from Europe. There were recently 4000 in St. Louis, waiting to begin their journey to the City of the Salt Lake.

On Monday last there arrived from Australia the *John Taylor*, with 11,847 oz. of gold; the *Sir Robert Peel*, with 13 338 oz.; and the *Clifton*, with 27,597 oz., valued in all at £212,765.

Mr. Frances Pulszky is at Boston, and was to sail by the next steamer from that port for Liverpool.

The *Jewish Chronicle* says:—"The utmost confidence is felt in circles well able to give an opinion on the matter, that the second reading of the Bill for the Admission of Jews to Parliament in the House of Lords will be carried by a respectable majority

The British barque *Robert Kerr*, with a cargo of iron, from Glasgow to New York, was totally abandoned at sea. Her passengers and crew were rescued by the British barque *Douglas*.

The declared value of the British produce and manufactures exported to Russia, during the year 1852, was £1,289,704, to Austria, £382,642; and to Turkey and its dependencies, £2,[illegible]

The young Maharajah Dhuleep Sing was formally admitted into the Christian Church by baptism on the 8th inst., at Futtyghur, by the Rev. W. Jay. The Prince is sixteen.

It is said that Professor Wilson (of *Blackwood's Magazine*) is past hope of recovery. His lower limbs are paralysed; and, although his mind is still clear, he is but a wreck of his former self.

On Wednesday, at the Scottish Hospital, in the Crane-court, six natives of North Britain (all aged above 70) were appointed pensioners of £10 each per annum.

The Commissioners of Sewers have decided on cutting a new sewer from Newcastle street, Strand, up Wych-street and Drury-lane to Holborn, which will join the main sewer in the Strand, and thus empty itself into the Thames

On Wednesday last, [illegible] steam boiler at Messrs. Priestley and Co.'s chemical works, Maiden-lane, Bow-cross, exploded, and caused the death of a man employed on the premises.

Two meetings have been held this week—one at St. James's, Westminster, on Monday, the other in Southwark, on Tuesday—to petition the House of Commons in favour of the Budget

On Monday last the public were admitted by tickets to view the progress of the works at the New Crystal Palace, at Sydenham; the unfavourable state of the weather, however, prevented many from availing themselves of the opportunity

Messrs. Parent Schaken and Co. have undertaken, in conjunction with Messrs. Brassey and Co., the execution of the railway from Seville to Cordova

her shoulders and be smashed to shivers. Fortunately for Ireland, and fortunately for the character and utility of Mr. Gladstone's budget, Ireland is not on bankrupt as some of her false friends would have us believe. There are rent-rolls of from £20,000 to £50,000 per annum, even in that part of the empire. There are rich merchants and manufacturers in Cork, Dublin, and Limerick; there are sturdy and solvent yeomen in the black north; and there are linen manufacturers in Belfast and its neighbourhood who may vie in opulence with the men of Manchester: all of whom must be made to pay the Property and Income-tax, or justice will not be done either to Ireland or to England.

Next to the Property and Income-tax, the great object of attack appears to be the extension of the Legacy-duty to Real Estate. As the opposition proceeds in its development, it will probably be found that the party of Lord John Russell and Mr. Disraeli, and of the heterogeneous regiment that is for awhile marching under their colours, attach far more importance to this item of the Budget than to any other. Nor in so doing would they be wrong as reasoners, though perhaps they might be unskilful as tacticians. The re-imposition of the Property and Income-tax for seven years, important as such a measure may be, and intimately as it is bound up with the whole scheme of the Budget, is, after all, a matter of less importance to the landed aristocracy than a tax upon successions to real estate. If, as the opponents of the Budget have just discovered, a tax upon successions be so great a grievance, why did they not, when in power, and when they had the means and the opportunity of doing so, abolish it as affecting Personal Estate? If such a tax be a bad tax it ought not to extend to the personal property of the defunct trader or manufacturer; and if it be a good tax when affecting the money, scrip, jewels, books, and other personalty of the trader, it ought to be equally good as affecting the broad acres of landed proprietors. Either there should be no such tax at all, or it should extend to real as well as to personal estate. Unless the Opposition be prepared to pledge themselves to the abolition of the tax as at this moment existing, they ought not, in justice, to object to Mr. Gladstone's equitable scheme for extending it. But the fact is, no party is prepared to abolish the tax on successions, and it is by no means so unjust, according to Mr. Gladstone's amendment of it, as its opponents would have us believe. A similar tax exists, we believe, in every country in Europe; and in England, as we learn from the unquestionable authority of one of the most instructive speakers in the House, Mr. H. Drummond, it dates its origin from the Conquest. That honourable gentleman humorously described the tax to be one "upon elder brothers." These gentlemen form an estimable portion of the community, no doubt, but they are not very multitudinous, and not entitled to any extraordinary sympathy for their liability to pay the Government a reasonable per-centage when they succeed to the enjoyment of their estates. Sir Edward Bulwer Lytton thought this tax "likely to break up the aristocracy." Not so thought Mr. H. Drummond. "Who," inquired that honourable gentleman, "were the persons who broke up the landed aristocracy in France? It was the younger brothers in the National Convention—it was the jealousy they felt when their fathers made a will. The elder brothers who inherited the land, paid no tax; while the younger brothers, if left a sum in money, had to pay upon it." Whatever value there may be in this historical illustration of Mr. Drummond, there can be no doubt of the fact that, if it be expedient that personal property should be liable to this tax, it is politic and just that real property should be liable to it also. We have no fears whatever that the landed aristocracy will be broken up or in the slightest degree injured by the new liability that is preparing for them. The aristocracy of Great Britain is too firmly rooted, and too broadly based, to be broken up by such a trifle as the tax that has so seared the imaginative member for Hertfordshire; and will flourish, we trust, strong and respected, after many generations of elder sons shall have cheerfully paid the tax that Mr. Gladstone, in common fairness, has proposed to levy upon them.

Though the symptoms of opposition are so decided upon these, as well upon other items in the Budget, there is reason to believe that the trial of strength which took place on a minor issue, on the 22nd inst., has sufficiently proved that Ministers will be able to carry their great financial project by a satisfactory majority. They have wisely and courageously determined to stand or fall by their Budget; and, if defeated in the present Parliament, they will appeal to the country. But a dissolution would be too inconvenient, and the result too surely in favour of the Ministry, to render it very likely that such a step will become necessary.

LAUNCH OF H.M.S. "JAMES WATT."

THE launch of this noble screw steam-vessel of war, sister ship to the *Agamemnon*, took place on Saturday afternoon last, at her Majesty's dockyard, in Pembroke.

The weather, which for some days previously had been most boisterous and unfavourable, cleared up on Friday night; and Saturday was as fine a day as could be wished for for the ceremony, a bright sunshine adding much to enliven the beautiful locality of the dockyard. Sheltered on all sides by lofty hills; forming one of the most picturesque and beautiful bays in the world; with great depth of water; capable from its position of safely admitting at all times, and in all states of the tide, and safely anchoring and refitting for service of the largest tonnage, under all circumstances of weather; Milford Haven must, at no distant period, become the greatest and most important harbour in the United Kingdom.

The ship of war, whose launch we have illustrated, is not the first vessel Government have contemplated naming after the great engineer. The *Retribution* steam-frigate was laid at Sheerness as the *James Watt*, but the name was altered during her construction; and this nobler monument of naval architecture in combination with steam, has the honour of helping to perpetuate the memory of this most eminent name in the progress of steam.

The event, though far from causing the interest which the late launch of the *Duke of Wellington* occasioned through Wales, was not without its attractions; and, though market-day in Pater, it brought nearly the whole population of the place, and the surrounding neighbourhood, to witness the sight.

The building of the *James Watt* was commenced by Mr. Abethell, the master-shipwright, now at Portsmouth; and completed by Mr. Rice, the present master shipwright at Pembroke; she is a noble specimen both of model and excellent building, and a credit to every one concerned in her construction.

The ceremony of naming the ship was performed by Miss Pasley, the daughter of Sir Thomas and Lady Pasley, the Superintendent of the Dockyard; and at a little before five o'clock the gallant ship was safely and beautifully consigned to her future element, without accident or mishap, under a salute of 21 guns from H.M. steam-sloop *Magicienne*.

Ample accommodation had been provided by the authorities for the convenience of a large body of spectators, and every eminence and point from which a view of the interesting event could be obtained was crowded.

The *James Watt* is provided with Robinson's patent tiller, which is necessary, as the shaft of the screw comes up through the cabins; and it is therefore requisite, in order to clear the casing of the shaft, to have recourse to a long tiller. She will be fitted and commissioned at Plymouth. Her dimensions, power, and armament are as follow:—

	Feet	In.
Length, over all	265	2
,, between perpendiculars ..	230	0
keel for tonnage	194	8½
Breadth, extreme	55	5
,, for tonnage	54	7
moulded	53	9
Depth of hold	27	7½

Burthen, in tons, old measurement, 3063 7-94ths; new, 2908 5-20ths.

600-horse power.

Armament: Sixty-two 32-pounders, of 56 cwt., and 2 feet 6 inches in length; twenty-eight 8-inch guns; and one 68-pounder pivot gun, of 10 feet in length.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Paris danse. Paris se promène. Paris s'amuse. Paris va aux courses, preparatory to emigrating to the country, or to the square boxes stuck by the road-side, in the middle of treeless parterres, which in the environs of Paris occupy the place of our suburban villas and cottages. There are still fêtes, balls, soirées, and dinners going on. The last *toilettes* of the parting season—a little, a very little *fanées*—are bidding adieu to the public; the first of the coming one are proudly displaying their fresh charms, oddly intermingled by the caprices of the weather, which mixes furs and gauzes, velvets and muslins in strange confusion, and obliges the *belle dame* to sally forth with a parasol in one hand and a muff in the other, the latter, however, being much the more useful appendage.

The ball at the Tuileries, which will, probably, be the last of the season, was sufficiently brilliant and well attended, though some strange *toilettes*—and wrong, *par conséquent*, suppose some strange guests—found their way there. The Emperor, whose anxiety about the state of health of the Empress is considerable, only passed through the *salons*, and immediately returned to the private apartments.

The illness of the Empress, resulting from the imprudent use of a warm bath, is, it is feared, likely to be of some duration. This will at least defer, if not put an entire stop to, the morning *fêtes*, which it was anticipated would be given at St. Cloud in the early summer. It is, however, to be hoped that the care and advice will re-establish the health of her Majesty sooner than the period named as possible for the continuance of her indisposition.

The Faubourg St. Germain continues to *bouder*, and only gives dinners and *soirées en famille*; which present, for the most part, few attractions to excite the jealousy of the excluded of these exclusives. Most of the galeties, *à part* the official fêtes, are kept up by foreigners, especially Russians. Madame Nathalie de Soloyov and Princess Sophie de Galitzin particularly distinguish themselves—the first by the representations of an admirably-constituted troupe of theatrical amateurs; the second by a concert, splendid both as to execution and attendance. Concerts both public and private, continue to take place at all sides: there are *grands concerts, matinées musicales, soirées de musique*, right and left. Pianists, violonists, harpists, bassos, singers, seem to drop from the clouds; each presenting you with a ticket bearing, for the most part, a name you never heard before, and demanding ten francs in exchange—a sum you would, in eight cases out of ten, willingly give to be excused from appearing.

Notwithstanding the hail-storms and showers, and cutting blasts, the races—those of the Champs de Mars succeeding the steeple-chases of La Marche—are abundantly attended, and really present a very brilliant *coup d'œil*. The steeple-chases revealed a new phase in female caprice; or, more properly speaking, developed one which for some time has been growing into notice that of adopting masculine habits, expressions, ideas, and tastes, among a class of women whose positions and education ought to place them above the ridiculous and offensive affectation of such a style. Fencing, smoking, betting, gaming, and the use of sporting terms, are among these accomplishments; and, as in the last-named the men are but little skilled, we may guess the frightful confusion of the women on the subject. But it is the French pronunciation of the English names of the horses and jockeys that forms the mystification of its insulars, who hear for the first time in our lives the names of *Tocjaire* (Tiger), *Giant-yon* (Glenlyon), and *Fleng-bulk* (Flying Buck), as those which we have bestowed on our courses!

The Grand Opera is taking up some of the popular old ballets, "La Fille mal Gardée," and "Giselle;" with Mdlle. Mathilde Besson, a youthful, graceful, and agreeable dancer, of a certain amount of talent; and Mdlle. Regina Forch, with a *pas de concerto*. The Opéra Comique gives, this evening, a *représentation extraordinaire* for the benefit of the *œuvre des familles au 3ème arrondissement*; consisting of two new operas—one composed by Dupres, the singer, and written by MM. Scribe and de Courcy—and the other by M. Montfort, the words a posthumous work of M. Bayard. A *pas* by Cerito, and a piece selected from among the most popular of the Théâtre Français, complete the entertainment, which promises to be brilliant in every respect. Perhaps its greatest attraction will be the re-appearance, for this single occasion, of Mdme. Volnys, the *Licorice Boy*, who turned all heads in her ohildish parts, some—no matter how many—years ago, and who, Mdme. Arnould Plessy, has got an express permission from Russia for the purpose. The Italian Opera has risen from its ashes by the immense success obtained by Madame de la Grange—a success which has not only repaired the desperate failure of the commencement of the season, but assures its safety for the next. It is said that she has been offered an engagement *en blanc*, and has promised to accept it, filling up the blank with a sum only reasonable. It is further reported that this new state of affairs gives M. Corte, the manager, hopes of obtaining for next season the assistance of Grisi, Mario, and Tamburini, in exchange for the services of Mdlle. Cruvelli, who has the modesty to demand, *à elle toute seule*, a sum sufficient to satisfy the requirements of the three great talents put together.

A French paper states that an *appartement* has been taken in the *quartier* Montmartre, for Mrs. Stowe, who is coming to Paris to remain three months, previous to going to Italy: still flying, as we suppose, from her black persecutors.

A sale has taken place within a few days, which offered in every way points of high interest. It consisted of the paintings on porcelain of Mdlle. Perlot, sister of the actor, whose *Comédien d'Estampes, St. Prest Assiette*, and other characters, so enchanted the public of the St. James's Theatre, some six or eight years since. Mdlle. Perlot, pupil of Ingres and Madame Jacotot, has carried the art of painting on china to an artistic perfection rarely attained; and the collection in question is nothing less than a series of chef-d'œuvres. Among subjects of all classes and periods, the portraits of Talma, Mdlle. Mars, Pasta, and a sketch, done almost in childhood, of Mdlle. Rachel, attracted particular attention

A new "infernal machine" has been discovered. A vessel called the *Empereur du Brésil*, from Rio Janeiro, arrived at Havre on Monday last; and, in consequence of letters written by the captain, was immediately taken possession of by the police. Two large cases were seized on board, which, on being opened, were found to contain an "infernal machine" complete and mounted. A lookout man had been concerned in the fabrication of the machine, and who had been residing for several years at Rio, and who was on board at the time, has been arrested with his wife, and lodged in prison. The original information proceeded from the French Minister at Rio; but against whom the infernal machine was directed, we have nothing more than rumour.

The French Government have adjourned the concessions for the service of the Transatlantic steam navigation lines, appalled by the subsidy of 15,000,000f. demanded by the companies. A line to the Brazils is, however, promised.

The Emperor has placed a sum of 3,000,000f. at the disposal of the Minister of the Interior, to be distributed among proprietors who convert their houses into healthy and cheap lodging-houses for the working-classes.

The *Moniteur* publishes a decree granting to the Count of Morny and to Messrs. Masterman and Co. the railroads from Clermont to Montauban, from Limoges to Agen, and from Lyons to Bordeaux.

Marshal de St. Arnaud, Minister of War, has recovered, and arrived at Paris, to resume his duties.

The Bourse was firm on Wednesday, with little business doing. The confidence of the speculators in the maintenance of peace was increased by a report that the French fleet had been recalled from the Bay of Salamis. The Three per Cents opened at 70f. 40c., and closed at the same price for the end of the month. A further rise would have taken place but for the numerous calls for joint-stock companies. The Four-and-a Half per Cents closed at 103f. 50c.

SWITZERLAND.

The Sonderbund party has again raised its head. Encouraged by Austrian demonstrations and Prussian pretensions, they have incited their dupes among the peasantry, headed by Colonel Perrier, of the Federal army, to invade the city of Friburg, where, through their instigators, they obtained possession of the college; but they received a severe defeat from the civic guard, who after some severe fighting remained masters of the ground. Many of the insurgents were captured, some killed, and not a few wounded, among whom is the military leader of the insurrection. Though the foolish and criminal attempt has been defeated, it is to be feared that its very failure may be made the pretext for precipitating external intervention. A letter from Friburg of the 23rd says:—

The city is in a state of siege. The gates are closed. Soldiers are to be seen in every direction, and the most profound silence everywhere prevails. The conquerors do not boast of their victory. Several civic guards killed in the encounter, are deep regretted, and a collection made in their favour produced 300f. Perrier has been tried by court-martial. On a table, in front of the Court, were placed a seven-barrelled revolver, and the rifle, sword, and cartridge box he carried. He boldly defended himself. His wound in the head is slight. Major Gerber saved his life by warding off a thrust of a bayonet, which would have run him through the body. His brother-in-law, Captain Landerset, who commanded the artillery against the insurgents, pleaded his cause. The public prosecutor asked that he should be condemned to irons during thirty years. The civic guards unanimously demanded his condemnation to death. The Council adopted the conclusions of the public prosecutor. This decision produced a painful impression on the civic guards, who observed that, in six months, probably, after he had been pardoned, they would again encounter him in the field. Perrier refused to name his accomplices. The Civic Guards fought very bravely and under great disadvantage, for they had to ascend two flights of steps, and to advance through a narrow street in order to reach the college. They were obliged to bring up the artillery by that difficult passage. The riflemen soon dislodged the peasants posted in the windows. The greatest number of the latter then took refuge in the church, where they were fired upon with grape-shot. Finally, they surrendered, the parish priest of Torny having stepped forward, holding a white flag in his hand. He was arrested. The Government has made many arrests. The state of siege has been raised. Among the prisoners taken are several curés, two former mayors, and a high bailiff. A flag was captured having on it the effigy of the Blessed Virgin.

The Government of Friburg has made a report of the affair to the Federal Executive, without, however, invoking its assistance, which is taken as a proof that the cantonal Government rules by no other strength than that which it derives from the sympathies of the people.

GERMANY.

We hear from Berlin that the principal article of the bill relating to the prohibition of the sale in Prussia of foreign publications has been rejected by the Chamber of Deputies. The rejection of this article is equivalent to the rejection of the whole bill. The check experienced by the Government has excited considerable sensation.

The Police Director, Stieber, has left Berlin for London, in company with the Secretary-General Nörner, to follow up certain clues and indications which the late discoveries and detections have thrown in their hands.

In consequence of the severe measures adopted in the province of Posen against the Polish Refugees, 200 of them have thought fit to take refuge in London.

The 1st of May is an important day in the history of the jurisprudence of the Austrian Empire, as on it the Austrian Civil Code comes into operation in all the provinces, with the exception of Transylvania and the Grand Duchy of Cracow.

HOLLAND.

The Second Chamber is dissolved. The elections are fixed for the 17th of May, and the meeting for the 13th of June. The programme of the new Government has appeared. There is to be no change in the constitution. Freedom will be extended to all religions, under strict superintendence. The manifesto announces the changes in the organic laws, by which the executive power will be really vested in the King, and concludes with an appeal to the wisdom of the nation. The late Government declares that it had no cognisance of the intentions of the Pope to pronounce an allocution on the question of a hierarchy in Holland.

DENMARK.

On the 18th inst. the question of the succession was brought to a division and lost, the majority of 97 to 45 not reaching the requisite proportion of three-fourths of the votes present. On the following day the meeting was dissolved. The announcement of the dissolution in the Volksthing produced a thundering "bravo" for the King and for the 45 minority.

The official list of the new Ministry is as follows:—Oersted—President of the Council, Minister of the Interior, and of Education. Bluhme—Minister for Foreign Affairs. Graf Sponneck—Finance. Scheel—Justice. Hansen—War, Steen Bille—Marine. Graf Carl Moltke—Schleswig. Reventlow-Criminil—Holstein and Lauenburg. It was rumoured that Rang would not only retain his *portefeuille*, but also that of Simony; subsequently, however, he seems to have had misgivings as to the stability of the Ministry, and Oersted to have taken the two vacant *portefeuilles* under his management.

TURKEY.

We learn from Constantinople that the proposals of Prince Menschikoff have not been accepted. Indeed, it is said the Divan, at the recommendation of Lord Stratford de Redcliffe, raises great objections to them. An excellent understanding prevails between the English and French embassies.

AMERICA.

By the *Atlantic* we have advices from New York to the 16th inst. The President, it is said, resents the interference of England in Central America; and Mr. Buchanan, the new Minister to England, will make a representation on the subject.

General Santa Anna arrived on the 1st inst. at Vera Cruz, where he was very coldly received.

The Canadian Assembly had adopted a bill making various alterations in the tariff, by which goods that ascend the St Lawrence Canal will pass the Welland Canal free, and *vice versâ*.

Jamaica advices of the 5th inst. had reached New York. A perfect political fever appeared to prevail in the Island, in consequence of the rejection by the Council of a retrenchment bill passed by the House of Assembly.

INDIA AND CHINA.

The Overland Mail has arrived with advices from Bombay to the 29th ult.

The news from Burmah is by no means definitive. No Burmese envoys have yet arrived at Meaday, and several divisions of the Burmese army being still *en route* to Ava, considerably protracts all rumours relating to the war and peace parties. It is reported that the former has lately been gaining ground. At Prome and Meaday all is quiet. Near Donabew a combined attack was made on a stockade of the robber chief Meatoon. Sir John Cheape, the Commodore, and Captain Tarleton were each advancing by a different route, so as to surround him, all those who succeeded in making their escape being guarded by gunboats; the result was not yet known.

General Steel has reached Tonghoo, and opened communications with Prome and Meaday. His march has been performed with great rapidity, the distance (during the country is covered in the last ninety-three miles in eight days), yet without distressing his force. During his last few marches his cavalry came up with some of the baggage and straggling of the retreating Burmese, and captured about a dozen elephants and a great number of horses. Another rather extensive magazine, containing guns, muskets, and ammunition, was taken possession of. It is not probable that any general move will be made during the remainder of the hot season, but the commencement of the Burmese monsoon, a month hence, will open the high road to Ava to our large steamers, if anything then remains to be done.

The Chinese mail of the 25th of February has brought important intelligence regarding the progress of events in the Celestial Empire. The rebels have now got so far north as to threaten Shanghai, and are stated to have a force of 50,000 men within a few marches of that port. Seu-kwyng-Tsin, appointed by the Emperor to the chief military command of the combined attack which had been ordered on the rebels, has been worsted, and has fallen—according to some accounts, by his own hand; according to others, by that of the enemy. Altogether, the affairs of the Tartar dynasty are considered to be in a most critical state, though the young Emperor is endeavouring to meet the emergency with a degree of energy, and a disregard to antiquated Chinese maxims, which proves him to be far in advance of his predecessors. He has repealed a law, by which an edict which, printed on yellow paper, is now posted up in every place of public resort in the empire. He attributes the frequency of the reverses which his troops have met with to a slothful and trifling spirit on the part of the local officials, absence of discipline in the army, and a want of union, energy, and public spirit among all classes. "Above all," says the edict, "it is necessary in reporting to us to state the truth, without the least glossing over of facts." The Emperor details the military movements he has ordered for the annihilation of the rebels. Seu-Kwyng-Tsin was to lead the main body of the troops in person, detaching troops under his subordinate commanders to drive the enemy towards Woochung; three other Generals were to ascend the Yang-tse-Kiang with troops; and a fourth, with 10,000 picked men, had been despatched to defend the southern border of Honan, and to relieve Hookwang. All these were to be reinforced as rapidly as possible by troops sent forward from other provinces. All "were to unite, without regard to territorial distinctions, and advance straight

to Hoopah, to make a combined and annihilating attack." Of the military movements sketched out in the above edict, the portion assigned to Ben and the main body of the army has already turned out a failure, and it is reported that the other generals have been equally unsuccessful. The provinces already overrun by the rebels are stated to have been completely ravaged, and to be in a present in a state of anarchy, and any further successes of the rebels would, it is thought, very seriously affect the commercial interests of all the powers trading with China. An absurd suggestion has been thrown out that England, France, and America should assist the Emperor to maintain his throne a design which will probably be scouted by every public man in Parliament.

A powerful American squadron is on its way to the China Seas, and it is stated that a powerful Russian land force has been despatched thither to watch its proceedings. Under these circumstances, and in the present position of affairs in China, it is complained that our naval force in those seas is inadequate for the protection of British interests.

The Emperor has legalised the importation and sale of opium. This may lead to the extensive cultivation of the plant in the southern provinces of China, in which case the East India Company's revenue would suffer severely.

Whatever may be the immediate issue of the present struggle in China, it is evident the old, exclusive, and bigoted system of that nation has received a shock which is not likely to recover Our successes in China destroyed the prestige of the empire, at least in the provinces on the coast, and the rapidly increasing communication with California and Australia, and the tens of thousands of Chinamen now annually returning to their homes, with the savings and experience of three or four years' residence in the most "go-ahead" country in the world, cannot fail to have a great effect in a country, where printing is so cheap and education so general as in China.

AUSTRALIA.

By the *Pirarire*, we have received accounts from Sydney to the 31st January. The yield of gold continues unabated; several new fields have been discovered, and one of them, on the confines of the territory of New South Wales, is likely to prove a second Mount Alexander. The whole of the clip has been got in, but great delay is experienced in bringing it to market. High prices are ruling for both wool and tallow. An improvement in the rate of exchange (the banks now selling at 1 per cent and buying at 5½ per cent discount) has caused a corresponding advance in the price of gold-dust, which is now selling at from 3d. to 3d. 9d. for New South Wales being 3s. per oz. lower. Business of every denomination was thriving, and the arrival of emigrants was constantly on the increase. The Government escort, which arrived at Melbourne from near Bendigo and Mount Alexander on the 8th of January, brought down 20,607 ounces of gold, the quantity received from the same places by a previous escort amounting to 17,500. Gold was still coming in in considerable quantities, although a large proportion of the miners were engaged in prospecting, or, at least, in surface digging, seeming to have an aversion to expending any great amount of labour in sinking deep shafts or pushing tunnels into the hills. Some heavy swindling transactions have been carried on for a number of months past in Australia in the manufacture of spurious gold. It is stated that £100,000 had been made in five months by operations in the gold frauds, one bank alone having been mulcted in £50,000.

NATIONAL SPORTS.

NEWMARKET FIRST SPRING MEETING.

MONDAY.—Many years have expired since the opening day of the First Spring meeting at Newmarket presented so wintry an aspect: snow and rain fell alternately in heavy showers, and the day was comfortless in the extreme. The muster on the Heath consisted chiefly of the indefatigable lovers of business men, who, in spite of wind and weather, will congregate together. At the Rooms, in the morning, even money was betted on West Australian for the Two Thousand, 5 to 2 agst Syphine for the One Thousand, and 100 to 8, five times, agst Orinoco for the Derby.

HANDICAP SWEEPSTAKES of 20 sovs. each.—Petrel 1. Jullien, 2.

SWEEPSTAKES of 50 sovs. each.—Alamode, 1. Dlomedia, 2.

FIFTY POUNDS.—Ariosto, 1. John of Berwick, 2.

TUESDAY.—The cheap and the regular trains brought down a large accession of visitors; but, notwithstanding a strong list of attractions, and more than ordinary interest attached to the principal feature of sport —the Two Thousand—the still stormy state of the weather had the effect of limiting the attendance of general company. There was, however, a goodly display of fashionables, and the ring was well thronged with speculators.

QUEENS PLATE of 100 Guineas. - Pancake, 1 Hasse Momburg. 2

MATCH: 100 sovs.—Hesperus, 1. Sophistry, 2.

HANDICAP SWEEPSTAKES of 10 sovs. each.—Child of the Mist, 1. Tittle Tattle, 2.

MATCH: 100 sovs.—Little Kitty, 1. Filly by Melbourne, 2.

MATCH: 150 sovs.—Knight of the Garter, 1. Nathan, 2.

THE THOUSAND GUINEAS STAKES. West Australian, 1. Sittingbourne, 2. Yardley Oak, 3. Lord Lyon, 4. Colt by Assault, 2

MATCH: 100 sovs.—Filly by Sir John, 1. Feversham, 2

HANDICAP SWEEPSTAKES of 10 sovs. each.—Peacock walked over.

SWEEPSTAKES of 300 sovs each.—Ilex received forfeit.

WEDNESDAY

SWEEPSTAKES of £50 sovs. each.—Filbert walked over

SWEEPSTAKES of £50 sovs each.—Dlomedia, 1. Cobnut, 2.

HANDICAP SWEEPSTAKES of 10 sovs. each.—Cock Pheasant, 1. Dromedary 2.

PLATE of 50 sovs.—Ipsa lemona, 1. Beaucleve, 2

HANDICAP PLATE of 50 sovs.—Caurire, 1 Waverley, 2.

HANDICAP SWEEPSTAKES of 20 sovs. each.—Jullien, 1. Ionic, 2.

RENEWAL of the SWEEPSTAKES of 50 sovs. each.—Speed-the-Plough walked over.

SWEEPSTAKES of 50 sovs. each.—Filbert received forfeit

A most pleasant change of weather made some amends for the discomfort experienced on the two previous days. The day had its average of sport and a fair attendance of company.

THURSDAY

QUEEN'S PLATE. Ilex, 1. Ariosto 2.

1000 GUINEAS STAKES.—Mentmore Lass, 1. Comdit, 2.

HANDICAP, 25 sovs.—Erawn, 1. Assault, 2.

MATCH.—Petrel by Incognita.

MATCH.—Hesperus beat Sophistry.

LONDON MODEL YACHT CLUB.—This nursery for yachtsmen sailed their opening match on Tuesday, on the Serpentine. The races were in heats, for a silver cup and other prizes:—In the first heat, Wanderer (cutter) was 1; and Glorinna (lugger), 2: seven started. In the second heat, Scud (cutter) was 1; and Sir Peregrandum (lugger), 2: seven started. The third heat was won by the Storm Witch; and the fourth, by Wellington (These two heats were formed of the ten losing boats from the first and second heats). The grand heat sailed with The Scud, 1; and Weathergauge, 2

HER MAJESTY AND THE DUBLIN EXHIBITION.—Within the last few days there have been despatched from Windsor Castle several large cases, containing cabinets, and articles of *vertu*, selected by her Majesty the Queen and his Royal Highness Prince Albert, for exhibition at the forthcoming Industrial Exposition at Dublin. Amongst the articles sent are Winterhalter's full-length portraits of the Queen and the Prince Consort, from the Throne-room

BRADSHAW'S NEW RAILWAY-MAP (Adams, Fleet-street).—This new railway-map of Great Britain exhibits at one view all the rail ways, railway-junctions, and stations, as well as the lines of electric telegraph, canals, navigable rivers, and mineral districts, with their geological peculiarities. The lines belonging to the various companies are each coloured a different tint; and the distinction between the broad and narrow gauge is clearly indicated. To the traveller by railway this map will be highly acceptable.

NATIONAL FREEHOLD LAND SOCIETY.—An estate at Clapham, Surrey, of fourteen acres, and one, being the third) at Walthamstow of thirteen acres; also a smaller one at Leighton Buzzard; have just been purchased for distribution among the members. These will make 190 estates purchased by this society since its commencement.

NEW RAILWAYS.

The Directors of the London and North-Western Railway have issued the following Circular to the proprietors:

In conformity with the intimation given at the recent half-yearly meeting, the directors have convened a special General Meeting of Proprietors, to be held on the 30th instant.

The Select Committee appointed by the House of Commons on Railways and Canals have made a preliminary report. Impressed, apparently, with the magnitude and importance of the questions referred to them, and finding themselves unable to complete their investigation in time to make any final recommendation for the guidance of the House in its legislation during the present session, the committee advised that the consideration of all bills involving the principle of amalgama tion between existing railways, or railways and canals, should be postponed for a year, and the House have resolved accordingly

In reference to this subject, the Board reported to the meeting held on the 18th February, as follows

"The Directors believe that inquiry must lead to the conclusion that the attempt to supply the requirements of the country, and to maintain competition, by granting rival lines, is an error, and if, on the recommendation of the Select Committee, the Legislature lays down a wise and just course of policy in regard to the future, it will be alike the duty and the interest of the existing companies to furnish all needful accommodation, by the extension of lines, which, though not profitable in themselves, would certainly throw upon the main line a large amount of traffic which could not otherwise be developed.

"The steps which your directors have thought it expedient to adopt will enable them to act upon such a decision of Parliament."

Although the committee have not yet concluded their inquiry, it is satisfactory to find it stated in their report, that they "infer from the evidence that in some shape or other ultimate combination of interest will result from the temporary competition of rival companies," and they cite instances as examples of what appears to be the general tendency in respect of competition and combination between railway companies."

The bills promoted by this company were specified in the report read to the general meeting, on the 18th February last, viz.:—

"A line connecting St. Albans and the district round Amersham and Chesham with the main line at Watford, eighteen miles; estimated cost, £162,000.

"A line from the Oxford, Worcester, and Wolverhampton Railway, at Oxford, through Thame to Tring, thirty-one miles; estimated cost, £400,000

"A short branch, forming a junction between the Buckinghamshire line and the line of the Oxford, Worcester, and Wolverhampton Company, near Oxford, two miles; estimated cost, £37,000.

"A line from Northampton to Market Harboro', eighteen miles; estimated cost, £250,000

"A line from near the Oldbury Station, on the Stour Valley Railway, to Stourbridge, eight miles and a half; estimated cost, £300,000.

"A line from near Wellington to Coalbrookdale, with branches, ten miles; estimated cost, £160,000

"A line from Shrewsbury to Newtown, with branch to Oswestry, forty-four miles; estimated cost, £600,000.

"A line from Crewe to Shrewsbury, thirty three miles; estimated cost, £350,000: also for power to widen the line from Primrose-hill to Willesden, and to take land for additions to stations at Warrington, Stafford, and Basford, and to divert part of the Grand Junction line.

"A bill to make a deviation of the Oldham branch (for which powers were granted to the late Huddersfield and Manchester Company), by which the expense will be materially lessened."

The branches from Watford to St. Albans and Amersham, at an estimated cost of £70,000 and £82,000 respectively, are projected with a view to the development of the resources of districts in the immediate vicinity of the main line; and, having regard to the position of the proposed lines with reference to the metropolis, and the small cost at which they can be formed, the directors entertain a confident expectation that the united earnings from the new traffic on the branch and main line will fully remunerate the outlay.

The line from Tring through Thame to Oxford, if sanctioned by Parliament, will be a most important one, which, although strongly objected to by the landowners and others interested in the matter, would no doubt be passed, if the superior project of this company were not proposed, and thus the entire district of Central Wales would be transferred to the opposing company.

The line from Crewe to Shrewsbury passes through a district free from any engineering difficulty; and many of the landowners having agreed to dispose of their land at fair rates, and to dispense with needless or costly works, the whole length, 33 miles, can be constructed for £350,000, about £10,600 per mile; its formation will bring Liverpool, Manchester, and Yorkshire into direct communication, by the lines of the company, with Wales.

By reference to the published statement of accounts, it will be seen, that in order to encourage and aid the extension of railways in connexion with the several lines now forming the system of the London and North-Western Company, the proprietors have, from time to time, subscribed to other undertakings; the capital so invested amounting to £3,292,656. The market value of the shares so held now amounts to £2,965,970. The proprietors have the option, should they think fit, to order the disposal of the whole, or any portion, of this property

A comparison of the market price of the shares, during the past four years shows the following results:—

Market value of the capital invested in other lines on the 1st January, 1850	..	£1,748,349
Ditto ditto ditto ditto calculated as the 1851	..	2,561,305
prices quoted at the close of April in each year 1852	..	2,683,450
.. .. 1853	..	2,965,970

Having regard to the steady increase thus shown to be taking place in the value of the property, to the still depressed condition of a portion of it, and to the reasonable prospect of further and considerable improvement, as also to other considerations connected with the objects which induced the investment in the first instance, it appears to the directors most desirable to make the property as productive as possible, and they have therefore resolved to recommend to the proprietors at the approaching half-yearly meeting, that the capital of the company be increased to the extent of £3,000,000, by the creation of 30,000 new shares of £100 each, to be issued for every £100 of stock), to the amount of £3,054,600, they further recommend that a deposit of £2 10s. per share of £12 10s. be made on the creation of the capital. At each half-yearly general meeting the directors will apprise the proprietors when any additional call will be required during the succeeding six months, a dividend after the rate of 4 per cent being allowed until the whole be called up, when the new creation will be converted into stock

With respect to the Manchester and Birmingham £10 shares upon which £8 are stated to be called, and the London and Birmingham £25 shares, upon which £8 remains uncalled, the directors will feel it due to the holders of these stocks to make further call upon them at an early date

GEORGE ANSON, Chairman

The report is considered satisfactory.

THE WILL OF THE LATE DUKE OF WELLINGTON not containing any direct appointment of executor, letters of administration, with the will annexed, are being prepared for the present Baronet, Sir Edmund Antrobus, as the next of kin—his Grace having entered into the usual bond with sureties to the amount of a million.

THE WILL OF THE LATE GENERAL SIR EDWARD KERRISON, Bart., G.C.B., G.C.H., of Oakley-park, Suffolk, has been proved by his son, Sir Edward Clarence Kerrison, Bart., M.P., and Richard Denny, Esq., a power being reserved to Lady Kerrison, the relict, to whom is bequeathed all plate, jewellery, carriages, furniture, and the residue of real and personal estate. To Sir Edward, the present Baronet, he devises his freeholds in Suffolk and Norfolk, and elsewhere in Great Britain, as well as the estates bequeathed by his father, and over which he had a power of disposition. To his married daughters he makes up their marriage portions to £40,000, and a legacy of £5000 to his other daughter. The personalty was estimated at £60,000

THE SCHOLEFIELD TESTIMONIALS.—The Engravings in our Journal of last week, page 313, were from Daguerreotypes by Pickering, of Birmingham.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

Sir Henry de la Beche, Director of the Geological Survey of the United Kingdom, and of the Metropolitan School of Science, has just been unanimously elected a Corresponding Member of the Institute of France, in the place of M. Mitcherlich, who has been promoted to an Associate Foreign Member of the Institute

The Chepstow Tubular Bridge is at length completed; and, after having undergone an examination by the Government Inspector of Railways, has been certified to be fit for traffic.

No less than 250 pike were captured last week, with a net, at Newark, in Nottinghamshire.

Two lines of submarine telegraph between France and Algeria are under consideration, one by way of Piedmont, Sardinia, and Corsica, to Bone; and the other from Perpignan, along the Spanish coast as far as Gata, and thence to Oran.

Professor Aytoun, of Edinburgh, author of the "Lays of the Scottish Cavaliers," intends delivering in London, early in May, a course of lectures on "Poetry and Dramatic Literature."

William Tyrrell and Charles Williams, who were left for execution at the late assizes for Lancashire, for murder, have had their capital sentences commuted to transportation for life.

The Anti-Slavery Society of Belfast has succeeded in obtaining an explicit promise of a visit to that town from the distinguished authoress of "Uncle Tom's Cabin," as soon as her health will permit.

Colonel Kemeys Tynte was prevented by illness from voting with the majority on Mr. Gladstone's resolutions on Friday night.

A gun, named Olivara, about three miles east of Lisbon, has been chosen for the commencement of the projected railway. The 29th inst. has been set apart for the ceremony of "turning the first sod." The Queen is anticipated to be present.

Honora Gibbons and Bridget Gerraly, who were left for execution at Liverpool, for murdering a child, for the obtainment of burial fees, have been reprieved, and transported for life.

A powder-mill exploded, near Wilmington (U. S.), on the evening of the 8th inst., killing the engineer on the spot.

The Earl of Rosse, as President of the Royal Society, gave his annual conversazione on Saturday last. On the tables were a number of exceedingly beautiful drawings of nebulæ, observed by Lord Rosse's gigantic telescope during the past winter

The inhabitants of Peacecheuch street have memorialised the Court of Sewers, praying that the wooden pavement might be continued in that very noisy thoroughfare, the residents having derived a great comfort and quiet for eleven years during which it had been down

The departure of the *Argo* steamer, belonging to the General Screw Steam Shipping Company, has been postponed from Wednesday, the 4th, to Saturday, the 7th of May next.

The Queen has appointed Mr. William T. Fraser to be Consul at Miramichi, New Brunswick, for the King of Prussia.

A Chinese child, named Keo, who had been brought to Europe, by M. Pallegoix, apostolic vicar of Siam, was christened on Thursday week in the church of St. Sulpice, in Paris.

The salmon-fishing in the rivers in Scotland has been very successful hitherto: and promises well, for the remainder of the season.

From Egypt, letters state that the cultivation of the sugar-cane, introduced into that country by Mehemet Ali during the latter part of his reign, had lately acquired considerable development.

In consequence of Mr. T. B. Macaulay's (M.P.) state of health being still anything but satisfactory, he has been ordered shortly to proceed to a warmer climate.

Victor Hugo is writing another vehement and eloquent book against the Bonapartist régime. One portion is said to be so terrible in its sting that "it would make a statue move."

The declared value of steam engines and other mill-work exported from the United Kingdom in the month ended the 5th ult., was £92,823.

The number of season tickets for the Dublin Exhibition, sold up to Tuesday evening was 5512 There are nearly 1300 men employed at the building over the gates.

The Siamese twins, who have been for years flourishing farmers in North Carolina, are about again to visit the principal American and European cities

Great disease prevails amongst the vines in the neighbourhood of Zante, Morea, and Cephalonia, which will seriously affect the crop of grapes

Colonel Colt is rapidly becoming a millionaire, from the immense demand for his revolvers

Mr. Thomas Dax, the senior Taxing Master of the Court of Exchequer, died suddenly, near the Mansion house, on Monday evening. He had been connected with the Court for about half a century. The appointment is in the gift of the Chief Baron, and the salary is £1200 a year

Several thousand workmen were last week discharged from the manufactories in Vienna, in consequence of stagnation of business

On Tuesday Mr. Rowden was elected Registrar at Oxford, by 393 votes, against 206 for Mr Cornish, and 162 for Mr Rawlinson.

The first legion of the National Guard of Turin has elected the young Prince of Piedmont, their apparent to the Throne, for its Colonel

The annual cricket match between eleven of all England (not Players), selected from the first players of the day, and fifteen from the undergraduates of Oxford University, will take place on Christ Church meadows, on May 23rd.

The last accounts from Tunis represent the health of the Bey as improving, and state that he hoped to be able to visit Europe in June

A bazaar in aid of the movement for ocean penny postage has been opened at the Manchester Exchange. The goods gratuitously furnished are valued at from £1500 to £2000; and 17 stalls have been taken

The Manchester police have memorialised the watch committee for an increase of wages, and their memorials are under consideration. The force comprises 400 men, arranged in four divisions.

The railway across the desert in Egypt progresses rapidly: in about two months, 67 miles of the line will be open.

Since the 5th of March, 82 persons have renounced the Roman Catholic religion in the church of St. Paul's, Bermondsey.

Mr. Walker, agent of the projected submarine telegraph between England and Ostend, has returned, viâ Brussels, after receiving the most satisfactory assurances of co-operation from the Prussian authorities.

Mr. Cubitt, who had the charge of lighting the House of Commons for some time, and discharged his duties most satisfactorily, has resigned; and the duties are in future to be performed under the superintendence of the Office of Works.

The Mormons are passing through St. Louis (U. S.) by hundreds a day, mostly from Europe. There were recently 4000 in St. Louis, waiting to begin their journey to the City of the Salt Lake.

On Wednesday last there arrived from Australia the *John Taylor*, with 11,647 oz. of gold; the *Sir Robert Peel*, with 13,836 oz.; and the *Clifton*, with 27,607 oz., valued in all at £212,760.

Mr. Francis Pulszky is at Boston, and was to sail by the next steamer from that port for Liverpool.

The *Jewish Chronicle* says:—"The utmost confidence is felt in circles well able to give an opinion on the matter, that the second reading in the Bill for the Admission of Jews to Parliament in the House of Lords will be carried by a respectable majority

The British barque *Robert Kerr*, with a cargo of iron, from Glasgow to New York, was totally abandoned at sea. Her passengers and crew were rescued by the British barque *Douglas*.

The declared value of the British produce and manufactures exported to Russia, during the year 1851, was £1,307,761, to Austria, £2,242,642; and to Turkey and its dependencies, £2,761,422.

The young Maharajah Dhuleep Sing was formally admitted into the Christian Church by baptism on the 8th inst., at Lathybur, by the Rev. W. Jay. He remains in retirement.

It is said that Professor Wilson (of *Blackwood's Magazine*) is past hope of recovery. His lower limbs are paralysed; and, although his mind is still clear, he is but a wreck of his former self.

On Wednesday, at the Scottish Hospital, the Crane-court, six natives of North Britain (all aged above 70) were appointed pensioners of £10 each per annum.

The Commissioners of Sewers have decided on cutting a new sewer from Newcastle street, Strand, up Wych-street and Drury-lane to Holborn, which will join the main sewer in the Strand, and thus empty itself into the Thames.

On Wednesday morning, a steam-boiler at Messrs. Priestley and Co.'s chemical works, Maiden-lane, King's cross, exploded, and caused the death of a man employed on the premises.

Two meetings have been held this week—one at St. James's, Westminster, on Monday, the other in Southwark, on Tuesday—to petition the House of Commons in favour of the Budget.

On Monday last the public were admitted by tickets to view the progress of the works at the New Crystal Palace, at Sydenham; the unfavourable state of the weather, however, prevented many from availthemselves of the opportunity

Messrs. Parent Schaken and Co. have undertaken, in conjunction with Messrs. Brassey and Co., the execution of the railway from Seville to Cordova.

BAY OF CARTHAGENA.—EMBARKATION OF GENERAL SANTA ANNA.

RECALL OF SANTA ANNA TO MEXICO.

THE political changes which have recently taken place in Mexico must create a lively interest in the movements of General Santa Anna: and a Correspondent at Carthagena has rightly estimated the attractiveness of the subject in favouring us with the accompanying Sketches illustrative of the General's residence during the last two years of his voluntary exile, at Turbaco, with some particulars of his habits of life; and a Sketch of the Bay of Carthagena, with the incident of the General's embarkation.

It will be recollected that at the close of the Mexican war, and after the disasters which befell his army, General Santa Anna took up his residence at the Havanna, thinking to meet there with the hospitality and generous reception which, in his position, he ought to have commanded; but the jealousy of the Spanish authorities was soon roused, and he was desired to quit the island as politely as it is possible for Spanish officials to issue such requests.

The General proceeded thence to Jamaica, where he resided some

COCKPIT AT TURBACO.

time, maintaining the best understanding with the authorities and principal inhabitants of that island; but a want of knowledge of the language, manners, and customs of the English induced him, though with regret, to quit the hospitable shores of Jamaica, and to turn his thoughts to one of the Spanish American sister republics. For that purpose he selected New Granada, and landed at Carthagena; but, finding that the climate did not agree with his family, he retired to Turbaco, a small Indian village, favourably mentioned by Humboldt, and situated about fifteen miles from the port of Carthagena. General Santa Anna's chief occupation, during his residence in Turbaco, has been to improve and beautify the general appearance of that village, and a fine property which he purchased in its vicinity.

The General is a tall, good-looking man, of a dark, truly Spanish complexion, with a quick, penetrating eye; he is an early riser, of thorough business habits, very temperate, seldom if ever indulging in the use of wine or spirits; and, unlike the generality of his countrymen, he seldom smokes. His manners are courteous and affable, particularly towards Englishmen, for whom he appears to have a decided partiality; and he cordially dislikes everything that savours of Yankeeism.

The General and his family embarked, on the 13th of March, on board the Royal steam-ship *Trent*, for Mexico, where, it is said, he has been called to preside over the destinies of that ill-fated country—with what success he will accomplish that object time alone will tell. It certainly appears difficult for the affairs of any country to be in a more deplorable state than at present obtains in Mexico. Little is as yet known of his programme: but, should it not be accepted *in toto* by the Mexican people, he will, in all probability, go back to New Granada.

One of the Sketches shows General Santa Anna's house in Turbaco, situated on the Plaza. It is the only stone house in the village; and contrasts strangely with the other dwellings, which are built of mud and covered with the palms. The busy scene was sketched at the moment that the General was quitting the village, to embark at Carthagena. Turbaco is situated at the entrance of a large forest, south-west of the Popa, one of the most remarkable summits in the neighbourhood of Carthagena. Humboldt states the village to be about 1151 feet above the level of the sea. From the terrace surrounding his habitation, he had a view of the colossal mountains of the Sierra Nevada de Santa Maria, part of which was covered with perennial snow. The intervening space, consisting of hills and plains, was clothed with luxuriant vegetation, resembling that of the Orinoco. The reader of Humboldt's "Travels" will remember his interesting account of the Volcancitos, or air-volcanos of Turbaco; the delight with which he speaks of his botanical excursions, "the little spring of Torecillo, the first sight of a gustavia in flower, or of the cavanillesia loaded with fruits having membranous and transparent edges."

To return to our Correspondent's Sketches. The next shows the "gallera," or cockpit, which General Santa Anna had built at Turbaco, to enable him to gratify his passion for that sport. Cock-fighting is a popular game in Mexico: it was once a Royal diversion in England, and Santa Anna has but followed the example of our Henry VIII. in erecting a cock-pit "for the more magnificent celebration of the sport," which, by the way, was prohibited by one of the Acts of Oliver Cromwell.

The Bay of Carthagena, with the embarkation of Santa Anna, and the boat conveying him to the *Trent* steam-ship is the subject of the uppermost Engraving.

Intelligence subsequently received states that Santa Anna had definitively consented to return to Mexico, as Dictator, on the 1st of April. He had a long interview with Escobar, and the sentiments he expressed have been published. They are not favourable to the United States. Santa Anna's watchword is "Independence or Death." He severely reproaches the Mexicans with ingratitude to him; declares he loves retirement, and only accepts power on patriotic grounds.

HOUSE OF GENERAL SANTA ANNA, AT TURBACO.—HIS DEPARTURE.

AGRICULTURE IN CANADA.—The Board of Agriculture for Lower Canada was formally organised on March 28; and its first Exhibition will be held at Montreal, in September next. The Postmaster-General has consented to allow the *Agricultural Journal* (patronised by the Board) to pass through the Post-office postage free, as he had previously allowed the same journal published in French. The Quebec Industrial Exhibition will be opened on May 27, in time for selections to be sent to the World's Fair, at New York, in the summer.

DOWNHAM RAM.

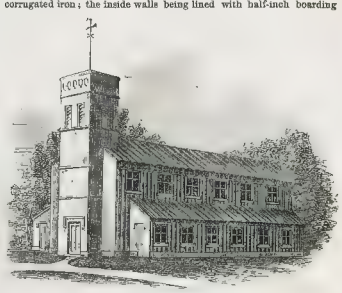
THIS fine specimen of the Asiatic breed of sheep was purchased about three years since of a sejoy at Attock, when the handsome animal was two years and a half old, and three feet high; and its tail weighed 25 lb. The upper wool was very long and soft; and under it was another kind, as soft as floss-silk. The animal was fond of being noticed and petted but its strength was so great as to render it unsafe to allow it to be at liberty

DOWNHAM RAM.

PORTABLE IRON CHURCH FOR THE DIOCESE OF MELBOURNE, SOUTH AUSTRALIA.

"NOTHING like iron" is one of the most practical "modern instances" The employment of iron may be traced through a long vista of ages; but it was reserved for our generation to produce the iron bridge, the iron road, the iron ship, and the iron house; and within the last few months towns of iron houses, to shelter the hordes of emigrants to newly-discovered lands of gold. A remarkable instance of the new manufacture, and its rapid extension, to meet the demands caused by the exodus to South Australia, has lately occurred in the city of Bristol, at Clift-house, Bedminster, where the stock of galvanised iron houses for emigrants has increased in a comparatively short time from a single model cottage to a sufficient number of dwellings in progress to form a little town; besides stores, villas, an hotel, parsonage houses for missionaries; and, last of all, a church, which has been ordered by the right rev. the Lord Bishop of Melbourne, and which it is believed is only the first of several which will be sent out to supply the means of public worship to the diggers. The smallest house made is the "cottage for the million.' It comprises two neat rooms, measuring 16 feet by 12, and can be purchased as low as 35 guineas. A house, in course of completion for the auditor of Melbourne, comprises four rooms, of 14 feet square, with an entrance-hall, closets, and a detached kitchen, and fitted with venetian blinds to every window, and a verandah running all round the villa. A parsonage-house has been made at a cost of 250 guineas, to the order of the Bishop of Melbourne: it contains a sitting-room, kitchen, servants' room, store-room, pantry, and four bed-rooms. The hotel or lodging-house is to comprise fourteen bed-rooms, so constructed as to divide into four compartments each, thus enabling the occupier to make up fifty-six beds.

We have engraved the church which Mr. Hemming, the proprietor of Clift-house works, has just completed for the diocese of Melbourne. It comprises a nave, and two side aisles, with pulpit, reading-desk, baptistery, vestry, and a tower; the whole covering an area of seventy feet by forty-eight feet. The outside casing is entirely of galvanized corrugated iron; the inside walls being lined with half-inch boarding



GALVANISED IRON CHURCH FOR THE DIOCESE OF MELBOURNE, SOUTH AUSTRALIA

canvas, and paper. The ceiling, under the roof, is of inodorous felt, also lined with canvas and paper. The church contains nearly 700 sittings, besides every fitting complete, for divine service; and the whole has been erected in five weeks, at a cost of £1000.

The Clift-house factory commenced with the proprietor's endeavour to make a light portable house for a son about to emigrate; and his success led to the present establishment, where hundreds of workmen are employed. An important feature in the premises is the seasoning stove, a large building in which the doors, sashes, &c. (of wood), are, before they are fitted together, exposed and thoroughly seasoned to a higher temperature than they will have to stand in the colony; thus providing against shrinkage, which would otherwise inevitably take place. The houses consist of a timber framing, the sills of oak; the walls, roof, and ridge-capping being of galvanized corrugated iron. Between the iron walls and wood lining is left a space of three inches throughout the building, by which means complete ventilation is secured, and the temperature in summer much lessened, and increased in winter; or the framing may be filled with sun-dried bricks. Again, felt is a non-conductor of heat, and thus prevents its entrance in summer, and its escape in winter. The erections are entirely put together with iron screws and bolts, and may be put up by any inexperienced person in a few hours, every part having been carefully fitted, numbered, and lettered. The facilities for package and removal are evident. A recent visitor to the factory writes:—"We knocked against a moderate-sized box near the entrance. 'That,' said the principal, 'is the whole of one house, and that bundle braced together is the rafters and principals; and you will observe that the flooring forms the packing-case; the iron clamps at the corners are for the principals, instead of mortise and tenon-joints, which emigrants could not manage; and the whole weight is perhaps under two tons.'"

Some of the portable furniture is remarkable for its ingenuity; and the new manufacture is altogether a very striking picture of the triumph of mechanical appliances in meeting the requirements of this rapid age.

THE "FOSFORO" RIVER STEAMER COALING AT PORT FAMINE.

A VOYAGE TO VALPARAISO.

Early in the summer of last year, a small screw-steamer was built of iron by Mr. Laird, of Birkenhead, for the Maule River, South America. The vessel is named the *Fosforo*; her register is 43 tons, and 40-horse power (engines by Mr. E. Humphreys); depth of hold, 6 feet; length over all, 105 feet. She left Liverpool on July 17, when she was loaded to a foot and a half of the water's edge. She was rigged as a three-masted schooner, and had no keel. The ship's company consisted of commander, two mates, two engineers, two firemen, and six men; and the *Fosforo* arrived at Valparaiso on the 15th of November, having touched at Madeira, Rio Janeiro, and Monte Video, for the purpose of coaling. The total consumption of coals of various kinds was 160 tons, equal to 138 tons of Welsh coal. The passage occupied 121 days, 46 of which were under steam and sail, and 28 days under sail alone; having averaged six knots an hour all the way out. The remainder of the time was consumed at the various ports touched at, in coaling, and repairing some trifling accidents of machinery, and at anchor through stress of weather in the Straits of Magellan.

The *Fosforo* is the smallest steamer that ever performed so long a voyage, the following details of which have been communicated by Capt. Walter Hall, the commander of the vessel; a somewhat fuller account appears in the *Sailors' Home Journal*:—

"Off the River Plate, we experienced heavy weather, with a high cross sea: the vessel behaved well, but required steam to keep her bow to the sea. We passed along the coast of Patagonia, and entered the Straits of Magellan in the month of October—in these parts, the worst month of the year. The weather was so tempestuous, that we were compelled to steam close in shore, where we found smoother water, and sometimes eddies in our favour; but, in navigating so near the shore, great care was necessary to keep the screw clear of the kelp, which is here so abundant, that the way of the vessel was frequently stopped. The passage through the Straits—entering at Cape Virgins, and quitting them at the Gulf of Penas—occupied eighteen days, thirteen of which we were at anchor from stress of weather; the remainder of time (five days and eight hours) the vessel was under steam, and ran about 700 miles.

"We passed Port Bulnes—the small Chilian settlement which will, no doubt, eventually become a coaling port for steamers passing through the Strait—anchored at Port Famine, where we fortunately found coal, on the bank of a rocky cove, left there by a ship in distress, which we embarked with considerable risk, from the difficulties of the place, combined with the tempestuous weather, and the smallness of the only boat we had, which was but 14 feet long.

"We anchored at Port Gallant, where the steamer was laid on the beach, to unship the screw, and put another collar on the shaft. This is the best anchorage in the Strait: from the stillness of its waters, it is a perfect wet-dock; and, from its position, invaluable: we entered at night, and were caught in a south-west gale, so common in the Strait.

"Anchored at Port Tamer, where I found two vessels stranded; these afforded me an ample supply of wood for fuel. After leaving this port, in thick weather, I discovered a channel four or five miles to the westward of Cape Philip, which is not laid down in the chart of the late survey of the Strait. I ran up to its northern extremity, steering N.N.W. by compass, a distance of eight or nine miles, when I anchored in a snug cove, in three or four fathoms, for the night. This inlet is about a mile and a half wide, decreasing to half a mile. I have no doubt there are many good anchorages here, and I think the place would be altogether eligible for steamers to stop, being the last good anchorage on the north side of the Strait. I passed through Smyth's and other channels to the northward, and entered the Pacific by the Gulf of Penas, where it blew nearly a hurricane for three days, from S.W. to N.W.

"I should have endeavoured to escape these tempests but for our short supply of provisions, by attempting the passage alluded to by Byron, in his interesting narrative of the loss of the *Wager*, as communicating with the Gulf of San Rafael, through which the Indian guide tried to take the *Wager's* barge, but was unable to do so by the strength of the current.

"On the 15th December we left Valparaiso, in the face of a fresh southerly gale, for the River Maule (appropriately called the Thames of Chili), a distance of 190 miles southward. Our ship's company then consisted of myself, one mate, one engineer, one stoker, two sailors, and a cook. The bar of this river is a great drawback to the success of the port, and the country adjacent. Sailing vessels are sometimes detained for three months here after they are ready for sea. The river is probably navigable for steamers drawing three or four feet of water.

"Advancing beyond this, great difficulties occur from the shallowness of the water, and quick turnings of the river; when heavy falls of water are met with in the narrow and crooked reaches, and large stones are frequently hurled down by the strength of the current. The banks of the stream are very picturesque, the foliage extending to the water's edge.

"I cannot close this imperfect account without mentioning the favourable impression made on the natives by the appearance of the little steamer going full speed up this river, which had never before been navigated by steam; she was crowded with the inhabitants of Constitution, who were much delighted with their trip. Nothing surprised them more than the easy way the steamer turned in the narrow and crooked reaches: we had more the appearance of a pleasure party than an exploring expedition.

"I should add that the *Fosforo* was sent out by Messrs. Brownells and Co., at Liverpool, to Joshua Waddington, the enterprising merchant of Valparaiso."

The first of the accompanying Illustrations (from Sketches by Captain Hall), shows the *Fosforo* coaling at Port Famine, with a little boat, 14 feet long.

Next is the *Fosforo* lying on shore at Port Gallant, to unship her screw-propeller. In this Sketch we have a glimpse of the striking coast scenery of Patagonia.

PORT GALLANT, PATAGONIA.

REDCLIFFE INFANT SCHOOL, BRISTOL.

Every addition to our scholastic institutions is at this moment peculiarly interesting, from the large share of public attention directed to the subject of the Education of the People. The instance before us has a twofold attraction; in its presenting a welcome termination to protracted Chancery proceedings; and a successful application of the funds thus set free, in carrying out the intentions of the benevolent founder; this being, we understand, the cheapest building ever erected in Bristol.

REDCLIFFE INFANT-SCHOOL, BRISTOL.

The city of Bristol—which in wealth, trade, and population was long reckoned next to London within this kingdom, is famed for the number and efficiency of its endowed charities. Among its benefactors we find recorded a worthy citizen named Brickdale, who, many years ago, willed that the proceeds of certain lands which he possessed should be applied to benevolent purposes. But these good intentions were for a time frustrated. A doubt arose in the mind of a certain churchwarden, whether the particular course which had been given to the charity was that which Brickdale had desired; a "friendly suit" in Chancery was instituted, and the funds were locked up, save for expenditure in costs. The details are not necessary for our present purpose; suffice it to say that an order to obtain a site and erect a School for Infants, was confirmed in 1845; and by those steps, slow if not sure, for which the Court is noted, matters have been brought so near to a close, that a School and Residence have been erected on the south side of Pile-street, not far from Redcliffe Church, from the designs and under the superintendence of Mr. George Godwin, F.R.S. and F.S.A.

We engrave an elevation of the structure, which is a meritorious architectural composition, and well-arranged plan. It includes a school-room, fifty feet long by twenty-five feet wide, with a gallery for assembling the children, fifteen feet by ten feet six inches; a residence for the mistress; and a covered play-ground beneath the school. The height of the school-room is twelve feet at the sides, and twenty-five feet in the centre. Ventilation is provided for by gratings at the level of the floor and under the plate, and by a louvre in the roof; while fresh warmed air is admitted from the back of the stove, which is formed of fire lumps. The building is of Pennant stone, with Bath stone dressings: the walls, internally, are rendered with blue lias cement. The roof is covered with green Bangor slates. The porch is surmounted by a turret for the bell. The tenders for the work ranged from £1066 to £789; the cost of the whole has been about £900. The School is built almost within the patriarchal shade of St. Mary, Redcliffe, one of the finest specimens of parochial church architecture in England, in the restoration of which Mr. Godwin has for some time been engaged. The school was, we believe, used for the first time on Saturday last. The architect, we perceive, is a candidate for the Islington district surveyorship, now vacant: Mr Godwin has worked many years for the public (without fee or desire for it), both in sanitary progress and in the honorary secretaryship of the Art-Union of London; which labours will, doubtless, be appreciated in the coming contest.

THE ART-UNION OF LONDON.

The drawing of the prizes of the Art-Union took place on Tuesday in the Lyceum Theatre. The proceedings commenced shortly after twelve o'clock. The theatre was crowded with well-dressed persons. Lord Monteagle, the President of the Association, was in the chair. Mr. George Godwin, F.R.S., Hon. Sec., read the report to the subscribers, which was unanimously adopted. The following is a statement of the receipts and expenditure for the present year:—

Amount subscribed	£13,348 13 0	
Set apart for pictures and other purposes ..	..	£8,001 0 0
Cost of engravings	..	2,548 8 1
Printing and other expenses	..	2,797 4 11
	£13,348 13 0	

After the usual routine business had been transacted, the prizes were drawn. The following is a list of the principal:—

A Work of Art of the Value of £200.—Lygon, Hon. F., Grosvenor-place.

A Work of Art of £150.—Haynes, B., Ewell; Wilson, H., Bury St. Edmunds.

A Work of Art of £100.—Allon, Rev. H., Canonbury; Long, C., Euston-square station; Richmond, W. A., Kensington; Snee, Miss M., Islington; Yarrell, W., Ryder-street.

A Work of Art of £80.—Balch, W. Y., Boston, U.S.; Biddulph, W., Shadwell; Brandard, E. F., Islington; Edwards, G. C., Mincing-lane; Hardman, Miss A., Bolton; Harris, F., Abingdon; Maudsley, T. H., Lambeth; Moore, Dr. J., Van Diemen's Land; Norton, John, King-street, St. James's; Swindell, C. E., Stourbridge; Turner, G., jun., Torquay; Walker, G., Manchester.

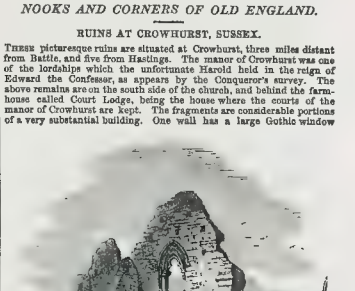
And besides these there were, also, fifteen prizes, at £60; twelve, at £50 twenty-eight, at £40; twenty-eight, at £25; thirty, at £20; twenty, at £15; twenty-five, at £10; five, for a group in bronze, "Satan Dismayed;" ten, a bronze statuette, "A Boy at a Stream;" thirty, to a Tazza in Iron; fifty, to a Parian statuette of "Solitude:" fifty, to a Porcelain statuette, "The Dancing Girl Reposing."

Thanks to the chairman and Mr. C. Mathews, for the use of the theatre, were passed, and the meeting separated.

NOOKS AND CORNERS OF OLD ENGLAND.

RUINS AT CROWHURST, SUSSEX.

These picturesque ruins are situated at Crowhurst, three miles distant from Battle, and five from Hastings. The manor of Crowhurst was one of the lordships which the unfortunate Harold held in the reign of Edward the Confessor, as appears by the Conqueror's survey. The above remains are on the south side of the church, and behind the farm-house called Court Lodge, being the house where the courts of the manor of Crowhurst are kept. The fragments are considerable portions of a very substantial building. One wall has a large Gothic window with cinque-foil head. Horsfield, in his "History and Antiquities of Sussex," says:—"Grose conjectured it to be the remains of an oratory, or chapel. It is probably the ruins of the ancient manor-house; the modern one adjacent having stolen away its honours. The style of architecture is older than, and much superior to, that of the church; and the great extent of the foundations shows it to have been a structure of no mean pretensions. Under the room to which the large window belonged, was another with a groined roof, and two small windows beneath the large one; and south of these the entrance, with remains of a handsome groined roof." As a nook of venerable antiquity, this proves an attraction to the visitors to the watering-places in the neighbourhood.



RUINS AT CROWHURST, SUSSEX.

CALENDAR FOR THE WEEK.

SUNDAY, May 1.—Rogation Sunday. Prince Arthur born, 1850.
MONDAY, 2.—Canuten born, 1851
TUESDAY, 3.—Columbus discovered Jamaica, 1405.
WEDNESDAY, 4.—Seringapatam taken, 1799.
THURSDAY, 5.—Holy Thursday. Ascension-day.
FRIDAY, 6.—Battle of Prague, 1757.
SATURDAY, 7.—Half Quarter-day.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING MAY 7.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

TO CORRESPONDENTS.

R. C.—OUR Correspondent will see that we have availed ourselves to some extent of his communication

PHOTOGRAPHER, Rotherhithe.—A positive is obtained from a collodion negative, by pouring over its surface some proto-nitrate of iron, or a solution of the oxide of silver in cyanide of potassium. The latter process is the one usually employed in France for the production of the positives for stereoscopes.

A CONSTANT SUBSCRIBER—*Argus* of Bradley: "Sa. a fesse engr, and in chief a mullet between two crosses formée fitchée arg"

AN OLD SUBSCRIBER.—"Per fess arg. and or, in chief a lion passant ppr in base a saltire az."

P. B. F. S., BERWICK; CAMOISE.—We are not at liberty to state the quarters name.

A CORRESPONDENT.—An alien cannot hold freehold land or chattels real. He may, however, easily enable himself to do so by naturalization, at a small expense, under the recent act of Parliament.

A. R.—"Studied" *i.e., adorned with studs.* In the blazon submitted it is the collar that is studded.

Our Obituary Notices are unavoidably postponed.

*** The LITERARY SUPPLEMENT will be given with the ILLUSTRATED LONDON NEWS for next Saturday, May 7.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 30, 1853.

THE state of affairs in the East still continues unsatisfactory. Although little or no dependence is to be placed on the truth of the statements and rumours that reach us, through Trieste and other Austrian Channels, especially when these rumours relate to insurrections and attempted revolutions in Constantinople, there is evidence enough to show that the crisis has by no means passed, and that mischief is still brooding over the Ottoman Empire. It is some satisfaction to know that Prince Menschikoff, though still lording it in Constantinople, and giving himself airs more appropriate to a conquering general, than to the peaceful representative of a friendly power, has a check upon his movements, in the person of Lord Stratford de Redcliffe, the able Ambassador of Great Britain. That veteran diplomatist fully comprehends the magnitude of the questions at issue. He knows that not only Turkey but British India is menaced by the Czar, and that everywhere between Constantinople and the frontiers of Hindostan, Russian intrigues and influence are at work; that ten years ago the Affghan war, if not openly, was secretly fomented against us by Russian agents; and that still more recently the Russians were discovered under the walls of Herat, with the same design of hostility to Great Britain.

France is almost as much concerned as England in the independence of the Porte. She has not, it is true, any Indian empire to be endangered; but she has her rank in Europe to maintain, and interests to subserve in the Mediterranean and in Africa—neither of which would accord with the dismemberment of Turkey by Russia and Austria, and the establishment of the Muscovites at Constantinople. We know nothing of the instructions given to her new Ambassador, M. de Lacour; but it is to be hoped that he is sufficiently impressed with the dignity of his own country to avoid the error of pampering the pride of the Russian Envoy, and of thus ministering indirectly to the designs of Russia. But, whatever the ulterior policy of France may be, the Sultan, strong in the alliance of Great Britain, will be able to maintain no mean and inconsiderable front against armed aggression, if now, or at any future time, Russia should resort to that extremity. The Turkish army numbers 350,000 men, well disciplined and accoutred. The Turkish cavalry is magnificently mounted; and its artillery, under the able direction of a Prussian Colonel—Kurczowsky—is admirable. But it is not likely—menacing as the department and demands of Prince Menschikoff may be—that Russia will have recourse to present war for the accomplishment of her objects. The Emperor Nicholas is bold, when boldness will serve his purpose; but he is patient and prudent, when patience and prudence are more calculated to aid him in the traditionary policy of his empire. The advice of Peter the Great has sunk so deeply into the minds of Russian rulers as to have become to their minds a command and a prophecy. "He who will reign at Constantinople," said Peter to his descendants, "will be the real sovereign of the world: therefore, we must stir up incessant wars in Persia and Turkey; establish dockyards in the Black Sea, and gradually take possession of it; hasten the fall of Persia; penetrate to the Persian Gulf; re-establish, if possible, by way of Syria, the commerce of the Levant; and advance as far as India, which is the mart of the world." When Peter uttered these remarkable words, Great Britain had no mighty empire in the East to abate his enthusiasm or tarnish the colour of his golden visions; but the successors of Peter, though not quite so sanguine as regards India, have never ceased to covet and to strive for the possession of Constantinople. By intrigue or by open warfare it is most probably they will attain their object, unless France should, as true policy demands, forget at last, all her unworthy jealousies of this country, and cordially unite with us in preventing the catastrophe.

ALMOST for the first time in her eventful history, Ireland fully shares in the growing prosperity of Great Britain. Though a faint cry of distress is raised on her behalf in Parliament, the cry is rendered nugatory by the cheering reports that reach England from almost every part of the sister country. Famine, pestilence, and what is called the "Exodus," have so reduced the numbers of the Celtic population, that the union workhouses have scarcely any inmates but the aged and the disabled; and the complaint of farmers and landed proprietors is no longer of a redundancy, but of a paucity of hands to till the soil. The great and small properties that are publicly sold under the beneficial operation of the "Encumbered Estates Act" realise unprecedently high prices. In many instances farms and estates have been disposed of at higher rates than similar properties would have brought in the most favoured counties in England. And, what is a most cheering circumstance, the Scottish and English purchasers not only settle upon and cultivate their new estates without the ancient dread of assassination to paralyze their energies and restrict their enterprise, but with the positive good-will and hearty support of the surrounding population. "The Saxon in Ireland," says the *Galway Packet*, "may no longer be regarded as a sentimental tourist, sitting on the box-seat of a mail-coach, with note-book in hand delineating the physical appearance of the country, and caricaturing the 'wild Irish.' He is now a veritable settler, snugly located in every romantic spot along our western coast. The fertile farms that have lain waste for the last few years, from which extermination drove the oppressed native, and the houses wherein famine seized its victims, are being fast occupied by English and Scotch settlers. That some of the fairest portions of Ireland will shortly be in the actual occupation, or under the control, of the Saxon, is a fact that can be no longer questioned. Every day English speculators in Irish farming may be seen on their way westward, in search of suitable homesteads." Nor are these circumstances—favourable as they are to the speedy development of the long-neglected resources of Ireland—the only cheering incidents in the economic history of that country at the present day. The *Limerick Reporter*, in reference to the first of the great Munster fairs, just held in Limerick, states that "the amount of stock sent in for sale was unprecedented; and that, notwithstanding the amount, there was not a prime beast left unsold, at prices which, a few years ago, would have been looked upon as fabulous." Such accounts as these, which appear to be strictly true, and to be confirmed by every day's intelligence from Ireland, are somewhat at variance with the arguments of those who protest against the extension of the Property and Income-tax to that country on the plea of its poverty and misery.

THE COURT.

The Queen and the infant Prince continue perfectly well. The Court will leave Buckingham Palace this afternoon (Saturday) for her Majesty's marine residence in the Isle of Wight; returning thence on the 28th proximo, when the usual royal hospitalities will commence.

The christening of the infant Prince will take place early in June. The King of Hanover, with his youthful family, will arrive in this country during the first week in June, his Majesty having consented to stand sponsor in person for his Royal nephew, who is to receive the name of "Leopold-George-Duncan-Albert." The other sponsors will be the Prince of Hohenlohe-Langenbourg, the Princess of Prussia, and the Princess Mary of Cambridge. The Drawing-rooms announced last week, and a succession of other hospitalities, will distinguish the Court during the sojourn of the King of Hanover in this country.

The week just closed has been distinguished by a very numerously attended Levee at St. James's Palace, and by the recurrence of the birthday of her Royal Highness the Duchess of Kent on the occasion of the birthday of the Princess Alice. The same morning the Prince Consort, accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, Prince Alfred, and the Princesses Alice, Helena, and Louisa, went to Madame Tussaud's Exhibition, in Baker-street. On returning, the Prince, with the youthful members of the Royal family, visited her Royal Highness the Duchess of Cambridge at Cambridge House, Piccadilly (the Duchess), at Gloucester-house, Piccadilly. In the evening the Prince Consort and the youthful Royal family honoured the Princess's Theatre with their presence.

On Tuesday his Royal Highness Prince Albert presided at the Council for the Management of the Duchy of Cornwall, at the Duchy-office, Somerset house.

On Wednesday the Prince Consort held a Levee.

On Thursday morning the ceremony of marching the Queen was performed in the private chapel of Buckingham Palace. At noon the Prince Consort left Buckingham Palace for the Royal Academy in Trafalgar-square. His Royal Highness was accompanied by the Prince of Wales, the Princess Royal, Prince Alfred and the Princesses Alice and Helena. The Royal party were received by the President of the Academy, Sir Charles Locke Eastlake, and conducted through the different rooms of the exhibition. Prince Ernest of Leiningen arrived at Buckingham Palace on Thursday, on a visit to her Majesty.

The Countess of Mount Edgcumbe has succeeded the Viscountess Canning in her duties as the Lady in Waiting to her Majesty.

THE LEVEE.

His Royal Highness Prince Albert, K.G., held a Levee, by desire of the Queen, on Wednesday afternoon, in St. James's Palace. His Royal Highness, attended by his equerries, entered from Buckingham Palace about two o'clock, escorted by a detachment of the Life Guards. The Prince was conducted to the Royal Closet by the Great Officers of State of the Queen's Household.

His Royal Highness the Duke of Cambridge, K.G., attended by Lord William Paulet, was present at the Levee.

The Earl of Lucan had an audience of his Royal Highness, and presented the Badge and Order of the Grand Cross of the Bath, worn by his uncle, the late Admiral the Hon. Sir Bladen Capel.

Viscount Palmerston, G.C.B., had an audience, and delivered to his Royal Highness the Ribbon and Badge of the Order of the Bath, worn by the late Viscount Melbourne.

Lieutenant H. M. Bouverie (Coldstream Guards) had an audience, and delivered to his Royal Highness the Ribbon and Badge of a Knight Grand Cross of the Bath, worn by the late Lieutenant-General Sir H. Bouverie.

The Levee was very numerously attended, both in the diplomatic and general circles. In the latter the following presentations took place:—

Lieutenant-General Earl of Peterborough, by Lord Hardinge.
The Earl of Lisburne, on his marriage, by Lord Rokeby.
Viscount Enfield, on being removed to the House of Peers, by the Duke of Bedford
Viscount Hinton, on appointment to the Colonelcy of the 1st Somerset Militia, by Lord Rodney.
Viscount Jocelyn, on appointment as Lieut.-Col. Commandant Essex Rifles, by Lord Maynard
Lord Erskine, on his marriage, by the Earl of Clarendon
Lord Worsley, by the Earl of Yarborough
Lord Norreys, by Lord Wilton
Lord Penrhyn, by the Marquis of Breadalbane
Lord Carew, on being invested with the Order of St. Patrick, by the Earl of Clarendon
Lord de l'Isle and Dudley, on his marriage and succeeding to the title, by the Earl of Munster
Col. the Hon. C. Dundas, M.P., on appointment to the Cavalry Brigade Militia, by the Earl of Hardwicke
Captain Hon. M. Stopford, R.N., on appointment as Naval A.D.C., by Vice-Admiral the Hon. J. Percy.
Col. Sir Colin Campbell, K.C.B., A.D.C., on his return from India and appointment as A.D.C. to her Majesty, by Viscount Hardinge
Mr. O'Malley, Q.C., by the Lord Chancellor
Sir Atherton, on his appointment as one of her Majesty's Counsel, by the Lord Chancellor
Mr. Pashley, on his appointment as one of her Majesty's Counsel, by the Lord Chancellor
Mr. Cecil Lengston, by his brother-in-law, the Secretary of Ordnance
Mr. T. Duncan, R.A., Keeper of the National Gallery, by Lord John Russell.

FASHIONABLE ENTERTAINMENTS

The great saloon of Willis's-rooms was, on Wednesday evening, the scene of a magnificent private hospitality, dispensed by the Countess Dowager of Erroll and her son and heir, the Hon. Mr. Hay, on which occasion of the fête was the introduction of the younger branches of the two families—the Lady Alice Hay and the Misses Kennedy Erskine. The company began to arrive shortly before eleven o'clock. They were welcomed by the noble hostesses in the reception saloon, and from thence passed into the ball room. His Royal Highness the Duke of Cambridge honoured the fête with his presence, arriving from the Countess of Eglinton's assembly shortly after midnight. The ball was opened at eleven o'clock, with a quadrille, in which the Dolphin Bicaniere led off with his niece, the Lady Alice Hay. Her Ladyship was also selected by the Duke of Cambridge for the first waltz, after his Royal Highness's arrival. The Duke of Cambridge also danced with the Misses Erskine during the evening. The ball was kept up with the greatest possible spirit until one o'clock, when a superb supper was served to the company in an adjoining saloon. The festivities were subsequently renewed, and the morning had dawned before the company separated. The guests at this ball exceeded 700 in number.

The Countess of Eglinton commenced her hospitalities for the present season on Wednesday evening, by an assembly at the family mansion in St. James's-square. The réunion was of the most brilliant description, the leading members of the fashionable world, to the number of nearly 600, taking the opportunity to pay their respects to the Countess His Royal Highness the Duke of Cambridge honoured her Ladyship with his presence, arriving about half-past eleven o'clock

The Hon. Mrs. Sidney Herbert held her first "reception" on Wednesday evening, at the residence of the right hon. the Secretary-at-War, in Belgrave-square. The réunion was a perfect ovation to the hostess—upwards of a thousand members of the aristocracy and fashionable world attending to pay their respects. His Royal Highness the Duke of Cambridge honoured Mrs. Herbert with his presence.

Her Royal Highness the Duchess of Kent, accompanied by her Serene Highness the Princess Adelaide of Hohenlohe, went to Claremont on Tuesday morning, and visited the Countess de Neuil and the French Royal family.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary dined with her Royal Highness the Duchess of Gloucester, at her residence, Gloucester-house, Piccadilly, on Monday. Her Royal Highness the Duchess of Kent joined the Royal circle in the evening.

Their Royal Highnesses the Duke and Duchess de Nemours visited the Duchess of Kent on Saturday, at Clarence-house, St. James's.

Lord Brougham has arrived in Grafton-street, from Paris, for the season.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, APRIL 28.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from the Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.

" 28	29.802	58·9	32·1	45·5	— 4·0	76	E	0.00

Note.—The sign — denotes below the average.

The reading of the barometer decreased from 29.39 inches at the beginning of the week to 29.34 inches by 3h. p.m. on the same day. After 6h. p.m. on this day it increased rapidly to 29.80 inches by 6h. p.m. on the 24th, then decreased to 29.37 inches by 9h. a.m. on the 25th, increased to 29.86 inches by 9h. a.m. on the 27th, remained nearly stationary till 6h. p.m., and decreased to 29.83 inches by the end of the week. The mean reading for the week was 29.638 inches The weather during the whole week has been cold, and at times very severe. The temperature has been a few degrees higher only on the 24th and 26th, when it was 40° and 42·9° respectively below the averages of the same days in the preceding thirty-eight years. The mean daily temperature on the 24th was 40·3°, being the lowest mean temperature recorded as having happened on that day since the year 1827, when it was 37·4°: and the mean daily temperature on the 25th was 35·6° only, being the lowest mean temperature recorded on that day in the same list a week, and a second as far back as the register extends. The mean temperature of the week was 42·28°, being 6° below the average of thirty-eight years. The range of temperature during the week was 21·7°, the highest and the lowest reading both occurring on the 27th. The mean daily difference of temperature during the week was 17·3°. Hail fell slightly on the 23rd, and snow fell early in the morning of the 25th. Rain fell during the week to the depth of 1¼ in.

Lewisham, April 29th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending April 23, the number of births registered in the metropolitan districts was 1580: of these 813 were boys, and 767 were girls. This average number in the eight corresponding weeks of the eight preceding years was 1476. The number of deaths was 1187; in the week ending April 9, the number was 1040; and in that ending April 16, it was 1233: so that the mortality, up to Saturday last, was decreasing by slow degrees; but it is to be feared that the severity of the weather, as shown in our table above, will cause an increase of deaths. The average number of deaths in the corresponding weeks of the ten preceding years, increased in proportion to the increase of population, was 1038: consequently, the deaths registered last week are in excess of the estimated amount by 144. The number of deaths caused by zymotic diseases was 218 (their average is 188): of these, measles carried off 34; hooping-cough, 66; and typhus, 47. To disease of the brain, spinal marrow, &c., 137 (their average is 117): of these, there were 25 apoplexy, 25 paralysis, 51 convulsions. To diseases of the heart and blood vessels, 84 (their average is 84): of these, 48 were diseases of the heart. To diseases of the lungs, 242 (their average is 148): of these are due 126 to bronchitis, and 80 to pneumonia. To diseases of the stomach, liver, &c., 74 (their average is 58); and to violence, &c., 29. By comparing the number of the deaths due to the respiratory organs, the decline of these diseases is shown; the number in the preceding four weeks were 426, 323, 261, and 242; from bronchitis, 231, 185, 151, and 126. But it will be seen that diseases of this class are still much more fatal than is usual in the middle of April; for the deaths from these causes, as above stated, were 242; while the average in ten corresponding weeks in ten preceding years increased, is only 85.

THE "GUNPOWDER" AT ROTHERHITHE.—On Thursday, Mr. Henry, the magistrate, delivered his judgment in this case against Mr. Hale, which was reported at length in our Journal and various other gunpowder, at some length; but the section of the act, the 11th, the one under which the defendant was summoned, provides—

That no person shall have . . . . . in any one house, shop, ... or mark . . . . . a greater quantity . . . . . than 2 pounds weight of gunpowder, or . . . . . of fireworks . . . . . unless a dealer, on pain of forfeiture . . . . . allowed quantity, and also two shillings for every pound of the excess . . . . . that whichever . . . . . be greatest; and that no person shall be for the . . . . . of any gunpowder . . . . . in any greater quantity than the allowed quantity shall be forfeited, and that the defendant shall pay two shillings for every pound thereof, such allowed quantity or excess . . . . . to be estimated or to differ between pounds weight.

Mr. Bodkin applied to have the penalties enforced against the defendant, because Mr. Henry had decided that the composition which had been used was in fact gunpowder, and there could be no doubt that the rockets sold by Mr. Hale were dangerous. Evidence was given to prove that Mr. Hale and his people had been found manufacturing the rockets, among others, a Major Lesser, a Hungarian, who was introduced to Mr Hale by Mr Kossuth. He stated that

During the time I was working in the factory I was sent to Kossuth, near Pimlico, about the middle of October. I was Kossuth at the . . . . . where I saw Mr Hale and the rest in the garden constantly . . . . . I was told to take no time from one end it was then that Kossuth told me to keep the affair secret. A little later I was sent by Mr. Robert Watt to Kossuth. In consequence . . . . . I went to Kossuth, and saw him in his own room. When I left the work I was paid by Mr. Hale. Kossuth said to me. Mr Robert Hale said to myself and my fellow workmen on several occasions in public houses and other places, that we must not believe that Kossuth was a man of Hungary if I have often uttered in what was called his Magazine

Cross-examined by Mr. Cankwell. I obtained this employment after I came out of Maidstone jail for debt. I was in jail for about half a year. We worked, a German, gave similar evidence. The Magistrate said there was sufficient evidence to send the case before another tribunal, and committed the defendants, bail being taken for their appearance.

MEETINGS AND ANNIVERSARIES.—We can only find space for a brief record of the various meetings which have recently taken place in the metropolis:—The annual meeting of the Church of England Metropolitan Training Institution took place at the College of Highbury, on Wednesday.—The Society of Friends of Foreigners in Distress held its anniversary festival on Tuesday, at the London Tavern.—The General Society for Improving the Dwellings of the Working-classes held their annual meeting at Willis's Rooms, on Monday.—The annual assembling of the Ragged Aid Society assembled, and held their annual meeting.—The anniversary meeting of the friends of the London Homœopathic Hospital was held on Monday, at the Hospital, in Golden-square, Oxford-street.—The friends and supporters of King Edward Ragged and Industrious Schools had a meeting on Tuesday, at the school-room in Spitalfields.

MUSEUM OF PATENTED INVENTIONS.—A document lately signed numerical has been addressed to the Board of Trade, praying the Government to give every facility in their power towards furthering that portion of the "surplus" scheme of the Exhibition of 1851 which relates to the establishment of a Museum of Inventions. The Board of Trade has informed the memorialists that it has forwarded the above memorial, together with a similar one from Bradford, to the Commissioners of Patents (to whom those provinces the subject more especially rests), accompanied by an expression of its sympathy with the objects prayed for.

MEMORIAL TO THOMAS HOOD.—A meeting was held on Wednesday night at the Whittington Club, for the purpose of receiving the final report of the committee for the erection of a monument to the late Thomas Hood. The report, which was read, stated that the total amount of subscriptions was £443 8s. The gross expenditure, including the purchase of land at Kensal-green Cemetery, was £54 9s. 1d. Mr. Matthew Noble furnished a model of the proposed monument, which was adopted. We shall engrave the design.

SURREY DISPENSARY.—The seventy-sixth anniversary of this deserving charity was held on Wednesday evening at the Bridge-house Hotel, Southwark; and was attended by many of the supporters of the dispensary dined together, under the presidency of Mr. Grissell, High Sheriff for the county of Surrey. Among the company were Mr. W. J. Evelyn, M.P.; Mr. A. Pellatt, M.P.; Mr. Bagnall, Treasurer of St. Thomas's Hospital; Mr. Allen, Master of Dulwich College; Mr. J. Hinde Palmer, &c. It was stated that the dispensary, since its foundation, has administered relief to 600,000 cases. During the last year nearly 6000 cases were relieved, of which upwards of 1000 were visited at the patients' own houses. Subscriptions were announced amounting to between £700 and £800.

ROBBERY AT MR. LAFONT'S RESIDENCE.—On Friday evening week, while Mr. Lafont was at the St. James's Theatre, some thieves entered his apartments, in Bury-street, St. James's, and completely stripped them. His entire wardrobe, jewellery, including gold watches, and a valuable gold chain (presented to him by the French Ambassador, &c.), were carried off, leaving him literally nothing but the clothes he was wearing at the time.

PROVINCIAL INTELLIGENCE.

THE DUBLIN EXHIBITION.—The articles contributed by Holland were despatched on Saturday last from Rotterdam by the *Albatross* screw steam-ship. They consist of ninety-three cases of pictures, and twenty-five cases containing the Japanese productions, which the Dutch Government have allowed to be sent to the Exhibition. The latter are in charge of Mr. Van de Castecle, the director of the Royal Museum at the Hague. The Belgian contributions, amounting to 250 cases, were forwarded from Antwerp on Thursday week last in the *Devonshire* steam-vessel, which has been specially chartered for the purpose. The despatch of the above articles was superintended by Mr. Roney.

ARREST OF DRS. ULLATHORNE AND MOORE.—On Tuesday week last the Right Rev. Dr. Ullathorne, Vicar Apostolic for the Midland District, and Dr. Moore, President of Oscott College, were arrested for large banking liabilities incurred without any view to personal advantage. They are now in prison, and have no alternative but to pass through the Insolvent Court.

THE SHAWL TRADE.—As an instance of the extraordinary prosperity of the shawl trade this season, it is currently reported that one large house in Paisley made sales during the last month to the extent of £10,000. The trade of that town generally has not been in such a prosperous condition for many months back. The satisfaction to be felt at this state of matters is greatly enhanced from the fact that this prosperity is not confined to any particular branch of manufacture, all workmen being fully employed.

STEAM TO THE BRAZILS.—The *Brasiliana*, a screw-steamer of 1100 tons, the first vessel of the new line projected by the South American and General Steam Navigation Company, was launched on Saturday from the building-yard of Mr. John Laird, Birkenhead. Her dimensions are—length, 250 feet; beam, 30 feet; depth of hold, 14 feet; height of spar-deck, 3 feet. She has engines of 250-horse power.

DEVONPORT DOCKYARD.—The following superannuations took place on Saturday, at the Devonport Dockyard: Mr. Richard Scott, clerk, on £220 per annum; John Thomas, leading man of shipwrights, on £24 per annum; William Cleave, shipwright, on £24; Henry Fowler, shipwright, on £22; Henry Bennett, caulker, on £24; and Francis Lawrence, labourer, on £18 per annum.

THE GREAT SHAKSPEARE FESTIVAL.—The great demonstration in honour of the natal day of the immortal Shakspeare took place on Tuesday, at Stratford-upon-Avon. The proceedings commenced by a large body of gentlemen assembling around the house (fortunately preserved to the country) in which Shakspeare was born. Mr. Linneus Banks then delivered the oration. The "pilgrims" then proceeded to the grave of the bard in Stratford Church (where Mr. James Bennett, of the Theatre Royal, Birmingham, recited the ode. The visitors then went to the Shakspeare-hall, where a concert took place; Mr. Sims Reeves singing "Blow thou winter wind" (" As You Like It"), and "Take, oh, take those lips away," composed expressly for this festival by Mr. F. Mori. At the conclusion of the first part of the concert, Mr. Vandenhoff pronounced an oration, which was loudly applauded. In the evening a dinner took place at the Town-hall, at which Mr. Benjamin Webster presided, which terminated the proceedings of the day.—[Next week we shall engrave a scene from this interesting festival.]

NORTH LINCOLNSHIRE LIBERAL ASSOCIATION.—On Monday a large meeting of the leading Liberals of North Lincolnshire was held at the Corn-Exchange, Lincoln—the Hon. W. J. Monson in the chair—when it was unanimously resolved to bring forward two Liberal candidates to replace the present members for the division at the next election. The greatest enthusiasm prevailed, and several resolutions were proposed and carried.

GAROTTING IN GLASGOW.—On Thursday night week, a gentleman, going home by South-side-hill street, was unexpectedly assaulted by some ruffians, seized by the neck and throttled till he was insensible. While in that state, his upper coat, waistcoat, watch, pocket-book, several shillings, and a measuring line had been taken from his person.—A second case occurred the next Saturday evening, when a gentleman was followed into the Thistle and Soho close, Gaustord-street, by three youths, and garotted according to the system. They robbed him of a silver watch and gold key, and a silk purse containing about 24s. In both cases, the ruffians escaped.

LAW AND POLICE INTELLIGENCE.

THE CITY FORGERY.—The person who was brought before the Lord Mayor, on the 18th inst., on the charge of having attempted to defraud Messrs. Overend, Gurney, and Co., by means of forged acceptances, and who refused to give his name, was brought up at the Mansion-house, for re-examination, on Tuesday. The justice-room was crowded. No evidence tending to clear up the mystery was produced; and, after the examination of one or two witnesses, the prisoner was again remanded.

SEATS ON OMNIBUSES.—Mr. Bendon, on Tuesday, at Hammersmith, delivered judgment in a case of considerable importance to omnibus proprietors, as to whether a passenger up in an omnibus had a right to a particular seat which he had previously engaged and paid for. Mr Bendon stated that he had consulted with his colleague (Mr. Broughton) upon the subject, and they were decidedly of opinion that no person could engage a particular seat upon an omnibus; and that, therefore, his decision would be against the defendant, who would have to pay a nominal fine of 1s. for the assault, and 2s costs.

THE NEWPORT SAVINGS BANK ROBBERIES.—Yelf, the fraudulent savings bank actuary at Newport, in the Isle of Wight, has been sentenced and remanded. He has committed forgeries in order to conceal his robbery of the bank deposits. He commenced his frauds in 1839, and for ten years he appropriated nearly £1000 a year. Some years since, when confidence in savings banks was shaken owing to the miscalculations of some actuaries, the directors of the Bank declared that Yelf's accounts had been examined, and were found to be correct. Great laxity appears to have been observed by the directors, and they have promised to subscribe to prevent the losses from falling entirely upon the poor depositors. During the time that Yelf was robbing the poor at the rate of £800 a year he was acting as a religious preacher. A government officer is investigating the accounts of the bank.

THE SELF-ACCUSED MURDERER.—The fellow who gave himself up at Marlborough Police-office, for the murder of his wife at Edinburgh, but which was false, was brought before the magistrate at that office on Tuesday last; when Mr. Broughton severely lectured him for the shameful deception which he had practised, and the trouble he had given to the police, and discharged him with a hope that the punishment which he had already undergone would be a warning to him for the future.

OPENING OF THE CRYSTAL PALACE ON SUNDAYS.—On Monday a deputation of working men waited upon Lord Palmerston at his residence, Carlton-gardens, for the purpose of presenting a memorial against the opening of the Crystal Palace on Sundays. The deputation having stated their views, Lord Palmerston said he was exceedingly glad to have met the deputation on this occasion, and, as they had been in quiet a peaceful and just with him, he would be on a par with them in cordially expressing his opinions on the question. For himself, he could not see how the opening of the pleasure-ground could be productive of the amount of evil described. He could not see the harm of an individual, who devoted a portion of the seventh day to the worship of his God, going afterwards to view the pleasure-grounds; but he was only stating his private opinions. He had frequently taken a ferry across the river on Sundays, and had also taken a row himself, and had seen individuals issuing the banks, taking fresh air. He should not object to ensure for the working public houses and beer-houses on Sundays; but he thought opening the Crystal Palace would draw people away from such places. He certainly objected to the desecration of the Sabbath, but was not unfavourable to harmless and innocent recreation after divine service. The deputation, having thanked his Lordship, withdrew.

EXTENSIVE SALES OF PROPERTY.—On Wednesday week, a portion of the London property of the late Mr. Peto, was sold by auction, by direction of the Court of Chancery. The following was the result:—A valuable leasehold property, comprising the whole of Furnival's-inn, sold in one lot for £55,000; a freehold property, Fenton's Hotel, St. James-street, realised £18,800; two freehold houses in Clifton-street, Finsbury, £1100; a freehold dwelling-house and part of Robinson's horse repository, £1870, five leasehold residences in Portland-crescent and Upper Portland-place, produced £20,150; two improved rents, of each, realised £2000; also a plot of villa ground, at Blackheath, £1810, &c.; producing altogether upwards of £100,000.

THOMAS SHAKSPEARE.—In the year 1597 there resided in Lutterworth, in Leicestershire—only distant from Stratford-upon-Avon, the birth-town of Shakspeare, a very few miles—one Thomas Shakspeare, who appears to have been employed by William Glover, of Hillingdon, in Northamptonshire, gentleman, as his agent, to receive for him and give an acquittance for a considerable sum of money. Having regard to the age in which this Thomas Shakspeare lived, coupled with his place of residence, is it not probable that he was a relative of the great bard?—CHARLECOTE—*Notes and Queries*

WOODCOCKS' NESTS.—Two woodcocks' nests were discovered by the gamekeeper to the Earl of Carnarvon: the first was found on the 6th instant, and the other on the 9th instant, in the grounds at Highclere, in Hants—each bird sitting on four eggs. The woodcock is a native of the countries bordering the Baltic, which it leaves in autumn on its route to this country, and generally returns in March and April.

THE THORNS OF MAY.

BY MRS. T. K. HERVEY.

I.—THE YOUNG MAID GONE A-MAYING.

I HEARD a young maid saying—
"Sweet is the time of Maying,
Pleasant the odours playing along the bended grass
When we catch the under-toning
Of the tender cushat's moaning,
And the mountain winds salute us, kissing as they pass.

"O! lovely is the viewing
Of the ruddy Morning's wooing,
When, from out the cloudlands stealing, like a startled fawn she showeth,
Leaving grey Night complaining
In the path of her disdaining.
Soft does his soul revealing, that still follow where she goeth.

"And beautiful to mark,
Ere the dazzled earth grows dark,
The conquered sun down-dying on the crimsoned fields of day,
Like a youthful warrior fighting
For the land of his delighting,
While the evening gales go sobbing through the blossoms of the May!"

Thus, while the May-bloom seeking,
I heard her gentle speaking,
And it thrilled me with the memories of a spring-time long ago,
When, with the thorn-boughs laden,
I met another maiden,
Whose passing from the green earth left me wintered in the snow.

So she fleeted, like the seeming
Of that early youth-time's dreaming—
A vision of deep beauty to still the soul of care,
And long after she had parted
And left me—newer-hearted,
I heard her bird-voice echoing on the rapt, impassioned air.

O! wild, untutored singing,
Music of Love's own ringing,—
'Twas like a mate-call sounding, murmuring as she passed!
O! tender, May-strung flower,
O! life's delicious hour,
Touched by the golden dawning, wherefore away so fast?

II.—THE OLD MAN GONE A-MAYING.

THERE went an aged man
Along the uplands, gathering the May.
The day was gracious as that first spring day
When tender Eve began
To feel it sweet
To track the feet
That through the wild grass ran.

That time I heard him saying—
"Where is the May? The dews have filled mine eyes:
The hills rise steeper than they used to rise,
When, with the flushed Morn straying,
She smiled to see
How full of glee
A young heart goes a-Maying.

"The joys of life grow rare!
Where is the thrill of Nature's glory born,
With which of old I greeted each May morn?
Departed!—Where, oh! where
The thoughts' rich flood,
The bounding blood—
The passion and the prayer?

"The springs of earth are failing!
The waning eve-star paleth in her place:
Ne'er did I see her with so wan a face
Along the welkin sailing!
The coolness sweet
Faint round my feet—
What is the old world ailing?"

He ceased; and laid him where
The broad tree shadows danced as in a pool
Along a verge of light; while, calm and cool,
One other Presence there
Stole in and made
Eternal shade,
Shutting out sun and air.

When that ripe sire was born
He waited to enter on a world so sad
Yet rose, in quitting, seemed it not so bad;
For, though his flesh was torn,
I saw him smile,
I saw him feel the while
His foot against the thorn!

Enough!—'tis idle playing:
Leave we the gathered sheaf among the flowers;
The key of Heaven's garner is not ours!
In truth, there is no saying
What guardians keep,
What pleasures sleep
The tired soul gone a-Maying.

MUSIC.

NOTES OF THE WEEK.

Handel's oratorio, "Judas Maccabeus," was performed on Tuesday night by the London Sacred Harmonic Society, under the direction of Mr Surman; with Mr H. Blagrove, leader of the band, and Mr Jolly, organist; and Miss Birch, Miss A. Byers, Miss M. Wells, Mr. Lockey, Mr. Seymour, and Mr. Lawler, as principal vocalists.

The second performance of the Quartet Association took place at Willis's Rooms on Thursday; Sainton and Cooper taking the first and second violin parts alternately, Hill and Piatti having the viola and violoncello. The scheme comprised Haydn's Quartet in F No. 82, Beethoven's in E flat, op. 74, Mendelssohn's Quartet in F minor (posthumous), and a Sonata in A major for pianoforte and violin, by Herr Peter, who was also the pianist on the occasion.

Herr Jansa had his fifth soirée at the Queen-Anne-street Rooms last Monday, assisted by M. Billet, Herren Hesmer, Rowahitzky, and Mr. W. F. Reed; Mdlle. Herrman was the vocalist, and Mr. Grattan the accompanyist.

Handel's "Israel in Egypt" was repeated last night by the Sacred Harmonic Society, at Exeter hall, under Costa's direction: Mdmes. Clara Novello, Miss F. Rowland, Miss Dolby, Mr. Sims Reeves, Staudigl, and Formès being the vocalists.

The second concert of the Royal Academy of Music was given at the Hanover-square Rooms, last Saturday morning. There was an average amount of scholastic ability exhibited on the occasion; and the singing of Miss Freeman, a soprano, and Miss Street, a contralto, must be selected as worthy of special encouragement.

At the sixth subscription concert of the Harmonic Union, on Monday last at Exeter-hall, under the able direction of Benedict, Macfarren's cantata "Lenora," was produced, together with selections from Handel's "Alexander's Feast," and "Acis and Galatea." Benedict's clever pianoforte concerto in C minor, admirably played by Miss Arabella Goddard; and a very skilfully written overture in E flat, by Mr. Cusins. The vocalists were Mdme Louisa Pyne, Miss F. Rowland, Mrs. Macfarren, Sims Reeves, and Staudigl.

Next week will be the fourth Philharmonic Concert; the third meeting of the Musical Union: the second concert of the Orchestral Union; and the concerts of Signor and Madame Ferrari, Mr. Aguilar, Mr Holmes, and Mrs. John Macfarren.

Signor Nappi gave a concert at the New Beethoven Rooms on Thursday evening, assisted by Mesdames A. Newton, Nott, Barclay, and Coulon; and Messrs. Benson, Regondi, Sprenger, &c.

THE THEATRES.

ROYAL ITALIAN OPERA.

The return of Mario—"that dear Mario," according to drawing-room, as well as managerial, phraseology—last Tuesday night was rapturously greeted. The Russian snows this time have used the pet of tenors tenderly. True, there may not be that gorgeous power and luscious fulness in his voice which he possessed in former days; but, as an artist, he has gained immeasurably. At no period of his career did he sing with more finish and finesse than on Tuesday. The audience welcomed him from beginning to end; and, encouraged by the plaudits of a house crowded to excess, Mario achieved one of his most brilliant triumphs

Grisi, the first of the quartet, party forming the original cast (Rubini, Tamberini, and Lablache), has resigned the part of *Elvira* to Madame Bosio, to whom let no one expect to find the sentiment, poetry, and passion of Grisi's delineation—but let the most captious be satisfied with young, fresh, and promising talent, possessing a nice voice, a nice style, and nice execution, without any pretensions to wondrous vocalisation Madame Bosio lacks animation, but her singing has its special charm, and she is evidently growing in favour. Her most successful effort was the *cabaletta* of the "Qui la voce," and she merited the recall for her clever roulades. She will do well, however, to accelerate the times of the various movements—her tendency to drag the measure is one of her chief defects.

The appearance of *Formès* for the first time in the old partian *Georgio*, excited considerable curiosity. He made up well, but he was scarcely master of the music, and it is of a school which is perhaps the least adapted to his peculiar powers. Ronconi gave vital importance to the somewhat insignificant character of *Riccardo*. Carefully acted, the artistic abstraction was again, as in all his conceptions, complete; and he did not fail, from time to time, to throw into his music some of those delicious *traits* of ornamentation, which only a truly great artist can display.

A second magnificent performance of *Norma* by Grisi, on Saturday night, to a densely-crowded house, must not pass unrecorded; and the fourth representation of Rossini's "William Tell," for the first extra night, on Thursday, proves that the management has at last won from the public—thanks to the transcendant triumph of Tamberik—a recognition of the recondite beauties of that superb opera.

Verdi's "Egioletto" is underlined in the bills as the first novelty of the season. Berlioz's "Benvenuto Cellini" is also in preparation.

LYCEUM.

Two new pieces have been produced here; one entitled "*A Fast Train*—High-pressure—Express;" the other, "A. S. S." *The captandum* nature of the former is apparent enough; but the latter, if only for its triviality, is a remarkable production. What can be the sufficient motive of the piece, the resolution of an old gentleman that his daughter shall marry somebody whose initials are "A. S.," simply because his knives and forks and spoons are marked with the letters "A. S.?" This is all the plot. Our *Augustus Sidgyles*, impersonated with sufficient ludicrousness by Mr Suter, advances his claims, and almost extinguishes another suitor, whose name (*Ogilvie*) begins with A. S. at first supposed to be an S. But matters are set right at last by a new-married couple of the required initials taking the place of the old gentleman's hands at cost price. The house has been but ill attended.

The "Fast Train" is an adaptation from the French, the hero being translated into a go-a-head American, who knocks up the father of his presumed intended at four o'clock in the morning. Having, however, mistaken the lady, some embarrassment ensues; but, ultimately, the right parties get united. Mr. C. Mathews dashed through the part of the fast Yankee with great spirit, and gave utterance to his extravagant anecdotes in the patter-and-clatter style, with a rapidity which has ceased to astonish.

OLYMPIC.

One would have thought that the theme of Shakspeare's "Macbeth," would have preserved it from burlesque. Mr. Talfourd, however, has found the means of connecting it, with ludicrous associations; and more fortunate still, with a low comedian, Mr. Robson, capable of giving an air of originality to burlesque itself. Mr. Robson does not caricature the exaggerations, but simply exaggerates the part, painting the terror and horror of the character and the deed in ludicrous colours, without altering the outline or the feeling. The accessories of the piece were well contrived; and the adoption of some of the business introduced at the Princess's—particularly the elimination of the ghost of *Banquo* from a clock-case, with the ghost, a skeleton of an umbrella, and an apparatus for illuminating his countenance—was most judicious and efficient. The dialogue sparkled with puns; many of the situations were grotesque, and the parodies unmistakably excellent. We are far from approving the treatment of such an argument in a burlesque form; but we must acknowledge that it was provocative of mirth, and attracted a numerous audience.

ST. JAMES'S.

The drama of "Le Chevalier de St. Georges" has been revived, for the purpose of exhibiting M. Lafont in the character, it being one of his great parts. The subject is well known to English playgoers from Mr. Balfe's opera of "The Bondman;" but MM. Mélesville and Beauvoir's production presents it in a more legitimate and dramatic shape. The acting, too, both of Madame de Fresle and Mdlle. Page is exceedingly interesting; and the whole performance appropriate to the feelings of the day.

On Wednesday the vaudeville of "Les Fées de Paris" was performed; the part of *Juliette* being sustained by Mdlle. Page, and that of *Lazare* by Mdlle. Fleury. The entertainments were for the benefit of the former. The drama is a production of the late M. Bayard, the celebrated author of "Un Fils de Famille," but is scarcely adapted for general performance, though, as a pet piece, well enough adapted for occasional purposes

STRAND.

The musical travestie of "Macbeth," produced at this theatre, has been eminently successful. It is introduced to the public by a bill under the signature of Mr. Allcroft, having three leaves, the last containing an address to the public, being a parody of Mr. C. Kean's fly-leaf to the Princess' broadsheet. The operatic *Macbeth* is an Irishman, performed by Mr. Hodson, whose humour is irresistible. *Phelim Macbeth* is quaintly adapted with a variety of contrarious feelings, and gives utterance to his sentiments in whimsical rhymes, stuffed with out-of-the way allusions, and delivered with extravagant gesticulations. In the course of this burlesque opera, the whole of Locke's music is contrived to be given. Miss Isaacs performed the principal witch; *Hecate* was done for by Mr. Leffler; and *Lady Macbeth* caricatured by Miss Featherstone. The scenery is good; and the houses have been crowded.

HAYMARKET

Of all the dramatic productions of Mr. Robert Browning, "Colombe's Birthday," is, perhaps, the sweetest in sentiment, and the simplest in structure. The heroine is *Colombe of Ravenstein*, Duchess of Juliers and Cleves; but by the virtue of salique law, one *Prince Berthold*, has a right to claim the succession. It is *Colombe's* birthday, and the lady expects a state celebration; but the audience-chamber is not crowded as usual, some mysterious cause restraining her courtiers from the wonted renewal of their allegiance. In fact *Prince Berthold* has put in his claim which only waits for some one bold enough to present it. The poor Duchess is an object of pity to the mean and the selfish. At this juncture arrives from Cleves one *Valence*, an advocate (Mr. B. Sullivan), with a petition, full of the misery of the inhabitants. As the price of being admitted to the Duchess's presence, he undertakes to deliver the paper—ignorant, however, of its purport. The audience obtained, and the document presented, he perceives that he has been made the tool of the Count, and forthwith challenges him to the lists. *Gaubert* (Mr. W. Farren), its agent. *Colombe* is highly interested by the exhibition, accepts the championship of *Valence*, whom she recollects as having before made a congratulatory speech to her at Cleves on the part of the citizens. The advocate improves his opportunity; and, for the sake of his native city, implores her not to abdicate. Accordingly, the lady summons up her courage, and determines to maintain her position: as her only loyal subject, *Colombe* invests *Valence* with all her authority. *Prince Berthold* next comes upon the scene; a good-humoured soldier of fortune, who expects to be Emperor, and who desires not to press hardly upon the failing Duchess; and has, indeed, determined to console her for the coming blow by marrying and thus affording her the opportunity of becoming an Empress. At this offer *Valence* is startled; for his heart has kindled in the transaction, and he feels that he loves the lady. However, he does his duty unhesitatingly, and bears the mission to the Duchess. Willing is she to accept the compromise; but, in doing so, gives expression to feelings which encourage *Valence* to a declaration of love. This scene, one of the most delicious in our dramatic recollection, was admirably acted. Miss Cushman in it manifested all her delicacy and power. Nothing ever more excited the tender sensibilities of our nature, and those delightful emotions where we sympathise tearfully, yet not painfully. In the fifth act, *Colombe*, having survived the struggle of feeling, yields to the pleadings of true love, and, for *Valence*, surrenders not only her present petty dignity, but the hopes of empire. Thus Love conquers, and his victory is the triumph of the moral over the material.

The production of a piece so pure in its purpose, theme, and treatment, is highly honourable to the management, and cannot but have the most beneficial influence on the public taste. It was placed upon the stage with the utmost care: the scenery was beautiful; and the acting of Miss Faucit graceful and exquisite in the extreme. Its success was decided.

"THE FIRST OF MAY," [illegible]."—PAINTED FOR HER MAJESTY, BY WINTERHALTER.

"THE FIRST OF MAY, 1851."

THE incident commemorated in this picture is of threefold interest. It occurred on the 1st of MAY, 1851, just after the opening of the Great Palace of Industry of All Nations; and the day was the birthday of the illustrious Wellington, as well as of the infant Prince Arthur, to whom, by Royal invitation, the Duke stood godfather. The gallant hero of a hundred fights, after assisting at the ceremony of the inauguration of the Great Exhibition, hastened to Buckingham Palace with a handsome casket selected from amongst the varied and costly articles *of vertu* thrown open to public view on that day, intending it as a birthday present to his Royal godson. He arrived at the Palace before her Majesty and Prince Albert had returned from the Crystal Palace; but, after waiting a few minutes, they arrived, when her Majesty was so pleased at the graceful act of attention intended on the part of the Duke, that she hastened to snatch up the infant Prince, *en dishabille*, even from the couch where he lay, to receive the present; a present we have no doubt he will dearly prize in future years. The Royal mother, holding her young child in her arms, contemplates the handsome cadeau with evident satisfaction. The expression of the Duke is marked with benignity and respectful homage. In the rear is Prince Albert, whose mind—notwithstanding the interesting scene passing before him—seems still to be engrossed with the great national work which he has this day brought to a happy completion (seen in the distance), and a plan of which he carries.

This picture, which was painted by Winterhalter, at the Queen's express desire, is one of the contributions forwarded by her Majesty to the Great International Exhibition about to be opened at New York. A fine engraving of the picture in mezzotint, by S. Cousins, has been published by Messrs. P. and D. Colnaghi, Pall-mall East, by whose permission it is here copied.

SCENE FROM THE NEW PLAY OF "COLOMBE'S BIRTHDAY," AT THE HAYMARKET THEATRE.—(SEE PRECEDING PAGE.)

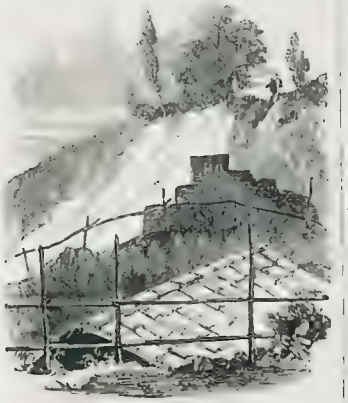
THE LATEST EXCAVATIONS AT POMPEII.

(From our own Correspondent.)

Naples, April 14th

It would be difficult to visit Pompeii at any period without finding new and interesting material either for reflection or illustration, and at the present moment the world of antiquarian treasure is unusually attractive, from the discoveries which have taken place during the last two years. The dates of the most important excavations, it should be remembered, are:—1748, Amphitheatre; 1763, Gate of Hercules; 1764, Theatres, and Temple of Isis; 1811, House of Pansa; 1813, Forum; 1818, Temples of Mercury and Venus; 1825, House of the Tragic Poet; 1826, Street of Mercury; 1829, Street of Fortune; 1841, Street of Merchants; 1846, Quadrivium; and 1847, House of Lucrezio. From the last-named date, I propose placing before the reader a notice of the excavations up to the present day.

I left Naples with an antiquarian friend, in a carriage, wishing to avoid the snort and whistle of a railway, the mocking vitality of which may, nevertheless, be heard in the death-like stillness of the Forum of Pompeii. We drove at once for the Street of Tombs, by far the most interesting way of entering a classical city. On either side the marble monuments of the dead glittered in glorious sunlight; but never more can those tombs arrest the footsteps of a relative or a friend. Here I found that the well-known Exedra had been restored, with all its decorations; but no new excavations had taken place in this part of the city. Passing the gates, we were shown some lately-discovered walls of Pompeii; and were informed that ere long the whole of the encircling battlements would be definitely traced. Entering the Forum, we found a few workmen employed in clearing away the sand which the late rains had deposited on the marble pavement where, centuries ago, the magistrates solemnly paced, and the coxcomb idly wandered.



ROOF OF A HOUSE, AT POMPEII.

Whilst passing on, in the direction of the new excavations, we observed that in many instances the fresco paintings were losing their colours; indeed, some have been lately removed to the Museum on that account. It is also found necessary to restore, in many instances, the brickwork of the houses of Pompeii, which is done by temporary roofings; whilst the mural frescoes are edged with a white cement, which by no means improves their appearance. In this way the buildings of Pompeii are now dotted over with ugly white patches in all directions.

It is calculated that about one-third of the city of Pompeii is now exposed, including four principal streets, and a... the important buildings of an ancient city. A long street, leading to the Stabian Gate, is now being excavated. These works were begun in 1851; when the street was first opened, it was supposed to be that of the Goldsmiths', from the number of objects of jewellery found in the first one or two houses; but subsequent revelations have not confirmed the expectation.

As we entered the Stabian Street, we observed on either side a series of dwellings, the lower portions of which had evidently been used for shops. The fresco paintings were remarkable only for the freshness of their colouring. The last stratum of earth had not yet been removed from the floors of some of the houses, so that there may be much treasure yet undiscovered. We next proceeded to the most important house yet found in this street, and which had been lately excavated for the Imperial Princes of Russia (See Illustration). You enter a wide portico of the *ostarius*, paved with marble, where an elegant table of the same material is placed. The clawed legs of this table are carved with fruits, and the form is very elegant. You then come upon the *atrium*, with the usual *impluvium*. None of the surrounding columns is perfect; and only one of the capitals was found, which is rather grotesque than classical. The circular object near one of the columns, is a Well, fluted all round, the rim of which bears traces of its having been much used. The *ala*, or wings, of this dwelling occur at the further end. The centre room is large, and might have been used as a *triclinium*. It is decorated with those floral romances and architectural illusions which glitter brightly on the walls of Pompeii. This room opens into two smaller apartments—one on the left, and one on the right—nearly destroyed. The main wall on the right contains a niche with steps, but no statue was found. The present dwelling, like most of the houses of Pompeii, had evidently been well rifled by the ancients. Some copper kitchen utensils and a few unimportant marble decorative garden sculptures are all that was found in a dwelling of so much importance.*

EXCAVATION NEAR THE GATE OF STABIA.

Threading our way through the back doorway of this house, we came upon the most remarkable discovery which has yet taken place, viz., the complete roofing of a house, of which I send you a drawing. It will be remembered that Pompeii having been destroyed by falling ashes, and then covered by earth, was the occasion of the roofs falling in. The very little care used in clearing away the incumbent earth has left us in the dark about the construction of ancient roofings.† Here, then, for the first time, we have a complete roof of a house formed of square tiles, about twelve inches by twelve, with coping tiles running between them; and over the back-bone, so to speak, of the construction, a cement was used to make the roofing water-tight. So perfect is the roof, that it might have been constructed yesterday, and it would suit an English cottage

* The small objects found at Pompeii are always removed to the Museum of Naples. Up to the present time no attempt has been made to restore a house and furnish it, although so much material exists for so doing.

† Mr. Falkener, an English architect, excavated a house at Pompeii some years ago, and personally attended the works from the very earliest stages, by which means he was able to collect much valuable data concerning the construction of the roofing as well as the height of the dwelling.

HOUSE AT POMPEII, EXCAVATED FOR THE VISIT OF THE IMPERIAL RUSSIAN FAMILY.

as well as a Roman dwelling. The whole is railed round, and will probably not be removed.

We next proceeded to the site of the excavations on which the workmen are now employed. Here I made a drawing, to show the way in which the works are carried on. The workmen are digging and picking away with little care. A not very intelligent inspector stands by, smoking his pipe; and when anything is found, it is thrown into a basket, which is guarded by a soldier. The drawing shows the termination of a street which runs through the Gate of Stabia. The building just brought to light is remarkable for having two large windows, a luxury by no means common at Pompeii. An archway breaks the centre of the front wall, over which is an aperture, which may have been caused by accident, as there is nothing in the masonry to denote a window. Two large stones are resting on the top of the wall, indicating an upper floor. On the centre stone of this building are clearly read, in the long Roman character of Pompeii, the words C.UM HOLCONIUM.* When some hundred feet more have been excavated, the whole of this street, extending as far the Gate of Veturius, will be open to the light.

The present Neapolitan Government does not appear to take much interest in Pompeii: more of the city was excavated during the French rule in Naples than has been brought to light either before or since that period

We had now spent a whole day at Pompeii, directing our attention almost exclusively to the novelties. It began to rain, but so excited was my antiquarian friend W., that I could not get him away. He walked about in the wet, with his umbrella under his arm, abstractedly meditating, to the great annoyance of guides, who like superficial observers best. I got into the carriage, corrected my sketches, drank some wine grown over the tomb of Pompeii; and, with the permission of the lady who accompanied us, lighted my cigar. No happiness can continue for ever; the antiquary was obliged to join us at last, and with the usual exclamation to the coachman of "Avante, avante!" we found ourselves once more on the road to Naples.

* This mode of advertising on the walls is very common at Pompeii. The *album* of the Latins acted like a modern sign.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, APRIL 22.

The Clergy Reserves (Canada) Bill was read a second time to-night, after a long debate, in which the bill was supported by the Duke of Newcastle, Lord Lyttelton, and Earl Grey; and opposed by the Bishop of Exeter, Lord St. Leonards, and the Earl of Derby.—The Bishop of EXETER moved as an amendment that the bill be read a second time that day six months; but, upon the suggestion of the Earl of Derby, the right rev. Prelate did not press his amendment to a division; and the bill was read a second time.

HOUSE OF COMMONS.—FRIDAY.

The South Sea Annuities Commutation Bill went into committee. On the second clause (which provides that proprietors of South Sea, and other minor Three per Cent Stocks may receive for every £100 of such stock: Either, 1, £93 10s. New Three-and-a-Half per Cents; or, 2, £110 New Two-and-a-Half per Cents—both guaranteed for 40 years; or, 3, an Exchequer Bond for £100 bearing interest at 2½ per cent until 1864, and 2½ per cent until 1864) being put,

Sir F. KELLY repeated the objections which he urged upon the introduction of the bill. He protested against any addition being made to the National Debt as a period of national prosperity. Proposal No. 1 might ultimately effect a saving of £700,000 or £900,000 a year; but the conversion proposed by No. 3 would at once add four millions to the capital of the National Debt. If it were carried out to the whole amount of the Three per Cents, it would involve an increase in the debt of fifty millions. This stock was to be guaranteed for forty years, although in the last forty years the interest of money had fallen 2 per cent Consols, forty years ago, were at 60; and if money had fallen 2 per cent in the last forty years, was it not probable, with the increasing prosperity and capital of the country, that in the next forty years interest would at least fall 1 per cent? The country would be paying 2½ per cent when the market rate of interest was 2 per cent; and then, at the end of forty years, the Government, when they had the option of paying off the stock, would have to pay £110 for every £100. He proposed to leave out the alternative No. 3

The CHANCELLOR of the EXCHEQUER admitted that his three alternatives were not equivalents simply and solely, according to arithmetical calculation. Considering the steadiness of the Exchequer Bonds, and the many conveniences connected with them, they would become a favourite means of holding securities, and would be accepted at a lower rate of interest. The main object was to create a 2½ per Cent Stock; and he conceived it most desirable to introduce into the structure and system of the debt a stock bearing a rate of interest which, in case the value of money should be subject to a favourable alteration, would form the basis for extensive operations. The committee could not make sure of creating a 2½ per Cent Stock by Exchequer Bonds. He had certainly proposed a moderate increase of the capital of the debt, not from indifference, but because he thought the price worth paying for the purpose of attaining a great object. It might be possible to create a Sinking Fund out of the annual saving made by the proposed 2½ per Cent Stock, so that not one farthing need be added to the capital of the debt at the end of forty years, and he would give his attention to the subject.

Mr. BARING, Mr. DISRAELI, and Sir J. PAKINGTON opposed the scheme, mainly on the grounds stated by Sir F. Kelly. Mr. HUME and Mr. GOULBURN, and other members supported it, several of them arguing, at the same time, in favour of the conversion of a large portion of the debt into terminable annuities, so that a portion of the debt might be finally extinguished at the cost of a present increase in the interest of the debt payable during the lives of the annuitants. The Chancellor of the Exchequer's plan was affirmed, upon a division, by a majority of 89; the numbers being—For the clause, 234; against it, 175.

The CHANCELLOR of the EXCHEQUER said that a power would be given to the holders of Exchequer Bills to convert them into stock, which would aid in establishing a £2 10s. per cent stock.

HOUSE OF LORDS.—MONDAY.

One of the puzzles of the Session—to those who do not rightly estimate the increasing interest taken by a section of the public in Church questions—has been afforded by the debates upon the Canada Clergy Reserves Bill. The subject, by the great majority of the public, is regarded as one of the most uninteresting and uninviting character which can possibly take up the time of the House; and many a reader of the morning newspapers has laid down his journal with feelings of deep disappointment, if not of anger, at seeing its columns filled with interminable discussions of a question which, it would seem, at first sight, might be exhausted by a speech of half an hour's length from each side of the House. Yet, upon every stage of the bill in the House of Commons long and elaborate speeches have been delivered, for and against the measure, to full houses; and the galleries have been on each occasion crowded with strangers. The same, or we should rather say an increased, amount of public interest has accompanied the bill to the Upper House. Upon the second reading of the bill, on Friday night, one of the fullest houses of the session was assembled; and to-night, when the fate of the bill was supposed to be jeopardised by an amendment to be moved in committee by the Earl of Derby, their Lordships again came down in unusual numbers.

The first clause of the bill empowered the Canadian Legislature to deal with the Clergy Reserves; and Lord DERBY moved an amendment, the effect of which was to preserve to the Established Church in Canada all the proceeds of the revenues granted to it, and hitherto appropriated under the acts of 1827 and 1840; but to give the Colonial Legislature free power to deal with any portion of the Clergy Reserves which was not already so appropriated and allotted. It appeared, in the debate that ensued, that the sum which the amendment proposed to place beyond the control of the Local Legislature did not amount to more than £30,000; while the unappropriated lands, over which the noble Earl was willing to give the Canadian Parliament the control, consisted of upwards of a million acres, which, in the course of half a century, might very well realise £300,000 or £400,000. It was also stated that the Churches of England and Scotland received an unfair proportion of the fund; seeing that three-fourths of the population only received one-third of the income

The Duke of ARGYLL contended that the faith of the CROWN was not pledged to the Church of England alone, but generally to the religious bodies of Canada. He protested against the doctrine that the clergy reserves of Canada stood on the same footing as the ancient endowments of the churches of England and Scotland. The reserved land was indebted for its value to the labour of the people of Canada; and we had no moral right to dispose of the proceeds of the land without reference to the wishes and feelings of the people of Canada. The Bishop of ST. DAVID's supported the bill, and the Bishop of LONDON the amendment.

Some warmth was imported into the discussion by the Bishop of OXFORD, who quoted a passage from Burke to show that our colonies became intractable "whenever they see the least attempt to wrest from them by force, or shuffle from them by chicane," the right to govern themselves. The Bishop of Exeter had said, on a previous night, that he (the Bishop of Oxford) robbed the memory of his father (Mr. Wilberforce) of its highest honour by the arguments he had used.

If their Lordships agreed with his right rev. brother in that opinion, he must beg of them to repress it, for he could assure them there was no feeling dearer to his heart than the honour of that honoured name. Sprung from one gifted with the highest opportunity—the friend of England's greatest Minister (Pitt)—who, with a great and commanding social position, used all those advantages for no personal aggrandisement, and died a poor commoner—poorer than he had entered upon public life, after having seen all his contemporaries rise to wealth and hereditary honour, and who, leaving to his children no high rank or dignity, according to the distinctions of this world, bequeathed to them the perilous inheritance of a name venerated by the Christian world (Cheers)—he could not bear it to be said he ever for an instant had derogated from that father's fame. He could not admit he had done so.

The Earl of DERBY could not admit that by this amendment, they had attempted either to "wrest by force" or "shuffle by chicane." The right rev. prelate would himself regret the use of such expressions, and think some apology due for having so pointedly characterised the amendment, for which he was justified in applying those words. He (the Earl of Derby) disclaimed the offensive imputation conveyed in those expressions.

The Bishop of OXFORD stated that the noble Earl must have seen that he (the Bishop of Oxford) made the motion with a smile, in a playful way, and with no intention to do what was offensive. He could only say that it was far from his intention to offer any offence whatever.

The following "scene" succeeded:—

The Earl of DERBY: My Lords, I accept at once the explanation which has been offered by the right rev. prelate, but when he tells me that it is impossible for him to say anything offensive because he has a smiling face, he will forgive me if I quote in his presence, from a well-known author, without intending in the least to apply the words to him—

A man may smile and smile, and be a villain

(Cheers, laughter, and some depressory remarks). I am at a loss to conceive to whom what I can say can be offensive—

The Earl of CLARENDON (interposing with great energy and excitement of manner): It is to me (Loud cheers). It is to me I say (Renewed cheering). I and my noble friends near me were offended by that expression. We are not accustomed to hear such expressions (Repeated and prolonged cheering). We are not accustomed even in the language of poetry to hear such a word as "villain" applied to any noble Lord in this House (Loud cheering)

The Earl of DERBY: I must say, my Lords, that I think the interference of the noble Earl wholly uncalled for (Cheers); and especially unbecoming the position which he at present holds in her Majesty's Government, for he must have heard me say, before I made use of the expression, that I was making a quotation in which I was quite certain the right rev. prelate would feel that I was not applying to him the expression which occurred in that quotation, any more than I believed, after his explanation, that he had intended anything personally offensive to me (Cheers). It will be quite time for the noble Earl to vent his indignation when he becomes the subject of personal attack. I can assure him that I have not the slightest intention to make him so; and I do not believe that it is the general feeling of the House at all to join in. I must say, the somewhat singular introduction of a much-wasted indignation, which I suppose was drawn out by the protracted length of this debate (Cheers).

The committee then at once divided, when the numbers were—Content (for the amendment), 77; Non content (against it), 117: majority (in favour of the Government), 40.

Their Lordships then adjourned at one o'clock.

HOUSE OF COMMONS.—MONDAY.

The youthful Viscount Goderich, who was unseated for Hull, took the oaths and his seat as member for Huddersfield.

Lord D. STUART said that the name of M. Kossuth having been mixed up with the seizure of certain Austrian goods, he begged to read to the House a letter he had received from that gentleman, disavowing any connexion with the matter:—

Alpha-road, St. John's-wood, April 1.

My Lord,—In answer to your kind note, I have the honour to say that all the accusations in the *Times* of to day, about a house in my occupation having been searched, and a store of war materials belonging to me been discovered and seized, are entirely unfounded. Not only no house in my occupation, but also nowhere else in England, could have been any store of war materials belonging to me discovered and seized, for the simple reason that I have no store of war materials belonging to me in England. But while I give this plain and flat denial to the alleged charge, I desire explicitly to be understood that I do not disavow my hostility to the oppressors of my country, but rather avow openly my determination to free my country from them. To this, my aim, I shall and will devote my life, my property, and to this activity I never will recognise any other limit but honour, humanity, and the laws of that country where I happen to reside. And, as it is not contrary to honour and morality to have stores of war material, to be used when required in the service of my country, I declare that such I have, but I have them in such countries where it is lawful for me to have them, even with those intentions which I openly avow. But in England I have them not, because I have been told that some doubts may be entertained about the legality of such an act. With this explanation I repeat, no store of any war materials of mine could have been seized, because I do not possess, either directly or indirectly, anything of the kind in this country.—I remain, with high regards and particular consideration, my Lord, yours respectfully,

The Lord Lindsey Stuart. L. KOSSUTH.

The first formal discussion of the Budget took place to-night, and great anxiety existed on the part of strangers to obtain admission. Some hundreds were unable to gain an entrance, and patiently awaited their chance for several hours in St. Stephen's Hall. Fortunately for them, the debate was dull and languid throughout the evening; and many persons who had obtained seats rose and went away, after listening for an hour or two to the less distinguished members to whom the debate of to-night seemed by consent to be left.

The renewal of the Income tax for seven years, at 7d. in the pound for two years, 6d. for two more, and 5d. for three more—its extension at 5d. to incomes between £150 and £100 per annum, and also to Ireland—and its continuance in a shape which recognises no distinction between fixed and precarious incomes—constitute the great subject matter of consideration. But every member who spoke considered himself at liberty to go over the whole ground of the Budget. In lieu of the resolution granting a tax upon incomes until April, 1860, Sir E. BULWER LYTTON moved an amendment to limit the duration of the tax for seven years, and its extension to classes hitherto exempted from its operation, without any mitigation of the inequalities of the assessment, are alike unjust and impolitic. He wished to see a broad distinction made between precarious income and income arising from realised property. Mr. BOOKER, representing an agricultural constituency, felt the greatest dismay at the plan propounded by the Chancellor of the Exchequer, which offered no relief to owners or occupiers of land, while, in the tax upon successions, it tended to break up the great landed aristocracy of the country. The hon. member put in for his agricultural constituents the claim of "some marked difference between precarious and certain incomes." Mr. HUME had a good deal to say against the assessment and collection of the Income-tax; but was too much charmed with the extension of the Legacy-duty to quarrel with the Budget as a whole. Mr. FAGAN strongly approved of the present of £4,000,000 made to Ireland by the abandonment of the Consolidated Annuities, but did not see why Ireland should be called upon to pay Income-tax. Mr. MAGUIRE and Mr. GROGAN took the same view; but another Irish member, Mr. J. BALL, contended that Ireland had been very favourably treated by the Budget. Colonel SIBTHORP announced his unmitigated hostility to the Income-tax. Mr. NEWDEGATE, Sir W. JOLLIFFE, and several Opposition members opposed the Budget, as another blow at the agricultural interest, and declared their opposition to the tax on real property. Mr. DRUMMOND denied that the Legacy-duty would, as Mr. Booker had suggested, break up the aristocracy. It was nothing more than a tax upon elder brothers; the aristocracy of France had been broken up by younger brothers in the National Convention. The Income-tax was the *substratum* of a scheme for creating a machinery by which the National Debt might be ultimately reduced. Mr. MUNTZ said the Budget contained a great deal of which he approved, but he could not support so oppressive a tax as the present Income-tax. On the motion of Mr. Cobden, the debate was adjourned until Thursday.

HOUSE OF LORDS.—TUESDAY.

A conversation upon the dissolution of the contract with the Australian Royal Mail Company, led to a statement by the Postmaster General, Viscount CANNING, that the payments for mail-packet service amounted to the enormous sum of £800,000 a year. The Government wished to take a course that would relieve them from these heavy payments, but they found that the major part of the contracts with the great mail steam companies are for seven, nine, ten, or eleven years, so that the Government are bound for a great number of years to the payment of very heavy sums. The Government would prescribe the price for this service, and the only condition would be, to limit the time in which the service was to be performed. If the shipping interest would not accept the terms of the Government, they might be obliged to rely upon the act of Parliament, which enabled them to employ any vessel sailing from this country as the medium of conveying ship-letters. In three months seventy vessels a month had sailed from English ports for Australia, many of which were calculated to perform the voyage at a greater rate of speed than had heretofore been attained by steamers. There was also an alternative communication already secured by means of the Overland Mail, *viâ* Singapore. Earl GREY declared that all successive Governments had made a great mistake in not reducing the cost of sending letters to the colonies. A charge of 1s. was nearly prohibitory to the working-classes; and, if it were reduced to 6d. for a half-ounce letter, a much larger number would be sent, and the revenue would gain, for the expense of sending letters was not proportioned to their number or to their bulk; a single letter would cost very nearly the same as a large number.

Lord WROTTESLEY, in a speech better suited to the atmosphere of the Royal society, and delivered to a select audience of eight or ten noble Lords, directed attention to a scheme of Lieut. Maury, the Director of the National Observatory at Washington, for improving the art of navigation by obtaining from the masters of vessels observations with regard to the winds and currents of the sea, so as to obtain the means of investigating the laws of atmospheric and oceanic circulation, and advancing the science of meteorology generally. The scheme had been widely adopted in the American mercantile navy, and at the present time there were nearly a thousand masters of ships who were engaged in making these observations, who received gratis in return the charts of the winds and currents, and the sailing directions which are founded upon them, corrected up to the latest period. During the short period the system had been in operation, the results to which it had led had proved of great importance to the interests of navigation and commerce. The routes to many of the most frequented ports in different parts of the globe had been materially shortened—that to San Francisco, in California, by nearly one-third. A system of north-westerly monsoons in the equatorial regions of the Atlantic and on the west coast of America had been discovered; a vibratory motion of the trade-wind zones, and, with their belts of calms and their limits for every month of the year, had been determined; the course, bifurcations, limits, and other phenomena of the great Gulf Stream, had been more accurately defined, and the existence of almost equally remarkable system of currents in the Indian Ocean, on the coast of China, and on the north-western coast of America, and elsewhere, had been ascertained.

Earl GRANVILLE said that Lord Clarendon had brought the plan under the notice of the Treasury.

HOUSE OF COMMONS.—TUESDAY.

Lord J. RUSSELL stated that Sir C. Wood would bring forward the Government of India Bill between the 20th and 30th May.

Mr. RICE moved for a select committee to consider the expediency of adopting a more uniform system of police in England and Wales. He contended that parish constables were unfit to perform the duties of an efficient police, and referred to the reports of the constables of public-houses and beer-shops, and that there was a strong feeling throughout the country that it ought to have the benefit of a strong national police.—The motion was seconded by Mr. HUME, who considered that the time had come for examining whether the existing police had proved beneficial; if not, it should be abolished; if it had, there was no reason why it should not be universal. Lord LOVAINE, Mr. RICE, and Sir J. PAKINGTON spoke in favour of the motion. Sir GEORGE GREY and Sir J. GRAHAM concurred in recognising the superiority of the county police over the parochial constables, the false economy of refusing to adopt the Police Act, and embarrassments arising from the jealousy of small municipal authorities in forming a police. Without pledging the Government to any specific views, he thought the committee would lay a foundation for legislation.—Mr. MACKIE moved that the inquiry be extended to Scotland. This amendment was adopted, and the committee ordered to be appointed.

On the motion of Mr. H. HERBERT, a select committee was appointed to examine the present state of the communication between England and Ireland; and to report what improvements modern science can suggest with the view of rendering it more commodious

The National System of Education in Ireland—which has been discussed until nine-tenths of the public must be heartily sick of the subject—was again the theme of debate, upon a motion, by Mr. G. A. HAMILTON, for a select committee to inquire into its working. No new reasons were given for wasting the time of the House by this motion. The grievance of the Irish Church party, who every year weary the patience of the House, was described by "the rector of one of the largest parishes in the north of Ireland," quoted by Mr. Whitehouse, who says—"If I walked into the school in my parish, and attempted to read to the children one verse out of the New Testament, I should lose my grant from the Board, if I had one. Although I am a minister of the Church of the Reformation, before I could read in the school a chapter from the New Testament, I should be obliged to put up a placard to warn off the presence of all persons who might be supposed to hear the very words which I am bound by my ordination vow to make known to all men; and that is so repugnant to my feelings and principles that I cannot do it." On the other hand it was stated that for an hour a day he may have all the Protestant children of the school, in the school itself if he likes, to read the Bible, say the Catechism, answer questions, repeat hymns, or whatever else he pleases. If they are too many for one class he can have them in as many detachments as he finds convenient. He is not allowed to compel the attendence of those children who believe him a heretic. On the one hand Mr. Whiteside's rector, and the Irish clergy who thought him, were supposed from fidelity to their religious principles and duties; while by the Ministerial benches they were charged with bigotry, and with bringing to the work of education a proselytising spirit, which could not fail to lead to counter demonstrations on the part of the Roman Catholic priesthood, and to excite animosities, the indulgence of which, if they received any countenance from the Legislature, would cause the youth of Ireland to perish for lack of knowledge.

Sir J. GRAHAM stated that, although the population of Ireland had diminished by 2,000,000 during the last few years, from the combined effects of famine and emigration, the number of children in the national schools had continued undiminished, so that, as they amounted at present to 570,000. He congratulated the House that these young people were receiving a better education than probably the youth of any other European country. After an attempt to adjourn the debate, which was negatived by a large majority, the House divided upon the original motion, which was rejected by 179 to 108.

The South Sea and other Annuities Commutation Bill was read a third time.

HOUSE OF COMMONS.—WEDNESDAY.

The second reading of the Attorneys' and Solicitors' Certificate Bill was deferred by Lord R. GROSVENOR till the 1st of June. The noble Lord said the proposals of the Chancellor of the Exchequer relative to attorneys, were unacceptable to the profession; and if the Chancellor of the Exchequer did not alter his Budget, as far as the attorneys were concerned, he should divide the House upon the third reading of the present bill.

The greater portion of the sitting was occupied with the amendments proposed to be made in the South Sea and other Annuities Commutation Bill. Sir F. KELLY proposed a clause to limit the creation of the New Two-and-a-Half per Cent Stock to £11,000,000. The CHANCELLOR of the EXCHEQUER said the clause was inconsistent with that already agreed to, which made the limit £30,000,000. The clause was withdrawn, and Sir F. KELLY then proposed a clause with reference to stock held under trust, the effect of which was to inhibit trustees, executors, and administrators from commuting stock, without the consent of all the parties beneficially interested. The clause was opposed by the SOLICITOR-GENERAL (who had prepared a clause), and defeated by 138 to 51 votes. The Solicitor-General's clause was then proposed and carried, after another division, in which an amendment of Sir F. Kelly's was negatived by 134 to 67. The bill then passed

Mr. Whitbeade obtained leave to bring in a bill to facilitate the operation of the Irish Encumbered Estates Act. Under that act, he said, 1000 estates were waiting for sale, and of the proceeds of sales, which, up to the 1st of April, amounted to £8,636,285, no less than £3,731,401 remained undisposed of, owing to the pressure of business in the court, arising from the working of one of the clauses of Sir J. Romilly's bill; so that the delay was now greater than in the Court of Chancery.

HOUSE OF LORDS.—THURSDAY.

On the motion for the third reading of the Canada Clergy Reserves Bill, the Earl of DERBY said that, though he still entertained strong objections to the bill, yet he looked upon the majority the other night as decisive upon the point, and would not, therefore, offer any further opposition to the measure. After a few words from the Earl of WICKLOW and Lord REDESDALE in opposition, the bill was read a third time and passed.

TRANSPORTATION.

In reply to Earl Grey, the Earl of ABERDEEN said, that although promises had been held out to certain of our criminals now confined in the different prisons of this country, but who were under sentence of transportation for various periods, that by good conduct they would be entitled to their removal to the colonies, with tickets of leave, the Government found it impracticable to carry out literally the terms of their engagement. The number of convicts to whom those regulations applied was about 1052. Still, the good faith of the Government would be substantially preserved towards those criminals by a diminution of the duration of their punishment under certain regulations. The subject was now under the consideration of the Government, and he hoped that a measure would shortly be ready for them to submit to Parliament. The question of transportation, at present, was a very difficult one. He would not express any opinion as to an adherence to the principle, as that was a question which must be left to the consideration and decision of Parliament.

Earl Grey and Lord Campbell severally expressed their regret at the statement of the noble Earl—that the pledges given to those criminals would not be adhered to, and that transportation was not, at all events, for the present, to be carried out.

After a few words from the Earl of ABERDEEN and the Marquis of LANSDOWNE in explanation, a short discussion ensued, in which the Duke of NEWCASTLE, the Earl of DERBY, the Earl of DONOUGHMORE, and other noble Lords took part, after which the subject dropped.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. EWART asked the Secretary of State for the Home Department, whether the question would be considered by the Government of conferring a system of municipal self-government on the metropolitan boroughs; and of instituting any superintending authority which may provide for the many exigencies (as widening roads, and leaving open spaces for air) arising out of the constantly-increasing extension of the city of London? Lord PALMERSTON said that the metropolitan boroughs, if they thought proper, had power to apply for a charter of incorporation.

In reply to a question from Mr. Labouchere as to the licenses of dealers in tobacco, the CHANCELLOR of the EXCHEQUER said, he was very sensible the scale of licenses proposed would operate with great severity; but the scale should be printed, and ample time would be given for consideration.

In reply to Sir John Shelley, Sir W. MOLESWORTH hoped that Battersea park would be completed by this time next year. He believed it would require about £60,000 more than was already voted for the purpose of completing the park.

Mr. FRIGHT asked the Chancellor of the Exchequer whether property in the possession of corporate bodies was to be subject to the duty on successions. The CHANCELLOR of the EXCHEQUER said it would be the duty of the Government to submit a motion with respect to property in the possession of corporate bodies.

INCOME-TAX.

The House then went into Committee of Ways and Means, and the adjourned debate was resumed by

Mr. COBDEN, who dwelt upon the enormous additional expenditure which had been incurred within the last few years, and said, if the Chancellor of the Exchequer was compelled to provide for the cost of those who supported that expenditure—and not the Manchester School, which always opposed it—that must bear the responsibility. The difficulty the late Government, as well the present Government felt, was the difficulty to find a direct tax to enable them to supersede a certain amount of indirect taxation; but this they could not accomplish so long as they allowed their expenditure to keep equal pace with their growing revenue. With respect to the proposition of the Chancellor of the Exchequer, he would turn to the debate of the Income-tax, upon which the right honourable gentleman had been very earnest and very unsatisfactory. A tax on consumable articles always pressed more heavily on the poor than on the rich; whereas an Income-tax did not press on trade or commerce at all so severely. There was no demoralisation arising from the Income-tax, for, unlike taxes of a different character, it gave no encouragement to smuggling. The right hon. gentleman would not agree to any modification of the Income-tax, because it could not be made perfect, yet nobody would contend that Mr. Disraeli's proposition was not an approach to justice, when he proposed 5½d. on precarious and 7d. on real income. He would not say that the right hon. gentleman had not shown any ground for doing nothing. Still, when he considered the other portions of the Budget, he must say that, as a whole, he was ready to take it with both hands. He thought the right hon. gentleman was right in extending that tax to incomes of 150. The Legacy-duty went far to redress the injustice of the Income-tax, and the Government deserved credit for grappling with a duty which he disliked even Pitt himself to cope with. He advocated the extension of the Income-tax to Ireland; and, inasmuch as the people of Ireland were offered a compensation in the abolition of the Consolidated Annuities, he advised the Irish members to close with the offer. With respect to the Advertisement-duty, he hoped that the Chancellor of the Exchequer would not make two bites of a cherry, but would take off the whole duty. As regarded the duty on supplements, he believed that Mr. Gladstone had no desire to favour any particular journal, but his repeal of that duty would, no doubt, have that effect. He therefore hoped that the right hon. gentleman would re-consider this part of his proposal.

Mr. Serjeant SHEE strongly condemned the extension of the Income-tax to Ireland.

Mr. RICARDO said that the evidence before the committee had convinced him of the impossibility of removing the inequalities of the Income tax. The imposition of the Legacy-duty went, however, a great way towards an equivalent for the Income-tax inequalities.

Mr. FRENCH was against the extension of the Income-tax to Ireland.

Mr. T. BELLEW supported the proposition of the Government.

Mr. SANDERS also spoke in favour of the Government propositions, but thought that the Advertisement-duty altogether should be abolished.

Sir F. BARING expressed his satisfaction that the Government had come to the conclusion that the Income-tax was not a proper permanent tax in time of peace; and he would, therefore, support the proposition in respect to it. He thought the propositions in reference to the Soap and Tea-duties, and the Legacy-duties, were also deserving of praise. He could not, however, concur in the proposition to extend the Income-tax to Ireland, nor to make it applicable to incomes below £100.

Lord LOVAINE and the Marquis of GRANBY severally opposed the propositions generally of Mr. Gladstone.

Sir C. WOOD defended the course taken by the Government, and combatted the objections urged against it.

The debate was then adjourned until to-morrow (Friday).

THE ELECTRIC TELEGRAPH, CLOCKS, AND BELLS IN THE HOUSE OF COMMONS.—In the course of the last few days an electric telegraphic station has been opened adjacent to the lobby, for the use of members and parties engaged in Parliamentary proceedings, and direct telegraphic communication is thereby obtained with all parts of the country, and intelligence transmitted. Operations were on Monday commenced for placing an electric clock over the principal entrance to the lobby, and a general system introduced of notifying to members in all parts of the House the precise moment of a division by the electrical ringing of 80 bells in various directions, the bells being set in motion by an apparatus in charge of one of the officers at the lobby door. Wires are also being carried to the Carlton, Reform, and other clubs.

ELECTION MATTERS.—*Athlone*: Mr. Keogh returned.—*Carlow*: Captain Bunbury returned. *Knaresborough*: Messrs. Woodd and Dent declared the sitting members. Mr. Westhead rejected.—*Berwick-on-Tweed*: Mr. Forster and Mr. Stapleton not duly elected.—*Maidstone*: Mr. Dodd not duly elected.—At *Taunton*, Sir John Ramsden (Liberal) is opposed by Mr. Badcock (Conservative), a banker.—At *Berwick-on-Tweed*, four Liberal candidates are in the field against two Conservatives. A committee is appointed to decide which two of the Liberals shall withdraw.—The petitions against *Finsbury* and *Hereford* are withdrawn; as also the one against *Cavlow* in the late general election.—*Dublin* and *co. London derry*, both petitions against the sitting members withdrawn.

CHESS.

TO CORRESPONDENTS.

COLONA.—1. The solutions are correct. 2. Your problems shall have immediate attention 3. The Numbers you require, including the one for May, we will give instructions to have printed, but there should be no difficulty whatever in your obtaining those through any bookseller.

T. E. H. S. (a fishertber).—Play the game over once more, and you will find your error. If Mobsechander had played his Queen to K B 8th, what prevented the adverse Queen from capturing her?

B. D.—As for particulars and tickets of the Great Manchester Chess Meeting, on the 6th and 7th of next month, apply to the Secretary, Mr. A. Fisher, 12, Kennedy-street, Manchester

J. P.—Of solutions—Best just north too obvious.

A. B. C.—It is quite sound, we believe, and certainly very clever.

J. S., Guernsey.—See the notice to Correspondents, in No. 7, &c., in our Number for April 16. You are quite right.

E. M. J., Norwich.—The Solution of Enigma No. 806 is—1. K to B 8th, 2. Q takes Kt (ch), 3. P mates.

B. H., Argate.—It shall be examined.

S. M. W. B.—You must not extricate your King from a check by Castling.

G. B. J.—Yes shall have our opinion next week. 2. We are told it will. *Nous verrons*

R. W., Sedbergh.—They are too simple.

SOLUTIONS OF PROBLEM No. 481, by Jack of Worcester, Farnwood, H. P. C., A. D. of Malines, R. W. M., D. W. H., Jejues, are correct

SOLUTIONS OF ENIGMAS, by Edible, Lynx, Harrovensis, D. W. H., Phis, M. D., B. B., Engineer, Sailor, W. F., are correct.

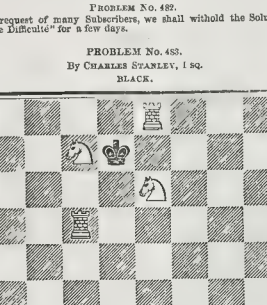
PROBLEM No. 482.

At the request of many Subscribers, we shall withold the Solution of "Une Difficulté" for a few days.

PROBLEM No. 483.

By CHARLES STANLEY, I SQ.

BLACK.



WHITE.

White, playing first, checkmates in four moves.

CHESS BY CORRESPONDENCE.

Game, played by Correspondence, between Mr. V. GREEN, Hon. Sec. of the Oxford Chess-club, and Mr. C. F. SMITH.

(Evans' Gambit.)

WHITE (Mr. S.)	BLACK (Mr. G.)	WHITE (Mr. S.)	BLACK (Mr. G.)
1. P to K 4th	P to K 4th	17. Q to K R 3rd	R to K B 2nd (b)

8. P to K 3rd	Kt to Q B 3rd	28. K to K B sq	P to K Kt 5th
9. P to Q B 3rd	P to K B 4th	29. Q to Q 3rd	Q to K Kt 2nd
10. Q Kt to Q 2nd	P to K B 4th	30. Q to K Kt 6th	B to Q sq
11. Q to her Kt 3rd	K to R sq (e)	31. R to K 8th	Q takes Q
12. Q Kt to his sq (f)	P to K B 5th	32. R takes K (ch)	K to Kt 2nd
13. P to Q B 4th	Q Kt to K 2nd	33. B take Q	K takes K
14. P to Q B 5th	B to Q B 2nd	34. P to Q R 4th	P takes B P
15. Q Kt to Q B 3rd	Kt takes B	35. P takes P	K to Kt 3rd
16. Q takes Kt	P to Q 5th	36. B to K 8th	R to B 3rd
17. Q Kt to K sq	Q Kt to K sq	37. P to Q Kt 5th	B to Q B 4th
18. Q to K 2nd	B takes K R P	38. Kt to K 2nd	K to K 2nd
		39. B to K K 5th	B to Q 7th

The Game was prolonged to nearly 60 moves, and finally won by GAMMA.

(a) Compelling White to look to the safety of his Q Bishop

(b) M. instead of retiring the Kt, he had played P to K B 3rd, Black might have taken that Pawn with his King's Bishop, or have played P to K B 5th in either case securing a great advantage in position.

(c) The best move, apparently. If he had taken the Bishop, Black would have obtained more than a sufficient compensation in force and attack together

(d) Black's position looks better than it really is, for he must now take the Kt, and thus lose time.

White to play, and win the game.

NAVAL AND MILITARY INTELLIGENCE.

THE ARMY.—The 52nd Light Infantry at Dublin, and the 81st Regiment at Kilkenny, are placed under orders for India, to relieve the 18th Royal Irish and 80th Regiments, now serving in Burmah, both of which corps have been sixteen years on foreign service. The 52nd will embark about June. The depôts of both regiments are at present at Chatham. Captain Blackwood Price's field-battery, quartered at Shorncliffe, have received orders to hold themselves in readiness to join the camp to be formed on Cobham-common, near Windsor, in the beginning of June next. The battery is composed of six guns, eighty-five horses, and 125 non-commissioned officers and men. Captain F. A. Campbell's field-battery, at Chatham, of similar strength, have also been ordered to join the camp at the same time.

WOOLWICH.—The *Phænix* screw steam-sloop, Commander Inglefield, has been taken into the basin to have her coaling completed. The *Brendalbane* store-ship, engaged to accompany the *Phœnix* to the arctic regions with stores, for the relief of Captain Sir E. Belcher's expedition, is in the inner basin, being strengthened. After she is completed she will be again taken up to Deptford, to receive provisions of various kinds and wine, rum, and brandy for the absent voyagers. The *Diligence* transport has been docked and fitted to convey coals to the Arctic Sea for the use of the vessels searching for Sir John Franklin.

THE *Hastings*, 74, Captain Austin, flag-ship of the China station, arrived at Spithead on Sunday. She has been a long time on the passage, consequently has no news. The family of the late Sir Francis Austin have arrived from the East in the *Hastings*.

NEW UNIFORMS FOR THE BRITISH ARMY.—Immediately after the levee, on Wednesday, Messrs. S. Isaac, Campbell, and Co., army contractors, St. James's-street, had the honour of a special interview with his Royal Highness Prince Albert, at the Palace, when they submitted the new patterns of uniforms, accoutrements, &c., which have recently been sanctioned by the authorities at the War office and Board of Ordnance, as the proposed change of dress for the British army.

CHURCH, UNIVERSITIES, &c.

ST. MAGNUS CHURCH, LONDON-BRIDGE.—A large number of workmen are engaged in repairing the upper portion of this church, which is to undergo a complete renovation.

ST. DIONIS, FENCHURCH-STREET.—The presentation to the Hvirg of St. Dionis Backchurch, has lapsed to the Bishop of London, six months having expired since the resignation of the late incumbent, without the induction of a new one by the patrons.

THE late Bishop of the Isle of Man, Dr. Short, now Bishop of St. Asaph, has given £1000 for the widows and orphans of those clergymen who have, as incumbents or under the Bishop's license, officiated in that island. His Lordship has expressed a wish that the fund should be called "Mrs. Short's money."

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. T. J. Rowsell, to St. James's, Westminster. The Rev. J. Prior, to Kirkington, Yorkshire. The Rev. J. Ford, to Old Romney. The Rev. T. Erskine, to Steppingley. *Vicarages*: The Rev. A. Kent, to Coln St. Aldwyn. The Rev. W. Dixon, to Shepreth, Cambridgeshire. The Rev. J. Fletcher, to Cubbington, near Warwick.—The Rev. J. Moultrie, to be a Rural Dean of Coventry.—The Rev. C. Jenkyns to the Incumbency of All Saints, Tuckingmill, Camborne.

TESTIMONIAL.—A splendid silver candelabrum, elaborately chased, was on Monday presented to the Rev. Philip Parker Gilbert, M.A., by his late congregation at St. Mary's, Haggerstone, as a token of gratitude and esteem for his laborious and useful exertions during a faithful ministry of sixteen years.

PRESENTATION OF PLATE.—A silver salver has just been presented, by a number of his former and present pupils, to T. K. Heath, Esq., F.C.P., late Principal of Barlington Grammar School, Hammersmith, accompanied by an illuminated address on vellum, expressive of the pupils' deep sense of the zeal and kindness which, for twenty-five years, have characterised his professional career.

CROSBY HALL.—The Earl of Carlisle delivered a second lecture before the Evening Classes of Young Men, on Thursday evening—the subject, on this occasion, being the past Gray. His Lordship began by remarking that personal impulses led him to the choice of the poets Pope and Gray as the arguments of his lectures. The latter occupied a lower position as the Parnassian Mount than the former; but he was not a precocious, and his works were few; but they were lofty in their aim and execution. Had he shown prodigality as well as perfection of genius, he would have been entitled to as high a rank as Virgil: the same delicacy of taste and exquisite style of workmanship were apparent in his productions. He was affected with hereditary gout, and thus had predisposed him to a remorse, but not morose, melancholy. Gray manifested but little of the spirit of authorship. He would not accept of remuneration, and wished to remain anonymous. He was never in love; his affections centred in his mother. Lord John Russell had expressed an opinion that Moore was the first of English lyrists: he begged to differ, and put in a claim for Gray. As a letter-writer, Gray occupied a position between Walpole and Cowper. Dr. Johnson's remarks on Gray were disgraceful. The noble lecturer then proceeded to cite passages from the poems on "Spring" and "Eton College," which took many recognitions. The picture of schoolboy life was not accurate; and the boys themselves were unconscious of his melancholy forebodings, being consigned over, in the last stanzas, not only to the pains of life, but to death. Of the famous those boys were four who had since been Prime Ministers in England, and one who became the Duke of Wellington. After some further recitals, he concluded with high encomiums on the "Bard," which were received with great applause. The Lord Mayor then expressed the thanks of the meeting, and complimented his Lordship's efforts to enlighten the young men of the city.

MAY MEETINGS.—We continue from our last Number the list of the various religious and other meetings to be held during May and June.—Monday, May 2: Wesleyan Missionary Society, Exeter hall (Mr. J. Heald, chairman); Naval and Military Bible Society, Willis's Rooms (the Marquis of Chomondeley, chairman); Home and Colonial School Society, Gray's-inn-road (the Earl of Chichester, chairman); Aged Pilgrims' Friend Society, London Tavern (Mr. Apsley Pellatt, M.P., chairman); Church of Scotland Missions, Exeter-hall (the Duke of Argyll, chairman).—Tuesday, May 3: Church Missionary Society, Exeter-hall (the Earl of Chichester, chairman); Christian Instruction Society, Weigh House Chapel (the Lord Mayor, M.P., chairman).—Wednesday, May 4: British and Foreign Bible Society, Exeter-hall (the Earl of Shaftesbury, chairman); Society for the Evangelisation of Foreigners, Newman street (Sir John Dean Paul, Bart., chairman).—Thursday, May 5: London City Mission, Exeter-hall (no chairman yet named); Irish Society of London, Hanover-square Rooms, (the Marquis of Blandford, M.P., chairman); Sunday School Union, Exeter-hall (the Lord Mayor, M.P., chairman).—Friday, May 6: London Society for Promoting Christianity amongst the Jews, Exeter-hall (the Earl of Shaftesbury, chairman); Governesses' Benevolent Institution, Hanover-square Rooms (the Earl of Harrowby, chairman); Bibliocratic Platform and Mariners' Royal Benevolent Society, Willis's Rooms (the Earl of Talbot, chairman); Religious Tract Society, Exeter-hall (the Lord Mayor, M.P., chairman); Irish Colonial Church and School Society, Exeter-hall (no chairman named).—Saturday, May 7. Royal Naval School Society, Willis's Rooms (the Earl Manvers, chairman).

ST. MARK'S CHURCH, ALBERT-ROAD, REGENT'S-PARK.

ON Monday last (St. Mark's Day), this church, which has been erected in a newly-formed and rapidly-increasing district of the densely-peopled parish of St. Pancras, was consecrated by the Lord Bishop of London; assisted in the ceremony by the Ven. the Archdeacon of Middlesex, the Ven. and Rev. Stephen Robinson, the Rev. Thomas Dale, Vicar of St. Pancras; the Rev. W. B. Galloway, the Incumbent of the district; and numerous clergy from the adjoining district.

The prayers were read by the Incumbent of the district; and an impressive sermon was preached by the Bishop, from the text "But as for me, I will come into thy house, in the multitude of thy mercy, and in thy fear will I worship toward thy holy temple."—Psalm v. verse 7.

After the ceremony of consecration, the Bishop and a numerous party of the clergy and laity were entertained at breakfast by the Incumbent.

The church stands on a plot of ground at the end of the long walk of the Regent's-park. The architecture is of the style known as Early English, of the geometric period. The walls are of Kentish-rag stone; the doors, windows, and other architectural features, of Bath stone.

The plan of the church is simple, being a parallelogram, 103 feet long, 63 feet wide, and presenting little variety of outline. There are no transepts or ideal side chapels, even the chancel forms no important feature externally, being only a prolongation of the nave. The architect has sought to give the character of a metropolitan parish church, and not that of an enlarged copy of a village church. The interior is divided into nave and aisles by five bays of stone columns and arches, the divisions being marked externally by buttresses. The roofs of the nave are covered by three span roofs, that of the nave is open-timbered, that the aisles are ceiled at the level of the springing of the roof. The nave with flat close-boarded and ribbed ceiling, open to the roof, and

NEW CHURCH OF ST. MARK, ALBERT-ROAD, REGENT'S-PARK, CONSECRATED ON MONDAY.

corbels. The height thus obtained in the aisles gives ample space for galleries, which are constructed over them.

The chancel window is a large seven-light traceried window, adapted from Tintern Abbey. The aisles are lighted by two-light traceried windows, with triangular lights, forming a second tier of windows above them, giving light and air to the galleries, of which arrangement an example is found in Westminster Abbey. It gives a peculiar character externally, as the aisles present a double range of windows. The tower is at the north-west angle; and, with the spire, rises to the height of 126 feet. The bell is by Messrs. Mears.

It has been stated that the chancel forms no distinct feature externally; but it is well marked internally by its occupying a large space of the eastern end of the church, including the last bay of the nave arches, which are enclosed with chancel seats. The paving in front of these seats and the cancelli railing, which is a trefoiled arcade, executed in carved wainscot, is inlaid with Minton's encaustic tiles. The pulpit and reading-desk, both of careful design, are also of wainscot, supported on Caen stone bases. The organ, an excellent one, is by Messrs. Gray and Davison.

The seats throughout the church are of deal. There is an effective porch on the north side of the church, with a deeply-recessed doorway of clustered columns, and rich arch mouldings, among which is the dog's tooth enrichment. Over this doorway is a quatrefoil, containing the sculptured emblem of St. Mark, the winged lion.

A dwarf wall built of Kentish rag and Bath stone encloses the site, and access is given to the enclosure through a well-designed arched gateway, opposite to the tower of the church. Accommodation is provided for 1200 persons; more than one-third being free sittings. The building has been executed in a sound and workmanlike manner by Mr. Myers, under the direction of the architect, Mr. Thomas Little, of Northumberland-street, New-road. The amount of the contract was £6778; of which, upwards of £1700 remains to be raised by voluntary subscription.

DESTRUCTION OF A LARGE MILL AT HALIFAX.

On the morning of yesterday week, the 22nd inst., a most destructive conflagration took place in the town of Halifax, by which a large mill, with its valuable contents, was reduced to the fragmentary ruins depicted in the accompanying Illustration, from a sketch by Mr. T. Binns, of Halifax. The premises were built in 1847, were situated between Gaol-lane and Ann-street, and consisted of five stories and an attic; there being also a room on the basement along the lower half of the plan. It was the most substantially-built mill in Halifax, and the rooms were about 130 feet long by 45 feet wide inside; the two lower stories being, however, shorter by the width of the engine-house, which was at the east end. The building belonged to Messrs Leyland and Highley, card-makers; but part of it was let off to Mr. Illingworth and Mr. Joseph Wood, worsted spinners.

The mill had been left quite safe, to all appearance, on Thursday evening, and remained in apparent safety through the early part of the night; but about half-past two o'clock, the policeman on duty in Ann-street was startled by seeing a light flash from the building. He at once aroused the neighbourhood, awoke Mr. Leyland and his family, and ran to give the alarm at the police-office. Mr. Isaac Swaine, the superintendent of the fire-engines, and the fire brigade, were roused; and the fire-engine of the Halifax, Bradford, and Keighley Insurance Company, drawn by men to the spot; followed by the Leeds and Yorkshire engine, also the two fire-engines belonging to the town. When the engines reached the spot the flames seemed confined to the two windows near the south-east end of the second story, which was in the occupation of Mr. Illingworth. The first object of Mr. Swaine was, therefore, to endeavour, by placing an engine on each side of the mill, to cut off the remaining parts of the rooms, so as to confine the fire to that end in which it had originated. But, owing to the inflammable nature of the floors and their contents, and the prevalence of a strong east wind, all human precautions proved in vain. The flames spread onward and upwards with appalling rapidity: the entire mill was in one roaring conflagration soon after three o'clock; and, before four, the roof and part of the walls had fallen in. Meanwhile, the smaller engine, which had been taken to the west end of the mill, was of necessity deserted, and was consumed in the conflagration it had been brought to stop; the men who were working it having a narrow escape of their lives. At this end of the mill, the flames were made more furious by three pipes of oil which were in the lower room.

The falling in of the roof presented a terrific spectacle: the building resembled a vast fiery furnace, the heat of which was so intense that it burnt the hose of the fire-engines, and ignited the window-frames of the houses on the opposite side of Gaol-lane. Fortunately, the mill was isolated, or it is impossible to tell how far the conflagration would have spread. The flames were driven by the wind over the low cottages in Malt-shovel-yard; and burning wood was carried in quantities into the town; but, happily, without igniting any other buildings on fire. When the destruction of the mill appeared inevitable, the brigade directed their efforts solely to the preservation of the surrounding property, and to the abatement of the fire around the steam-engine: in this they were favoured by the wind, which had altered their previous exertions to save the mill; and the steam-engine, boilers, and boiler house were thus preserved. During the forenoon, one of the engines was brought again to the spot, to put out the fire still lingering about the engine; and, while playing the water upon the flames, a portion of the wall gave way, one of the stones striking a fireman on the ribs in the rush to save himself.

Early in the forenoon, the safe (a large iron one) of Messrs. Leyland and Highley was reached, and its contents taken out. The books were greatly damaged; and a quantity of gold, silver, and copper was found molten. With this exception (if it be one) scarcely an article has been saved; and the blackened remnants of the mill walls seem more like some ruins of an ancient edifice than the support of what was the day before a hive of busy industry.

Messrs. Leyland and Highley's loss is stated to be about £19,000, towards which they have an insurance, in the Halifax, Bradford, and Keighley Office, of £7000. Mr. Illingworth's loss will not be less than £8000; and Mr. Wood's loss will exceed £4000: both are partially insured in the Leeds and Yorkshire Office.

REMAINS OF MILL, AT HALIFAX.—SKETCHED AFTER THE FIRE.

PARLIAMENTARY PORTRAITS.

VISCOUNT GODERICH, M.P. FOR HUDDERSFIELD.

Viscount Goderich belongs to that class of young noblemen in this country who find their surest hope of gaining a place in the public regard, in identifying themselves with popular progress, and what is generally termed the cause of the people. Stepping from the pedestals which rank and wealth have raised for them, they meet the classes below them half way—are the first to extend the hand of sympathy, and to propose the interchange of mutual good offices. Viscount Goderich, during the course of his brief public life, has been unceasing in his endeavours to advance the comforts and welfare of the lower and particularly the working classes, and to elevate their station in society. In the year 1852 he had an opportunity of signally evincing the sincerity of that feeling, when he laudably exerted himself to promote an amicable adjustment of the serious differences which for so long a time had unhappily subsisted between the master engineers and their workmen in the iron trade.

George Frederick Samuel Robinson, Viscount Goderich, only son of the Earl of Ripon, who in years gone by was so well known by the *soubriquet* of "Prosperity Robinson," was born on Oct. 24, 1827, and is,

VISCOUNT GODERICH, M.P. FOR HUDDERSFIELD.—FROM A PHOTOGRAPH BY M. BAUM, OF HUDDERSFIELD.

consequently, still a very young man. He was privately educated; and, in 1849, was for a short time attaché to the special mission sent to Brussels by Lord Palmerston, to endeavour to put an end to the war between Austria and Sardinia, and of which mission the Right Hon. Sir Henry Ellis was the head. Very shortly after his return to England he began to engage public attention by the interest he took in all questions affecting the working classes.

At the general election in 1852 he was returned for Kingston-upon-Hull, in conjunction with Mr. James Clay, by a large majority, over the then Ministerial candidate, Mr. Bramley Moore, and the Hon. C. L. Butler. He was, however, unseated on petition, very shortly after he had taken his seat. Although opportunities of frequently addressing the House of Commons were thus denied him, the noble Viscount made one speech, which he delivered with great self-possession, yet in a manner at once evincing so much modesty and frankness that he succeeded in passing that ordeal of criticism which is so trying to young members. Although unseated on the ground of bribery practised by his agents, the committee exonerated him from all connivance at these corrupt practices.

When Mr. Stansfeld was unseated for Huddersfield for bribery, political parties in the town, favourable to the late member, introduced Mr. Joseph Starkey, an eminent manufacturer, and of Liberal politics, as his successor. That section of the Liberals, however, who took part in unseating Mr. Stansfeld, was anxious again to introduce Mr. Williams, the unsuccessful candidate at the general election. This gentleman entered an appearance, but nothing more, and upon his leaving the field, the choice of his friends fell upon Lord Goderich, who consented to stand for the borough.

On the 30th of March, therefore, his Lordship met a large body of his future constituents in the Philosophical Hall, in order to make known to them his political creed. His reception was of a most gratifying description. Having been introduced to the meeting by the retiring candidate, Mr. Williams, he vindicated himself from any participation in the acts of bribery alleged in the Kingston-upon-Hull petition, and then proceeded to state his political views. First, however, with regard to the terms on which he sought to obtain the suffrages of the people of Huddersfield. He remarked, that if he had been willing to profess principles which were regarded as more in consonance with the position which he held, and which Mr. Williams had told them, was his misfortune and not his fault (Laughter and Cheers); if he had had the misfortune, not only to be "a live Lord," but to have acted, as many live Lords had acted, he might have obtained a seat in Parliament with no trouble, no expense, and no inconvenience (Loud applause). But he only sought a seat there to advocate those principles which in his heart he believed to be true; and, therefore, he at once had appealed to large constituencies as an independent candidate. The noble Viscount then explained his principles to be those of enlightened and steady progress; of reform, rapid but not hasty—never ceasing, but not violent. He was the advocate of that reform which was the only safeguard against revolution—of that reform which was in fact the truest Conservatism; and which had never, so far as he had learned, been the ruin of empires, whilst the opposite policy had been so (Loud applause). One of the causes which led him most to rejoice at the final settlement of the Free-trade policy, was that it would open the way to the consideration of another question in which he felt personally the deepest interest, the question of Parliamentary Reform. The only principle on which he would rest the representation was that it should be extended to the utmost possible point; and he should be willing to advance in that direction by all the means which the circumstances of the country would allow (Applause). He had no sympathy with the principle of finality (Applause). Passing to the ballot, and the re-distribution of electoral districts—both of which measures he advocated—his Lordship then touched upon the questions of Church endowment by the State, and grants out of the public revenue for religious and ecclesiastical purposes—to both of which he expressed his decided hostility; and he concluded his speech by stating that he should go to the House of Commons the advocate of the cause of the people, and in that capacity alone would he act. The noble Viscount was returned for the borough by a majority of 82 over Mr. Starkey.

As may be gathered from his declared opinions, Viscount Goderich is of Liberal politics, in favour of the extension of the suffrage and the ballot, and announces himself as an independent supporter of the present Government. In 1851 he married Miss Vyner, eldest daughter of Henry Vyner, Esq., and grand-daughter of Earl de Grey.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

The original, or "old" Society of Painters in Water Colours opened their forty-ninth Exhibition for the season on Monday; and the crowds which have thronged their elegant little gallery ever since afford convincing proof that the interesting art they cultivate has many and influential votaries.

Most of the members and associates contribute on the present occasion their usual number of pieces, in the several styles in which they respectively excel: amongst the absentees of those we have been accustomed to admire, are Cattermole, who has withdrawn in favour of the Royal Academy; and John F. Lewis, who perhaps is studying brilliant colouring and delicate outline under the bright skies of the East.

Copley Fielding, the President, first attracts us with a fine coast scene (14) "near Bembridge, with Culver-cliff, Isle of Wight," in which the effects of a coming storm are very truthfully produced, with blacks, whites, and greys. His "View of Windsor Castle from the Great Park," is a fine panorama of magnificent wooded scenery; but the sky is too deeply blue for our inland climate. Amongst his other landscapes are several from his favourite haunts in Cumberland and Westmoreland, in which there is nothing to cavil at, nothing left to desire. Add to these 273, "View of Ben Conachan, over Loch Awe, Argyleshire," a perfect gem.

John Callow's sea-pieces are as admirable for intrinsic merit as for variety in treatment. In 45, "An Emigrant Ship embarking Passengers in Plymouth Sound," we have a simple subject executed with a bold broad touch; the water clear and deep in tone, as it is in our English Channel at early morning; and the ship with her sails hanging loosely from the yards, as prepared for setting: a thing of life realised in all its details with the nicest accuracy. 81, "Assisting a Disabled ship into Yarmouth Harbour" is equally good, but of a different character; the surges breaking riotously over the jetty; and the disabled ship, having lost half her spars in the struggle with the elements, rolling heavily as she strives for the harbour. In 147, "Stormy Weather at Sea," the billows run high, but with a broad base, and a wide berth between them, as on the Atlantic. 187, "Margate from the Sands," is a very pleasing view of a well known cockney resort.

William Callow's architectural and other views are always admired for their warm tone and delicacy of finish. His "Rialto at Venice" (28), "Church of San Giovanni and San Paolo" (74), "Cathedral of Abbeville" (83), "Mont Blanc, from Chamouni" (88), and "High-street, Lincoln" (103), will support his well-earned reputation.

"THE SHEPHERD."—PAINTED BY WALTER GOODALL.

In the landscape department Duncan's sea and moonlight pieces next claim a meed of hearty praise for their genuineness of character and tasteful treatment. We especially admire three in the present collection, viz.: 113, "Crossing the Bar," a furious storm raging at the mouth of a harbour—we believe Boulogne—and two vessels, one a steamer, tossing and struggling to cross the bar; and 128, "Stormy Sunset—Douglas-head, Isle of Man," in which the genial warmth of the sun softens the asperities of the storm. Still more beautiful is No. 287, entitled "Moonrise," an exquisite bit, introducing the windmills at Millwall, and with a glimpse of Greenwich Hospital in the distance. Of this very capital piece we have great pleasure in producing an Engraving.

George Fripp has two very charming landscapes, close together: 32, "Sunrise in the Highlands," exhibits a mountainous spot in Argyleshire, under the effects of a morning sun, so cunningly executed that the light mists ascending along the ridges of the hills in all directions, seem almost to move before us. 99 is a capital "Distant View of Bordon Tower and the Valley of the Wharfe, near Bolton Abbey."

56, the "Lake of Como," by H. Gartiman, is a gorgeous representation of a magnificent piece of scenery. 146, "Aberystwith from the Sea," by S. P. Jackson, is a good landscape, with an agreeable effect of sunset.

W. Goodall, in *genre* subjects, has an original and effective style, which are happily illustrated on the present occasion in a small piece (21) entitled "The Shepherd." The honest rustic, attended by his dog, is trudging across the fields, which, being covered with snow, render a considerable display of action necessary. The figure is full of character, and the colouring is nicely toned. In another piece, (185) "Half way Home," we have a woman and two children amusing themselves, seated on a bank by the roadside; a basket of fruit &c., beside them, which they have to carry home.

Carl Haag comes out in great force this year, and in various fields of achievement. 88, "Marino Fallero and the Spy," is an incident most effectively rendered. The cautious attitude of the masked spy is well expressive of the purpose with which he leans over the sleeping Doge. The colouring is rich and harmonious. 127, "An Italian Peasant Girl," and 136, "A Roman Model," are clever studies of single heads. 172 represents the Duke of Saxe-Coburg and Gotha, and the Prince Leiningen returning from a chamois hunt, in the valley of the Inner-Riss, Tyrol. The romantic scenery of the valley is well depicted, and the portraits

MOONRISE."—PAINTED BY E. DUNCAN.

of the distinguished sportsmen are, we believe, accurate; but being portraits, the attitudes are rather stiff, and contrast strikingly with the more natural and animated forms of the attendant guides in the other parts of the picture. This work is the property of her Majesty. 181. "Remains of the Temple of Jupiter Tonans, at the Roman Forum," is a stately architectural group, treated in a picturesque manner, under a glowing atmosphere, and is altogether a very striking and satisfactory production.

On either side of the last-mentioned are two very fine landscapes. 175. "The Challenge," by D. Cox, representing a mountain spot, with wild cattle; and 186, "Deer-stalker, Glen Nevis, Inverness-shire," by T. M. Richardson, where we have a fine sporting country, with an admirable group of sportsmen.

John Gilbert exhibits a more ambitious work than is usually attempted through the medium of water colours; and indeed we must add that if he has not wholly confined himself to them, availing himself occasionally of opaque colours for the production of deep effects. The subject of this picture, which is of considerable size, and occupies the place of honour, at the upper end of the room, is the forced abdication of Richard II. (Shakspeare's), and the particular moment that when he calls for the looking-glass, that he may contemplate his features.

> Give me that glass, and therein will I read.
> No deeper wrinkles yet? Hath sorrow struck
> So many blows upon this face of mine,
> And made no deeper wounds &c.

The attitude and expression of the fallen monarch are well studied, somewhat, we apprehend, after approved stage models: the face wearing a disordered aspect, with a redness about the eyes, as though they had been suffused with tears. The figure, nevertheless, is dignified and commanding, and occupies the centre of the picture. The other figures are, perhaps, a little too numerous, and crowded together too closely, and without sufficient distinctiveness of character and relationship to the momentous incident which they watch bear a part. In the colouring of the various parts, the artist, we think, has in outdone anything hitherto accomplished in this school; the rich green and blue carpeting of the steps being marvellously real; and the various draperies rich in hue, and substantial in the folds. The artist has, in the same manner, a capital little bit, in *chiaroscuro*, conceived in the true spirit of Rembrandt, of a musician tuning his violin (298).

F. Taylor's "Bringing Home the Dee" — 181, is a very creditable performance, in a field which Landseer has almost made his own; yet there is nothing in it that savours of Landseer, or any other; the artist depending wholly upon his own resources, and an honest treatment of his own materials, for success.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although the demand for money for commercial purposes has increased to some extent, without, however, leading to any advance in the rates of discount, large parcels of first-class bills having been done as low as 2½ per cent per annum, the demand for cash has been very limited during the whole of the week, and prices have had an upward tendency—the Three per Cents having touched 101, both for money and the account. In ordinary times, the late large shipments of bullion to the East, and which have increased since we last wrote, would have been productive of lower quotations, and a strong feeling in favour of a higher value of money; but as it will understood that immense quantities of gold are on passage from Australia, and that there is every prospect of the foreign exchanges becoming more favourable to this country, a scarcity of cash appears now to be wholly out of the question; whilst it is very unlikely that the directors of the Bank of England, with the present prospects before them, would deem it necessary to raise the minimum rates of discount. The arrival of gold from Australia, up to Monday, amounted to £300,000; and we have had an import of 203,000 dollars from South America.

On Monday, Bank Stock was done at 226½; the Three per Cents Reduced were 100¾, Three per Cent Consols, 100¾; New Three-and-a-Quarter per Cents, 103¾; Consols for Account, 100¾; Exchequer Bills marked 4s.; India Bonds, 40s. pm.; and India Stock, 262. Prices were well supported on Tuesday. On Wednesday, Consols were 100¾ to 101; and the New Three-and-a-Quarter per Cents, 103¾. The Market on Thursday was steady, yet Consols were a shade easier; the Three per Cents having been 100¾ for Money, and 100⅝ to 101 for the Account. The Three per Cents Reduced were 100¾; New Three-and-a-Quarter per Cents, 103⅝; Long Annuities, 6 5-8-16ths. Bank Stock, 225½. India Bonds, 40s. to 35s.; and Exchequer Bills, 2s. to 7s. premium.

On the whole the Foreign House has ruled very inactive, but no material change has taken place in quotations. French Four-and-a-Half per Cents Rentes have been done at 102f 50c. (Exchange, 25f. 10c.); Austrian, 101; Brazilian, Small, 101; the Five per Cents, 100¾; the Four-and-a-Half per Cents, New, 100¾; Secondary, 95¾; Granada, 22; Dec. Coupon, 24; Greek, Red, 11½ to 12; Mexican, for Money, 27½; for the account, 27¾; Peruvian Four-and-a-Half per Cents, 88¾; the Scrip, 4; the Three per Cents Referred, 60 to 62; Portuguese Four per Cents, 40; Russian Five per Cents 120, Ditto, Four-and-a-Half per Cent, 104¾, Sardinian Five per Cents, 88; Swedish, 12 to 12½; Belgian Four-and-a-Half per Cents, 100¾; Dutch Two-and-a-Half Cents, 64¾ to 65; and the Four per Cents Certificates, 95.

We regret to state that a heavy failure has been announced in the metal market. The liabilities of the firm are over half a million sterling.

Our advices from the manufacturing districts are very favourable. Large foreign orders are on hand, and the demand for fabrics for home use is exceedingly active, considering the immense production.

The transactions in Miscellaneous Securities have been devoid of interest. Australian Agricultural have marked 43 to 45, Peel River, 4½ to 5 pm.; Van Diemen's Land, 20 to 21; South Australian Land, 48 to 50; North British Australian, 1½ to ¾ pm.; Scottish Australian, 48 to 50; Port Phillip Mining, ¾ to ⅞ pm.; Australian Coal, 4½ dis. to par; Union Bank of Australia, 76 to 78; Bank of Australasia, 46 to 47; London Chartered of Australia, 2⅝ to 3 pm.; English, Scottish, and Australian, 1½ to ¾ pm.; Bank of South China, and Australia, ¾ to 1 pm.; Oriental Bank, 51 to 53; British American Land, 5¾ to 6; Berlin Waterworks, ¼ to ½ pm.; North of Europe Steam, 4 dis.; Central Pacific, 1½ to ¾ pm.; ditto of France, 3; General Steam Shipping Company, 10¾; Peninsular and Oriental Steam, 83½ to 83; Ditto New, 46; Royal Mail Steam, 72; East London Waterworks, 125¾; Grand Junction, 98; Kent, 84; West Middlesex, 110; Southwark and Vauxhall, 90; Hudson's Bay Stock has changed hands at 220.

The settlement of the Account has somewhat interfered with the dealings in the Railway Market, nevertheless prices have had a decidedly firm. Government having announced its determination to oppose all amalgamation, until some general measure is adopted, the various bills already preferred for that purpose will not be proceeded with for the present. The following are the official closing prices on Thursday:—

ORDINARY SHARES.—East Anglian and Exeter, 10½; Caledonian, 87; Chester and Holyhead, 23½; Cork and Bandon, 22¾; Dublin and Belfast Junction, 49½; Eastern Counties, 18½; East Lancashire, 73; Edinburgh and Glasgow, 72; Edinburgh, Perth, and Dundee, 81; Great Northern Stock, 90, do. A Stock, 89¾; do. B. Stock, 151; Great Southern and Western (Ireland), 104; Great Western, 92¾; Lancashire and Yorkshire, 79¾; Ditto, Fifths, 1½; London and Blackwall, 8½; London, Brighton, and Southend, 7; London and Brighton, 106; London and North-Western, 110¾; Ditto, Fifths, 1½; London and South-Western, 93¾; Manchester, Sheffield, and Lincoln, 36; Midland, 73¾; Midland Great Western (Ireland), 35¾; Norfolk, 58; North British, 35; North Staffordshire 13; Oxford, Worcester, and Wolverhampton, 32; South Eastern, 76¾; South Wales, 56½; Waterford and Limerick, 33¾; West Cornwall, 10¾; York, Newcastle and Berwick, 70; York and North Midland, 59¾.

LONG LEASED ARE FIXED.—East Lancashire, 5 per Cent, 165¾; Wear Valley, 3½.

PREFERENCE SHARES.—East Anglian, 3¾; Eastern Counties Six per Cent Northern, 7½; Edinburgh and Glasgow, 5 per Cent, 109½; Ditto, redeemable at ten per cent premium, 112; Ditto, Four and a Half per Cent, 104½; Great Southern and Western (Ireland), Half-Shares, 8¾; Great Western, Four-and-a-Half per Cent, 107; Ditto, Four per Cent, 94; Manchester, Sheffield, and Lincoln, Five per Cent, 111; Midland Great Western (Ireland), 5¾; North British, 3¾; North Staffordshire, 4½; York, Newcastle and Berwick, 11½; York and North Midland, 15½.

FOREIGN AND COLONIAL.—Antwerp and Rotterdam, 2; Great Indian Peninsula, 4; Grand Junction, 4; Great Luxembourg, 2; Namur and Liege, 2; Sambre and Meuse, 2; Ditto, six interest, 6; Northern of France, 5¾; Paris and Lyons, 58; Paris and Orleans, 62; Paris and Rouen, 4; Paris and Strasbourg, 35¾; Sambre and Meuse, 3; South-Eastern of France, 2¾; Upper Indian Scrip, 4 pm.

Mining Shares have been far from active. On Thursday, Agua Fria were 2¾ to 3; Anglo-Californian, 1¾ to ⅞; British Australian Gold, 1½; British Iron, 9¾; St. John del Rey, 3¾; Colonial Gold, 3¾; Copiapo, 7¾ to ⅞; English and Australian Copper Smelting Company, 3¾; Great Copper Vein Scrip, 3¾ to 4½; Liberty, 1¼; Linares, 11¾; Mexican and South American, 2; Nouveau Monde, 2¾; United Mexican, 6; Waller, 1½ to 1; West Grenada, 1¾; Yuba, 1½ to 2.

THE MARKETS.

CORN EXCHANGE.—During the present week, the arrivals of English wheat have been on a very moderate scale. Really fine qualities have moved off steadily, and, in some instances, the quotations have had an upward tendency; whilst the value of other kinds has been well supported. Fine foreign wheats have changed hands to a fair extent, at extreme currencies; but low qualities have been neglected. Barley (the receipts of which have been small) has sold freely, on former terms. In the value of malt, we have to change to a trifle less. Beans, peas, and flour have commanded rather more attention, on former terms.

English.—Wheat, Essex and Kent, red, 41s. to 43s.; ditto, white, 42s. to 46s.; Norfolk and Suffolk red, 37s. to 39s.; ditto, white, —s. to —s.; rye, 28s. to 31s.; grinding barley, 27s. to 30s.; distilling ditto, 29s. to 30s.; malting ditto, 30s. to 32s.; Lincoln and Norfolk malt, 50s.; brown ditto, 46s. to 48s.; Kingston and Ware, 52s.; Chevalier, 54s.; Hertfordshire, 52s. to 53s.; Yorkshire and Lincolnshire feed oats, 17s. to —s.; potato ditto, 19s. to —s.; Irish, Waterford and Cork, black, 15s. to 16s.; ditto, white, 16s. to 17s.; Sligo, Limerick, and Londonderry, ditto, 16s. to 17s.; Scotch, potato ditto, 20s. to 21s.; ditto, feed, 18s. to 19s.; maple, 34s. to 36s.; ditto, white, 30s. to 32s.; fallen, 27s. to 29s. per quarter. Town-made flour, 36s. to 44s.; Suffolk, 32s. to 33s.; Stockton and Yorkshire, 34s. to 35s. per 280 lb. *Foreign.*—American flour, fine, 30s. per barrel; French, 34s. to 36s. per sack.

Seeds.—The demand for most kinds of seeds is in a sluggish state, and prices are barely supported. There is rather more inquiry for cakes, at full quotations.

Linseed English, sown sign., 66s. to 68s.; Baltic, crushing, 47s. to 50s.; Mediterranean and Odessa, 45s. to 46s.; hempseed, 38s. to 44s. per quarter; Carawayseed, 8s. to 12s. per cwt.; Coriander, 6d. to 8d. per lb.; white ditto, 7d. to 9d.; mustard, 5s. 6d. to 6s. 6d. per bushel. English rapeseed, new, £21 to £24 per last of ten quarters. Linseed cakes, English, £8 5s. to £9 10s.; ditto, foreign, £7 10s. to £8 10s. per ton. Rape cakes, £4 15s. to £5 5s. per ton. Canary, 60s. to 64s. per quarter. Red clover, 60s. to 64s.; white ditto, 58s. to 66s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 6d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 44s. 7d.; barley, 31s. 7d.; oats, 18s. 11d.; rye, 30s. 6d.; beans, 34s. 6d.; peas, 34s. 1d.

The Six Weeks Average.—Wheat, 44s. 9d.; barley, 31s. 7d.; oats, 18s. 11d.; rye, 30s. 6d.; beans, 34s. 8d.; peas, 34s. 1d.

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—The business done in this article, owing to the proposed reduction in the duty is trifling. Imports, however, are very full, and prices are well supported. The lowest to ordinary sound congou, is 10½d. to 11d. per lb. Up to Saturday last duty was paid on 9,761,553 lb., against 14,419,286 lb. in 1852.

Sugar.—Most kinds of raw sugar have met a steady inquiry; and, in some instances, the quotations have had an upward tendency. Refined goods have sold slowly at 45s. 6d. for brown lump per cwt., and 46s. 6d. for fine. The grocery trade generally are doing a fair local business to the end of April were 1,814,334 casks, against 1,852,650 ditto, to the same date last year.

Coffee.—Our market is in a very inactive state, and, in some instances, the quotations are somewhat in favour of the buyer. Foreign parcels may be purchased on similar terms.

Rice.—We have to notice a slow inquiry for all descriptions, but no actual change has taken place in prices.

Fruit.—Currants are dull in sale, on former terms. In the value of Valencia raisins a change has taken place. Other kinds of fruit command very little attention.

Provisions.—Several parcels of new Irish butter have changed hands at 80s. to 84s. per cwt. Carlow, 82s. to 86s.; Tralee, 80s. to 82s.; Cork, fourths, 80s. to 90s.; and thirds, 78s. to 82s. per cwt. Foreign, the supply of which is on the increase, has a downward tendency. English is quite as dear as last week. Fine weekly Dorset, 100s. to 104s. per cwt.; mids, 92s. to 94s.; per single dozen pounds, 8s. to 9s. Bacon and all other kinds of provisions, are very dull.

Tallow.—The anticipated reduction in the soap duties, and the limited stocks at the out ports, have caused our market to rule active, on higher terms. New P.Y.C., on the spot, is selling at 47s. 6d. to 48s. 3d. Town Tallow is 46s. to 46s. 6d. Delivery to the end of the month for new is 47s. 6d. to 48s. Town Tallow is 46s. to 47s. per cwt. net cash.

Oils.—Common fish oils, and other kinds of fish oil, have sold very dull at £2 per ton, and the value of linseed and spirits of turpentine is not supported. Palm-oil has advanced £1 to £2 per ton. Rapeseed, 32s. 6d. to 33s. per cwt.

Hay and Straw.—Meadow hay, £3 5s. to £4 15s.; clover ditto, £3 10s. to £5 5s.; and straw, £1 7s. to £1 16s. per load. Trade dull.

Coals.—Carr's Hartley, 19s. 6d.; Chester Main, 15s. 6d.; Holywell, 16s. 3d.; Tyne Main, 14s. 6d.; Belmont, 15s. 6d.; Hetton, 15s. 6d.; Kelloe, 15s. 6d.; Lambton, 15s. 6d.; Cowpen, 15s. 6d. per ton.

Spirits.—East India rum is dull in sale, at from 1s. 9d. to 1s. 10d. Leewards, 1s. 10d. to 1s. 11d. Barbadoes, 1s. 9d. per gallon, on the spot. Brandy, the stock of which is still increasing—is heavy, at the late decline. Corn spirits are tolerably firm.

Hops.—The show of samples is limited, yet the demand is in a sluggish state, as follows:—Mid and East Kent pockets, 115s. to 152s.; Weald of Kents, 110s. to 126s.; East Sussex, 105s. to 120s. per cwt.

Wool.—Our market continues very firm, at very full prices. The stocks are limited for the time of year.

Potatoes.—The supplies of both English and Foreign being limited, the demand is heavy, and prices have a downward tendency. York Regents are selling at from 160s. to 180s.; Cobbolds ditto, 80s. to 120s.; Scotch ditto, 80s. to 120s.; and Foreign, 80s. to 100s. per ton.

Smithfield.—Beasts have met a slow trade, at a decline in the quotations of 2d. per 8 lb. In the value of other kinds of stock very little change has taken place.

Beef from 3s. 6d. to 4s. 2d.; mutton, 4s. 4d. to 5s. 6d.; lamb, 6s. 0d. to 6s. 8d.; veal, 5s. 4d. to 6s. 6d.; pork, 3s. 8d. to 4s. 6d. per 8 lbs. by the carcass.

Newgate and Leadenhall.—A fair average business has been transacted in these markets, as follows—

Beef, from 3s. 8d. to 3s. 8d.; mutton, 3s. 6d. to 4s. 6d.; lamb, 4s. 10d. to 6s. 8d.; veal, 5s. 4d. to 6s. 6d.; pork, 3s. 4d. to 4s. 6d. per 8 lbs., by the carcass.

ROBERT HERBERT.

THE ZOOLOGICAL GARDENS, Regent's Park, are open to visitors daily. The collection of living animals is the largest in Europe, and contains many objects never seen in any other menagerie.—Admission, 1s.; on Mondays, 6d.

HOME for GENTLEWOMEN, 25 and 26 QUEEN-SQUARE, BLOOMSBURY,
Under the Patronage of
HER MOST GRACIOUS MAJESTY
H.R.H. the Duchess of GLOUCESTER.
H.R.H. the Duchess of CAMBRIDGE.

A BAZAAR will be held at WILLIS'S ROOMS, on FRIDAY, the 3rd of MAY, under the Patronage of H.R.H. the Duchess of GLOUCESTER, and the Duchess of CAMBRIDGE, for the purpose of enabling the Committee to complete the purchase of the above House, and to establish it on a permanent basis. The Committee confidently hope that many ladies will be induced to aid in a cause which will be found to have peculiar claims on their sympathy (it being the cause of gentlewomen suffering under reverses of fortune), not only by assisting at the Bazaar, but by having the great kindness to honor the Bazaar by their personal influence which must be most powerful, and by which alone the Institution can be established and generously continued to do.

The Ladies Committee will be glad to receive contributions from Ladies willing to assist the Institution, through the medium of the Bazaar, addressed to "The Ladies' Committee, 25, Queen square, Bloomsbury;" or to "The Residents of the Home," at the same address; or to gentlewomen, to the care of Mrs. Bowtell, Lilon-street, Bedford-square, by whom orders will be executed.

Subscriptions will be received by the Treasurer, Mrs. Hall, 25, Queen's Mrs. Bell, the Lady Superintendent at the House, or by Mrs. Lewis.

The Institution now affords a Home to sixty Gentlewomen, with comfortable wives and children by their very limited means, and there at least fifteen candidates awaiting admission. Of the debt occasioned by purchasing two large houses, and old ones, a considerable balance remains to be liquidated and the assistance of a benevolent public is urgently required at this time, to enable the Committee not only to extend the benefits of the Institution to a larger portion of a most interesting and deserving class which their (the Committee) anxiously desire to do—but even to maintain the Establishment in its present (struggling to the feeling of the Committee) too circumscribed operation. Subscriptions and donations will be gratefully received by the Bankers, Messrs Hanson and Co., Pall-mall East, and by Messrs. Pratt and Co., Fleet-street, by the Secretary, at the Office of the Institution, 32, Sackville-street; and by Mrs. Bell, at the House.

DUBLIN GREAT INDUSTRIAL EXHIBITION.—THE GRAND EXCURSION TRAINS will be issued as favorable for a month—will be issued at the following rates, and after the 30th of May

	1st Class	2d	Cabs.
London (Euston & Station)	2 0 0	1 5 0

BANQUET IN HONOUR OF MRS. STOWE, IN THE MUSIC-HALL, EDINBURGH.—(SEE PAGE 334.)

PARIS FASHIONS FOR MAY.

The mutations of fashion during the last three years have been chiefly a few modifications in the adopted patterns of the day; and the novelties for May are especially of this class. The number of flounces has always been kept to three, for morning dresses; for evening there is much variety, but they should always be in odd numbers. The pagoda sleeves are still worn, and will be the fashion for the ensuing summer; but, instead of being plainly trimmed at the extremity, as when they first appeared, all kinds of ornaments are added. *A jockey* is put on the shoulders, with a fringe, which is repeated at the extremity of the sleeve; the sleeve is slit to the elbow, and is fastened by little stripes of the same stuff as the dress, on which are applied a slight trimming of jet, with which the body also is trimmed. The inside of the seam of the sleeve is sometimes covered with lace braid, with which also the extremity of the sleeve is trimmed, above a fringe. Velvet and small-plaited ribbons are also used, in bows, in great variety.

Bonnets are very small, and are more worn about the neck than on the head. They are still to be seen trimmed with velvet; but we are enabled to announce that plaited straw in stripes, mixed with ribbons, will this year be for the groundwork of the bonnet; and crape-net and flowers will be used for trimming. The flowers which were worn round the front of the bonnet have been dispensed with, bunches on each side being sufficient. Crape bonnets are made with much net, which is set on, from front to back, over the whole bonnet, except on the front row, which is adapted for a falling veil; the trimming, blonde and flowers.

The scarf-mantelets will still be worn. They are made of lace, or guipure. The shape is nearly round behind, two ends rounded in front, without being very long on either side; and there are three or four rows of lace. For spring the ground of the mantelet is made of taffetas nearly always blue; for summer, the ground will be replaced by net or still better by full lace.

Dresses are still worn with small skirts, the petticoat being separate from the body; which allows the former to be worn with a velvet corsage for the present season, and with a muslin canezon for summer. Taffetas are made with patterns for three flounces, of plain stuff, of various dark shades—black, blue, green; *violet pensée* (a new and charming shade), with plain stripes of a lighter shade for the trimming of the flounces. Large plaid checks of rather dark shades, and without trimming, or flounces, are new; the variety of shades is sufficiently ornamental, and would seem to be spoiled by trimming.

THE ILLUSTRATIONS.

In-door Toilette.—Guipure cap, with small ribbons put on in flat bows long lappets falling on the shoulders.

White Cashmere Dress, of large flowered pattern, reaching nearly up to the waist. Body plain white, without pattern, with facings, trimmed with ribbon put on flat, and round the edge with a silk fringe of the same depth. The skirt is quite round; pagoda sleeves, trimmed with two bows of ribbon put on the seam of the insides.

Blonde Bonnet, with small flounces, laid one over the other; mousquetaire collar, with long pointed teeth. Taffetas dress, with three flounces; mantelets, with four rows of lace of different widths: the shape is slightly in a point for behind, for the lace is so arranged as to form the circle. Lace bonnet, with long tulle falling behind, and bunches of flowers. Taffetas dress, embroidered down the front. Spring mantelet of taffetas, fully embroidered all over the ground-work; bound behind with two rows of lace, uniting in a single row in front; the edge trimmed with a velvet ribbon, stamped, which is repeated at the beginning of each lace flounce.

THE ILLUSTRATED LONDON NEWS.

No. 620.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MAY 7, 1853. [SIXPENCE { WITH SUPPLEMENT GRATIS.

"TOWN" AND "COUNTRY."

We continually hear of a "town interest" and of a "country interest," of manufactures being opposed to agriculture, or *vice versâ*; and of the views and opinions of "Manchester" as of necessity clashing with those of the rural districts. But with the irrevocable settlement of the Corn-law question, it is time that these idle and mischievous distinctions should disappear, not only from the hearts and understanding, but from the mouths of men. No one in the position of a statesman and legislator, or that of a leader of public opinion, seriously believes that there is, or can be in this country, any interest, however great or powerful in itself that is disconnected with the general interest of the nation. Agriculture is an ancient and honourable art—the most ancient and the most renowned of all the industrial pursuits that occupy the time and the skill of reasonable beings. Without agriculture all other arts would avail us little or nothing. No man of common sense seeks to undervalue or despise it. Above all, no man out of Bedlam advocates the oppression of those who gain their subsistence by it, or would wilfully do anything to cause the fertile fields of his native land to remain untilled, and the sheep and cattle to remain untended upon the hills, for the sake of manufactures or commerce—or any other "interest" still greater, if any greater there can possibly be. On the other hand, the large body of intelligent men interested in agriculture, either as owners or occupiers of the soil, are not so utterly unreasonable as to underrate the importance of manufactures or commerce. The farmers and farm-labourers know full well that—unless their wives and daughters will knit and spin, like the maids of Penelope, in old Homeric fashion; and unless they will themselves renounce their tea, coffee, sugar, tobacco, spice, and many other luxuries, if not necessaries, for the due supply of which countless fleets make the circuit of the globe—there must be such persons as handicraftsmen and mariners; and that, the more these prosper, the better for agriculture, and for all engaged in it.

But these things are truisms; although a stranger to our habits might imagine, after attendance at some of our public meetings, and after perusal of some of our daily and weekly disseminators of opinion, that the British public had not yet arrived at the distinct knowledge of them. The old cry is still kept up, though it has long ceased to serve its purpose, and become obsolete; and a venerable absurdity still totters about the earth, and will not die; although its time has long since expired, and it only exists upon sufferance.

We are, therefore, glad to see that Mr. Disraeli—the leader of a party which has long made, and whenever it has a chance, continues to make, unreasonable demands on behalf of those engaged in the cultivation of the soil, as if they were a race apart, and privileged and entitled to receive more favour and protection from the State than their fellow-citizens engaged in other avocations—has at length deemed it necessary to administer a gentle reproof to these, and to all others who would set class against class and interest against interest. "There is," said the right honourable gentleman, "no difference of material interests between town and country. I am told," he continued, "that between the great towns and the country gentlemen there is a difference of material interests. I am told that there are moral, social, and political differences between them also. I should be very loth to believe it." Some moral and social differences there are, notwithstanding Mr. Disraeli's unwillingness to believe in them. The dwellers in towns are necessarily quicker and better informed than those who inhabit purely rural districts. The townsman rubs more frequently against his fellows than the peasant. He is nearer the centres of intelligence and of opinion. He has greater opportunities of learning and hearing the march of the world. The daily intercourse of life is more favourable to the development of his mind; and as his circle of observation is more extended, his means of self-instruction and elevation are more numerous. The peasant is cut off from much, if not all, of this sharpening and invigorating influence, and his bright faculties but too often go to rust for want of exercise. Our foolish taxes upon literature and upon knowledge aggravate the loneliness of his position, and keep his mind darker than it need be, by depriving him of the current history of his country and his time. But these differences are not political ones. Going on to argue that it was neither our manufactures, nor our commerce, nor our own agriculture, separately or combined, that made this country pre-eminent among the nations of the world, but the force of the national character, our long assured liberties, and the sterling worth of our venerable institutions, Mr. Disraeli denounced those who showed political hostility to the land; and, without intending it, denounced in the same breath all those who would express political hostility to the towns. Mr. Disraeli's position as the leader of what is called the "country" or agricultural party—a party that we hope will very speedily change its name—thinks it incumbent upon him to be more severe upon those who fancy themselves opposed to the landed interest than upon such of his followers as imagine their interests irreconcileable with those of traders and manufacturers. Yet we know enough of Mr. Disraeli's career as a Minister to be certain that were he again in the possession of the power which he covets, he would not incur the risk of damaging the general interests of the nation for the purpose of showing undue favour to the cultivators of the soil. And it is not only Mr. Disraeli, but those whose general views on politics are diametrically opposed to his own, who take this view of a statesman's duties and responsibilities. Were it possible by any turn in the wheel of politics that Mr. Cobden or Mr. Bright should next week become Chancellor of the Exchequer, it is morally certain that neither of these gentlemen would seek

A BUSH-FIRE IN AUSTRALIA.—(SEE NEXT PAGE)

for an instant to discourage or oppress agriculture, or confer upon the towns and their industrious people any privilege or immunity whatsoever, that would render the business of the farmer less profitable than it now is. We may be sure, too, that they would not even inflict a moral hardship upon the estimable men to whom we are mainly indebted for all the first necessaries of existence. They would not consider themselves the ministers of Manchester, or ignore the feelings and the rights of all who were not cotton-spinners, wool-manufacturers, or workers in brass and iron; but would do impartial justice, like men of common sense and common honesty.

We could have wished that Mr. Disraeli's reprimand had been somewhat stronger; but, such as it is, it may afford a proof that a foolish distinction is beginning to be discountenanced by the leaders of the party that was formerly most zealous in insisting upon it. They are at length aware to the fullest extent of the fact that the interests of all classes are identical. Who is there who does not know that nothing causes such ruin to trade and manufactures as a bad harvest? and that the non-arrival of one year's supply of cotton from the United States of America would be felt as a calamity in the remotest hamlet and village of the empire, as well as in Manchester, and that it would affect the "many-acred squires" of Buckinghamshire, Wiltshire, and Devonshire almost as seriously as it would the mill owners of the West Riding? In the practice of statesmanship it is now found to be utterly impossible to legislate for a class, however powerful and pertinacious. Such legislation, as history records, was attempted by the original framers of the Corn-laws. The result—after thirty years of discontent and suffering—would, in all probability, have been a revolution, if it had not been for the sagacity and self-sacrificing patriotism of the late Sir Robert Peel. That struggle has happily ended. Not only all the "best heads," but even the inferior heads that formerly believed in the policy and necessity of taxing foreign corn, have gone over to the other side, and the political differences between the plough and the spinning-jenny, and between the country and the town, are virtually at an end. It will be wise policy not to revive the remembrance of them. The division of Monday night, and the large majority in favour of the Budget, show that the present Parliament will not countenance them any longer, and that the future policy of Parliament will, in the words of Lord John Russell, be such "*as will neither neglect the interests of the land, nor the interests of trade, but consult all together; showing no undue favour to any class, but adopting a course which each will acknowledge to be just.*"

A BUSH FIRE IN AUSTRALIA.

BY AN AUSTRALIAN SQUATTER.

(From a Correspondent.)

My companion and myself breakfasted when the sun was little more than half an hour high; and, mounting our horses, we crossed the river on a punt which does duty for a bridge, and directed our horses' heads towards Melbourne. For the first hour we rode slowly, to allow our horses to come to their wind, of which they were likely to have need; for, we had determined on sleeping in an inn on the Melbourne side of the Big Hill, which gave us about ninety miles of a ride to do. An hour elapsed, and then we began to canter gently: the canter became quicker until we had increased our pace to a hand-gallop. Perhaps there are no horses in the world more deserving of repute for what is termed *bottom* than those reared in New Holland; and certainly many which we receive worse treatment or do harder work. Who would think of riding an unfortunate grass-fed beast ninety miles in Europe, with nothing by the way but two feeds of oats, or an hour and a half's liberty, to feed on grass? This, however, is what we proposed to do, and often done before.

Nor was this our first day's journey on the same beasts, as the day before we had come twenty, and the day before that thirty-five miles, across the bare plains of the Edwards River.

The miles began to diminish as we kept on at a long steady hand-gallop, pulling up our beasts for a few moments every mile and a half, or two miles, to a walk. The white bleached plains of the Campaspe, were left Lehind. The barren heads of New England, also were passed. The M'Ivor Creek was gained; and in the roadside inn of the same name our horses had an hour's respite. We again mounted and passed on. But what avails it to name hills, creeks, or plains, that so few know. Let us surprise ourselves with four only in the township of Kilmore.

A bush fire was raging on either side of us as we descended into the rich flats which lie to the north-west of that township. As we advanced we noticed that the hills around us in every direction were enveloped in a dense smoke, and mostly to the southward, rising thickly from the summits of the Big Hill, across which lay our route. The heat was intense; huge surges of fire were visible in the distance, rolling with resistless impetus over the plains, leaping on the wooded hills, blackening all that it passed over, and causing affright and destruction in its course.

Coming in view of a station which is situated in this fine undusting park-like country, a disastrous scene presented itself to our eyes. The hills, as I have said, in every direction were enveloped in a dense lurid smoke. Huge trees—like gigantic funnels of steam-engines—were belching forth flames thirty, forty, and even fifty feet in height, which waved and curled in the wind. Horses were galloping affrighted over the plain, and cattle in long lines were rushing before us, bellowing as they poured into the flats. Shepherds were to be descried as they hurried their flocks for protection towards those spots where the grass was shortest. Here and there were persons galloping at headlong speed to his home in the forests: all were seeking safety from the merciless element.

A wild dog, which had been dislodged, came to the edge of the forest. Loath to abandon his cover, he stood for a moment uncertain, lifted up his voice in a long piteous howl, scoured across the plain, and, in a moment was hid from our sight by the tall green reeds on the banks of the creek. Below us was a station; near the house were a barn and wool-shed, and many stacks of oats and wheat. The fire was creeping gradually and slowly towards them; a thread of fire—if I may use the expression—like a thing endued with life, like a brilliant serpent—was winding its way amongst the grass to the stacks and buildings. We at a distance at once saw that the struggles of the proprietor and several of his men to arrest the flames were utterly hopeless; and, therefore, did not move to assist them, but slighted from our horses to view the catastrophe. The wife and children on the shore of the inn who would fain bar back the tide. In vain they plied their green boughs, beating out for an instant the point of the flames most in advance. The luminary, as if forecasting a prey, noiselessly stole on. There was but little smoke from this part of the fire as the grass was short, but it was very dry, and a wind was breathing on the fire. In vain were struggles! in vain were hopes! but man will struggle: even death is met with less regret, dying. And the hardy Britons wrestled with their foe; but in every direction it over-lapped them, and without a check kept on, and at every point they were beaten back. They did their duty well, and retired slowly, leaving nothing untried. And now the fence which enclosed the stack-yard was almost gained. I saw the master throw down his bough, and could fancy I heard him exclaim, "It's useless;" for his men all imitated his example, and it was time, unless they had resolved to conquer their foe or be roasted. They had just time, and time only, to escape from their perilous position, all blackened and begrimed with the smoke and ashes: a minute more and it would have been too late.

The fire had conquered: it leaped on its prey, it reared its gorgeous crest upon the stacks, a dense smoke arose, a mimic volcano spouted its flames, and in two minutes all was reduced to ashes.

Without proffering useless condolence, we mounted our horses and pushed on. For three miles we met no fire, and were about to quit the little enclosed farms, which on a bright spring morning have sometimes recalled to my mind the green fields of England, where I passed some of my boyish years; when, before us to the southward, and on our left, to the east, we met the advancing flames. The stubble was on fire. The fences which separated the various farms were glaring red; the flames were roaring as they swept over these lands, reducing to ashes in a moment the stacks of the poor farmers. Here we met a woman and four children on the road; she was crying, and told us yon burning house had been her home. I pointed to her in which direction to fly, and we galloped on. The two fires were now meeting and burning the large brush fences on each side of the very wide road. Four hundred yards would see us in the township, and we clapped spurs to our horses, but soon repented. I happened to be leading, and pulled up. "I cannot stand this," said I. "Nor I," answered my companion. Not another word was spoken. We returned at a gallop, our horses evidently much frightened. I felt as if I was suffocated. Escaped from the flames, we kept a little to the right, headed the fire, and passed by a hut as yet distant from danger. The owner of it asked me to tell some of the people of Kilmore to send him his assistance. It was nearly entirely useless, such a fire brooks not resistance. We hurried on, and passed a little boy crying as he ran along—he was not on the road, but going in the right direction. I was sorry afterwards that we had not seen him out of danger. I hope he found his home.

We had now passed the worst of it, and were soon in the town, where ourselves and horses were glad of a little refreshment after our hot work. We can tell the amount of gingerbeer we drank, or the number of pipes we smoked, as we listened to the various accounts, rumours, and opinions concerning the fire; for the fire, of course, was the general topic of conversation. It extended over many miles of country; I cannot at this moment recollect how many, but if I say sixty or seventy I am within the mark. Indeed, bush fires are often much more extensive. Some of the squatters in the inn related how several thousand sheep had been overtaken and burnt in one direction; others spoke of houses and huts; and another of a woman and four children, who had fallen victims to the flames; and all concurred in the opinion that to cross the Big Hill on the road to town was impossible. That, however, we had determined to essay, though there were two people present, who had made the attempt, been forced to return. Business, however, of an urgent nature forbade our delaying; besides, we were heated by what we had passed, and screwed up to the right pitch for doing whatever was possible. Indeed, had we been cool and unexcited, I am not sure but that the smoke and flames which were visible from the windows of the inn, would have taken away all hopes of pursuing our road. As it was, they only urged us on to try what we could do

An hour passed, and we were again in the saddle. The sun was getting low, and had lost some of his power; but it was most plentifully made up for by the scorching breeze, which blew over the burnt and smouldering plains and forests. A few yards from the inn-door was the commencement of our forest-road; and, shoving our feet home in the stirrups, and drawing our straw hats tightly over our brows, we struck in our spurs, and gave our horses the rein. And truly it was a road to try those who had described the road had neither exaggerated its dangers nor its inconveniences. Hundreds of hollow trees were on fire; their interiors, when visible, appeared perfect furnaces, and they sent forth a heat which, when we were obliged to pass close them, was truly terrific.

At times I thought I should fall from my saddle, which I could not but think began to feel very crisp beneath me. The wind every now and then roared through the burning waste, carrying with it dense clouds of ashes, obscuring everything nearly to the darkness of night. In these moments we were obliged to pull up, as the road became quite invisible, though at other times so distinct that on ordinary nights I have galloped along it without accident. A few yards before us, pillars of fire, like a pillar of fire, lay across our path, obliging us to leave the road and go round it; and when off the beaten track, our horses, in the obscurity, sometimes trod on spots where fire had crept into the earth, along the rotten roots of trees destroyed by former fires, burning their feet, and covering themselves and riders with hot ashes. My face, too, had just that sort of feeling which made me almost fancy that a rub of my hand would bring the skin off. It certainly was the hottest job I was ever engaged in

At last we saw some clear ground before us. This was the summit of the hill; and on the last rise, as we emerged from the thickest of the fire, we saw before us several bullock-drays, and their teams, standing on the side of the hill. Their owners were, like us, begrimed with the ashes and smoke which proceeded from the burning forest: they were seated on the ground in silence, their heads resting in their hands; nor did they perceive us until we were within a few yards of them When they saw us, they all rose to ask about the road. Our reply, of course, put an end to their hopes of proceeding; and we recommended them to chain their beasts to the surrounding trees, in order to avoid the hazard of their wandering in search of water and getting burnt.

Our troubles were now at an end. A road of unobstructed road lay before us, and eight of a burning forest were in our rear. Our horses, in the comparatively cool atmosphere, became quite refreshed; and we pushed on to the Kenlochewe, where, like *Jack Falstaff*, we might ask each other, "Shall we not take our ease in our inn?"

PROVINCIAL INTELLIGENCE.

MEETING OF THE ROYAL AGRICULTURAL SOCIETY AT LINCOLN IN 1854.—A deputation from Lincoln, consisting of the present Mayor of Lincoln, Robert Gardener Hill, Esq., F.S.A.; the Hon. A. L. Melville, and other gentlemen, waited on the council of the Royal Agricultural Society, praying that the meeting of 1854 should be held at Lincoln. The council of the Society graciously acquiesced in the request of the deputation.

THE BUDGET AT MANCHESTER.—In answer to a memorial from the Manchester Commercial Association in support of the Budget, Mr. Gladstone has written an autograph letter, in which he says:—"I have read the memorial, proceeding, from a body of such intelligence and weight, with much gratification, and I am confident, I may say, on the part of my colleagues and on my own, that it will encourage us to persevere, as opportunity may offer, in the promotion of measures conformable to the policy on which the proposals now before Parliament are based."

SOUTHAMPTON.—The steam-ship *Magdalena*, Captain Chapman, arrived here on Tuesday afternoon, with the usual West India and Mexican mails. She brings the large number of 136 passengers; and also on freight 1,000 dollars in gold, 1,000 dollars in silver, 1,000 dollars' worth of pearls, £3823 platina and gold, £2965 precious stones, 77 serons of cochineal, 5 ditto of jalapa, 54 barrels of coffee, 94 cases of cigars, 166 bales of tobacco, 23 bales of sarsaparilla, 8 packages of succades, and 49 tierces of coffee.

THE PRICE OF WOOL.—The *Galway Packet* says:—"It is worthy of remark that the price of wool, which was only 18s. 6d. last October, is now run up to £1 5s. 6d. This extraordinary rise is attributed to the short supplies from Australia, where stock farming has been neglected for the more exciting and profitable occupation of gold-digging."

THE HALF-HOLIDAY MOVEMENT.—A successful meeting has taken place in Birmingham, upon the subject of closing places of business at mid-day on Saturdays. Several firms declared their readiness to join the movement, and it was stated that nearly 9000 people in Birmingham participated in the boon

THE FRAUDS ON THE ISLE OF WIGHT SAVINGS-BANK.—Yelf, the fraudulent savings-bank actuary, has been fully committed on charges of forgery and larceny. He robbed the bank chiefly by forged cheques during the seven years to about 1850, and the directors, when Yelf presented a forged cheque, looked at the index of the bank ledger to see if the drawer's name appeared there, or if he had any effects, the forgery must have been detected. After the frauds in the Hochdale savings-bank were known, Government ordered an examination throughout the country, the director of the Isle of Wight Newport bank entrusted Yelf with the examination, who pronounced accounts of course correct, and the directors were satisfied! Yelf is £1450 in debt to the Stamp-office, and the authorities have seized upon his property, so there will not be a farthing for his savings-bank creditors. A poor old Isle of Wight shepherd, named Cass (all his lifetime economical), is a sufferer from Yelf's defalcations, having lodged there £200. This he lost through the failure of the party where it was placed. By renewed efforts he scraped together £100, and placed it in a private bank. The bank broke, and he lost all again. He once more recovered and deposited in the Newport bank, and the poor old man is again a loser. Yelf was a bookseller and savings-printer, and had a tolerably good business; and during the time the forgeries were going on the auditors were very slack indeed.

FLIGHT OF A SUPERINTENDENT AND INSPECTOR OF POLICE.—On Saturday last information was received from Tunbridge-wells, of the sudden disappearance of Superintendent Morton and Inspector Dadson, of their town police—two officers upon whom the greatest confidence was reposed on account of their extreme activity in routing out one of the most notorious gangs of thieves in the county, and in connection with the Frimley murderers. Morton has been nearly nine years superintendent at Tunbridge-wells. It is supposed that he is a considerable defaulter, and that most serious charges can be brought against both the runaways.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE work of embellishment goes on more actively than ever in the Bois de Boulogne: and such is the interest displayed by the workmen employed in it. No less energetic are the labours bestowed on and about the continuation of the Rue de Rivoli. not only houses but whole streets are being swept away and rebuilt with an astonishing rapidity—to the extreme inconvenience and even distress of the inhabitants, who are often left houseless, being unable, in consequence of the immense rise of rents, to find lodgings on terms suited to their means.

Within a few days the Palais Royal is to be given up to the *ex-Roi Jérôme*, for whose reception it has been for so many months preparing. The apartments once occupied by Cambacères are designed for the Prince Napoleon; who, however, is, we believe, disposed to remain for the present in the *appartement* he has arranged with no less taste than luxury in the Rue de l'Université.

The principal galeties of the past week have been the Ministerial receptions, most of which were very brilliant; probably, because they are almost the last grand entertainments of the season. There was M Billault's dinner: an Archbishop and a Cardinal, senators, members of the *Corps d'Etat*, and the *Corps Législatif*, to the numbe of about forty guests. M. de Persigny (Madame de Persigny was not visible, on account of indisposition), to which it is a matter of remark, she is very subject on reception nights, though her general health is happily good), M. Fortoul, M. Baroche, M. Maupas—in short, all the Ministers, with the exception of M. St. Arnaud, whose health, though much improved, does not as yet permit him to entertain or to go into society—followed in the wake; and almost every evening in the week was thus employed.

M de Lamartine has just placed in the hands of the editor of the *Siecle* the first volume of his "Histoire de la Constituante." It is said that this book will not only sustain but increase the reputation of its gifted author. A society has recently been formed for the exploitation of M. de Lamartine's works, in order to relieve him from the pecuniary difficulties which unfortunate circumstances, united to his too generous liberality, and his inattention to his affairs, consequent on his uncertain health and ceaseless literary occupations, had plunged him. Almost all the shares are already placed, numbers having been subscribed for by the peasan e of Saône et-Loire, and other departments, in token of the popular esteem and regard in which the home of the poet, historian, and politician is held. M. de Lamartine has just quitted the *appartement* he recently occupied in the Rue de l'Université, for a small house with a garden, in the Rue de la Ville l'Evêque, for greater repose and tranquility, to continue his literary labours

A variety of theatrical and musical novelties are in preparation. At the Français, "Mirabeau," by M. A. Pouyat; at the Gaîté, "Le Pirate," by M. B Lossey; and M. Pousard is, it is whispered, writing a comedy on a most impressive and novel subject for Mdlle. Rachel. The concert of M. Jaques Offenbach, announced for the 6th instant, promises, from the programme, to be the most brilliant and attractive of the season, uniting the first talents of the day, performing some of the best music. Mdlle. Madeleine Brohan, whom report has already *fiancé* some half-dozen times, we are assured, is not to be married—*pour de bon* this time—to a M. Huchard, on her return from her London engagement

The arrival of spring is opening all the summer *fêtes* in and about Paris. On the 1st, the Hippodrome commenced its season, with a magnificent provincial *meilleure*, "The Climate of the Birth of Venus," and a variety of other brilliant spectacles. The Park and Château d'Asnieres, Ranelagh, and all the other public gardens, are hanging up their coloured lamps and decorations, tuning their fiddles, and making their preparations for the reception of the thousands of guests of all ages, fortunes, grades, and positions who, in the course of the next four or five months, will frequent them. These public fêtes have in France a custom confined to the trading or lower classes. Of course, these are their principal supporters; but there is generally, especially on particular occasions, a considerable sprinkling of the higher grades of society, many men and some women—the former dancing and amusing themselves in the latter in a sort of half incognita, which, however, they take little pains to preserve, walking about on the arm of some steadier cavalier, enjoying the coup d'œil, the gaiety, the dancing, the music—almost always good—and the taste and ingenuity with which scores of unpromising ground are made to represent garden, grove, shrubbery, wood, and wilderness.

We hope in our next letter to be able to entertain our readers with an account, from our own personal experience, of some of the extraordinary cheap-moving experiments now taking place here. The phenomenon is become too general to admit of contradiction, but we will say nothing on the subject till we can speak from our own observation.

The *Moniteur* announces that her Majesty the Empress, who has been *enceinte* for two months, and who has been unwell for the last few days, miscarried on the evening of the 29th of April. Her Majesty's health is now good, as satisfactory as can be expected under the circumstances. It was said that she sustained serious injury from the fatigue of standing five hours during the ceremony of presenting Archbishop Morlot with the red hat of a cardinal Wednesday's letters state that the Empress is considerably better in health, but that she still, on the recommendation of Dr. Dubois, keeps her bed.

It is stated that the Empress has decided on not accepting the dotation which the Senate is disposed to offer her Majesty.

The Marquis de Valdegamas, Spanish Ambassador in Paris, died on Tuesday. The Marquis de Valdegamas, better known as Juan Donoso Cortes, had been the warm advocate of liberal institutions in Spain; but recoiled with disgust from the excesses which followed the revolutionary outbreak of 1848. From that period his political opinions underwent a change, which he carried to an extreme.

A private letter from Toulon gives sad details respecting the recent departure of 250 political convicts for Cayenne. These unhappy prisoners uttered the most lamentable cries on going on board, and some were in such an excited state that they had to be bound, and borne in that condition on board the vessel

The Emperor has commuted the sentence of death passed on the individuals named Mercadies, Galzy, Delpech, Denis Carrier, Barthez, Garly, Triadon, by court-martial on the 24th December, 1852, into hard labour for life. These men were engaged in the insurrectionary movements which took place at Bedarieux after the *coup d'état* in December, 1851.

A communication by electric telegraph is now open between Paris and Evreux, and Paris and Bayonne.

The rise in public securities made further progress at the Bourse on Wednesday. This improvement is attributed to the result of the division in the House of Commons on the Budget in favour of Ministers, and to the expectation that a number of the holders of Three per Cent Consols will transfer their capital to the French *rentes*. The Three per Cents opened at 81f. 50c., rose to 81f. 75c., and closed at 81f 70c. for the end of the month; the Four-and-a-Half per Cents closed at 103f 90c.

BELGIUM.

The French Cabinet has despatched to Belgium M. His de Butenval; who recently proved himself at Turin to be one of their most unscrupulous agents. It is stated that some weeks ago an insinuation reached the little Court of Brussels to the effect that any serious acquisition made by Russia in the East would be held by France to constitute a sufficient ground or pretext for the abolition of existing territorial treaties and the Belgian frontier. At any rate, the language of M. His de Butenval has revived the ready apprehensions of the Belgian Government; and, perhaps, it is in connection with this circumstance that the young Duke de Brabant, whose majority was recently celebrated as a festival by the whole of Belgium, is shortly to proceed to Vienna to pay his respects to the Austrian Court. Meanwhile, King Leopold proceeds to Berlin, and the Emperor of Russia to Warsaw, whence it is probable that these Sovereigns will repair with the King of Prussia to Vienna.

HOLLAND.

Our readers are aware that the Pope has repeated, with aggravating circumstances, the affront already offered to England, by the establishment of a Papal hierarchy without the assent or knowledge of the Crown. The King has availed himself of the energy displayed by the ultra-Protestant party to eject a Ministry to which he was not warmly attached; and, by the dissolution of the Second Chamber of the States, the new Cabinet has thrown itself upon the high Orange and Protestant party in the country, by which it will be warmly supported.

DENMARK.

We announced last week the rejection of the bill regulating the succession, and the appointment of a new Ministry. The Constitution framed in 1848 has virtually placed the supreme power in the hands of the minority, by requiring on certain occasions that resolutions should be carried by three-fourths of the votes given. The Government is now once more thrown into agitation by the refusal of the Assembly to accede to the conditions to which the very existence and integrity of the Danish monarchy are attached. This upward conduct of the minority tends unhappily to undermine the Constitution itself, and, possibly, to affect the independence of the State.

GERMANY.

The Bishop of Ripon will visit Berlin next June, for the purpose of confirming such youthful members of the Church of England as are prevented from celebrating this rite in England.

The question of the political refugees in England has been brought before the German Bund; and the declaration of the Prussian Government is published. It amounts to this. Prussia has full reliance that the British Government will do everything in its power to assist in the punishment of past and the prevention of fu ure outrages; and therefore it is held, that any d monstration which might make it appear that foreign powers influenced the British Government would impede the fulfilment of this expectation.

A letter from Vienna, of the 29th ult., says:—

The Emperor this day held his first public reception since his recovery. It is said that the Emperor of Russia, the King of the Belgians, and the Duke de Brabant, the Kings of Prussia, Bavaria, Greece, and Naples, and the Duke of Saxe-Coburg, are to arrive here in the course of the month of May.

SWITZERLAND

The investigation into the late sedition at Freiburg is being actively prosecuted. The effect of the Austrian Minister's last note at Berne was such that the Swiss Federal Council was on the point of sending him his passports; and France holds herself in readiness to make a counter demonstration on the western frontier.

ITALY.

A private letter from Rome of the 21st ult. says that the Pope has sent a "special blessing" to Dr. Newman in his own handwriting, which is not usually done. "I had the document in my hands," adds the writer, "and I give you the translation as well as my memory serves me:—

May the Almighty and merciful God bless him, and give him grace and strength to withstand the attacks of his enemies, and to resist the assaults of the evil one; and may he remember that, being acceptable to God, he must be well proved by temptation.

The Papal Government continues to exhibit the total and irretrievable decay of its temporal authority in direct connection with unlimited and unprecedented claims to spiritual supremacy. A French brigade is its only defence in Rome; but, in France, it prohibits books, imagines the ecclesiastical law, suspends the clergy from their functions, and publishes edicts, which are received by French Bishops "on their knees," with the fulsome ejaculation, "Peter has spoken by the lips of the immortal Pius IX."

In Piedmont, the Government struggles manfully in defence of the rights of the house of Savoy, the independence of the State, and the constitutional franchises of the people. But, with all its ability and zeal, it is the Government of an intelligent minority, detested by a large portion of the upper classes and of the clergy, ill-supported in some parts of the kingdom, and liable to be betrayed in an emergency by the Italian people. Between Austria and Piedmont, as well as between Austria and Switzerland, the seeds of hostility and ill-neighbourhood have been sown by Mazzini's misdirection, and the blood and the taxes of Turin has once more been led to expose itself to peril by a spirited defence of men who have done nothing to win the respect of the country.

The Austrian army which occupies Tuscany is to be lessened by 2000 men, who are to be detached into the Romagna.

SPAIN

The present Cabinet is said to be one of transition merely. M. Bermudez de Castro, Minister of Finance, gave in his resignation on the 29th; but the Queen did not accept it, and the Ministerial crisis still continued. That there exists in the highest quarters a determination to maintain a constitutional government in Spain there can now be no doubt whatever, and it is equally certain that no Ministry can expect to hold its place in quiet, or for any long period, who will not consent to observe scrupulously that act. The real danger to the crown of Isabella II. will proceed, not from the excesses of the Liberal party, but from the attempts to introduce an absolute system of Government in place of a Constitutional one. Every man of eminence in public life is openly against the extraordinary and destructive policy of the Court. Narvaez is still kept in banishment and in disgrace. The Palace is the scene of intrigues between Christina, Munoz, and their creatures, which can only be compared to the scenes of Dalcour. The Queen herself has more than once been on the point of destroying that Constitutional Charter, which is her best title to the throne; and the house of Bourbon seems only to have prolonged its existence in Spain to exhibit to the world the degradation of a race of kings.

PORTUGAL.

We have Lisbon letters to the 20th ult. The Chamber of Deputies had approved all the electoral list decrees of 1851 and 1852 by eighty votes against twenty. The declining health of Marshal Saldanha seems likely, ere long, to renew the contest of parties for that power which he obtained by a military revolt, though he has since exercised it with moderation.

The railroad had not been opened, and difficulties appeared still to impede the project; the excuse now being that a bill had to be passed through the Cortes before the works could commence.

TURKEY

A despatch from Constantinople, dated the 25th ult., says that the question of the Holy Places is settled, and great concessions have been made to Russia. M. de Lacour, the French Minister, is said to have displayed a very conciliatory spirit in the negotiations. The only negotiations now pending are relative to the question of the Greek Patriarch. The armament is suspended. The exchange on London has risen. The blockade of the Albanian coast has been raised, and the fleet employed on that service has returned to Constantinople.

PERSIA.

Persia is preparing for another expedition against Herat. The British Ambassador, Colonel Shiel, had declared that he would demand his passports if the projected expedition were carried out.

CHINA.

The precise claims of the rebel leader, and the grounds of disaffection with the Imperial Government which influence his followers, are not clearly stated in any of the ordinary communications from China. Those communications would lead to the supposition that the weakness of the reigning dynasty had invited an attempt at its expulsion from the immense empire which its more vigorous founders subdued two centuries ago. But a Californian journal contains a statement relative to the rebel leader and his objects, which, if true, casts an entirely new light on the circumstances of the case. This statement is as follows:—

The Rev. J. J. Roberts, a native of North Carolina, who has been residing some years in China, writes a remarkable letter to a friend in California relative to the Chinese rebellion. He says—"The chief leader in the affair turns out to be, as I learned at Hong-Kong, a man whose surname is Hungname Saw-Chuen. He came to Canton and studied Christianity for several months, some five or six years ago, and instead of raising a rebellion to upset the Government, he seems rather struggling for religious liberty, and is upsetting idolatry. He is a man of no extraordinary appearance, about 5 feet 4 or 5 inches high, well built, round faced, regular in his features, rather handsome, about middle-aged, and of gentlemanly manners. While here, he applied himself to the study of the Scriptures, daily committing them to memory, and maintained a blameless deportment. He requested to be baptised, but left for Kwangsi before he was fully satisfied of his fitness. When he first came to me, he brought some pieces of poetry and other essays which he had written respecting the Christian religion, the knowledge of which he professed to have derived—first, from a tract received at one of the examinations in Canton; and, secondly, from a vision he had while sick, which, he said, corroborated the doctrines learnt out of the book; and hence he believed in the true God, and came to Canton expressly to be instructed, and to learn the will of the Lord more perfectly from his own Word. . . . . I am informed that about 100,000 are now numbered on the side of the chief, that he is popular among the people, treating them with respect, generosity, and kindness.

In addition to this singular story, it is said in other quarters that the Empress of China is a Christian, and the Emperor himself more than half a convert.

AUSTRALIA.

The *Statesman* has arrived from Port Phillip, having sailed on the 20th of January. The total amount of gold she brings is not at present known, the advices only giving the shipments from Geelong, which were 10,339 ounces, valued at about £42,000. The intelligence by this opportunity is two days later, but comprises few points of interest. An arrival by the *Lady Seymour* with 2000 ounces of gold had been announced; and the latest accounts from the mines were satisfactory. New discoveries had been made at Ballarat, the value of which appeared to be undoubted. The quotation of gold in Melbourne was £3 12s. 6d. per ounce. Sales of real property continued to be made at advanced prices. It is stated in private advices from Sydney that the net profits of the Scottish Australian Investment Company for the half-year ending December amount to £8700.

MUSIC.

PHILHARMONIC SOCIETY.

The sensation produced at the Quartet Association, by the performance of a quartet by Cherubini; and, more recently, at the New Philharmonic Society, by the execution of his sublime "Requiem," in C minor, gave to the programme of Monday's Philharmonic Concert peculiar interest, as it was announced that a symphony by the Italian composer, expressly composed for the society, would be revived. At length, then, justice is to be done to one of the most distinguished composers of his epoch; and gradually a the period approaching when the "agitation" made in the columns of the ILLUSTRATED LONDON NEWS, on behalf of Cherubini's lyric productions, will meet with the success which attended our efforts to make the works of Meyerbeer known in this country. "Lodoiska," "Medea," "Les Deux Journées," &c., have yet to be tried here are the Florentine's fame rests chiefly on his overtures. In the meanwhile, prejudices are being dispelled—exclusiveness in schools is becoming extinct—and it may be really believed that, some day, even English musicians will have their chance, especially if they will throw off their bigotry and asperity, and become liberal and tolerant in their strictures on "foreigners and foreign art."

Cherubini's Symphony (which was arranged as a quartet, and played last season by the association) is not of the grandest scale. Its proportions, indeed, if compared with those of Beethoven, are small; but there is a liveliness in the ideas, and a richness in the orchestration, which impress the hearer with the most pleasurable sensations. In the slow movement, the pastoral sounds sing their own melodious strains. In the minuetto, there is a quaintness and vivacity quite piquant and even exciting; the dialogue in the wood band was delicious the players seemed to revel in it, and the auditors to sympathise most cordially with them. The Symphony was cautiously received. Philharmonic hearers are so fearful of their idols being disturbed, as if there was not room for any one except Beethoven, Mozart, Haydn, and Mendelssohn. Another novelty in the scheme was Molique's violoncello concert, played by Piatti here the admiration was equally divided between composer and executant; the slow movement was heard with enthusiasm. The concerto is a fine conception from one of the greatest of living musicians; and, with the exception of a little triviality in the finale, may be pronounced to be admirably constructed, and tastefully scored. The genuine of Piatti was divine, and his passage playing a wondrous display of executive perfection. Next in interest and importance was Hallé's noble reading of Beethoven's pastoralé Pianoforte Concerto in E flat. He reads his composer like a true and conscientious artist, thoroughly resolved to be identified with, and not to be distinct from, the conceptions of the master he is charged to interpret. He was immensely applauded at the end of his grateful task, which he accomplished from memory.

It was universally remarked that the "Pastorale" symphony and "Euryanthe" overture never "went" more finely; even the *sforzando* critics were struck dumb by Costa's poetic readings.

Mrs. Endersohn and Herr Standigl were the vocalists; but both were out of voice, and very unfortunate in their selections.

The fifth concert will be on the 16th inst.

THE MUSICAL UNION.

The pitiless rain and murky fog which at one time last Tuesday enveloped the encountants at Willis's Rooms in darkness, did not prevent upwards of 200 amateurs from assembling at the third meeting. The programme was rich in materials, and the players comprised the greatest [illegible] could be desired. Its character. Herr [illegible] Piatti, [illegible] Hallé, [illegible] Viola, and Lucas [illegible] Pianoforte, Mr. Hallé [illegible] concert [illegible] Haydn's [illegible] Quartet in [illegible] which his grand tone and exquisite phrasing were fully developed, and with the "perpetual motion" of Paganini, which for rapidity of touch and articulation was quite astounding. This solo was cheered to the echo; Hallé gloriously terminating the sitting with "Lieder ohne Worte," and solos by Chopin

NOTES OF THE WEEK

Mr. Aguilar, an English pianist and composer of great ability, gave his annual concert on Wednesday, at the Hanover square Rooms. In the scheme was his new trio in G minor, for piano, violin, and violon cello; a work which will greatly increase the estimation in which he is held. The solo instrumentalists were Vieuxtemps, Hausmann, Regondi, Pratten, Lazarus, Baumann, and Jarrett; and the vocalists were Mdlle. Anna Carr, Madame Dorda, Herr Reichardt, and Herr Hoelzel. Herr Kuchler and Mr. F. Mori were the conductors. The selection of music did credit to Mr Aguilar's classic taste.

Signor and Madame Ferrari, well-known professors of singing, assembled their friends and patrons at the Hanover Rooms, on Tuesday, and presented an interesting programme, under the able direction of Mr. F. Mori and Mr. Alfred Mellon. The gifted Sterndale Bennett, Miss Coles, Herr Pauer, Signor Giulio Regondi, Watson (violin), Piatti, Miss Bassano, Miss R. Fitzwilliam, Messrs. Benson and Ransford, aided the *beneficiares*, so that a goodly array of vocal and instrumental talent was congregated.

Haydn's "Creation," and Mr. H. Leslie's very clever "Festival Anthem," were performed at Exeter-hall on Wednesday night, by the Harmonic Union, under Benedict's admirable conductorship; the vocalists were Miss L. Fyne, Miss F. Rowland (a singer of much promise), Sims Reeves, and Standigl.

Mr. Holmes, the pianist and composer, who quaintly "invited the musical public to witness the performance of his sons, Alfred and Henry, as violin artists," to the Queen's Concert-room, on Thursday night, called also into play the talents of Mrs. F. Crook, and Mr. Lindsay Sloper (piano), Mr. Webb (viola), Piatti, the Misses Brougham, Miss Birch, and Miss Clara Holmes; Herr Rummel and Mr. G. F. Flowers officiating as accompanyists.

Amongst the musical arrivals are Madame Angri, the contralto, Herr Sobolewski, a composer, from Germany, highly recommended by Meyerbeer, with Mdlle. Sobolewski, a vocalist; Mdlle. Gravelet, a pianiste of distinction from Paris; Herr Reichardt, the Viennese tenor; and Emile Prudent, the pianist.

In addition to the Gloucester Musical Festival, in the autumn, there will be the opening of St. George's Hall (under the patronage of the Queen and Prince Albert), in September, at that wonderfully-increasing town, Bradford, in Yorkshire, under Costa's direction. Next week will be the fourth New Philharmonic Concert, at Exeter-hall; the performance of "Elijah" (under Costa's direction), by the Sacred Harmonic Society; the concerts of the "Harp Union;" and of Miss Arabella Goddard.

In this age of innovation and improvement, let it be notified that a long-wished-for reform in the music at our public dinners is in progress. At the anniversary festival of that admirable institution, the "Westmoreland Society," last Tuesday, at the London Tavern—the Hon. Colonel Lowther, M.P., in the chair—we were much struck with the purpose exhibited in the programme, and with the judicious taste displayed in the selection of the pieces. The singers were—Mr. Francis, Mr. Benson, Mr. Cummings, and Mr. J. L. Hatton; and when such works are heard, as those of the last-mentioned professor, who combines within himself the varied abilities of a pianist, vocalist, and composer, it is certainly to be regretted that a wider sphere of action is not open to such writers.

Dupree's new two-act opera, "La Lettre au Bon Dieu," just produced at the Opera Comique in Paris, the libretto by Scribe and De Courcy, has been successful; the débutante of the grand tenor, Mdlle. Caroline Dupree, was the *prima donna*. M. Montfort has produced a new one-act opera at the same establishment, "L'Ombre d'Argentine;" and M. Hignard, a new composer, has brought out at the Théâtre Lyrique a new act work, "Le Colin-Maillard." There are four theatres in Paris at which French composers can introduce their lyric productions. In London there is not one!

THE THEATRES.

ROYAL ITALIAN OPERA.

There seems to be a fatality attendant on the performance of Donizetti's "Maria di Rohan" in this country. Its first production, in May, 1847 although signalised by one of the greatest vocal and histrionic triumphs ever witnessed on any stage, in Ronconi's masterly delineation of *Chevreuse*, a part written expressly for his powers, for the Italian Opera House, in Vienna, in 1845—was exceedingly disastrous, owing to the failure of Madame Ronconi as *Maria*; and this untoward event led to a disunion in the company, exceedingly unlucky for the interests of the establishment, then in the first year of its existence. The revival of the work was not fortunate on former seasons; for one capital mistake has always been made, namely, not securing for the character of the heroine of the story—which is so familiar to the frequenters of the French theatres, under the title of "Un Duel sur Richelieu"—such an actress as could [illegible] up to Ronconi in the last thrilling act. The amateurs who recollect Mrs. *Maria*, in Paris, will not easily forget the fact; and there are those who have seen Viardot in St. Petersburgh, who are equally rapturous in their praises of her acting and singing. The most interesting representative here, has been Madame Forconiui, at her Majesty's Theatre; but the tide of success, was interrupted by her illness. There must be a first-rate *Maria*, if Ronconi's sublime effects are to be adequately developed; and it is doing a glaring injustice to Donizetti, to fasten on him the blame of a failure, which is not to be ascribed to any deficiency of musical inspiration on his part. What did "William Tell" effect here, until Tamberlik's genius was found to embody the leading part? Let Grisi resume her part of *Maria*, and then let us judge whether the opera be as weak as its detractors have hastily assumed. From these observations, it will be gathered that Mdlle. Alboni, the new prima donna, was a failure. Such was the case, a more uninteresting vocalist pretending to the highest rank was never met with; and Ronconi had the up-hill labour of having to remove the most disagreeable sensations she created whilst she was on the stage. Tamberlik's *Chalais* equally suffered from the same cause, and the new contralto, Mdlle. Didiée—although decidedly successful in her debut—has not yet artist sufficient to turn the scale in point of interest. What renders the mishap of the intended new prima donna more vexatious was, that she is the daughter of a once-celebrated singer in Italy; and there was, consequently, every sympathy for the new-comer. Mdlle. Didiée sung at the italian Opera house in Paris. Her organ is not equal in quality; and it appears, in fact, to appertain to distinct registers; but there is sentiment about her; and the "Son leggiero" won a deserved encore.

When the French claim their Talma, and the English vaunt their Garrick, Kemble, or Kean—Italy, sunk as she is in fine art, in the present age, may raise her drooping lyre, and, as she sweeps the strings, may exultingly exclaim, "Ronconi!" Such singing and such acting as are combined in his *Chevreuse* must be recorded as the most marvellous [illegible] of power and passion that can ever be hoped to be seen on a lyric stage.

On Thursday, for the extra night, Donizetti's "Lucrezia Borgia" was revived—glorious Grisi resuming her grand impersonation of Victor Hugo's terrible heroine; Mario singing with his flute-like mellifluousness, the noble and romantic *Gennaro*; and Ronconi enacting the revengeful *Duke* with tiger like stealthiness and ferocity. Mdlle. Didiée was the generous *Maffio Orsini*. The new contralto made a favourable impression. She is certainly an Alboni, not as she an Angri. She is a better actress, but is not so good a singer, as De Meric; and is assuredly an improvement on Segum. She won the encore for the brilliant cavatina in the second act, which, however, by a house filled to overflow, in every part. Altogether, it was a magnificent representation—band and chorus striving to keep pace with the distinguished talents of the leading performers.

Next Thursday the first act of "Norma" and the whole of the "Puritani will be given; and next Saturday Verdi's "Rigoletto" will be produced.

ST. JAMES'S

On Monday much excitement was produced by the début of Mdlle. Madeline Brohan in MM. Scribe and Legouvé's historical comedy, "Les Contes de la Reine de Navarre," which was performed for the first time here; and in which Mdlle. Brohan made her first appearance on the Parisian stage in 1850. The play is in five acts, and, as might have been expected, indeed wild work of the historical materials. The principal aim of the structure is to present an attractive symbol of its brilliant heroine, *Marguerite de Valois* (Mdlle. Brohan). The subject of the plot is the liberation, by her agency, of her brother, *Francis I.* (M. Lafont), from his imprisonment in Madrid. Her devises towards this object include the most *espiegle* as well as public earnestness; her talent, also, for story-telling, and the resources of personal fascination, are brought distinctly out in the course of the action, and render the development of the character one of uncommon artistic interest. The action itself is reduced to the utmost simplicity and unity by the dramatists, the time comprising merely a day and night; and the scene being confined to the Royal garden at Madrid. The play commences with the appointment, by *Charles V.*, of *Granthiara*, his Prime Minister, but also lover of *Marguerite Royal*, then present at the Spanish Court, as the betrothed of the *Emperor*. Soon after her arrival, *Marguerite* throws her spells over the Spanish despot, and obtains his consent to visit her brother. Her first visit is welcomed by starvation. But she succeeds in persuading him still to live. A scene in which *Marguerite* wins on his affectionate reminiscences, and induces him to pledge the health of his friends, and to partake of wine and fruits, is a gem, which was admirably acted both by Md le. Brohan and M. Lafont. For securing his release, however, it is needful that *Francis* should cede the Duchy of Burgundy to the Spanish monarch's unscrupulous interests. He promises to abdicate in favour of his son; but this act must be done secretly, and they are carefully watched. *Marguerite* hits on an expedient. She had already interested *Charles* by one of the tales of her celebrated "Heptameron," and proposes to obtain his permission, in which she succeeds, to send a specimen of the work, among his own despatches, to *Louise of Savoy*, her mother. Of course the instrument of abdication is substituted for the supposed novel. The trick is, however, perilous. For the attempt, nevertheless, *Charles* would appear to have forgiven her the more, and offers to the spirited and ingenious woman his hand; which she, considering the political advantages of such an union, is not indisposed to accept, notwithstanding an inclination in favour of the Count *d'Albret*, Comte de Navarre, which the *Emperor* discovers, and accordingly changes his intentions. A union, however, is effected between the captive *Francis*, and *Eleanore*, sister of *Charles*, and, by means of a secret door, contrives to visit the prisoner. While the marriage ceremony is proceeding, *Marguerite*, by reciting one of her tales to the Emperor, prevents him from entering until all is over. *Charles* then gallantly acknowledges his defeat, releases *Francis*, and permits the marriage of *Marguerite* with *Henri*, while *Isabella* is free to wed the *Count de Montbrun*. The intrigue throughout the play is really managed; and the quiet yet pointed action of Mdlle. Brohan singularly attractive. Altogether, this is one of the most interesting and effective productions of the season.

LYCEUM

Under the title of "Trying it On," an adaptation of "Une Rivière dans le Sac" has been produced. Mr. C. Mathews enacting the part of the fidgetty pilferer with the success that might have been expected. Mr. William Brough, as the modifier of the play, has shown much ingenuity in the manner of recasting the materials; and the curtain fell to the delight of the audience.

OLYMPIC

"The Miller of Derwent Water," is the title of a new melodrama at this theatre. It has the merit of evolving a story. *Sir Marcus Lister* (Mr. Cooke), a capitalist and monopolist, desires to purchase from one *Jeffries* (Mr. H. Farren), his hereditary mill; and, on his refusal, erects a mill in opposition, and ruins him by underselling. To crown all, the miller's daughter, *Mercy* (Miss Anderton), elopes with Lister's son, who has an independent fortune. Thus all ends happily; and the piece has the fair promise of becoming somewhat popular. This end was promoted by the introduction of some subordinate comic characters, as usual in Mr. Fitzball's pieces, and in which Mr. Robson bore a prominent part.

Gay's "Beggar's Opera" has been given this week at the Strand Theatre; with Miss R. Isaacs as *Polly*, Miss Featherstone as *Lucy*, and Leffler as *Macheath*.

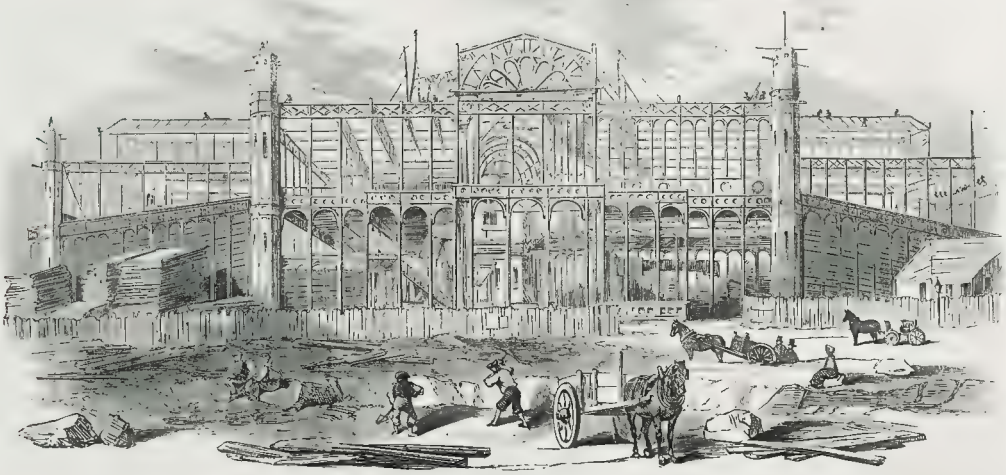
THE UNITED STATES INDUSTRIAL EXHIBITION.

(From our own Correspondent.)

NEW YORK, April 20th

Most of the exciting accompaniments of the Great Exhibition year in London seem likely to be re-enacted here, with fitting variations as may suit the different bent of the two nations. With the exception of what may be called the heavier handicrafts, the ingenuity of teamsters — who are all "on strike" for higher wages—the remaining part of the population seems active and looking forward to an unusually brilliant shopping campaign. Already (thanks to the Great Exhibition) the Broadway stores have assumed more than their wonted splendid appearance; though the delicate wares, whether for apparel or otherwise, seem terribly the worse for the dust arising from a score of upstart hotels rearing their heads in every direction. The Crystal Palace and its minor rival, Franconi's Hippodrome, must be supposed to swell the human tide of New Yorkers prodigiously, if they are to attract as many visitors as would fill the hotels, whose yawning brick halls will, in a brief month or two, be ready to shelter and welcome any amount of excursionists.

The great iron frame of the Industrial Palace is complete, save the dome, which may be expected to rear its colossal head in a few days; meanwhile, the sound of the granite's blast is incessant, as well the hammering of rivets, and the duller sound of the pick-axe. Like its London forerunner, the New York structure has for a while thrown some rather conspicuous pieces of masonry in the shade. It is placed close by the Croton Reservoir; from the parapet of which crowds of eager promenaders watch the progress of the work (a glimpse of the reservoir is seen at the right side of the Sketch). On the other side a monster Babel-like wooden tower will soon rear its head some two or



PRESENT STATE OF "THE CRYSTAL PALACE," AT NEW YORK.

three hundred feet high. This is Barnum's addition to forthcoming amusements. The galleries are already commenced. One fancies an elephant striding up to its summit, as in some towers of Hindostan. Barnum is precisely the man to revive that eccentric feat.

But all the menageries which have ever appeared here must fade before th troupe of Franconi, who has just arrived. The private view of his equestrian spectacle takes place on the 25th; till then, every one is on the tenter-hooks of expectation. People gape at the very announcements of what is in store for them in the big booth of Madison-square. Imagine announcements comprising "daring feats and animated splendours," the Pentathlon and Stadium, and other athletic entertainments; the whole to be thrown open to the public on the 2nd of May. With one or two exceptions scarce worth mentioning, there has been, as yet, no representative of Ducrow or Astley in America; so that Mons. Franconi will have a clear field before him.

These coming spectacles of the gymnasts have been forestalled by Exhibitions, which appeal to quite other sensations and faculties; we here allude to the New York Academy of Paintings, which was last night opened to private view. The American school of art may safely be said to have considerably progressed, since the time (some score or more years) when Basil Hall pronounced it "hard, flat, and woodeny," though these three adjectives might even now not inaptly suit some of the crudities hung so unchartably for their owners here. The whole collection impresses you as an average one in Suffolk-street would do. With no aims at historical composition worth noticing, portraits and landscapes hold the line. Amongst the former, the portrait of Eastlake, the President of the Royal Academy, stands conspicuous, as a carefully elaborated and characteristic likeness, which was duly appreciated at the Trafalgar-square *salon* last year. A lady's head by the same painter (Huntingdon) is also of considerable merit

Landscapes evidently are the forte of the rising American school. There is something very striking in the general novelty of the scenery, the totally different scale of harmony from which the British painters have made their own, which shows that, in landscape even, endless monotony of tone and subject might occasionally be departed from. That a little effort is necessary, the works of Durand seem to show: perhaps the effort in his compositions is a trifle too obvious. Eclecticism in matter as well as style, tends to give an overdrawn and unnatural character to otherwise meritorious works. Fancy the twelve cantos of "Paradise Lost" thrown into one pictorial illustration! The very thought is oppressive, and one feels that the dimensions of Banvard's last panorama of 12,000 feet would hardly suffice for its development; yet that is the complaint of Durand's fine picture of the "Progress of Civilisation." Not amenable to this charge, but a downright bold piece of scenic painting, is Cropsey's "Niagara Falls" - the best approach to the sublime we have seen of this volume of waters. Kenseth has some exquisitely mellow mountain scenes: his is a pleasant medley of Both and Ruysdael, whom he has studied without merging his originality in either. Pre-Raphaelitism finds its champion in Mr. Tait, whose "Hunting Party" closely reminds one of Hunt's later works. Evidently Ruskinism has in the future of American art a determinate stronghold.

A BURMESE DANCE.

A SCENE of peace from a seat of war may be an agreeable variety in our Illustrations of our contest with the Burmese.

The Engraving, from a sketch by a recent traveller, correctly represents the dresses and musical instruments, and the style of houses (built of wood) and the temples (of stucco) common in Burmah.

The dress of the women, consisting merely of a coloured silk handkerchief worn as a waist-cloth, exposes the leg as high as the knee when the wearer walks. The white jacket of the women is only worn by those that are married; and a simple scarf is folded across the breast by the unmarried. The hair, of glossy blackness, is never covered by cap or bonnet; and the women use a chattah (umbrella), of the Talipât palm.

The lower part of the dress of the men is always of silk, of gay and varied patterns, and is worn as shown in the Sketch. The jacket is of fine white cloth. The hair is dressed in a knot on the top of the head. Round the temples is worn a piece of book-muslin, of very fine quality, the arrangement of which occupies much of the time of those who are inclined to coxcombry. A singular custom prevails of wearing as an ear-ring, the box in which is contained the "pâu," which they chew. The lower lobe of the ear is distended frightfully, so as to allow the insertion of the box, which unscrews in the middle for that purpose.

The musical instruments consist of banjo, drum, and triangle. The music is, to English ears, very monotonous. The mode of dancing, though quite suited to the natives of a hot country, where exertion is disliked, and activity in exercise unnecessary, is very peculiar. It consists of what we should call posturing—the men balancing themselves in extraordinary positions, with such contortions of the fingers, arms, and legs, as are most painful for an Englishman to witness. When any extraordinary feat is accomplished, the spectators express their approval by significant grunts, "ughs," "hahs," &c.

A BURMESE DANCE.—FROM AN ORIGINAL SKETCH.

LEIGHTON BUZZARD CROSS, RESTORED.

CHURCH OF ST. JOHN, ANGELL-TOWN, NORTH BRIXTON

THIS beautiful structure was consecrated on Saturday last, by the Bishop of Winchester, assisted by the Rev. Dr. Vaughan, and upwards of twenty of the neighbouring clergy. The Bishop, attended by his chaplain, was received shortly before eleven o'clock, at the door of the church, by the Commissary, the Registrar, the clergy, and others attendant upon the occasion. The right rev. prelate immediately proceeded to the Communion-table, where a petition was presented praying for the consecration of the church. The petition having been read, the Bishop signified his consent, and commenced the consecration service by walking in procession down one of the aisles, and returning up the other aisle, attended by the Commissary and the clergy; the Bishop and clergy alternately repeating the 24th Psalm. After the usual prayers, the Bishop being seated, the Commissary read the sentence of consecration, which was signed by the Bishop, and ordered by him to be duly registered among the muniments of the Registry-office. The usual prayers for morning service were read by the Rev. Dr. Vaughan; after which an eloquent sermon was preached by the right rev. prelate. The sacred edifice was crowded in every part by a congregation who manifested great interest in the event.

The church is capable of holding 1150 persons, and has been built at the sole expense of William Stone, Esq., of the Casino, Herne-hill, on ground liberally granted by B. J. A. Angell, Esq., of Rumsey-house, near Calne, Wilts, who has also given the site for the parsonage-house, and for schools, and dwellings for the teachers, built on another part of this large estate, shortly to be entirely covered with houses. The cost of the church (designed by Mr. Ferrey) has been upwards of £3000. It is in the Perpendicular style: the plan consists of a lofty and massive west tower, with octangular pinnacles at the angles; there are a nave, north and south aisles, and a conspicuous north porch, chancel, and vestry.

The seating is entirely of oak; the paving of encaustic red and black tiles. The roofs are stained deal, and the spaces between the timbers tinted in azure colours. An organ remains to be provided.

The materials of the building are Kentish rag facing, varied with Devonshire rag-stone in the ornamental parts; the dressings being of Bath stone. The contractors are Messrs. Holland, of Duke-street.

The ecclesiastical district of St. John's is detached from St. Matthew's, Brixton, the Incumbent of which (Dr. Vaughan) has given £1000 towards the several erections; and his son, the Rev. Matthew Vaughan, is the appointed minister of this new church.

As the name of the new town is one of much interest in the county of Surrey, we may be induced to refer to the subject in a subsequent Number.

RESTORATION OF LEIGHTON BUZZARD CROSS.

AMONG the fine old market crosses which the wear of centuries has spared for the admiration of the lovers of art is the Cross at Leighton Buzzard, in Bedfordshire, supposed to be the work of five centuries since, at one of the best periods of our architecture. In this long interval time had, however, reduced the monument to a very dilapidated condition: this was a subject of much concern to the townspeople, who frequently expressed a wish for the restoration of the olden work; when Colonel Hanmer, of Stockgrove-house, having purchased the manor—held many years by the family of Lord Leigh—by his liberality, aided by several influential gentlemen of the town and neighbourhood, the restoration of the Cross was commenced in September last, and has lately been completed, under the direction of Mr. W. Cox, of Leighton.

From its architectural details, we may attribute this cross to the reign of Edward III. It consists of two stories, the lower covered with a stone groining, which, in its turn, forms the base of the second story. The tracery of this lower portion is remarkably good. It rests upon five buttresses, and a centre shaft, with small shafts and caps at the angles, internally; the cornice is charged with gargoiles and grotesque heads, and is surmounted by a pierced parapet, embattled.

The second story contains five statues, arranged in the following order:—Looking down the chief street of the town, and towards the parish church, you perceive the Virgin with the Child; on her right, a bishop, possibly the bishop of the diocese for the time being; on her left is a venerable crowned and bearded figure, whom we may conjecture to be King Edward III.; on the right of the bishop stands St. John the Baptist, with the Agnus Dei and a book; on the left of the king is Christ, having risen from the tomb.

The five outer buttresses are also affixed to the jambs by tracery work, forming flying buttresses at the angles. The centre of the cross is a large crocketed pinnacle, surmounted until recently by a wrought-iron vane, over which stood a cross and crown. Whether this formed part of the original structure is uncertain.

In the foundation-stone, which was deposited by Colonel Hanmer, is engraved the following inscription:—

LEIGHTON BUZZARD

This ancient Gothic cross is said to have been erected A.D. 1250. Temp. Edward III.

A.D. 1620 it was repaired by a rate of fourpence levied upon each inhabitant, and it has since received several imperfect restorations.

At the present date, 1852, its very dilapidated state being much deplored, the Lord of the Manor, aided by some of the wealthier inhabitants of the town, raised the following liberal subscriptions:—

Colonel Hanmer, K.H., Lord of the Manor	..	£140	0	0	Mr. Joseph Proctor	..	£ 26 5 0
Mrs. Grant	..	52	10	0	Mr. C. Ridgway	..	26 5 0
Mr. Bassett	..	52	10	0	Mr. E. Lawford	..	26 5 0
Mr. F. Bassett	..	26	5	0	Total cost	..	350 0 0

Mr. W. Cox, Dunstable, Architect and Sculptor.

And it was restored to its former beauty and original state.

There has been an additional £75 subscribed for a new iron palisade by the Lord of the Manor and J. D Bassett, Esq.

Mr. Cox, the architect, has faithfully carried out the design of the restoration. The figures of the old cross, which were in a very dilapidated condition, have been placed round the Market-house—a very excellent arrangement; and those on the present structure have been beautifully executed by Mr. Cox, who was also the sculptor of the Martyrs' Memorial at Oxford.

EXHIBITION OF CABINET WORK.—FOUR van-loads of highly valuable specimens for this Exhibition were removed last week from Windsor Castle to Gore House, Kensington. Besides the contributions of her Majesty, the Dukes of Hamilton, Buccleuch, Devonshire, and Northumberland, the Earls Spencer and Amherst, the Lords Willoughby d'Eresby and de l'Isle, Sir Anthony Rothschild, Mr. Charles Mills, Mr. C. R. Wall, M.P., Mr. H. Maguire, Mr. James Morrison, Mr. George Field, Mr. I. K. Brunel, Mr. E. Pownall, Mr. John Auldjo, Mr. J. Swabey, Mr. D. M. Davison, the Rev. M. Taylor, Mr. H. Farrer, and other gentlemen have liberally consented to lend valuable examples for public instruction in the production of cabinet work.

NEW CHURCH OF ANGELL-TOWN, NORTH BRIXTON.

TESTIMONIAL TO COLONEL HIGGINS, R.A.

ON Saturday last several influential Canadians, on a visit to England, in the name of the hon. the Mayor and citizens of Quebec, presented to Colonel Higgins a superb piece of plate, designed and manufactured by Messrs. Garrard, of the Haymarket, and bearing the following inscription:—

TESTIMONIAL PRESENTED TO COLONEL HIGGINS, R.A.

Presented to Colonel Gordon Higgins, Royal Artillery, by the Mayor and Councillors, the Magistrates, and the Citizens of Quebec, as a mark of their regard and esteem for one who, while holding the distinguished position of Commandant of the Garrison for a period of five years, evinced, in his frequent intercourse with them, public and social qualities which, eliciting their highest approbation, induced in all a feeling of respect for him as an officer and a gentleman.

Prior to Colonel Higgins quiting Quebec, he was presented by the Mayor, on behalf of the principal inhabitants, and in the presence of an influential meeting, with an address, expressive of their sincere regret at the termination of the gallant Colonel's period of service in Canada. To the address is attached the names of the Chief Justice of the Province, the Hon. Sir James Stuart, Bart., of other Judges, of some of the members of the Provincial Administration, of the principal merchants, and of some hundred other gentlemen. Colonel Higgins thanked the meeting for this distinguished honour; and the plate here engraved is the handsome testimonial of esteem, the presentation of which awaited the arrival of the gallant Colonel in England.

PARLIAMENTARY PORTRAITS.

MR. CHARLES GAVAN DUFFY, M.P. FOR NEW ROSS, IRELAND.

THE distinct personal interest attaching to Mr. Duffy's appearance in the Imperial Parliament, is peculiar and great. The man, who in 1852 was returned to serve in Parliament for the small but thoroughly independent borough of New Ross, Wexford, was, not five years ago, tried as a rebel—as the chief organiser in the partial Irish outbreak of that period against the English connection—and he has entered Parliament without, in any respect, having compromised or contradicted the convictions in conformity with which "Young Ireland" entered on

MR. CHARLES GAVAN DUFFY, M.P. FOR NEW ROSS.—FROM A PHOTOGRAPH BY BEARD

that final struggle, which resulted in the deportation, to Van Diemen's Land, of O'Brien, Meagher, and Mitchell; but in the acquittal (upon legal and constitutional grounds, of their friend, Mr. Duffy. Could a better evidence be referred to of the thorough "freedom" of the English Constitution? And beyond the personal interest there is now an extensive public interest. Mr. Duffy, as a member of Parliament, took his position in Imperial politics, as the representative of the "party of independence"—as the leader of the party, which not only all English politicians, but the governing classes of Ireland, regard as peculiarly impractical; and, as an isolated individuality in the Legislature, there could, in his case, be none but the personal importance arising from the protests of a highly intellectual man, upon grounds which he could urge, as a foreigner, against the continuance of the English connection with Ireland. The recent confusion, however, thrown into Irish politics, by some utterly unexpected combinations, compels a new career for Mr. Duffy; and the probability would seem to be, that the "ex-rebel" will be the leader in the English House of Commons of the *par excellence* "Irish

party" that party, including men who have little or no sympathy with Young Ireland, and with whom Mr. Duffy's ultimate purposes can only allow a temporary agreement.

In England hitherto, Mr. Duffy's name has been best known in connection with the celebrated *Nation* newspaper—a journal which is historical for its influence in reforming the newspaper press of Ireland, creating a new Irish literature; and, politically, for the results of its influence in breaking down the power of O'Connell over his countrymen. The political tendencies and fortunes of the *Nation* are matters of the news of to-day; and the more agreeable portion of its character to dwell upon in our columns is that which relates to its literary fruits. Mr. Duffy was the founder of the *Nation*, the originator of its peculiarly systematized nationalism of policy, and has been the sustainer of its ceaseless work from 1845 up to this moment, when, direct appeals to independence being now suppressed, it is as powerful as ever in directing the younger minds of Ireland, not only in regard to current politics, but in regard to general literary and social philosophy. The *Nation* was the centre of the political movement of Young Ireland; around it gathered all the aspiring men who had grown weary of O'Connell; and to its teachings men like Mr. Meagher owed all their oratorical inspiration. In the *Nation* grew up that "belief poetry of Ireland" to the striking vigour, beauty, and originality of which men like the late Jeffrey pay the warmest and heartiest tribute; and, from the appearance of its first number, the marked modern intellectual movement of Ireland—so far as it is a scientific attempt to discover and to analyze the native elements of Irish literature—conspicuously dates. Mr. Duffy is entirely self-educated—a singular fact in connection with the founder of a literature; and he is sprung from the peasant class—as singular a circumstance in regard to a man who was finding a leader of the young orders of Ireland before he was forty. He is the son of a Monaghan farmer; but though an "Ulster man," who are of as much Scotch as Irish blood, he is essentially Celtic in race, as his appearance sufficiently testifies. A common ethnographical observation in the House of Commons during the short session before Christmas, when he made his first appearance being that there must necessarily be some affinity between Irish celts and "pure Scandinavian," seeing that Dr. and Mr. Duffy might be taken for one another. He appears to have developed unusually early his literary tastes, for it would seem that in his eighteenth year he went to Dublin friendless and unknown, but determined on being an author. As with many others who have started with the same ambition, he found the great avenue to fame was through a newspaper office.

After the ordinary gradations on the Dublin press, Mr. Duffy, probably finding abject acquiescence in O'Connellism uneasy, and no other policy then possible on the Liberal side, proceeded to Belfast, where he became editor of an influential newspaper. He returned to Dublin in 1841, became connected with the "Mountain" of the O'Connell party; and in 1842 he started the *Nation*, announcing that he had begun an educational journal; and electrifying the political and literary circles of the Irish metropolis by the unreserve and the originality of his tone and topics. The motto, which, in imitation of the English *Examiner*, he adopted and placed over his leading articles was a phrase from Chief Baron Woulfe—"To create and foster public opinion in Ireland, and to make it racy of the soil;" and that sentence is the text of all he has done since, both with respect to politics and to literature. In five years he had created a public opinion; planted a party; and the contest with O'Connell and the artificially forced "rebellion" of 1848 were the result. But up to 1847 he has acted in concert with O'Connell; and in 1844 was a fellow-prisoner with O'Connell, for "sedition," in Richmond Gaol, Dublin: being liberated, it will be remembered, after the "delusion-and-mockery-and-snare" speech of Lord Denman, by the House of Lords. The struggle between Old and Young Ireland was, perhaps, precipitated by events, but was inevitable, sooner or later. O'Connell had worked the people up to the highest pitch of expectancy; and, in fact, the country which witnessed the monster meetings was already in a revolutionary state. When "agitation" had done all that agitation could, the young followers of the old leader asked if all was not "ready?" and when O'Connell said that he would never shed a drop of blood to gain an object which it was clear "agitation" alone would not gain, the only consistent course for the Loncster of the party to pursue was to retire. They left the Repeal Association, and founded the Irish Confederation. Then came the prosecutions, and the foolish attempt of Mr. Smith O'Brien to rouse a nation to arms, while all the priests were proclaiming peace. Mr. O'Brien failed; and he and Meagher, and the student and vulgar Mitchell were transported. Mr Duffy was implicated; and, though there is reason to believe he was against all the violence and all the folly of his confederates, he never said a word expressing a desire to have his acts at all distinguished from those theirs. He accepted his fate, and volunteered defiance. Nevertheless, after several trials, he was acquitted, practically for want of evidence.

Indirectly it cannot be said that Mr. Duffy failed. He had destroyed the huge imposture of O'Connellism in Ireland, and he had evoked a manlier spirit in public affairs, and insisted upon a higher standard for public men. He himself has admitted the direct failure, but never appears to have been disheartened. On emerging from prison he at once started the *Nation* again, modifying his programme of policy, and in a great measure promising to limit his energies to the obtaining of social reforms. He seized the main point—the abiding and everrenewed cause of the social mischief in Ireland—the bad land laws, and he initiated the agitation of tenant right, the consequences of which have been seen in the "independent party" sent to Parliament from Ireland, to promote a measure on this subject. It must be confessed that the controversy provoked by the Ecclesiastical Titles Bill in 1851 assisted greatly in the success of Mr. Duffy's efforts to construct an Irish Parliamentary party, which should necessarily act as a check on Palmerston, at enmity with every English government, and separated from every English party. It is this, as all Englishmen think—most impracticable Parliamentary policy, which Mr Duffy, with others, is now insisting on in Ireland; the results being the contest at the Carlow and Athlone elections.

Mr Duffy is a barrister; but, like most journalists, who seek from the Bar the "standing" they fancy their own profession does not give, he has never practised. He has been twice married.

CHURCH, UNIVERSITIES, &c.

CONFIRMATION OF THE BISHOP OF LINCOLN.—The ceremony of confirming the election of the Rev. John Jackson to be Bishop of Lincoln took place on Tuesday morning, in the parish church of St. Mary-le-Bow, Cheapside.

CONSECRATION.—Thursday morning was fixed for the consecration of the Right Rev. Dr. Jackson, Bishop of Lincoln. Shortly after eleven o'clock the several prelates engaged in the ceremony left the Archiepiscopal Palace and proceeded to Lambeth church. The consecrating Bishops were the Archbishop of Canterbury, the Bishops of London, Winchester, Oxford, Carlisle, and Llandaff. The Bishops of Chichester and Ely were also present. After the usual morning service had been performed the sermon was preached by Dr. Irons. After which, the Bishop elect, vested with his rochet, was presented by the Bishop of London and Archbishop Sumner, the Bishop of London (addressing the Archbishop) said, "Most Rev. Father in God, we present unto you this godly and well learned man to be ordained and consecrated Bishop." The Archbishop then commanded the Queen's writ for consecration to be handed to him, and the remarks read by Mr. F. H. Dyke. After which the several oaths were administered, and the rest of the consecration service was proceeded with, and was terminated by the administering of the sacrament.

TESTIMONIAL.—The Rev. R. G. Calthrop, late Curate of Newburn, Northumberland, from Parishioners, in Durham.

NEW CHURCH AT PIMLICO.—A new church, dedicated to St. Gabriel, has just been completed in Warwick-square, Pimlico, and will be consecrated on Thursday next, the 12th instant, by the Bishop of London. We shall give further particulars, and an illustration, in a future Number.

VISITATION.—On Tuesday the venerable Archdeacon Hale held a visitation of the clergy of the City and Archdeaconry of London, in the parish church of St. Sepulchre, Snow-hill. There were about 130 clergymen present.

ELECTION EXTRAORDINARY.—In consequence of the resignation of the Rev. J. Cleobury, the perpetual curacy of Piddington, Oxon, is vacant. The presentation rests with the inhabitant householders of the village. The living is worth £300 a year in addition to the residence. There are no less than 100 candidates for the office, and but 60 voters. The election is to take place at the church on the 2nd of June.

PREFERMENTS AND APPOINTMENTS.—*Recent dates.* The Rev. B. Crook, to Killeevan; Rev. E. Holmes, to Wakerley, Northamptonshire; Rev. Evan O. Hughes, to Llandeniolen, Carnarvonshire; Rev. J. Prior, to Kirkington, Yorkshire; Rev. J. B. Mayhew, to Great Horseley, Essex; Rev. Edward Gray, to Alwalton, Huntingdonshire; Rev. R. Decker, to Lyndon, Rutlandshire; Rev. R. Turner, to Tiffield, Northampton. *Incumbencies:* Rev. W. Valentine, to Allerton, Yorkshire; Rev. W. B. Benison, to the new church of St. Paul, Birmingham; Rev. E. Walker, to St. Matthias Church, Salford. *Vicarages:* Rev. A. Kent, to Cobham, Kent; Rev. W. Pedford, B.A., to Holland to St. Dunstan's, Canterbury; Rev. C. J. Goldie, to Melbourne, Cambridgeshire.

CALENDAR FOR THE WEEK.

SUNDAY, May 8.—Sunday after Ascension-day.
MONDAY, 9.—Easter Term ends. Corporation and Test Acts repealed, 1828.
TUESDAY, 10.—Theatrical Performances first licensed.
WEDNESDAY, 11.—Mr. Perceval shot by Bellingham, 1812.
THURSDAY, 12.—Lord Strafford beheaded, 1641.
FRIDAY, 13.—Old May-day. Henry IV. of France assassinated, 1610.
SATURDAY, 14.—Oxford Term ends. Henry Grattan died, 1820.

EXHIBITION OF THE ROYAL ACADEMY,
MAY, 1853.

On SATURDAY NEXT, MAY 14, the Eleventh Anniversary of the commencement of the ILLUSTRATED LONDON NEWS, will be Published

A DOUBLE NUMBER,

Containing a Series of Splendid Engravings—copies of some of the finest Pictures in the Exhibition of the Royal Academy, just opened, including—

The Execution of Montrose	..	*E. M. Ward, A.*
An Episode of the Happier Days of Charles I	..	*F. Goodall, A*
The Monarch Oak	..	*M. Anthony.*
Fisherman's Widow ("Year of Wakefield")	..	*T. Faed.*
The City of Refuge	..	*F. Armytage.*
The Order of Release, 1651	..	*J. P. Mullins.*
Duguesclin and Hilline	..	*A. Solomon.*
Death of Thomas a Becket	..	*J. Cross*
Scene from the "Tempest"	..	*C. Roll.*
Fruit	..	*G. Lance.*
"The Brothers' Little Pet" (Sculpture)	..	*A. Munro*
"The Maid of Saragossa." "A Daughter of Eve" (Sculpture)	..	*J. Bell.*

With a copious and interesting Critical Review of the Pictures exhibited

The DOUBLE NUMBER, printed carefully on paper manufactured expressly for the purpose, will also contain the following Engravings:—

The Laying Down of the Submarine Electric Telegraph Cable from Dover to Ostend. The Cable Manufactory, &c.
Opening of the Oxford, Worcester, and Wolverhampton Railway. (Two Views.)
The "Bengal" Iron Steam-ship.
New Metropolitan Churches of St. Gabriel and St. Anne.
Assault of the Mandingo Town, Medina; Portrait of the Chief, &c. (Three Engravings.)
The Tomb of Napoleon at Paris.
And other Illustrations—Experiences of an Australian Gold-seeker (with Engravings). Plan of the Estate at Kensington, purchased by the Royal Commissioners of the Exhibition of 1851, &c. Opening of the Dublin Great Industrial Exhibition on Thursday next.

Price of the Two Numbers, ONE SHILLING

To secure Copies, Orders must be sent immediately to all News-agents and to the Office, 198, Strand, London

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS

LONDON, SATURDAY, MAY 7, 1853.

THE decisive majority of Monday evening leaves no doubt that the safety of the Budget is secured, and that the re-installation of a Derby Ministry is not to be looked for till the "Greek Kalends." There is, consequently, no fear of a dissolution of Parliament—an event which would have been exceedingly inconvenient, if not mischievous, at the present time. An examination of the division list shows some curious results. Out of sixty-four members who on November last supported the abortive Budget of Mr. Disraeli, no less than forty-seven have gone over to the Ministerial side, and swelled the majority on Monday evening. Of the remaining nineteen, three were prevented from attending the House by indisposition, and sixteen were absent without explanation or pairs. What the opinions of these nineteen gentlemen may be, the country and their constituents will probably learn at some future period. In the meantime, sixteen of them may be fairly classed among the waverers, shaken in their allegiance to their party; not quite at with the old love, and not quite prepared to be on with the new; but only waiting for time and circumstance to make the inevitable change. But these results, though gratifying, are not calculated to excite surprise. The case is altered, however, with regard to some of the Irish members. When we find that Messrs. Duffy and Lucas, and twenty-seven other representatives of Irish constituencies, formerly claiming to be Liberals and Free-traders, went out into the lobby with Mr. Disraeli, we cannot but express our wonder that such a leader should have found such allies. Mr. Disraeli has denied that he made any compact with the Irish members who formerly opposed his policy, although the existence of such a compact has been generally asserted, and very widely believed, and though it was affirmed in an Irish journal, by a gentleman said to have been present when the compact was proposed. We must, however, take Mr. Disraeli at his word, and treat the Irish compact as a purely imaginary one. But, what ever the real state of this matter may have been, we shall doubtless find, now that the Budget is certain to be triumphantly carried, that these Irish members will be disposed to return to their own ranks, and to support the Government against any hostile amendments that may be moved on the less important portions of the Budget which do not extend taxation to Ireland. They are clearly not the allies upon whose aid Mr. Disraeli can rely when dividing on the Legacy-duties, or in any general attempt to embarrass or defeat the Ministry. For, let these gentlemen say what they will, the extension of the Income-tax to Ireland is by no means unpopular among the great bulk of the people of that country. It is only a small minority in Ireland that will be liable to the new burden; while the overwhelming majority will feel the benefits of the Ministerial measure, in the reduction of the prices of necessary commodities, and in the impetus that will be given to trade and commerce. The fear of their constituents will be before the eyes of these twenty-nine gentlemen—if the voters in their several counties and boroughs be, as we suspect nine-tenths of them to be, men who possess far less than £100 or even £50 per annum. To these, twenty-nine Irish opponents of the Budget are to be added five English members, who have been hitherto reckoned as supporters of the Ministry. This makes a Ministerial loss of thirty-four, to counterbalance the gain to which we have already adverted. But these numbers represent simply the idiosyncracies and peculiarities of a few members of Parliament, pledged, some of them, against an Income-tax in any shape; and are not to be taken as applicable to the future stages of the Budget.

For these and other reasons we incline to believe that the future divisions will be still larger than that upon the [illegible] and Income-tax clause; and that the older the [illegible] the more supporters it will find both among the English and Irish members.

THE present session of Parliament is likely to be long celebrated in our annals for the numerous committees it has appointed to investigate bribery and corruption in small boroughs, and for the unsparing censure which the majority of those committees have passed upon the venal voters and impure agents where such practices have been proved to exist. But, notwithstanding all this apparent zeal, it is still a question whether the old reproach against the House of Commons, that it had no real desire either to prevent or to punish bribery, is not as well-founded as ever. Although the evidence given before the Chatham Committee was in the highest degree damaging, the House has refused to institute any proceedings against Sir Frederick Smith—described by Mr. H. Drummond, amid loud cheers from every part of the House, to be "a meritorious officer and an honourable gentleman." "When we are all of us called upon," continued Mr. Drummond, "to take up stones to cast at Sir Frederick Smith, I should like to inquire who amongst us will say 'I am without sin'?" Mr. Drummond, in this instance, hit the right nail on the head. A small minority in Parliament, including Lord John Russell and many others of its brightest ornaments, is, we believe, sincerely anxious to efface this plague-spot of bribery from the constituencies and from the Legislature; but the majority have laxer notions, and appear to think that the only sin in bribery is—to be detected in it. Gentlemen of the purest private character, and of the most unsullied honour in every relation of life, think it no moral offence to bribe needy, unprincipled, and rapacious electors, directly and indirectly, by hard cash, or by appointments in the public service. And such being the feeling among so many "honourable men" who aspire to legislate for this great country, and who fill conspicuous stations in its aristocracy, it is scarcely surprising that the poorer classes should not think themselves warranted in having a purer code of political morality than their betters. We have but to study the melancholy evidence given before the committee appointed to investigate the charges against Mr. Stafford, the Secretary to the Admiralty under the Derby-Disraeli Administration, to understand how it is that poor men are demoralised by the political impurity of the rich. That evidence, as far as it has yet been published, is quite sufficient to convince any one of the uselessness of attempting to elevate the character of humble men who have votes, while men in the position of Prime Ministers, Chancellors of the Exchequer, and Lords and Secretaries of the Admiralty, think it no shame to job the patronage of such great national establishments as the dockyards, for the sake of influence at elections. It afforded no room for any moral imputation upon the late Ministry, that it was composed for the most part of unknown and inefficient men, or that Mr. Disraeli introduced a Budget which excited that most formidable of all kinds of opposition—derision; but it does afford ground for the gravest censure of their conduct, that at a time when the public mind was excited upon the subject of the national defences—or at any other time—they should have appointed incompetent persons for the service of the dockyards, avowedly for the purpose of influencing elections. It should be remembered, too, that this was done in spite of the earnest remonstrances of the responsible officer, and in contravention of the principle laid down by Sir Francis Baring—and rigidly adhered to until the Duke of Northumberland became First Lord, and Mr. Stafford Secretary, of the Admiralty—that dockyard appointments should be regulated by merit and capacity alone. We cannot wonder that so many ten-pound householders should make it a rule to job and sell their political privileges, when such examples are set before them by men in high places. When the House of Commons deems it just and proper to institute a criminal prosecution—or, latter still, an impeachment—against one of its own members for bribery, or for a more flagrant offence, like that charged against Mr. Stafford, we shall believe, *but not till then*, that it is really desirous to purify the constituencies, and to clear its own character and dignity from the imputations that now so seriously affect the one and detract from the other.

THE COURT.

THE COURT AT OSBORNE.—Her Majesty and Prince Albert, accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, the Princesses Alice, Helena, Louisa, Princess Arthur, the infant Prince, and suite, left Buckingham Palace at eight minutes before two o'clock on saturday afternoon, for the Isle of Wight. The Queen and the Royal party were conveyed by a detachment of Lord Dreadnought's Nine Elms station of the London and South Western Railway, and left by a special train for Gosport. The illustrious party crossed the Solent in the *Fairy* Royal yacht, and arrived at Osborne at ten minutes before six o'clock.

On Monday the Queen and the Prince, with the Royal children, walked and drove in the grounds of Osborne.

On Tuesday the Queen again drove out in the grounds. His Royal Highness Prince Albert and the Royal children walked as usual in the [illegible].

On Wednesday the Queen and Prince Albert, accompanied by the Princess Helena and the Princess Louisa, drove out in a pony carriage, and returned to Osborne about six o'clock.

On Thursday afternoon his Royal Highness Prince Albert embarked on board the screw steam-ship the *Impregnable*, and proceeded a few miles out to sea, at the rate of speed of that vessel along the measured mile. The Royal Highness returned to Osborne at half-past five o'clock. The Queen and the Royal family went out, as usual, in the grounds.

THE ARRANGEMENTS of the Court for the present season have been announced since the arrival of her Majesty in the Isle of Wight. The Queen will return to town on the 24th instant. Her Majesty's birthday will be celebrated on the 24th of May. It was generally told upon that occasion; but three drawing-rooms are announced during the month of June, as follows:—On Friday, the 2nd of June; Tuesday, the 14th of June; Thursday, the 23rd of June. It is also her Majesty's intention that state balls shall take place at Buckingham Palace on Wednesday, the 15th of June, and on Wednesday, the 29th of June; and that concerts shall be given on Friday, the 3rd of June, Monday, the 20th of June, and on Monday, the 4th of July.

The christening of his Royal Highness the infant Prince will take place on Monday, the 27th of June.

FASHIONABLE ENTERTAINMENTS.

The Duchess of Norfolk gave a grand ball on Wednesday night, at Norfolk House, in honour of her Royal Highness the Princess Mary. The invitations were limited to about five hundred guests, including the Diplomatic members of the aristocracy. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary arrived about a quarter past eleven o'clock. The Duke of Cambridge came shortly afterwards. During the evening the Princess Mary honoured Lord Edward Fitzalan Howard with her hand in a quadrille, the Duke of Cambridge dancing with the Lady Adelaide Fitzalan Howard.

Lady Stanley of Alderley gave a grand ball on Monday night, at her new mansion in Dover street. The invitations exceeded 700. The Duke of Cambridge honoured her Ladyship with his company.

Her Royal Highness the Duchess of Kent visited her Royal Highness the Duchess of Gloucester on Wednesday, at Gloucester House.

The Duchess of Sutherland has invited a large number of lords and gentlemen to meet Mrs. Beecher Stowe at Stafford House this day (Saturday).

The Earl of Clarendon gave a Cabinet dinner to his colleagues on Wednesday evening.

The Countess of Jersey had an assembly on Friday evening.

The Lady Constance Grosvenor gave birth to a son on the 28th ult. at Stanford-hall.

Note. The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.65 inches at the beginning of the week to 29.96 inches by 9h. a.m. on May 1st; decreased to 29.79 inches by 9h. a.m. on the 3rd, and increased to 30.30 inches by the end of the week. The mean reading for the week, at the height of 82 feet above the level of the sea, was 29.842 inches. The mean daily temperature has varied during the week from 6° below, on April 29th, to 4° above its average on May 1st. The mean temperature of the week was 50·8°, being 0·4° below the average of thirty-eight years. The mean daily range of temperature during the week was 19°. The range of temperature during the week was 33·3°, the highest reading 70·9°, and the lowest 37·6°, both occurring on the same day. Rain fell during the week to the depth of rather more than nine tenths of an inch. The mean reading of the barometer for the month of April, at the level of the sea, was 29.634 inches. The mean temperature of the air was 46°, being 0·8° below the average of thirty-eight years. The mean temperature of the dew point was 38·9°. The mean degree of humidity was 78; complete saturation being represented by 100. The mean daily range of temperature was 14·4°. And rain fell to the depth of 3·4 inches.

LEWISHAM, May 6th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—In the week ending April 30, the births of 1252 children were registered in the metropolitan districts: of these, 587 were boys, and 770 were girls. In the eight corresponding weeks of 1843-52 the average number was 1441. Registering the deaths of the Registrar-General observes, that it is gratifying to observe a decided improvement in the public health. In the first three weeks of April, the deaths in London were 1346, 1946, 1822; in the last week of the month the examination is considered le, the number being 1089. In the ten corresponding weeks of 1843-52, the average number of deaths was 980; which, if raised in a certain proportion, according to increase of population, becomes 1023. The excess of mortality in last week, above the estimated amount, is, therefore, 66—a result which is much more favourable than any of those returns have yielded since the cold weather set in. In January the deaths were about 1000 weekly; since that time they have ranged from 1260 to 1946. In the past week 227 deaths are referred to zymotic diseases: of these 67 are hooping-cough, and 41 typhus. To dropsy, &c. 46. To tubercular diseases, 222—still 31 above their average: 151 of these were consumption. To diseases of the brain, &c. 117. To diseases of the heart, &c. 70. To those of the lungs, &c., 206: of these, 100 were bronchitis, and 75 pneumonia. To diseases of the stomach &c., 60; and 24 to violence, &c. From these general particulars, compared with previous returns, it will be seen that fatal cases arising from diseases of the respiratory organs, have declined in the last two weeks from 342 to 206: those from zymotic diseases suffer little in the general results. Typhus is on the decline. The Registrar-General remarks, speaking of meteorological observations, that it is difficult to over-rate the value when these observations possess and will acquire—as the diseases of men, the crops of the agriculturists, as well as the health of the rich and many manufacturing processes, depend on the state of the weather to an extent which has not yet been determined. That this is the case, our own observations, published in this paper during the past quarter, have abundantly proved

METROPOLITAN MEETINGS AND ANNIVERSARIES.—On Friday week, the London Library and Society, at the offices, in Hanover-square, the Sunday-the London University College, in the Lecture-room, Gower-street (on Monday, the Home and Colonial School Society, at the Institution, Gray's Inn-road; the Wesleyan Missionary Society, at Exeter-hall; and the Naval and Military Bible Society, at Willis's Rooms.—On Tuesday, the Literary Association of the Friends of Poland, at the Sussex Hall, Leadenhall-street; the British and Foreign Bible Society, in Exeter-hall; the Medical Benevolent College, in Freemasons' Tavern (upwards of £2000 was collected); the Queen's College Hospital, at the Albion Tavern, the Middlesex Hospital School of Medicine, in the hospital; the University of London, in the large hall of King's College, the St. Pancras School, in the school-room, at Pancras-churchyard; the Wykehamists, at Willis's Rooms; the Evening Classes for Young Men in London, at the Lowther Arcade, the Strand; the Society for the Preservation of Life from Shipwreck, at their offices, John-street, Adelphi (Captain Sammarez, R.N. in the chair).

ADDRESS TO DR. JACKSON.—An address from the parishioners of St. James's, to the Bishop of Lincoln, was presented to him on Wednesday, at his rectory in Piccadilly. After a few pertinent and feeling remarks, a copy of the address, beautifully illuminated, on vellum, with the signatures, and bound in red morocco, was handed, by the Hon. E. Byng, to the Bishop, who acknowledged it in suitable terms. In addition to the address, a testimonial of plate, to the value of nearly £700, is in course of preparation by Messrs. Wilkinson and Dobson, of Piccadilly.

THE ROYAL ACADEMY DINNER.—On Saturday week, according to custom, the President and Council of the Royal Academy, of Arts entertained a party of noblemen and gentlemen of distinction at the rooms of the association, in Trafalgar-square, on the occasion of the opening of "The Exhibition," Sir C. L. Eastlake, the President of the Academy, in the chair. The Lord Chancellor, the Earl of Aberdeen, Lord Dufferin, Chevalier Bunsen, the Baron de St. Paulo, Sir Charles Eastlake, Mr. Charles Dickens, and other gentlemen, addressed the company, in proposing the toasts of the evening.

THE GOVERNMENT EDUCATION BILL.—A public meeting was held at the Hall of Commerce on Monday evening. Mr. Wickham in the chair, when resolutions were carried disapproving of the Government scheme of education, as unsuited for, and tending to interfere with the carrying out of the voluntary principle.

CITY CENTRAL TERMINUS.—On Monday a very numerous and influential deputation, accompanied by the Marquis of Clanricarde, the members for the city of London, and several of the representatives for the metropolitan boroughs, waited upon Lord Palmerston, at the Home-office, to solicit the co-operation of Government in carrying out the above scheme. Several gentlemen of the deputation having explained the object of their visit, Lord Palmerston said he was happy personal feeling as well as official duty to promote a message possessing the sanction of bad feelings the shipowners tried to lower the wages 5s per month, but the men have refused it.

He recently received advices from the Baltic, we learn that the navigation was free, and that a large portion of the corn bought on British account was being despatched

The Prussian 12-gun war-steamer, built at and named *Dantzic*, of 360-horse power, and a crew of 180 men, will start for Portsmouth in a few days to be in her care, and thence proceed to join the British squadron in the West Indies

Appuldercombe, in the Isle of Wight, so well known as one of the finest mansions in the island, is to be offered for sale in lots, no sale having been effected of it as a whole. It belongs to the Earl of Yarborough.

Captain Oscar Lafayette (grandson of Lafayette) has resigned his commission in the French artillery, he having refused to take the oath as a deputy.

An actor in the Mayence Theatre, having in vain besought an actress about to leave the company, to change her determination and stay, bit off part of her nose while pretending to give her a farewell kiss. The wound will require five or six weeks to heal up

On Wednesday an elderly man, named Southcott, fell from the scaffolding of a building at Roxburgh-terrace, Haverstock-hill, struck a load on the curb-stone, and was taken up quite dead.

The quantities of cocoa and coffee imported into this country in the three weeks ending 5th April are as follows:—Cocoa: 1851, 817,321 lb; 1852, 779,747 lb; 1853, 851,940 lb. Coffee: 1851, 4,885,977 lb; 1852, 2,145,688 lb; 1853, 2,645,845 lb.

From a Parliamentary return of the schools managed by the Commissioners of Education in Ireland, it appears that the number of scholars in the Royal schools was, on the 1st of May, 1852, 434; in the Endowed Classical schools, 302; and in the schools of private endowment, 7, total, 1·3.

The gross sum realised by the sale of estates, principally situate in the county Galway on Friday week amounted to £18,000.

The *Waterford Mail* says "that crime of every description has nearly ceased to exist, and that now peaceable and well-disposed county.

The annual distribution of prizes to the students of St. Bartholomew's Hospital took place on Thursday; the president of the hospital, Sir Alderman Rumbold, in the chair.

Ralph Waldo Emerson has in print, and nearly ready for publication, a volume of impressions received during his visit to England.

Newcastle has 14 public libraries; Leeds, 20; Birmingham, 21; Liverpool, 36; and Manchester, 61.

The Marquis de Valdeiglesias, the Spanish Ambassador to France, died in Paris on Tuesday evening.

Capt. William Vincent, of Pembroke-house, is appointed to succeed Capt. Richard Barton as Marine Superintendent of the Royal (West India) Mail Steam-Packet Company at Southampton

We hear that it is in contemplation to form a Medical Board at Somerset House, for the purpose of directing the medical affairs of the Navy.

Information has been received by the Board of Trade, from her Majesty's Consul at Bahia, that yellow fever has again made its appearance at that port.

John Guthrie, Esq., has been appointed Sub-collector of Customs at Geelong, Australia; and Richard Down, Esq., Landing-surveyor, at the same place.

The Duchess of Alba (sister to the Empress of the French) has left Spain, on a visit to Paris.

Three months ago three Mormons only were known at Malmö, in Sweden. These three have made so many proselytes that there are now 60—which 29 are Swedes—wonderful, as their preachers pay 14 Swedish dollars to each convert baptised!

The annual distribution of prizes in the various departments of King's College took place on Saturday, in the large theatre. The Archbishop of Canterbury presided.

A terrific conflagration took place at Brooklyn navy-yard, which destroyed ship timber valued at 120,000 dollars.

The proposal for the erection of a new church, or rather cathedral, on the site of St. Peter's, in Church-street, was negatived by the select vestry at Liverpool, on Tuesday.

The barque *Eliza*, arrived at Boston, fell in, on the 28th of March, with the ship *St. George*, from Glasgow for Boston, in a sinking condition, and took off her crew, twenty-one in number.

General Sir Walter Gilbert, Bart., after fifty-two years' service in India, has returned, viâ Egypt, to England, in a weak state of health

An explosion, on Saturday last, at a chemical manufactory at Battle-bridge, while preparing sulphate of ammonia, caused the death of one man, and severe injuries to another

The steamer *Melbourne* arrived safely in Swan River on the 7th of February, after a four months' voyage, and several mishaps on her passage out

The bill for the conveyance of a line of submarine telegraphs between France and Algeria is at present under consideration of the Council of State. Mr. J. W. Brett is the *concessionaire*.

Steam-packet navigation between Stettin and Stockholm will open on the 16th, and continue weekly. The *Sagler* steamer, built in London, is destined for this service

A man named Walter Partridge (keeper of a beer-shop in the Harrow road) has been fined £13 9s. for purchasing a Minie rifle of a private of the Coldstream Guards.

Leipsic fair has terminated. The demand for leather, cloth, and other staple articles has been brisk, but less business than usual was done in English cottons

On Tuesday last, Sarah Jones, aged 17 years, of Chester, was shot unintentionally by Edwin, a youth 12 years of age, son of her master, Mr. Wren, tea merchant, Balliol road, Bootle.

Mr. Manjilla, general of the Argentine army, and brother-in-law of Rosas, has, after a long residence in France, set out for Buenos Ayres.

The chicory factory of Messrs. Grice and Co., George-yard, Whitechapel, was much injured by fire early on Wednesday morning.

The Jacksonian Prize has been awarded by the College of Surgeons to Mr. Henry Thompson, of Wimpole-street, Cavendish-square.

At Liverpool, recently, a strange fish, shaped somewhat like a turbot, four feet long by three feet wide, and with a mouth of enormous capacity, was caught in George's Dock.

On Wednesday, a carman, named Wilmott, while driving a cart in Lue beth-walk, came in contact with a brewer's dray, and was thrown out, fell under the wheels of the dray before it could be stopped, and was killed on the spot

By a decision of the Lord Chancellor of Ireland, a young newsagent in Dublin, named Russborough, has come into possession of "ten thousand a year."

The provincial journals still report movements in all quarters for an advance of wages, coupled, in some places, with demands for fewer hours, and oil or boons.

The Pope has ordered the Roman artist, Jacometti, to execute in marble a statue representing "Judas giving the kiss of treason to our Saviour," which is to be placed in an upper hall of the Vatican.

The artist Sherwan, condemned to death for the murder of his wife in Ireland's Eye, but who is transported for life, has sailed for Western Australia in the *Robert Small*

The Minister of Peru at Rome has requested the different sculptors in the city to send in designs for an equestrian statue of Bolivar.

Thursday being Ascension-day, the children belonging to the different parochial schools throughout the metropolis, beat the boundaries of their respective parishes in procession as usual.

The Greek Government has concluded a postal convention with the Glasgow and Liverpool Shipping Company, establishing a communication twice or thrice a month between Liverpool, Gibraltar, Malta, Syra, Smyrna, and Constantinople.

The Chancellor of the Exchequer has acknowledged the receipt of Bank-notes, value £800, "in further payment of a debt long due to the nation."

Advices from Canada refer to the buoyancy of the revenue. duties in the tariff have been reduced £70,000 for the year, and a surplus revenue will exist of 1,200,000, of which £75,000 is to be appropriated to the sinking fund

On Friday evening week an explosion of gunpowder took place in the house of a grocer named Smallshaw, at New Springs, near Wigan, by which he and his wife, and a Mrs. Lever, who was making some purchases, were killed.

On January 1, 1852, the number of paupers in Ireland relieved on that week-day was 170,854; and the 1st January last, 111,[illegible] five years, after deducting the increase in one place of seven, was [illegible].

Mr. Daniel Cannon has been fined by the Excise £25 for mixing chromate of lead with snuff. The full penalties were £[illegible]. The defendant said he only did it to add brilliancy to the mixture

There has been a strike among the sailors at Exmouth: in consequence of bad freights the shipowners tried to lower the wages 5s per month, but the men have refused it.

He recently received advices from the Baltic, we learn that the navigation was free, and that a large portion of the corn bought on British account was being despatched

The Prussian 12-gun war-steamer, built at and named *Dantzic*, of 360-horse power, and a crew of 180 men, will start for Portsmouth in a few days to be in her care, and thence proceed to join the British squadron in the West Indies

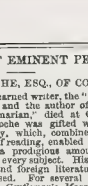
The annual distribution of prizes to the students of St. Bartholomew's Hospital took place on Thursday; the president of the hospital, Sir Alderman Rumbold, in the chair.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

OBITUARY OF EMINENT PERSONS.

JAMES ROCHE, ESQ., OF CORK.



THIS learned writer, the "J. R." of the literary world, and the author of "Recollections of an Octogenarian," died at Cork on the 1st ult. Mr. Roche was gifted with an extraordinary memory, which, combined with his constant habit of reading, enabled him to store up in his mind a prodigious amount of knowledge on almost every subject. His familiarity with classical and foreign literature, has seldom been surpassed. For several years, he contributed to the *Gentleman's Magazine* under his well-known initials: but his highly-interesting, though discursive articles, were so surrounded, in the pages of our venerable contemporary, with the dreary speculations of its antiquarian correspondents, that they attracted less public notoriety and approval than they deserved, or would have obtained in a more popular periodical.

Mr. James Roche, who had reached his eighty-fourth year, was brother of the late Mr. William Roche, M.P. for Limerick, and third son of Stephen Roche, Esq., of Grange Castle, county Kilkenny, by Sarah, his second wife, daughter and co-heir of John O'Bryen, Esq., of Moyraine. The Roches, of Limerick, claim to be a branch of the ennobled house of Fermoy.

Mr. James Roche married Anne, daughter of John Moylan, Esq., and has left two daughters, both married. He was long connected with banking pursuits, and was a magistrate for the city in which he resided.

REAR-ADMIRAL SIR THOMAS FELLOWES, C.B.

THE death of this highly-distinguished officer occurred at the vicarage, Great Bedwyn, Wilts, the residence of his son-in-law, the Rev. Wm. Collings Lukis, on the 12th ult. He had completed his 75th year. Sir Thomas was brother of Sir James Fellowes, Knight, M.D., F.R.S., and youngest son of the late Dr. William Fellowes, of Bath, Physician Extraordinary to George IV., when Prince Regent. He was born at Minorca in 1778, and entered the Royal navy, on board the *Royal George*, towards the close of the year 1797 (having previously been midshipman in the East India Company's service), and was eminently distinguished throughout the war. In "O'Byrne's Naval Biography" the details of Sir Thomas Fellowes's exploits fill two closely printed columns of that work

Having gained his lieutenancy, he was appointed to the *Sweeper* gunbrig, and afterwards to the *Unique*, 14 guns, with which he served with distinguished honour in the West Indies, and was rewarded with a Commanders' commission on the 15th September, 1800. In the following year he was appointed, under Sir Richard Goodwin Keats, to the chief command of the whole Cadiz flotilla, consisting of 30 sail of gun boats. Captain Fellowes was promoted to post rank 4th March, 1801, when he resigned the command of the Cadiz flotilla. Early in 1812 he was appointed to the *Fame*, 20, in which ship he recaptured the *Perthshire* letter-of-marque; and destroyed the notorious heavy-armed American privateer, *Rosamond*, near Puerto Cabello. After the peace we do not think he was employed till he was appointed to the *Dartmouth*, 46, on the 23rd of February, 1827, when he sailed for the Mediterranean with the dispatch of the treaty between Great Britain, France, and Russia, for the protection of Greece. At the battle of Navarino, which was fought on the 20th of the following October, Sir Thomas, by bringing the *Dartmouth* into action, together with six fire-ships and four other vessels entrusted to his care, was the theme of praises and commendation throughout the fleet. He paid off the *Dartmouth* 10th March, 1830; and since that period has been successively commissioned to the *Pembroke*, 74, and the *Vanguard*, 80, on the Lisbon and Mediterranean stations. He was appointed Naval Aide-de-Camp to her Majesty in 1841; and in 1843 to be Captain-Superintendent of the Royal Naval Hospital and Victualling-yard at Plymouth.

He received his flag as Rear-Admiral in 1849. Sir Thomas was a Knight of the Russian order of St. Anne, of the Redeemer, of Greece; of the Legion of Honour in France, and of the Spanish orders of Charles III. and San Fernando.

Sir Thomas married, first, 9th November, 1813, Catharine Mary, eldest daughter of the late Sir William Addy, Bart: she died in October, 1817, leaving one son, the present commander, William Addy Fellowes, R.N., and two daughters. He married, secondly, 24th August, 1819, Mary Anne Colborne, daughter and heir of Colonel Isaac Humphreys, of the Bengal Artillery. Lady Fellowes survives, and has several children.

REAR-ADMIRAL SIR CHARLES THOMAS JONES.

THIS gallant officer, whose death occurred recently, was the representative of the family of Jones, of Fonthill, Monmouthshire. Sir Charles was born in 1778, and entered the navy May 2, 1791, on board the *Vulcan* fireship. During the first five years of the French revolutionary war he served with the Channel fleet under Lord Howe and Admiral Hotham, in the former of which ships he witnessed the occupation of Toulon, in August, 1793; and was wounded on Lord Howe's action, June 1, 1794; and in the latter participated as midshipman in the action fought off Isle de Groix, June 23, 1795

When Commander—a rank Sir Charles attained after twelve years' active service—Lieutenant, August 15, 1810—he was employed, from June 16, 1814, to December, 1818, in the *Harrier* sloop, among the Canary Islands, where the merchants, in token of their grateful esteem, presented him with a magnificent piece of plate. He became Post Captain Aug. 1, 1819, accepted the retirement as such Oct. 1, 1846, and was made Rear-Admiral August 27, 1851.

Sir Charles (upon whom the honour of knighthood had been conferred in 1836) married, in 1817, Jane Helen Melville, only daughter of Gilbert Mitchell, Esq., of Bermuda, and had four sons and first, Charles Saltern (who died unmarried, September 15, 1842); second, Maurice, Lieut. R.N.; first, Gilbert, Lieut. H.E.I.C. Madras Artillery; and fourth, John Matthew, of the Inner Temple.

Sir Charles was a Magistrate and Deputy-Lieutenant of Montgomeryshire, and served the office of High Sheriff in 1832.

THE DEAN OF PETERBOROUGH.

THE Very Rev George Butler, D.D., Dean of Peterborough, son of the Rev. Weston Butler, was born at Pinner, July 5, 1774. He took his degree at Cambridge, in January, 1794, being then only nineteen years old, he was Senior Wrangler and Senior Smith's Prizeman of his year—Lord Lyndhurst (then Mr. Copley, of Trinity College) being in each case second in turn. The following year he travelled (principally on foot) through a great part of Germany, where he formed the acquaintance of Klopstock, Schiller, Goethe, and other eminent literary men. On his return he kept his terms at Lincoln's-inn, and was on the point of being called to the bar when the appointment of mathematical lecturer in his college altered the direction of his life. After being Fellow of his college, and a select preacher before the University, he was, in 1805, elected Head-master of Harrow School. In 1810 he was presented to the college rectory of Gayton, in Northamptonshire. He continued in his arduous office at Harrow till 1829, when, after four-and-twenty years of duty there, he retired to the living of Gayton, and devoted himself with the same unwearied energy to the functions of a parish clergyman. In 1836 Dr Butler became Chancellor of the diocese, and in 1842 was appointed by Sir Robert Peel to the canonry of Peterborough, which on the latter office he continued till his death, which occurred on the 30th ult. Besides his great mathematical attainments, Dean Butler was also a distinguished classical scholar, and spoke German, French, and Italian with correctness and fluency. He was practically versed in chemistry and other branches of physical science. He was a good musician and draughtsman; and he excelled in all athletic exercises, being one of the best runners, fencers, and swimmers of his time. A remarkable example of his love of gymnastic exercises was afforded by his boat, which was driven by a paddle-wheel worked by himself when in the act of rowing. But what was, on the ground, a pleasant hobby became the principle by which he was riveted to the scene of a most daring and successful act, that obtained for him a medal from the Royal Humane Society.

MR. SAMUEL WOODBURN.

THIS well-known amateur and dealer in pictures of old masters, early drawings, and prints, died on the 2nd ult., at his residence in Piccadilly, at the age of seventy-three. Mr. Woodburn (says the *Literary Gazette*) has been long considered one of the first, if not the very first, judges of ancient art of his time, and has helped, more or less, to form many of the finest private picture-galleries of Europe. The collections of the Duke of Hamilton, grandfather of the present Duke, and of Lord Fitzwilliam, now at Cambridge, were formed chiefly by him; as were also the Dimsdale, the Sykes, and the Lawrence collections. Of the last of these, valued at £100,200, at least half were gathered and supplied by Mr. Woodburn. In testimony of his services Sir Thomas Lawrence painted Mr. Woodburn's portrait, and presented it to him. Lord Fitzwilliam left 3000 guineas, a token of quite habitual and confidential employment. He probably, leaves behind him no one in equal in opinion on ancient art. He was possessed, at the time of his death, of a large collection of pictures, drawings, and engravings.

THE LATE DUKE OF WELLINGTON'S WILL.—In the late Duke's will there is contained a clause appointing those who were holding at the time of his death the offices of Prime Minister, Chancellor of the Exchequer, and Speaker of the House of Commons, to be the executors thereof—viz. the Earl of Derby, the Right Hon Benjamin Disraeli, and the Right Hon. G. Shaw Lefevre, who, having respectively renounced taking upon themselves probate of the will, letters of administration annexed thereto were on Thursday, the 5th inst., granted to his Grace the Duke of Wellington.

THE UNITED STATES EXPEDITION TO JAPAN.

THE presence of a large and powerful American fleet in the Eastern Seas possesses an unexpected interest at the present moment, in consequence of the intestine convulsions which endanger the throne of the present Emperor of China, and the probability that he may solicit on his behalf the intervention of any civilised foreign power which may be able to render him assistance against the successful rebels, who are defeating his troops and ravaging a large portion of his empire. Some account of the vessels composing the American Expedition to Japan, and of its gallant Commander-in-Chief, cannot, therefore, fail to be interesting to our readers.

The Japan expedition was several times on the point of sailing before its actual departure; but first, the dispute about the North American fisheries; secondly, the Lobos Islands affair; and, more recently, the Cuban difficulties, each in its turn interrupted the course of this enterprise. The rumour that President Pierce had given orders to recall the expedition has recently been positively contradicted. The squadron, as originally intended by the late Administration, to be placed under the command of Commodore M. C. Perry, as the Commander-in Chief of the United States naval force in the East and China Seas, and with a view to his contemplated visit to Japan, consisted of the following vessels:—One ship of the line, the *Vermont*, 74; frigate *Macedonian*, 36; three steam-frigates—the *Mississippi*, Commodore Perry's flag-ship (of which fine vessel we give an Engraving), 10; the *Susquehannah*, 8; and the *Powhattan*, 6; one first-class steamer, the *Alleghany*, 2; five sloops of war—the *Saratoga*, 20; *Plymouth*, 20; *Vandalia*, 20; *Vincennes*, 20; and *St. Mary's*, 22: to be accompanied by a surveying ship, the *Porpoise*, 10; and three store ships *Supply*, 4; *Southampton*, 4; *Talbot*, 4. Total sailing vessels, 11; steamers, 4. Total number of vessels composing the squadron, 16. Total guns, 260. Officers, seamen, and marines, 4000.

This force, with the exception of the *Vermont*, 74, the *Macedonia*, 36, and the *Alleghany* steamer, is now assembling at Macao. The *Vermont* is ready to receive her crew; but, while the Board of Admiralty at Whitehall are constrained to admit the prevalence of desertions in the British navy, the difficulty in obtaining seamen is equally felt in the United States navy, in consequence of the temptations offered to seamen by the high rate of wages in the merchant service. Such is, indeed, the condition of the recruiting service, that it is impossible to say when, if at all, a crew of 800 men can be collected for the *Vermont*. Besides this, the number of men of all classes employed in the naval service of the United States having been limited by law to the small number of 7500, and Congress having failed at its last session to grant to the navy department the authority which is asked to enlarge the number, the withdrawal of the *Vermont* from Commodore Perry's squadron has become unavoidable. The *Alleghany* is now in the hands of the mechanics; but the delay in preparing her for sea will also probably render her services unavailable for the expedition. This, however, will not interfere with the contemplated visit of Commodore Perry to Japan; and it is said that, even with these reductions, a more efficient and powerful fleet never sailed from the American coast; although the vessels as originally proposed, carried but 260 guns. The strength of the expedition is not to be measured by that number. Every English sailor knows that American men-of-war carry more weight of metal to their size and tonnage than those of any other nation. Several of the vessels carry 10-inch shells, weighing 100 lb.; others 10-inch solid shot, weighing 128 lb.; others 11-inch shells, weighing 123 lb. The Americans affirm that no fleet carrying the same number of guns, or even of the same tonnage, has ever yet floated capable of producing such destructive results.

It is said that the expedition has not sailed with any hostile intentions towards the Japanese Government or people, and that it is not contemplated to use any force. But cases of quarrel are not wanting. The Japanese have barbarously seized American sailors, who have been shipwrecked upon their coast, and have confined them in cages. Commodore Perry will call the Government of Japan to account for these outrages. The Americans say that since Japan condescends neither to give reasons for what she has done, nor to apologise for it, it is necessary to ask her attention to the business in a way she will not be likely to refuse. So the expedition goes to "coerce the Government of Japan into civilisation," and if she will not consent to negotiate with a nation whose subjects she has treated with barbarity, she is to be taught a lesson of humanity, and "be made to wheel into the ranks of civilised empires."

COMMODORE MATTHEW C. PERRY, COMMANDER OF THE UNITED STATES EXPEDITION TO JAPAN.
FROM A DAGUERRÉOTYPE BY MEADE, BROTHERS, NEW YORK.

Among the subordinate results of the expedition will be the establishment of a coal dépôt upon the Japan coast; nor will the promotion of scientific objects be forgotten, unless more stirring occupation should intervene. Lord Wrottesley, in his speech in the House of Lords last week, bore cordial and generous testimony to the characteristic vigour and activity with which the Americans are labouring in the field of science; and the Japanese expedition is likely to bear rich fruit, if the Japanese accept the olive-branch which Commodore Perry will hold out to them. A squadron, under the command of Captain Ringold, will make a survey of the Chinese and Japanese Seas, and will, indeed, delineate the Asiatic coast up as far even as Behring's Straits. It is stated that, although Captain Ringold's corps of engineers and scientific men will contribute all they can to the knowledge of mankind by these explorations, his squadron will be within the call of Commodore Perry in the event of hostilities with the Japanese.

We conclude with some biographical details of Commodore Perry:—

Commodore Matthew C. Perry is a brother of the late Commodore Oliver Perry, whose fame is inseparably connected with the achievements of the American Navy on the Lakes, during the last war with Britain. He was born in Rhode Island, from whence he entered the naval service of the United States, as a midshipman, on the 18th of Jan., 1809; since which time he has seen more active service than almost any of his compeers. On receiving his warrant, he joined the schooner *Revenge*. He was shortly afterwards ordered to the frigate *President*. In November, 1813, he was transferred to the frigate *United States*; and in April, 1814, was again sent to the frigate *President*. On the 18th December, 1814, he was ordered to the brig *Chippewa*; after which he was transferred to the Navy-yard at New York, with the rank of Lieutenant. In the course of the active service above enumerated, as a Midshipman and Lieutenant, the gallant Perry participated in all the stirring events in which the vessels named were engaged, when he was in them, during the war with Britain; discharging his arduous duties with intelligence and intrepidity, and laying the foundation for the high reputation as an officer and gentleman which he has acquired in after years.

In August, 1819, he was ordered to join the ship *Cyane*; and in May, 1821, he was honoured with his first command, of the schooner *Shark*, as Lieutenant-Commanding. His next tour of duty was on board the ship of the line *North Carolina*, of which noble craft he was the First Lieutenant. Being promoted to the rank of a Master Commandant in 1830, he was immediately ordered to the command of the ship *Concord*, wherein he made a cruise of two years and seven months, for the most part in the Mediterranean. On his return to the United States, in January, 1833, he was transferred to the New York Navy Yard, and served there as second in command, as Master Commandant; after which, being promoted to the rank of a Captain on the 9th of February, 1837, he was transferred to the command of the steamer *Fulton*. In 1840 he took command of the steamer *Missouri*. In June, 1841, Captain Perry was ordered to the command of the New York Navy Yard, and remained until the treaty for the suppression of the Slave-trade made it necessary, in 1843, to despatch a United States squadron to the coast of Africa, of which he was placed in command. After serving a long tour of duty on that disagreeable and dangerous station, in 1846 Captain Perry was despatched to New York, on "special service," where he superintended the construction of Government docks and steamers. In March, 1847, he received the command of the home squadron, joining it in time to win imperishable renown, while rendering important services on the coast of Mexico. In November, 1848, Commodore Perry was detached from that squadron, and ordered to New York, as the General Superintendent, on the part of the Navy, of the construction of the Ocean Mail-Steamer Squadron. In this position he remained until March, 1852, when he was ordered to the command of the Japan expedition, on which duty he is now absent.

In his late annual report, the Secretary of the Navy thus alludes to Commodore Perry:—

The opening of Japan has become a necessity, which is recognised in the commercial adventure of all Christian nations, and by every owner of an American whale-ship, and every voyager between California and China. This important duty has been consigned to the commanding officer of the East India squadron; a gentleman in every respect worthy of the trust reposed in him, and who contributes to his administration the highest energy and ability, improved by long and various service in his profession.

In the course of this long, active, and varied service, Commodore Perry has not only widely distinguished himself by a display of gallantry and seamanlike conduct on all occasions, but he has given evidence of varied talents and attainments, such as have rendered his connection with the service of extraordinary benefit to his country; more especially in perfecting many of the improvements in the United States Navy, which experience and the progress of the naval science have rendered necessary. Activity, energy, and quickness of apprehension are the traits of character which, distinguishing Commodore Perry above most of his compeers in the service, have enabled him to outstrip almost all of them in the amount and the variety of public duties it has been his lot to perform.

THE STEAM-FRIGATE "MISSISSIPPI," UNITED STATES NAVY.

SHAKSPEAREAN COMMEMORATION, AT STRATFORD-UPON-AVON.—THE ORATION AT THE CHURCH-GATE.

OCEAN PENNY POSTAGE BAZAAR, IN MANCHESTER.

THIS BAZAAR was opened on Tuesday, the 26th ult., and closed on the following Friday; and the result far surpassed the most sanguine expectations of all who contributed to the demonstration. Its success was, in fact, complete and brilliant; and proved the deep and general interest felt in the movement to lift from the heart-communings of the sea-divided families of the British empire, and other lands, that grievous tax and impediment imposed upon it by the present high rates of ocean postage. The "Ladies' Olive Leaf Societies," formed for disseminating the ideas of peace and goodwill among the populations of Christendom with the help of friends they won to the work, supplied the articles for the Bazaar. And these came up in boundless variety from almost every part of the United Kingdom; the work of a thousand busy fingers, plied with delicate taste and skill. And the place for this display was most fitting the large room in the Manchester Exchange, perhaps the most important focus-point of commercial intercourse in the world. The hall was gracefully and admirably decorated; and the two parallel rows of stalls, extending nearly the whole length of the room, were arched and embellished with exquisite taste, presenting throughout the four days' sale a most picturesque object for the eye to dwell upon. The ladies who attended the stalls were chiefly members of "Olive Leaf Societies," in Lancashire. One came all the way from Plymouth to superintend the sale of articles contributed in that town. Another was present from Chatham, Kent; and one from London. The ladies of Manchester were indefatigable, and entered into the work with an animation and earnest zeal that seemed to increase in vivacity to the last. One, who had a brother or sister in Africa, and twenty cousins in Australia, furnished a splendid stall, chiefly from articles wrought in her own house by herself and a skilful milliner employed to assist her for a week or ten days. At this stall alone more than £100 were taken.

The hall was well filled with visitors; frequently being excessively crowded for several hours at a time. The receipts at the door for admission the first day amounted to over £60, although the charge was 2s. 6d. per ticket. Nearly the whole stock of articles was sold without recourse to auction. The gross amount received exceeded £1000, which, after all expenses are deducted, will supply the means of agitating the question of Ocean Penny Postage until the boon shall be fully realised to mankind. And the joy and gladness which it will bring to the hearts and homes of millions, will be a rich reward to those benevolent ladies whose gentle and social activities, taste, and skill, stocked the Bazaar in Manchester.

COMMEMORATION OF THE BIRTH OF SHAKSPEARE.

ST. GEORGE'S DAY (April 23) is held to be the day on which Shakspeare was born, at Stratford-upon-Avon, A.D. 1564. Some uncertainty prevails as to the above being the actual date of the Poet's birth; and the feeling that an event so closely associated with the glory of England should be celebrated upon the day of her patron Saint may possibly have led to this adoption. The town of Stratford and its inhabitants, it has been truly said, have existed on Shakspeare and his fame for more than two centuries; and we regret that, in return, they have done so little to hallow his memory. There have been various "Commemorations" of the Poet's birth, it is true; but, as far as Stratford is concerned, they have been for its pelf; and when, a few years since, the natal house in Henley-street was about to be taken down, it required an appeal to the world to save it from destruction. The memory of Shakspeare is, however, about to confer still another benefit upon Stratford; for, we agree with a writer in the *Birmingham Journal*, that had it not been for the birth of Shakspeare in Henley street, we very much question whether, in this said Parliamentary session of 1853, a bill would have been before the House of Commons for bringing the town of Stratford into connection with the great trunk lines of railway which now stretch from one end of the land to the other. In the prospectus, the circumstance which has made Stratford the Mecca and the Jerusalem of all who speak the English tongue, was dwelt upon as the only guarantee for the success of the scheme which required to be mentioned; so that in the middle of this money loving nineteenth century Shakspeare may be considered as "patron" and originator of the project for giving his native town a railway.

But, the course of "Commemorations" at Stratford "never did run smooth," and this year has added its proof. It appears that a number of Birmingham gentlemen made arrangements for a "pilgrimage" to the birth-place and the grave; to be followed by two concerts, a series of orations, and a dinner in the evening. Unfortunately, in doing so, they did not think proper to consult the influential residents of Stratford-on-Avon and its neighbourhood, who have been accustomed to celebrate the event by a dinner at the Town-hall. The consequence was that these gentlemen took no part in the more attractive programme, but simply dined together on the 23rd, under the presidency of William Judd Harding, Esq. The other party, not deeming Saturday a suitable day for a demonstration of the nature intended, fixed it for Tuesday the 26th of April, the day on which Shakspeare was baptised, and the earliest well-ascertained date of his existence. The weather was bright and smiling, but not so the Stratford people, who held aloof from the celebration, and there was no public reception of the visitors. The omnibuses containing the "pilgrims" did not arrive at Stratford until eleven o'clock in the forenoon, and it was twelve o'clock before the "pilgrimage" commenced at the One Elm, near the town, from whence the procession arrived in due time at the house in which Shakspeare was born, and into which they entered. In about ten minutes Mr. George Linnæus Banks ascended a temporary platform in front of the ancient abode of Shakspeare, and delivered an oration on his genius, addressing the assembly as "men of Warwickshire," and very properly rebuking the apathy of the townspeople.

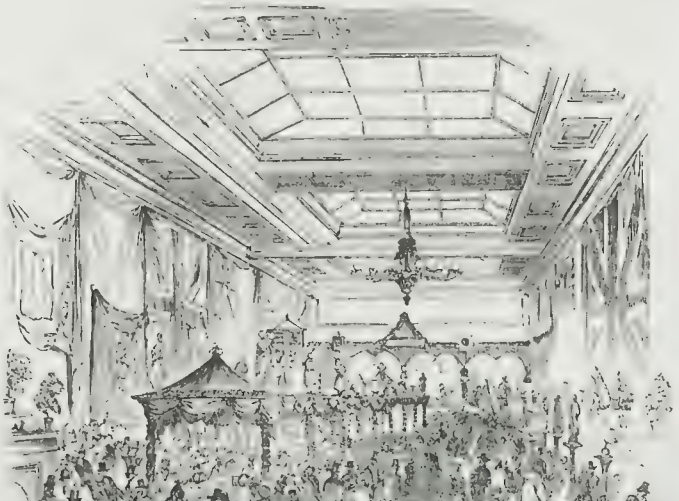
The procession then walked to the church of the Holy Trinity, accompanied by a considerable concourse. On the arrival of the multitude at the church doors, "the sordid spirit" was fully exhibited in the form of a placard, in large letters, stating that a gratuity would be expected for the clerk. Great numbers applied for admission, and it may be presumed that the clerk (or "money changer," as he ought to be called), profited considerably by this "order of the day." The homage of the pilgrims being duly paid to the poet's tomb, they proceeded to the roadside adjacent to the principal graveyard, where, on a platform, Mr. James Bennett, tragedian, of the Theatre Royal, Birmingham, delivered with much effect, some extracts from an ode composed for the occasion, by Mr. Ouseley, of Shrewsbury, entitled "The Grave of Shakspeare," and commencing thus:

> Speak not!—scarce utter breath; this hallowed spot
> Entombs the dust of one whose world-wide fame
> Crowns him the master spirit of all time
> Here "gentle Shakspeare" sleeps. Within these walls,
> Cramped in a little space, the mouldering form
> That gave to thought a substance, and portrayed
> Visions of beauty ne'er before conceived,—
> Enshrined here lies.

The Illustration shows this impressive scene, with a portion of the beautiful lime-covered walk. This was followed by the chanting of Shakspeare's magnificent peroration from "The Tempest"—

> "The cloud capp'd towers."

The chanting was given with much effect, and, for the occasion, was peculiarly appropriate. It was performed by Messrs. Savage, Fellows



"OCEAN PENNY POSTAGE" BAZAAR, AT MANCHESTER.

Hall by Matthison, Morley, Heritage, Taylor, Bickley, and Stillard. These objects of the "pilgrimage" being attained, the procession moved to the centre of the town, followed by a large crowd

The next object of attraction was the grand musical festival, held in the Shakespeare Rooms, which was very well attended; the principal artists being Mrs. Bull, Miss Wight, Mr. Sims Reeves, Mr. F. Mori, Mr. Glyde, and Mr. Lazo. In the course of the proceedings, Mr. Vandenhoff, the tragedian, delivered an oration on the genius of Shakspeare, in which he read the death-scene of *Cardinal Beaufort*. The performances were highly satisfactory, and constituted a very suitable portion of the commemoration.

The festivities concluded with a public dinner held in the Town-hall, and which was ably presided over by Mr. B. Webster, late lessee of the Haymarket Theatre

After the festival, Mr. George Lindsay Banks presented a pair of small and elegant Library bellows to several gentlemen who had contributed their assistance to the festival; as well as to one of the artists of this Journal. The value of the gift consists in the wood with which the bellows are formed being selected from an aged elm tree, under which the principal affairs of Stratford-on-Avon were formerly conducted. A gentleman of fortune gave a very high price for this ancient relic, intending to have some articles of furniture made from it. He died before he could fulfil his design. Mr. J. C. Onions, of Birmingham, purchased the wood, and made from it these memorials, which he kindly gave to Mr. Banks for presentation

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Friday, April 29.

JEWISH DISABILITIES BILL.

The Earl of Aberdeen, in moving the second reading of the Jewish Disabilities Bill, frankly admitted that his former opinions against the present bill were founded on a remnant of that old feeling against the Jewish race which at one time prevailed so strongly all over Europe. The principle established by the legislation of recent times was, that religious truth or religious error should not be the test of qualification for civil rights; and the political emancipation of the Jews was all that was now wanting to complete our civil liberty. The noble Earl emphatically warned their Lordships of the danger of a serious collision with the House of Commons, if they went on year after year refusing the just demands of the House of Commons in a matter in which their own body and compassion were essentially concerned.

The Earl of Shaftesbury moved that the bill be read a third time that day six months. In resisting these demands, he deemed that he ought to be regarded as an enemy to the Jewish people. All personal sympathy had long since ceased. He respected them; he remembered their past, he contemplated their future. He saw them to be now under a cloud, but hereafter to be the sovereign family of the human race.

The Earl of Aldemarle said it was not argument, but prejudice that hindered the Jews from obtaining admission into Parliament; and this prejudice would soon die away, as the prejudice against Scotchmen had died away. To treatment of the Jews was not a bad test of the enlightenment of a country. Spain, Portugal, Russia, and the Pope oppressed the Jews; but in France for forty-five years, and in Holland for two hundred and fifty years, they had been admitted to a perfect equality of privileges with their fellow subjects.

The Earl of Darnley and the Earl of Winchilsea opposed the bill

The Archbishop of Dublin refused to discuss this measure as a benefit to the Jews. He regarded it rather as a bill for the relief of the electors, to enable them to return whom they pleased. He was not anxious to send Jews into Parliament, but he wished to see the restrictions removed from Christians, so that they might have liberty to elect those whom they thought fit. He was dissatisfied that declarations were required at all of members of Parliament. He wished to see all religious disabilities, of whatever kind they might be, swept away altogether

The Bishop of Salisbury declared that, if this bill passed, the Christian character of the country would be impaired, if not destroyed

The Bishop of St. David's, on the contrary, asked what there was in the religion professed by a portion of her Majesty's subjects, which ought to disqualify them the faithful discharge of the duties of a representative in Parliament. The phrase of unchristianising the Legislature was an excellent one, it conveyed no notion whatever. A Christian Legislature was not necessarily a Legislature in which none but Christians were admitted. A Christian Legislature might be one which represented the constituencies of a Christian country, which was not only as good as the other, but much better. Suppose the bill should pass, and not a single Jew thereafter should enter the House of Commons. Would the Legislature in that case be unchristianised

The Earl of Harrowby opposed the second reading, not because he was afraid of the numbers of the Jews, but because he believed that while the bill would be extremely injurious to the religious feelings of the people of this country, it would not confer any adequate advantage on those who were the special objects of it. The people of this country might find a sufficient number of persons to represent them without choosing among the 5000 or 10,000 Jews scattered over the country who, in respect to property, were eligible to become members of the Legislature

The Duke of Argyll supported the bill

Lord Brougham, who said he spoke under the pressure of illness, supported the bill. He bore testimony to the liberality of the Jews in supporting the charities of the metropolis.

The House divided—

Content (present)	.. .. ..	70
Proxies	.. ..	46
		116
Not-Content (present)	.. ..	96
Proxies	.. .. ..	68
		164

Majority against the bill —49

Their Lordships adjourned at a quarter to ten o'clock.

HOUSE OF COMMONS.—Friday, April 29.

A discussion of some warmth took place between Sir J. Walmsley, Mr. Bright, and Lord Palmerston, on the subject of the seizure of warlike stores at Rotherhithe, and the employment of police to watch the residence of M. Kossuth, and other political refugees. Mr. Bright called upon the noble Lord to say that he had no evidence to connect Kossuth with the making of warlike stores. But Lord Palmerston declined to answer a question which he said no man had a right to put to him, and which it would be contrary to his duty to answer, as a judicial inquiry was now pending.

Mr Cobden denounced in strong terms the system of police watching.

THE BUDGET.

The House having resolved itself into a Committee of Ways and Means, the debate upon the resolution for granting an Income-tax, and Sir B Lytton's amendment, was resumed by Mr. Moore, who said that Ireland was sufficiently taxed. Mr. J. M'Gregor said that Ireland ought to be grateful for the benefits derived from the Income-tax, seeing how it had enabled England to assist her upon the failure of the potato crop. He regarded the Budget as the most important and valuable proposition that had been submitted to the House since Sir R. Peel repealed the Corn-laws. He believed that the Budget would be much more productive than the Chancellor of the Exchequer had calculated Col. Sibthorp, Mr. H Herbert, Mr. C. Forster, and Mr. P. Urquhart supported the Budget; which was opposed by Mr. C. R. Morgan, Lord A. Vane, Lord Jocelyn, and Mr. Cairns. Mr. Cardwell said, that having held a subordinate situation at the Treasury in 1845, under Sir R. Peel, he knew from personal experience that that lamented statesman most carefully examined the possibility of extending alleviation to the professional classes; and that he had determined that, without breaking up and destroying the Income-tax, it was impossible for him to accomplish that task He shewed with respect to the articles of taxation and exemption articles of consumption which the Income-tax had enabled the Government to propose, and the tendency on the part of the revenue to recover itself by the increased consumption. The result of the taxation which Great Britain had borne for ten years, and from which Ireland had been wholly exempted, was that prohibitory duties had been entirely repealed, protective duties had been abolished, articles of first necessity had been relieved from duty, the raw materials of industry had been freed from taxation, trade had been stimulated, industry had been excited and encouraged, and large and general prosperity had been the result. Had Ireland derived no share of these advantages? Preeminently she had. He called upon the House to give its cordial assent to a measure replete with comfort and happiness to the people. Mr. Henley protested against no attempt being made to mitigate the inequalities of the Income-tax at a moment when it was proposed to re-enact it for seven years. Because full justice could not be done should there be none at all? Mr. Cairns showed that the Legacy-duty would operate upon a vast amount of property, including settlements of personal as well as of real property. The most skilful and competent judges said it was perfectly idle to suppose that the amount would be limited to £2,000,000; he believed that the Legacy-duty would produce at least £4,000,000.

The debate was then adjourned to Monday.

HOUSE OF LORDS.—Monday.

The subject of internal improvements and public works in India was again the subject of discussion, upon the presentation of a petition by Lord Wharncliffe from the corporation of cutlers at Sheffield, praying for the improvement of the roads and canals; the neglect of providing means of irrigation; the absence of bridges; and the cheapness of labour, which rendered it possible to construct public works at a small expense, were in turn dilated on by the noble Lord and Lord Ellenborough, who energetically supported the prayer of the petition. The latter noble Lord developed a scheme for providing funds for internal improvements in India, viz., by converting East India Stock into Three per Cent Stock, at a small premium upon the present market value of India Stock. The difference of interest, by pledging the credit of this country, would provide a fund of £200,000 per annum, which should be devoted for works of improvement within the Presidencies, in proportion to the revenues of those Governments. Earl Granville said he considered immediate and great changes were necessary in the Government of India.

On the motion of the Earl of Aberdeen, their Lordships agreed to concur in an address presented by the House of Commons for a commission to inquire into corrupt practices at elections for the borough of Cambridge.

The South Sea Annuities Commutation Bill passed through committee.

HOUSE OF COMMONS.—Monday.

THE BUDGET.

The adjourned debate upon the re-imposition of the Income-tax was resumed to-night by Sir W. Clay, who declared that the entire metropolis was decidedly in favour of the financial scheme of the Government, and that its rejection would cause the deepest regret, not only throughout the metropolis, but in all the great towns of the kingdom.

Sir F. Kelly at great length opposed the scheme, as inflicting an intolerable burden upon the already overburdened landed interest.

Mr. Lowe argued that it was perfectly impossible to graduate the Income-tax so as to obtain impartial justice in its assessment.

Mr. Butt saw no rational hope of being relieved from the Income-tax in 1860. He protested against a proposal to continue the tax for seven years, without any attempt being made to remedy its injustice Ireland had passed through a great crisis, and was overtaxed already, and it was not fair at such a time to impose an Income-tax upon her

Mr. Serjeant Murphy deemed the extension of the Income-tax to Ireland to be a measure of inevitable necessity, and as such accepted it

Mr. Conolly declared that Ireland already paid her fair share of taxation, and that she had not sufficiently recovered from her depression to enable her to pay the Income-tax.

Mr. E. B. Hoche regarded indirect taxation upon the necessaries of life as much more unjust and unequal than the Income-tax. A tax on tea or sugar, or any other necessary, which fell heavily on the poor man and lightly on the rich man, was much more unjust than the Income-tax. Ireland would benefit much more by the relief from the payment of the Consolidated Annuities, than she would suffer by the imposition of the Income-tax. He would give the Budget his support, because he believed it to be a Budget for the working classes.

Mr Disraeli addressed the Committee at great length against the financial scheme of the Government. He said the late Government wished to re-impose the Income-tax for three years, in order to relieve land from the burdens which unjustly pressed upon it, but they proposed to establish a different rate of payment for incomes derived from real property and incomes the result of intelligence and skill. He was incredulous as to the abrogation of the Income-tax at the end of seven years, for the spirit of the times appeared hostile to its abrogation. But (said Mr. Disraeli)—

If this tax is not to be mitigated, and if its inequalities and its injustice to be baffle both Minister and Legislature, the best thing to do is to apply your surplus and security income as you receive it to the reduction of an impost which no Minister can manage and no people can long endure (Cheers).

He had one great objection to the financial policy of the Chancellor of the Exchequer, that it was conceived in a spirit of injustice to the land bearing the Income-tax, paying as it did an annual sum of £60,000,000 sterling, directly or indirectly, upon a single crop of the British Islands. The average of the united duties levied in one way or another on both were different. He should have preferred his own more prudent arrangement regarding the duties of 1842, and levied that supply of ten which China could afford as was illimitable, he was not terrified by the arrangement of the Chancellor of the Exchequer But, by the duties upon tea more than 100 per cent, tea would be brought into increased competition with the beverages prepared from home productions. The late Government saw the importance of increasing our commerce with India and China, by reducing the duties upon tea. The new tariff would enable us to deal with the wine and brandy duties, whereby our commerce with France and the south of Europe might be increased, but the late Government thought they were bound simultaneously to reduce the burden and mass of indirect taxation that pressed upon the industry of the British producer. If Parliament thought it right to permit articles to enter into competition with articles produced by the English cultivator of the soil, they should take care that it was an unrestricted competition on the part of the British farmer. He believed that all taxes on successions were unsound in principle. They were taxes on capital—unsound in principle as regarded personal property, and still more unsound as regarded landed property, because they led to partition. Was it generous to attack the land after such an immense revolution in those laws which regulated the importation of foreign produce? He had received 200 or 400 letters complaining of the tax upon licenses, and declaring that it was worse than the Income-tax. The right hon. gentleman appeared to have yielded to the discontent which his proposa. had excited, and was about to alter his scale. He must have thought his original proposal just, proper, and politic; but he changed his opinion in twenty four hours, when the trades rose and told him they would not endure it. The noble Lord (J. Russell) had taunted his party with having refused an ass duty upon corn; but it would only have been fair if he had stated to the House and his friends that he had refused it.

When the noble Lord remembers under whose advice and at whose instance that proposal was refused when he remembers who are those by whom he is now surrounded. (Opposition cheers) when the noble Lord remembers that he had thrown away the Whig party, and that he himself accepted a subordinate office under the subordinate office of Sir Robert Peel, I think he might have felt that the time has come when these sneers and taunts should cease (Cheers).

Mr. Disraeli concluded by deprecating the hostility evinced by the representatives of the great towns to land, and asserted that every man in the country was deeply interested in maintaining the stability of the possession of the land of this county:

If, however (said the right hon. gentleman), the representatives of towns are still animated from me as if they still proceed in their illusory progress—they may arrive at the goal which they may contemplate—they may find—they will find—they have set before them; but I believe they will be terribly disappointed. Sir, you will not effect a change from a land-tax to a property-tax without a terrible struggle.

Lord J. Russell said that no House of Commons since 1842 had seriously contemplated the termination of the Income-tax; but, by continuing it for the limited time proposed by the Chancellor of the Exchequer, the House of Commons would be enabled to part with the tax if it should think fit to do so. The noble Lord detailed some of the great advantages of the Budget—the repeal of the duty on soap, the reduction of the ten duty, and the adjustment of the assessed taxes on horses, carriages, and servants. Mr. Disraeli complained of new taxes upon land, and said that the Budget was framed in a spirit hostile to the land; and yet while it was in preparation before the House, moved by the hon. member for Hertfordshire (Sir Edward Bulwer Lytton). Did it take off burdens from land or impose new taxes upon trade? On the contrary the proposition before the House was that whereas land was now taxed 7d., and trade 7d., land should continue to be taxed at the same rate and trade and manufactures at a lower rate. Was ever anything so contradictory? He contended that Ireland would be greatly a gainer by the Budget. The relief given by the Consolidated Annuities was £245,000, by the Tea duties £871,000, and other smaller items £50,000; while in 1860, Ireland would be relieved from £670,000, and the only duties imposed would be the Legacy duty and the Spirit-duty leaving £412,000 a year as the balance of remission to Ireland. He admitted that the course which Parliament had taken in 1842 and again in 1846, in levying an Income-tax and reducing the duties upon articles of consumption was more beneficial to the country than the course which he proposed to take in 1842. The noble Lord concluded as follows:—

It was said last year (by the Earl of Derby) and I think it was a proof of little wisdom in him who said it—that he would endeavour to rule this country so as to check the advance of democracy. Depend on it, that the ruler who sets himself to check the advance of democracy will but increase the irritation and augment the influence of the power against which he sets himself. (Hear, hear); but, if you consult the interests of the people, you will make democracy conservative; you will carry democracy with you, instead of having it oppose you as an enemy. I rejoice that, towards the termination of this course—which Parliament has now for nearly twelve years pursued my right hon. friend the Chancellor of the Exchequer has had this opportunity of laying the propositions before the House which whether we consider the propositions themselves, or the manner in which they were introduced—must give him a name to be enrolled among the Financial Ministers of this country (Cheers). If, in order to do this, it has been his fortune to live before his age, he must find his reward in the approbation and support of this House, and in the gratitude of an admiring people. (The noble Lord resumed his seat amid loud cheering.)

The Committee then divided; the numbers were—

For the resolution	.. ..	333
Against it	.. ..	272
Ministerial majority	.. .. ..	61

The announcement was received with vehement cheering from the supporters of the Government.

Mr. Lawless then proposed an amendment to omit from the resolution the words "United Kingdom" and substitute the words "Great Britain," with the view of exempting Ireland from the imposition of the Income-tax.

The debate on this amendment was adjourned, notwithstanding numerous calls for an immediate division; and the Chairman reported progress, and obtained leave to sit again on Thursday.

HOUSE OF LORDS.—Tuesday.

The Lord Chancellor, in moving the second reading of the Charitable Trusts Bill, repeated the arguments by which the necessity for such a bill had been so often urged. It had been ascertained pretty accurately that the institution of proceedings in Chancery on the subject of a charitable fund which did not yield more than £30 a year would necessarily absorb the whole of the capital—from £600 to £1000—even if the parties prosecuting were successful. There were no less than 12,760 charities in this category, which were, therefore, without the pale of the law, and must be dealt with by some cheaper and more summary jurisdiction. A board would be established, which would exercise a supervision over all the charities in the kingdom, at no expense whatever to the smaller charities. Trustees of every charity would have to keep regular accounts of all their receipts and expenditure, and to deposit a copy with the clerks of the County Courts, which would deal with the smaller class of charities; and another copy with the Board in London, where they would always be accessible to inspection. The bill gave the board great powers, and they might frame a new scheme (subject to the veto of Parliament), where the funds of charities were applied to injurious or useless purposes. The expenses of the board, which would consist of two unpaid and two paid commissioners, would be defrayed out of the public exchequer.

Several peers, and among them the Earl of Brougham, thanked the Lord Chancellor for his measure; but Lord St. Leonards objected to give to a board thus constituted the powers conferred by the bill.

The bill was read a second time, and ordered to be referred to a select committee

The Cathedral Appointments Bill was read a second time.

Three bills brought in by Lord St. Leonards, amending the law relative to dower, went through a stage.

Earl Granville moved the third reading of the South-Sea Annuities Commutation Bill

Lord Monteagle said that the plan for augmenting the capital of the Dock was open to very grave objection. For the first time in the history of England, without any pressure of financial difficulty, they were about to issue Government paper to pass from hand to hand after the fashion of a circulating medium, which was not convertible into the coin of the realm; and, consequently, had not that security against an over-issue. Now, ought the Government to become bankers and issuers of inconvertible paper, and that for so long a period as forty years? This was the principle adopted in France, with such ruinous consequences. He warned their Lordships, from the frauds committed by Mr. Beaumont Smith, that forgeries of Exchequer Bonds would be attempted

The bill was read a third time, and passed.

HOUSE OF COMMONS.—Tuesday.

Mr Locke King brought forward his annual motion, "to give the right voting for counties to all occupiers of tenements of the yearly value of £10 Lord J. Russell said that the motion was intimately connected with the whole question of the representation, and to deal with it the Government would have to postpone all the important questions in which they were engaged, to take up the one of the reform of the representation. The Government were not indisposed to consider the whole question, and he hoped to be able to introduce a measure, at a time and in a manner, which would enable us to remove the persons attention of the House. Mr. Hume was perfectly satisfied that a full and satisfactory Reform Bill would be introduced next session He advised his hon. friend not to press his motion to a division. Mr. Hadfield said the state of the representation of the country was most unsatisfactory. In a population of 27,000,000 the majority of the members of that House were returned by 174,000 electors Mr. L. King withdrew his motion

Sir J. V. Shelley drew the attention of the House to the following sessional order with reference to elections:—

That if it shall appear that any person hath been elected or returned a member of this House, or endeavoured so to be, by bribery or any other corrupt practices, it is House will proceed with the utmost severity against all such persons as shall have been wilfully concerned in such bribery or other corrupt practices

He adverted to the resolution of the Chatham Election Committee, that no election of that borough had been tainted by or stained in the Post-office, obtained for his son by Sir F. Smith; and moved that the Attorney-General be directed to prosecute Sir F. Smith for such bribery. Sir F. Thesiger observed, there had been no instance of such a prosecution as this is such a case, and against corruption as called imperatively upon the House to interfere, and he thought the House should be extremely cautious in directing such a prosecution, where it might be attributed to party feeling, and where there was not a fair and reasonable prospect of a conviction Mr W. Williams thought this case one of a very light character compared with others Mr. Brampton, chairman of the Chatham committee, said the decision they had arrived at had not been one, but upon the whole evidence. It had been proved, however, that it was quite impossible for any candidate to stand for Chatham without making promises; and the question was, whether the House, in not taking steps to correct the evil in doing so, they did not lay a snare for candidates. Mr. Newdegate, Mr. Pigott, Mr. W. M Smith, Mr W. J Fox, Mr. T. Duncombe, and Mr. Heywood having spoken against the motion, and Mr. Pellatt and Mr Stanley in its favour, Lord John Russell said, as the Government had confined its prosecutions of the Crown, whose opinion was, that there was ground for a prosecution, though they would not answer for its success He left the House to decide upon the motion —a decision which was not free from influence. Mr. Drummond, in a satirical speech, of extraordinary humour and pungency, declared that Governments must either rule by brute force, as in Austria or France, or by self-interest call it bribery, corruption, or what you choose. The latter principle pervaded our whole system, from the palace of the Sovereign, through the House of Lords, through the House of Commons, and through the whole of the constituencies, and you could not rule in any other way.

Why (said the hon. gentleman) is there such desperate anxiety to come to this House? Because this House is the great place bazaar (Laughter), the great office market (Laughter). Here places, rank, and title, Lord Chancellor, and orders of Knighthood. Why is the House beset with so many members of the legal profession? (Loud Laughter) Is it because they find at first sight partisan speech in this House is a surer road to the bench than hard flogging in chambers or attendance in court? (Hear, hear). But is it for the public advantage that this shall be the school in which the lawyer shall study for the gravity of the criminal? I am not sure whether the Attorney-General is in his place just now, but there are gentlemen in the House of whom it is pretty well known that by this little trip out the elections which they adorn (Laughter). To be sure, every case has its price, as well as every individual. You cannot bribe

in the House of Lords by £2 10s., or a place in the Post-office; but is there no bribery in making Baron Viscounts, and Viscounts Earls, and Earls Marquises? (Her r, hear). There is a bill introduced by the noble Lord, or some reformer or other, prohibiting the giving a few yards of penny ribbon to the wives and daughters of the electors—it is bribery! But you will find in the House of Lords the gift of three yards of green ribbon, or blue ribbon, very conducive to the public interest (Laughter). I am not censuring these proceedings; I justify them; it is the only system by which your Government can be carried on. I am only sorry the Government have not got a great deal more power of this sort (Loud Laughter). When gentlemen come down to the House they must carry on their "bribery and corruption," as it is called (which is self-interest), in another way. They must put up with seats at boards, and things of that sort (Laughter); and when there is a man that is particularly boring (Bowring), why, he must be sent to Hong Kong (Roars of Laughter). I am very sorry that the Government have not in their gift a great many Hongkongs; the House would be much improved by it (Loud laughter). Unless all rumour's tongues united in falsehood (be continued), the noble Lord had, not very long ago, received a letter of remonstrance from the head of a large family not particularly remarkable for talent—because he had not included some of them in the new arrangements ("Hear, hear," and a laugh). What was the danger of the Government? Simply, mere want of places (A laugh). There was no danger to the Government from any opposition that could be offered from the other side of the House. The danger was, that it received shots from the rear (A laugh). If the Treasury were to be symbolized or embodied, it would be as Cybele or Tellus, with more applicants for nourishment than she could supply; or—he would take a more homely illustration than Gillray's caricature of the sow that brought forth more pigs than she had teats for (Laughter). He saw in the notice-paper a motion from one of the friends of the Government (Mr. Reh) concerning about India. What was it but the squeak of a pig that had got no teat? (Great laughter.) He thought the motion discreditable to the House, and therefore he opposed it

Mr. HUME said the speech of the hon. gentleman was one of the most extraordinary he had ever heard.

It was a speech that he could not have believed any Englishman would have stood up in that House and delivered. The hon. gentleman had libelled the House ("Oh, oh," and loud cries of "Hear"); he had abelled the country; and, whatever the House of Lords might be, he had libelled that and all who were connected with it (Laughter)

Mr. RICH (who rose amid loud cries of "oh, oh" and great laughter) declared, amid the incredulous laughter of the House, that no hostility was intended to the Government in the motion he had made, and that he regarded them with unfeigned respect. From him they would receive the most cordial support when his conscience would go with them (A laugh)

Sir J. SHELLEY believed and hoped there was no man in that House less quarrelsome than he was; but words had been let drop by the hon gentleman near him (Mr. Drummond) which, for the credit of that House, required some explanation (Cries of "Question" and "Order," and great confusion, during which the hon. Baronet resumed his seat)

The SPEAKER said, that if the hon. Baronet had wished to take exception to any word spoken by the hon. member for West Surrey, he ought to have done it at the time

Mr. DRUMMOND said, if he had used any words that were improper, he would at once withdraw them

Sir J. SHELLEY (with some excitement). You said it was disgraceful and discreditable to the House (cries of "Hear, hear" and "Order").

The House then divided; the numbers were

For the motion	.	75
Against it	..	185
Majority		110

HOUSE OF COMMONS.—WEDNESDAY.

The Payment of Wages Bill the second reading of which was moved by Sir H. HALFORD, gave rise to a long debate. The bill had its origin in the distress of the stocking-weavers, the abuses and evils connected with middlemen, and the hiring of knitting-frames, which it was proposed to subject to a fair competition in open market. The object of the bill was defined by its supporters to be not to interfere with rents or wages, but to secure the knitters against exorbitant stoppages for rents and charges, and the payment of their wages in full, in the current coin. It was contended, on the other hand, that the system of frame-rents had grown up from the necessity of the case; and, if put an end to, the result would be to drive the manufacture from domestic workshops into mills. A proposal by Mr. HUME, that the bill be read a second time that day six months, was carried by 166 against 125, so that the bill was lost.

The rest of the sitting was occupied by the Combination of Workmen Bill. Six o'clock having arrived, the House adjourned without having come to any decision for or against the third reading.

HOUSE OF LORDS.—THURSDAY.

To-day, being Holy Thursday, their Lordships did not meet

HOUSE OF COMMONS.—THURSDAY.

Sir W. MOLESWORTH moved for leave to bring in a bill to transfer Westminster Bridge, and the estates of the Commissioners of Westminster-bridge, to the Commissioners of her Majesty's Woods, Forests, and Public Buildings, and to enable such last-mentioned Commissioners to remove the present bridge, and to build a new bridge on or near the site thereof.—Agreed to

In reply to Sir John Shelley, Mr. SIDNEY HERBERT said that a statement which had appeared in newspapers, that orders had recently been issued forbidding their circulation in soldiers' barracks, was not correct. The facts of the case were these: When he became Secretary at War, he found that no newspapers were allowed to be taken in barracks, or in libraries or reading-rooms attached; and the consequence was that the soldiers were in the habit of resorting to pothouses, in order to ascertain the news. Desirous to put an end to this state of things, he issued an order that newspapers should be admitted into barracks, excepting only those which were of a controversial character, either with respect to religion or military discipline, and the *United Service Gazette* was one of the papers thus excluded.

BERWICK-UPON-TWEED ELECTION.

The adjourned debate upon the question as to whether the writ should issue for a new election for Berwick-upon-Tweed, was resumed by Mr. PHINN, who opposed the motion upon the ground that the borough was notoriously corrupt. He contended that a Committee of Inquiry ought to sanction a report upon the state of the borough before they took any further step in the matter. He therefore proposed, as an amendment, that no writ should issue until the 2nd of June.

Mr. K. SEYMER thought that no ground had been shown for withholding the writ. The borough had never been before Parliament except on the present occasion; and, as chairman, he could assure the House that the committee were unanimously of opinion that the writ should issue

Sir F. THESIGER supported the motion for the issuing of the writ.

After a few words from Mr. WHITESIDE,

The House divided, when the numbers were—For the issuing of the writ, 218; against it, 60: majority, 158 It was accordingly ordered that the writ be issued.

THE ROTHERHITHE ROCKET SEIZURE.

On the motion for going into Committee of Ways and Means, Mr. T. DUNCOMBE asked Lord Palmerston whether, in consequence of two informations of a political character having been laid against William Hale, inventor and manufacturer of the patent war-rocket: and the first of such informations having terminated in the said patentee, William Hale, being adjudged to pay certain penalties to the Crown; whether it was the intention of her Majesty's Government to advise the Crown to proceed with the second information laid under the provisions of a law passed during the reign of William III., 1697, intituled an Act to prevent the Throwing or Firing of Darts, Serpents, and other Fireworks? The on. gentleman admitted that, in making rockets, Mr. Hale was guilty of a violation of the law, in the same degree as every maker of squibs and crackers (Laughter); and Mr. Varenhell and every manufacturer of lucifers in the metropolis. He thought that the Government ought to have taken a fairer and more direct course of proceeding than by raking up an old Act of Parliament which had been obsolete for 120 years. He believed that the motive which had led to this prosecution had been an Austrian one. A Frankfort paper had said that the Austrian police had been able to make several arrests from information which they had received the London police. He was quite certain that the people of this country would never sanction the employment of the British police for the purposes of foreign espionage

Lord PALMERSTON said he disclaimed all responsibility as to anything which might be said about him in any newspaper, British or foreign; and if the hon gentlemen had been as much in the habit of seeing what foreign newspapers said of him (Lord Palmerston), he would come, perhaps, to a different conclusion than that he appeared disposed to arrive at. He (Lord Palmerston), for example, was told the other day, that, in one of the incursions which had lately been made into Italy, a number of daggers were found which bore his name upon them; and some of the foreign papers then said, "See, here is a detestable and diabolical revolutionist!—here is his name on the daggers—'Palmerston'" (Laughter). With respect to the prosecution alluded to, he had no hesitation in saying that the object of the Government was not, of course, to procure penalties upon a few pounds of powder; but when he was informed that there was in the quarries of warlike stores collected in a comparatively secret place, he felt it was his duty to institute the proceedings which he had done. He considered that the decision to which Mr. Henry, the magistrate, had come was a very proper one. With respect to the question whether it was the intention of the Government to proceed with the prosecution, he had no hesitation in saying that there was no desire to press upon Mr. Hale; and in stating that the evidence which had been given did not justify proceedings against any person, British or foreign, except Mr Hale. It was not, therefore, thought proper to abandon the prosecution; because such a course, as a precedent, would be liable to great abuse; and, in the present instance, proceedings might be taken against the Government for a malicious prosecution. It was also considered necessary to take the opinion of a Court of Justice up in the question, and so the case would proceed, although Mr. Hale would not suffer in being punished to any extremity. The object was to furnish a good precedent for future proceedings of a similar character.

Mr. FREIGHT remarked upon the tardiness which Lord Palmerston had displayed in doing justice to Kossuth; and intimated that the articles which appeared in the *Times* newspaper were written by part es who dared not affix their names to their slanders. He wished to know if it were true that spies were employed to watch the movements of M. Kossuth; and, if so, by whom they were paid

Lord PALMERSTON said that no special directions were given to the police to watch the movements of M. Kossuth. The directions that were given were of a general character; namely, to see that the laws of the country were not infringed by foreigners, as well as others. If they had reason to believe that such proceedings were contemplated, it was their duty to inform the Government; and, if they had reason to suppose so in the case of Kossuth, they had a right to watch and to see whether their suspicions were well founded or not.

Mr. COBDEN rose to put a question to Lord Palmerston on the same subject; but the SPEAKER intimated that the noble Lord, having already spoken upon the matter, could not, in accordance with the rules of the House, be required to speak again.

Mr. COBDEN then asked Lord John Russell whether any communications had passed between the Home-office, the police commissioners, and the stipendiary magistrates, with reference to the transaction?

Lord J. RUSSELL said that the police commissioners reported periodically to the Home-office, and had, therefore, to make communications with reference to the affair under consideration. He admitted the claims of political refugees to the asylum of this country; but it was equally clear that the refugees must not abuse its hospitality by taking hostile steps against friendly countries. With respect to M Kossuth, he was under peculiar obligations to this country, and should take especial care that he did nothing to endanger our amicable relations with other powers. It was impossible that suspicion should not attach to the movements of M. Kossuth, when they recollected the proclamation which was issued at Milan, and his recent letter, avowing his intention to wage war against an ally of England. Austria had, however, made no demand whatever in reference to this matter

Sir J. WALMSLEY said that the proclamation referred to had been issued before the arrival of M. Kossuth in England. He would, however, move for a committee of inquiry into the proceedings of the police.

INCOME-TAX.

The House went into a Committee of Ways and Means, in consideration of the resolution in reference to the Income-tax.

Mr. LABOUCHERE moved, as an amendment to the resolution of the Chancellor of the Exchequer, that the words "Great Britain" be substituted for "United Kingdom" in the second line of the resolution; the object being to exempt Ireland from the operation of the Income-tax

Col. DUNNE said, if the hon. gentleman was disposed to prevent the Income-tax being extended to Ireland, he should have voted for the amendment on a former evening. The hon. member must be fully aware that his present amendment was altogether futile, and that it could not be carried. He would, however, vote for it, if it were pressed

Mr V. SCULLY supported the Government proposition

A discussion then took place, in the course of which Mr. C. G. DUFFY used the following language:—"Since I made my experience of Parliament has been, I do not think, in the worst days of Walpole and Pelham more scandalous corruption existed than I have seen under my own eyes practised upon Irish members"

There was an immediate demand made upon Mr. Duffy of "Name, name," which created the greatest noise and confusion.

Ultimately, upon the motion of Mr. J. BALL, the words were ordered to be taken down, and the debate upon the matter was adjourned until the following day (Friday) at four o'clock, when it resumed

ELECTION COMMITTEES AND APPEARS.—*Tolness*: Mr. T. Mills declared duly elected.—*Ipswich & Carlow*: Petitions against return withdrawn.—*Leicester*: Mr. W. Biggs-Davison (Liberal) opposes Mr. D. C. Majoribanks (Peelite).—*Maidstone*: Mr. W. Lee (Liberal) and Mr C. W. Martin (Conservative) contest this borough.—*West Gloucestershire*: In case of a dissolution the Hon. Berkeley Geffery Moreton (*Tractite*) and the polling was on Tuesday, and the result as follows: Sir J. Ramsden (Liberal), 874; Mr. Badcock (Conservative), 866; majority, 7.

NAVAL AND MILITARY INTELLIGENCE.

THE "DAUNTLESS."—The ill-fated *Dauntless*, 24 (screw), Captain Halsted, arrived on Wednesday at Spithead, last from Bermuda. We give, for the satisfaction of their friends, the list of officers who have come home in her: First Lieut. J. W. Armstrong, Second Lieut. W. H. Jones, Third Lieut.—Sutton, Fourth Lieut. E. Stubbs, Surgeon Alex. Woodcock, Paymaster J. Biggs, Master C. Q. Parker, Chief Engineer G. M. Burt, Assistant Engineer Mr. Saunders, Second Assistant Engineer C. Hodgkinson, Clerks Messrs. C. Lescombe and Hyde; Lieut. S. Shaw, Royal Marine Artillery. Dr. Wallace, Assistant-Surgeon; and Lieut. —, all well. Also, as passengers, Captain Arbuthnot, of the Royal Artillery, from Barbadoes, and Mr. M'Donald, from Bermuda. Midshipmen Messrs. Selby, Twiss, Blair, Hudson, O'Connell, and Brooke

THE SICK CREW.—The Admiralty have ordered the *Agamemnon*, 90, screw-ship, Captain Sir Thomas Maitland, to proceed from Spithead to Madeira, in order to give the crew a chance of recovering and establishing their health

FROM THE WEST COAST OF AFRICA.—The *Cygnet*, 8, Commander Richard D. White, anchored on Sunday evening at Spithead, having left Lagos on the 1st of March. She sailed from Plymouth on the 1st of August, 1852, since which she has sailed over 46,000 miles. She has not been sufficiently in dock to capture any slavers.

THE GREAT ENGAMENT.—The ground has been selected for this purpose, beyond Ascot Heath; but we shall enter into further details with the illustrations which we shall present to our readers in a future Number

SCREW S. PADDLE.—The *Bengal* screw-steamer, which brought home the last Indian mail, performed the distance between Malta and Alexandria, 820 miles, in two days twenty hours, which is the shortest time by seven hours ever performed in; and she must have averaged 14 miles an hour to have done it in the time. There is no doubt that this [illegible] (one of the largest at present in the world) can run, under very favourable circumstances, 16 miles an hour.

[illegible] APE FROM DEPRAVITY.

[illegible]

LINNEAN SOCIETY.—On Tuesday evening the Lord Mayor, on Monday night, entertained at the Mansion-house the Judges, Recorder, Sheriffs, Aldermen, Barrister, and a few literary men. After the customary toasts (for [illegible] following replied for his own country), the Chief Baron of the Exchequer proposed the Lord Mayor, and then Sir Benjamin Hall gave the health of Mr Charles Dickens, and in proposing it passed an eulogy on Mrs. Beecher Stowe, which was received with [illegible] Dickens, in reply, said some happy words of compliment [illegible] Mrs. Stowe.

CITY COMMISSIONERS OF SEWERS.—The Commissioners met on Tuesday for the despatch of business. The usual routine of business was disposed of, and tenders were received for the cleansing of streets, &c., for the year commencing at Lady-day next. By the contract it is provided that all the streets in the City are to be effectually cleansed every day, and the main streets are to be cleansed twice on each Saturday, with a view to their decent appearance on the Sunday. The contractors accepted were Messrs. Gould, Charles Parsons, Robert Drummond, and W. Bennett, junior, and the aggregate cost will be £4700, which is a reduction, as stated, in favour of the existing contract of nearly £500.

CHESS.

TO CORRESPONDENTS.

J. C. W.—The last seems clever, but, from the number of variations it admits of, requires very careful revision

EUREKA If White brached his adversary's Pawn, as well as his own Queen, he was bound to take the Pawn; if he only took hold of the Queen, he was at liberty to play her where he chose.

D. D. T.—In our next we intend to give some account of the doings at the Grand Chess Meeting, held this week

F. T. M., Amateur.—It is generally understood that at the Manchester dinner, Mr Staunton purposes to give a challenge to play a Match of twenty one games with any player of the day. This answers both your queries.

J. W., Liverpool.—You must have described the position inaccurately. If the White Queen stands at K B 3rd, and the Black King at Q R square, how can the former take the K Pawn, giving check?

*** Our customary notices to Chess Correspondents are for the most part deferred till next week.

PROBLEM No. 482.

Of this "difficulty" we have received so few solutions, that we shall leave it as an exercise of our readers' ingenuity for a few days longer.

SOLUTION OF PROBLEM No. 483.

NATIONAL SPORTS.

CHESTER RACES.

TUESDAY.—During the early part of the morning the scene on the Roodee was of the usual animated and exciting character. A large number of horses galloped. The Cup candidates, Trifle, Peggy, Black Doctor, Woolwich, Newminster, Lord Lieutenant, and Mr. Beaumont's two were particularly admired for their form of condition and style of going. At the betting-room the investments were made chiefly around to the two leading favourites, Trifle and Peggy. The events of the day were decided as follows.—

Grosvenor Stakes.—Lerry Wheat, 1	Massaroni, 2
Palatine Stakes.—Exact, 1	Elba, 2
Sweepstakes of 5 sovs.—Sweetness, 1	Cleveland, 2
Mostyn Stakes.—Brown Brandy, 1	C. by Napier, 2
Chester-field Stakes. Jacquenau, 1	Fly by Candlelight, 2
Optional Selling Stakes. Welsh Harper, 1.	Mayfly, 2

WEDNESDAY.—The densely crowded streets testified to the undiminished popularity and attraction of the Chester Cup. The scene on the Roodee was of the most animated and exciting description. The Grand Stand and the Stands were crowded full, and swarms of spectators clustered on the slopes and vale, and filled the windows of the neighbouring houses. The weather was all that could be desired for the occasion.

Helter-skelter Handicap.—C by the Emperor, 1. F. by California, 2.

Second Triennial Produce Stakes Mocassin, 1. Oxonian (late Hayman), 2

The "Cup," or Trafesmen's Plate. (Betting at starting:—3 to 1 agst Trifle, 6 to 1 agst Jalfourd, 7 to 1 agst Peggy, 12 to 1 agst Missive, 10 to 1 agst Lord Lieutenant, 15 to 1 agst Newminster, 15 to 1 agst Little Jack, 15 to 1 agst Black Doctor, 20 to 1 agst Lady Evelyn, 30 to 1 agst Contentment, and 20 to 1 Goldfinder.)—Goldfinder, 1. Talfourd, 2. Trifle, 3. A twenty-eight started

Sixty Guineas.—Chilton, 1. Lerry Wheat, 2

Scramble Handicap.—Adela, 1. Margaret of Anjou, 2

Her Majesty's Plate. Audulon, 1. Massaroni, 2

THURSDAY

Dee Stand Cup—British Farmer, 1. May Day, 2.

Westminster Plate. Pelion, 1. Sultan, 2

Triennial Produce.—Merry Bird, 1. Dismay, 2

Dee Stakes.—Orinoco, 1. Brother to Shylock, 2.

Welter Cup.—Sphynx, 1. Agis, 2.

FRIDAY

THE ROYAL THAMES YACHT CLUB.—The first match for the season took place on Tuesday last, the distance being from Erith to the Nore and back; the day was most inauspicious, raining incessantly the whole time. Four vessels of the first-class the *Marquito*, *Wave-Hawk*, *Volante*, and *Pauline*—and three of the second-class—the *Thought*, *Phantom*, and *Capella*—started for the two prizes, which were respectively won by the *Marquito* (first-class), and the *Phantom* (second-class). The prizes were presented to the winners in the usual manner, and the company returned to town. The Royal Horse Guards Band was in attendance.

THE DUBLIN EXHIBITION.—The proceedings on the 12th inst., the inauguration day of the Dublin Exhibition, will be gorgeous in the extreme; no less than 1000 performers, vocal and instrumental, ushering in its existence, in the presence of the nobility and gentry of the United Kingdom. The Lord-Lieutenant and the Countess of St. Germans, and the Knights of St. Patrick, her Majesty's Cabinet Ministers, the Foreign Ambassadors, and the municipal authorities of all the principal cities and towns in Great Britain, will take part in the interesting ceremony; and, judging from the general interest all classes take in the success of the Exhibition, there can be no doubt whatever but that the undertaking will be crowned with the most signal success.

THE NEW YORK CRYSTAL PALACE.—A correspondent from New York says. "The Crystal Palace, in Reservoir-square, is now progressing with spirit; but, from appearances, I should say that it will not be completed until the 1st of June; while buildings are springing up like magic all around it. A room near it, in a wooden house, 25 feet front by 70 deep, has been let at the rate of 2500 dollars a year. The glass for the palace will be enamelled by a new process, to prevent the ingress of the sun's rays—the effect being similar to that of ground glass. The framework is nearly finished, with the exception of the roof; and the front on Sixth-avenue is more forward than any other part of the building. The banks of the vast reservoir of the water-works, which overlook the palace, are daily thronged with curious spectators. The general superintendence is confided to Captain Dupont and Captain Davis. There will be a department of mineralogy and chemistry; and there will also be a vast geological and mineralogical map of the United States. Specimens and packages are pouring in for exhibition. Several hundred have arrived from Europe."

EXHIBITION OF THE ROYAL ACADEMY.

THE display at the rooms of the Royal Academy, just opened for the season, though including many attractive and meritorious productions, is not as a whole very encouraging to the prospects of art. We regret that the fact should be so; a fact of the more significance at the present moment, when the question of affording encouragement to art has been taken up under the highest auspices; the probable result of which will be that the Royal Academy will come in for a larger share of influence and advantages than it has hitherto enjoyed; and, as a natural consequence, the independent disciples and votaries of art will be compelled to pay still humbler deference to its authority, and be subject more completely to its caprices than heretofore. If this Academy pretends, as its name implies, to be a school of art, it is now high time that it should propound some principles of art; and that its members—the assumed "aristocracy of art"—should evince activity in illustrating those principles by the best efforts of their hands. So far is this from being the case, however, the Royal Academy was never less productive either in respect of theory or illustration than on the present occasion: several members Maclise, Mulready, Leslie, R.A.'s, and Frith, the R.A. elect, being altogether absent; and several of those who remain being represented by few, and often very unimportant, specimens. As honourable exceptions to this remark, however, we must name Sir E. Landseer—who stands in the van of the Academicians, and in his "Night" and "Morning" has fairly eclipsed anything that has hitherto come from his wondrously-creative hand; and Stanfield, who, on his chosen scene of action, the ocean deep, has no competitor in our day. But then it immediately occurs to us that these are works in the second order of art: and when we look round to see what has been done in the other schools, what do we find? The accomplished President, confessedly weak and unsuccessful in the historical school; and very near him, in the Great Room, Chalon, contributing two very weak sketchy affairs—one, a fruit piece; the other entitled "A Little Music," which any artist (not an R. A.), whether amateur or professional, would have blushed to let see the light beyond the circle of his most intimate friends We are, indeed, at a loss to understand how this should be; and are compelled to suppose that there must be some peculiar advantages, some sedative influences, inherent to the status of a Royal Academician, which relieve him from the occasion for personal exertion, and permit him to retire into an *otium cum dignitate* for the rest of his days. It is well for the arts and for the Academy, on the other hand, that there is constantly an increasing crowd of ardent and hard-working practitioners beyond the privileged pale, whose works serve to fill the walls or an annual exhibition, and sometimes come in strong antagonism to fashionable precedents. We now proceed to notice some of the principal works exhibited on the present occasion.

"THE TRUANT DEFEATED."—PAINTED BY W. HEMSLEY.

Landseer's two magnificent pictures, hanging on the side wall of the Great Room, first command attention: they are (46) "Night," and (69) "Morning." In the former the artist depicts a wild rocky spot, beside a mountain lake, where two red deer are engaged in mortal conflict; their antlers locked in one another, and every muscle of their bodies straining in deadly purpose. The expiring flame in the eyes of one of them shows that the fight has been long and severe, and that it will probably soon be over, with the death of one or both of the combatants. Admirable as is the poetic conception displayed in the study of these brute heroes, the surrounding landscape more than divides the honours of the present work; the pale full moon shines through a misty atmosphere, the lake lashed by a fierce north wind sending up a fitful spray, in which meteors "madly glance."

In "Morning," we see the result of the battle overnight—

> Locked in the close embrace of death,

their horns still tangled together, the mighty champions of the mountain side are brought to a level in death. The fox stealing forward to feed upon their remains, and the eagle winging its way from afar to claim its share in the spoil, suggest an appropriate epilogue to the drama just enacted; whilst pictorially the contrast between the forms of the living and the dead is most striking, and affords fine opportunities for skilful handling. And here also the artist's landscape surpasses in grandeur of conception and power of execution the animal objects. The storm is passed away with the night; the sun is rising calmly behind the mountains, whose craggy heads are warmed with its first rays; the latter again being reflected in the smooth lake below. Landseer has two other works in the present exhibition. 170, "Children of the Mist," represents a group of stags indistinctly seen through a mountain mist—a good idea admirably realised; 291, "Twins," consists of a group of sheep and lambs, with dogs above but is not equal in textural execution to many other works of this class we have seen from the same hand.

Stanfield's great work—which hangs between Landseer's "Night" and "Morning," and even there well maintains its position—represents a subject in itself so interesting, that we are surprised it should never have been adopted before (at least, it has not been to our knowledge)—"H.M.S. the *Victory*, with the body of Nelson on board, towed into Gibraltar, 28th of October, 1805, seven days after the battle of Trafalgar." The anchorage is crowded with disabled ships which had already arrived; there is a moderate swell upon the sea, which sets all these variously-wounded and variously patched-up veterans of the deep in motion, when the *Victory*, knocked and battered about, her flag half-mast high, heavily sweeps in amongst them, being in tow of another vessel. The solemn effect of this scene has been commemorated by

"KATHERINE'S DREAM."—PAINTED BY H. O'NEIL.

the historian, and has evidently inspired the artist in the treatment of the present very noble work. If he had never touched canvas before, and were never to touch it again, he has here produced enough whereon to rest a lasting fame.

Sir C. Eastlake, the accomplished President — accomplished in all that pertains to the poetry, the doctrines, and the proprieties of art — exhibits only two works, which convincingly prove that art-knowledge and art-skill are not necessarily associated. 124, "Ruth Sleeping at the Feet of Boaz," is what might be termed a pretty picture, the figures neatly drawn, and the entourage of unimpeachable quietness and propriety. But nothing can compensate for the weakness, the want of naturalness of the figures; and the colouring, a disordered mixture of various hues, and compounds of red, from crimson to ruby, with additions of yellow, brown, bright pale blue, and pale yellow, cannot be accounted for, or excused by any rules or exceptions to the rules of art. 106, "Violante," is a female figure, expressionless, tamely drawn, and unbecomingly habited in an old-fashioned dress of pale green, set off with a pearl necklace.

Dyce has two exhibits. 140, "The Meeting of Jacob and Rachel" —(Genesis, xxix, 9), is a small picture, cleverly conceived, and carefully and tastefully executed. Jacob rushes forward with ardour to greet Rachel, who, standing motionless, her eyes downcast, receives him but coldly. The limbs are well studied; the flesh well rounded and delicately coloured. 931 is a cartoon for one of the frescoes to be painted in All Saints' Church, St. Marylebone—the subject St. Peter—and is of considerable merit.

F. Danby exhibits but one piece (124), "A Wild Sea-shore—Sunset;" a fine specimen of his brilliant and transparent colouring, though wanting a little in light in the middle ground, considering the position of the sun.

Herbert also contents himself with one production of his pencil, and that a very small one—"A Head of a Scribe," being a study for a portion of one of the frescoes in the New Palace of Westminster. This head is well studied and powerful in expression, but sketchily executed. It shows, however, that some progress is making in the imitation of the broad style of treatment practised by the old masters, and so adapted to fresco painting.

Jones has a view of the "Battle of Waterloo" (224), taken from the British quarters at the moment of the order being given for the attack of the Foot Guards, in which he displays all his usual skill in treating a subject now pretty familiar to him; but the colouring is not very effective, being pale and somewhat crude.

As Mr. Jones re-produces the last of Wellington's victories, Cooper re-commemorates his first (23) "The Battle of Assaye." Battle-pieces generally, with all their stirring incidents, are but poor subjects for the artist; and are very much alike, the one to the other. The one before us is no exception to the rule; being, for the most part, a mass of confusion, in the midst of which the figure of the Duke, on a spirited charger, is displayed, after the usual fashion.

E. M. Ward, whose fine picture of the "Execution of Charlotte Corday" was so justly admired in the last Exhibition, this year exhibits another somewhat similar scene, that of "The Execution of Montrose in the Market Cross at Edinburgh" (286), painted for the New Houses of Parliament; the peculiar incident chosen being that where the executioner re-binds the Wishart's book around Montrose's neck at the foot of the scaffold This is a masterly work, full of subject matter, admirably varied in the grouping; but, as we intend engraving it, we shall say more of it in a future notice. In his other exhibited work Mr Ward has chosen an event in recent French history, equal in pathetic interest, though less violent in the emotions excited by it, as that of the death of the heroic Corday; namely, "Josephine Signing the Act of her Divorce"—another female sacrifice to the force of destiny. This painful scene took place in the Grand Cabinet of the Emperor, at the Tuileries, and in the evening, by candle-light, on the 16th December, 1809. This circumstance, perhaps, has led to the yellow hue which pervades the picture, and which, though it may realise the proper effect when viewed by candle-light, is not agreeable by day. It must be added, that, although the grouping of the various figures is animated, and appropriately illustrative of the story, the figures themselves are somewhat hard in outline, and in too prominent relief for general harmonious effect. The expression of Josephine, as she takes a last look —a look of sorrow, not of anger— at her cruel husband, is entitled to praise; but, Napoleon himself, resting his head upon his hand (not an attitude of dignity, or indication of firmness of purpose), wears rather the aspect of a scowl than the merely "searching and anxious expression" described by Lenormand in his "Memoires." Nevertheless, with all these little drawbacks, this work is an extremely clever one, upon a subject of considerable historic interest.

C. W. Cope exhibits three very pleasing pictures in the *genre* school,

"THE PAGE."—PAINTED BY C. W. COPE, R.A.

"THE THORNY AND THE FLOWERY PATH."—PAINTED BY T. UWINS, R.A.

and the in better class of that very wide school, portraying incidents of the gentler comedy, and domestic interests of life; and executed with the nicest delicacy of treatment, and a rich and healthy colour. We particularly remarked, a "Mother and Child" (80), a cheerful little group met with every day—a happy mother cuddling her infant daring up about her neck, patting its back, and hushing it to sleep; and (479) "The Page

Let our haste con mend your duty —SHAKSPEARE.

The scene is the portico of a mansion—a garden seen in the distance; the female figure is graceful, her expression earnest and feminine: that of the page, with whip under arm, ready to start off on his errand, is life-like and intelligent. A comical looking dog, the lady's pet, watches from a little distance what is going forward, and will evidently be glad when he shall again cross his mistress's attention. This very agreeable work we engrave. The same artist also exhibits a work of a larger and more important character than those already referred to—174, "Othello Relating his Adventures," and which, if it do not quite come up to all our mind's-eye filling in of this wondrous narrative, presents many points of extreme merit. The expression of the three personages forming the group show the different feelings with which they are occupied. The father, calm, dignified, curiously admiring the noble exploits of the sable hero, yet not much moved by the perils attendant upon them; Desdemona, earnest, intent, more engrossed with the "dangers" than the glories of the battle field; Othello, energetic, eloquent—with perhaps a very slight redundancy of action in the hands for conversational discourse

To close our mention of Academy names for the present, we come to Ureus, who contents himself with a single work—"Fairy Path and the Flowery Path." The idea is entirely allegorical, being that of impersonating the antagonistic influences of pleasure and of the cloister. And we may be allowed to remark that—in these days, when there is a middle and a safe and wholesome course, equally removed from the excesses of sensual indulgence on the one hand, and the unmeaning and profitless austerities of the cloister on the other—we could have wished that Mr. Uwins had illustrated his position in a manner more practical, and more pertinent than on the present occasion: adopting some lesson of real life; and are there not many which would serve for the purpose? However, to the work itself, which, if more happily chosen in subject, would have been an instructive as well as a most pleasing one. On the one hand we have a group of giddy creatures dancing, and pressing the grape, endeavouring to entice back into their company a young man, who has by some accident come under, or partly under, the influence of a monk, who seeks to confirm his conquest by safely depositing his new protégé in a monastery. The young man hesitates; he is of a sanguine temperament; and we predict that the conquest gained, on which ever side it be, will not be permanent. The serious part of this picture is more pleasable than the cheerful: as the contrast is, perhaps, too wide to be softened down by any skill of treatment. The colouring of all the paris, howe-er, is sound and correct; that of the sportive group on the right, and the gay landscape beyond being especially rich and glowing. Of this picture we have much pleasure in presenting an engraving.

It is time now that we speak of Millais—Millais the Pre-Raffaelite; the "pretender" Millais that was; the "usurper" Millais that is; the "legitimate" Millais that perhaps (much virtue in that little word) may be; and who has certainly a larger crowd of admirers in his little corner in the Middle Room than all the Academicians put together command; ay, and a more enthusiastic one than they are always in good sticking crowd, who, having once taken up their position opposite the object of their homage, are not inclined very soon to move on, but stand there gaping, and staring, and comment-ing upon the wondrous effects, without any regard to the pressure from behind of crowds preparing to occupy their place. Truth to say, Mr. Millais, in this "Order of Release" (265), has achieved for himself an "order of merit" worth more than any academy has earned or can add to a fame which a whole corporate academy might be proud to portion amongst its constituent members. Whilst we admit—nay, assert this—we would by no means wish to be understood as enrolling ourselves unreservedly in the "pre-Raffaelite" party" (for there is partisanship in everything, even in art), but simply as asserting that Pre-Raffaelitism (or rather the artists who have been foolishly styled Pre-Raffaelites) is a "great fact," and perhaps may lead to the regeneration of high art in this country. We may add that those who did us the honour to read our remarks upon this very subject last year, will perceive that what we now state is perfectly consistent with. Indeed confirms, what we then said with some reserve and hesitation, put forth. But more of this anon, when we come to engrave the "Order of Release," which we hope to do next week. In the meantime, we will only add that the subject is simply that of a wife, with child in her arms, coming with an order of release for her husband, who has been taken in the Civil Wars. The husband, overcome with emotions, and weak from a recent wound (his arm is in a sling), can but fall upon her neck and weep: the woman, "firm of purpose," sheds no tear: she has need to shed; her eye is dark and heavy with weeping and waking; and she looks at the stern and unconcerned gaoler with a proud look, expressing that she has won the reward for all her trouble past. The colouring, the textural execution, are marvellous (for these degenerate days); but of these we have not room to say more at present. Mr. Millais has another picture (520), "A Proscribed Royalist, 1651," concealed in the trunk of an old tree, whom a young lady stealthily visits to supply him with bread; this, though itself a splendid specimen of executive skill, it by no means carries the poetic interest of the other work, nor in colouring is it so harmonious

H. O'Neil, who is a worthy labourer in the painstaking school recently sprung up, exhibits a single work of great merit (389), "Katherine's Dream." We all know the passage ("Henry VIII.," Act iv., Scene 2) where, under the influence of the inspired dream "she makes in her sleep signs of great rejoicing, and holdeth up her hands to heaven, and so the spirits vanish, carrying the garland with them." The attitude of Katherine is very truthful, indicative of the living thought in sleep, and the general disposition of the figures is such as to form a highly-interesting group. The colouring is careful, tender, and harmonious

Hemsley, of whose talent we have already given one or two specimens, has a very effective little picture, which we engrave, entitled (110) "The Truant Defeated." Look at it, reader; does it not tell its own story? Behind the young urchin, who has been shamming illness to escape school, how his watchful eye quails before the stern Doctor, who gravely investigates the symptoms, and is evidently "up to snuff" about the matter. The sunshine which looks on with all a mother's solicitude, unconscious how her darling boy has been trifling with her feelings The colouring of this clever little bit is as satisfactory as the expression infused into it.

The Sculpture Room is as dingy and unlinviting as usual, and contains few pieces of note and mark. Amongst the busts are two very admirable, of the Queen and of the Duchess of Gloucester, by Mrs. Thornycroft; and three by P. Park—ranged side by side—respectively, of John Chapman Coleridge, Esq., Sheriff of Middlesex, and Sir Watson Gordon, R.A.; and the Countess of Zetland. A. Munro has a very charming group of children (1305), "The Brothers' Little Pet" (portraits of the children of Herbert Ingram, Esq.), in which the artist shows how much may be done, by judicious and tasteful treatment, to reconcile portraiture with the poetry of art. Of purely high-class works there are very few; the largest and most prominent of which is one by Monro (1310) "Truth Unveiling herself," in which the veiled-face trick is carried out over half the countenance: and the artist, seeking to give greater comparative whiteness to the drapery, has darkened the flesh, by means of obasco-juice, or some such pleasant cosmetic, to a degree very reprehensible act of heresy which we hope he will not repeat, and in which we hope he will find none to imitate him. In the hall entrance the colossal statue of the late Sir R Peel, with figures illustrative of the city of Manchester, and the arts and sciences, on either side, deserves attention

*** Two very interesting exhibitions, in addition to the Royal Academy, have been opened during the present week—namely, that of the sketches of the Amateur Society, in Pall-mall; and that of works by German Painters, 136, New Bond-street—but want of space compels us to postpone our notice of them till next week

LUDWIG TIECK died at Berlin on Thursday week, in his seventy-first year. Years of suffering had withdrawn the poet and critic from the literary society of which he was the ornament. English students of German literature will remember that Tieck helped to familiar-se his countrymen with the writings of Shakspeare and other of our older dramatists by his translations.

THE ASCOT-PARK BUFFET.—There is at present in the Egyptian-hall a very noble and artistic buffet, executed by Messrs. Cooke and Sons, of Warwick, for the dining-hall at Ascot-park, belonging to Jumes Robert West, Esq. The characteristics of this work, which is carved in oak, are its massiveness, its simple symmetry of design, and the richness, propriety, and excellence of execution of its decorations

A SPRING SONG.

BY FRANCIS BENNOCH

SPRING-TIME returning sprinkles flowers
O'er valleys, meads, and mountains;
The genial sun and gentle showers
Unlock sweet Nature's fountains.

On joyous wing the wild birds sing
With loud melodious voice—
"O, lovely Spring! thy blossoms bring,
And bid the world rejoice."

Spring-time returning sprinkles flowers
O'er valleys, meads, and mountains;
The genial sun and gentle showers
Unlock sweet Nature's fountains

In stream and lake, in wood and brake,
All things that torpid lie,
To life are stirred when'er is heard
Spring's carol in the sky.
When air and earth are full of mirth,
Let each his tribute bring;
With loving heart bid grief depart,
That all may welcome Spring.
Spring-time returning sprinkles flowers
On valleys, meads, and mountains;
The genial sun and gentle showers
Fling open Nature's fountains

Blackheath, April, 1853.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The immense imports of the precious metals, the great abundance and low value of money, the unusual activity in the manufacturing districts, and the rapid increase in our export trade, have imparted considerable firmness in the Consol Market this week. The speculative spirit of money stock have, however, not been to say extensive. According to annual custom, Monday was observed as a close holiday in the Exchange. On Tuesday, the Three per Cents were done at 100¾; Fri, touched the same figures on the following day, yet the market closed less actively than it opened. The Three per Cents Reduced were 100; the New Three-and-a-Quarter per Cents 101¾; India Stock marked 260 to 263; and Bank Stock, 226 to 228. Exchequer Bills have ruled rather heavy, at from 1s to 5s, and India Bonds, 3s to 2s. pm. On Thursday, the Three per Cents were 100⅝; both the Reduced and the Account. The Three per Cents Reduced marked 100⅛ to 99⅝; and the New Three-and-a-Quarter per Cents, 101⅛. Bank Stock was 226½ to 227½, India Stock, 261 Exchequer Bills (June) were done at 1s. to 5s.; and India Bonds, 32s. pm. Long Annuities, 5 5-16. South Sea Stock, 115; Ditto, New Annuities, 100¾.

There has been an arrival of about 67,000 dollars, on account of the Mexican Dividends; yet that stock, owing to the disordered state of the country, and the uncertainty which prevails respecting future remittances, has been heavy, and drooping. The bargains have comprised, Austrian Five per Cents, 101; Brazilian Five per Cents, 100½; the Small, 101; the Four-and-a-Half per Cents, New, 100¾; Chilian Six per Cents, 104½; the Three per Cents, 81; Equador, 6½; Grenada, ex December Coupon, 23; the Deferred, 11½; Mexican, for Money, 37½; for the Account, 37½; Peruvian Four-and-a-Half per Cents, 88¼ to 89; the Scrip, 8¾ pm.; Portuguese Five per Cents, 42⅝ to 42; Russian Four-and-a-Half per Cents, 104½; Sardinian Five per Cents, 98½; Spanish Three per Cents, 48½; Ditto, New Deferred, Passive, Converted, 6¾; Spanish Committee's Certificates, 6¾ per cent.; Swedish, 2 dis.; Belgian Four-and-a-Half per Cents, 98; Dutch Two-and-a-Half per Cents, 66¼; Dutch Four per Cents, 99¼; French Rents, 104f. 50 cents; Greek, Ref., 10⅜; Ditto, Bine, 9⅝.

The returns from the Board of Trade, detailing the progress of our exports during the month, ending on the 5th ult., are very satisfactory. The total value of the shipments was £7,897,293, against £6,400,415 in 18.2 During the first quarter of the year the aggregate value of the e-[illegible] 3, against £16,575,748 last year, showing an increase of £3,515,970, or 21 per cent.

There has been rather more doing in Miscellaneous Securities, the prices of which have been well supported. Australian Agricultural have been 22 to 24; Peel River, 2½ to 4 pm.; Van Diemen's Land, 19½ to 20½; South Australian, 19½ to 20½; New South Australian, 1½ to 1 prem.; Scottish Australian, 1½ to 2½ prem.; Australasian Coal, ½ dis. to par. Union Bank of Australia, 77½ to 78½; Bank of Australasia, 36 to 37; London Chartered Bank of Australia, 40 to 41; Australian Agricultural, 1½ to ½ prem.; Bank of India, China, and Australia, 2 to 2½ prem.; Oriental Bank, 30 to 31; British American Land, 77 to 79; Bertin Waterworks, 2 to 4 prem.; North of England, 2½ Crystal Palace, 14 to ½ prem.; Ditto, of France, 14 prem.; Peninsula and Oriental Steam, 94; Ditto, New, 464; St. Katharine Docks, 100½; East London Waterworks, 124; Grand Junction, 74½; Kent, 84½; Southwark and Vauxhall, 90; West Middlesex, 110.

The arrivals of the precious metals have amounted to about £700,000 from Australia, £40,000 from New York, £12,000 from the East, and £400,000 from Mexico, the West Indies, &c. Amongst the shipments may be noticed £31,000 in gold and silver to India and Egypt. To the Continent several large parcels continue to be forwarded

Railway shares have ruled tolerably firm; but North Western's have been somewhat depressed, owing to the proposal "calls" for the present month are £3½,276, against £260,396 in 1852. Those for the first five months of the present year have amo-nted to £3,394,774, against £4,165,313 in 18.2. The fol owing are the official closing prices on Tour-lay.

(ORDINARY SHARES AND STOCKS.—Aberdeen, 20; Bristol and Exeter, 102¾; Caledonian, 65¾; Chester and Holyhead, 24; Dublin and Belfast Junction, 20½; Dundalk, Penrith, and Aberdeen Junction, 8½; East Anglian, 6; Ditto, £18, 14½; Eastern Counties, 10¾; Eastern Union (B and C), 7¾; Edinburgh and Glasgow, 73¾; Edinburgh and Peebles, 14; Great Northern Stock, 86½; Ditto, 5 Stock, 127; Great Southern and Western (Ireland), 113; Great Western, 92; Lancashire and Yorkshire, 80; Ditto, Fifths, 11¼; Ditto, West Riding Union, 8¾; Lancaster and Carlisle, 16½; London and Blackwall, 9¾; London and Brighton, 105¾; London and North-Western, 119½; Ditto, £10 Shares, 24; London and South-Western, 91½; Manchester, Sheffield, and Lincolnshire, 31; Midland, 75¾; Norfolk, 54; North British, 36½; North Staffordshire, 14½; Oxford, Worcester, and Wolverhampton, 22; Scottish Midland, 61¼; Shrewsbury and Birmingham, 16¼; Shrewsbury Union, 2½; South Devon, 21¼; South Eastern, 76; South Wales, 37½; Waterford and Kilkenny, 10; York, Newcastle, and Berwick, 70½; Ditto, G.N.E. Purchase, 9½; York and North Midland, 46.

LINES LEASED AT FIXED RENTALS.—London and Greenwich, 14½; South Staffordshire, 8½; Wear Valley, 8½.

PREFERENCE SHARES.—Birkenhead, 10½; Chester and Holyhead, Five-and-a-Half per Cent, 19½; Cork and Bandon, 8½; Dundee, Perth and Aberdeen Junction, 8½; Great Northern, Five per Cent, 120; Ditto, Redeemable at 10 per Cent Premium, 12½; Ditto, Four-and-Half per Cent Scrip, 8½; Great Southern and Western (Ireland), 8½; Great Western, Irredeemable, Four per Cents, 104; Lancashire and Yorkshire, Six per Cent Stock, 152½; Lancaster and Carlisle, Five per Cent Shares, 11; Consolidated Bristol and Birmingham, Six per Cent Stock, 156; Ditto, Five ference, Four-and-a-Half per Cent, 95; North British, 11½; Oxford, Worcester, and Wolverhampton, 11½; Ditto, 14½; York, Newcastle, and Berwick, Four per Cent, 104½.

FOREIGN.—Antwerp and Rotterdam, 2¾; Dutch and Rhenish, 1½; East Indian, 20¾; Ditto, Extension, 2; Great Indian Peninsula, 7½; Grand Junction of France, 2½; Luxembourg, 2; Northern of France, 17½; Paris and Rouen, 11½; Paris and Strasbourg, 17½; Royal Swedish, 1½; Sambre and Meuse, 1½; Western of France, 2½.

About an average business has been doing in Mining Shares. On Tuesday Agua Fria were 2¾; Anglo-Californian, 1; Australasian, 2¾; Australian, 4½; British Australian Gold, 1½ to ¾; Imperial Brazilian, 1; Cobre Copper, 47½; Colonial Gold, ¾ to ⅝; Liberty, 1½; Nouveau Monde, 3½; Port Philip, 1½; Santiago de Cuba, 6½; United Mexican, 5½; Weller, 1½; West Mariposa, 1½.

THE MARKETS.

CORN EXCHANGE.—The arrivals of English wheat up to our markets this week have been moderate in good. For all kinds the demand has ruled heavy, at a decline of 1s. per quarter from last week. Foreign wheats have moved off heavily, at 1s. per quarter less money. The imports of barley being less extensive, the sale for that article has been dull, at a decline of 1s. per quarter In the value of malt no change has taken place; but oats have given way 6d. to 1s. per quarter Beans and peas have realised former terms; but flour has commanded very little attention

English.—Wheat, Essex and Kent, red, 41s. to 50s.; ditto, white, 41s. to 53s.; Norfolk and Suffolk, red, 39s. to 50s.; ditto, white, 40s. to 52s.; rye, 30s. to 32s.; barley, 24s. to 28s.; distilling ditto, 25s. to 29s.; malting, 30s. to 36s.; Lincoln and Norfolk malt, 52s. to 58s.; brown ditto, 47s. to 52s.; Kingston and Ware, 56s. to 60s.; Chevalier, 60s. to 63s.; Yorkshire and Lincolnshire feed oats, 17s. to 21s.; potato ditto, 22s. to 24s.; Youghal and Cork, black, 16s. to 19s.; ditto, white, 17s. to 21s.; tick beans, new, 24s. to 26s.; ditto, old, 30s. to 32s.; grey peas, 30s. to 35s.; maple, 32s. to 36s.; white, 36s. to 38s.; boilers, 37s. to 42s. per quarter Town-made flour, 35s. to 44s.; Suffolk, 32s. to 33s.; Stockton and Yorkshire, 32s. to 34s. per 280 lb. *Foreign.*—French flour, 34s. to 38s. per 280 lb.; Spanish, 20s. to 22s. per barrel.

Seed Market.—The general demand is in a sluggish state, and prices are well supported

Linseed, English, sowing, 54s. to 56s.; Baltic, crushing 47s. to 50s.; Mediterranean and Odessa, 46s. to 50s.; hempseed, 38s. to 40s. per quarter, Coriander, 9s. to 12s. per cwt. Brown mustard-seed, 7s. to 9s.; white ditto, 7s to 9s.; rapeseed, 5s. 6d. to 5s. 9d. per bushel. English rapeseed now, £21 to £24 per last of ten quarters. Linseed cakes, English, £8 to £9 10s.; d.to, foreign, £7 10s to £9 10s per ton. Rape cakes, £4 10s. to £5 per ton. Canary, 40s to 47s per quarter. Rice, clever, 40s. to 46s.; white do., 42s. to 45s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5½d. to 6½d. per 4 lb. loaf

Imperial Weekly Average.—Wheat, 44s. 6d.; barley, 31s. 6d.; oats, 18s. 8d.; rye, 30s. 9d.; beans, 35s. 9d.; peas, 33s 3d

The Six Weeks' Average.—Wheat, 44s. 7d.; barley, 31s. 7d.; oats, 18s. 10½.; rye, 30s. 5s., beans, 34s 7d.; peas, 32s 9d

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s., beans, 1s.; peas, 1s

Teas.—The amount of business doing in the auction rooms is by no means extensive, yet prices are very firm Common sound congou cannot be purchased under 11d per lb Up to Saturday last 30,000 packages had changed hands at 21,236 lb in 1853.

Sugar.—All kinds have sold freely, and the quotations have ruled very firm Good to fine yellow Barbadoes has changed hands at 39s. 6d. to 37s. 6d.; fine grainy ye low, 41s to 42s. good to fine grainy Demerara, 38s. to 39s 6d.; good to fine yellow Mauritius, 37s to 37s 6d.; good to fine grainy yellow, 38s. to 40s 6d.; and many to this where Bengals, 37s to 39s. 6d. per cwt. Foreign sugars have moved off steadily, at extreme rates. Refined goods are firm, as are the brewing lumps, and the sale of to-day is fair to fine grocery. The total consumption to the 30th ult. were 1 354,736 cwt. against 1,368,436 cwt. last year

Coffee.—Our market is heavy and the quotations are almost nominal

Rice.—Middling white Bengal is selling at from 12s. 6d. to 12s. 9d.; good, 11s to 11s 6d. per cwt.

Fruit.—Valencia raisins are steady, at full quotations Otherwise, the demand is in a stagnant state

Provisions.—Irish butter, the supply of which is on the increase, moves off freely at full prices. Likewise, 94s. to 96s., and Friesc 92s. to 94s. per cwt. Foreign dull, and rather weer; but English imports previous rates. Bacon very heavy Dutch, 100s to 104s per cwt.; Irish to 92s. per dozen lbs Bacon firm, at 60s. to 62s for Waterford sizeable, and 60s to 64s. per cwt. Lard is easier to pay base Irish kegs, 50s. to 54s. per cwt. Other kinds of provisions are tolerably firm

Tallow.—P.Y.C., on the spot, is firm at 47s. 6d. per cwt. The same quotation has been paid for delivery during the last three months. Town tallow is 47s. 3d. to 47s. 6d. per cwt. mutton, rough fat, 5s. 2d. per 8lb

Oils.—Linseed oil is steady, at 28s. 6d. per cwt. In other oils, very little to doing. Spirits of turpentine are selling at 32s. per cwt.

Spirits.—East India rum, proof, is selling at 1s. 8d.; Leewards, 1s 9½d. to 1s. 10d.; and Jamaica, 1s. 8½d. to 1s 9d. per gallon. Brandy is in better request, at full quotations Corn spirits are quite as dear as last week

Hay and Straw.—Meadow hay, £3 3s to £4 14s.; good ditto to £5 15s.; and straw, £1 7s to £1 16s. per load

Coals.—Stea s West Hartley, 15s.; Hastings Hartley, 15s.; Holywell, 15s.; Lawson, 15s.; Eden Main, 17s. 3d.; Cassop, 17s. 6d.; Seaward's, 18s. 3d., South Kelloe, 17s. 3d.; Tanfield Moor, 17s. 6d.; Wylam, 17s. 6d.; St. Hilda's Tees, 16s. per ton.

Hops.—The show of samples is limited, yet the demand is very inactive as follows:—Mid and East Kent fine, 130s. to 160s.; Weald of Kent, 112s. to 126s.; Sussex 112s to 120s. per cwt.

Wool.—All kinds, notwithstanding that the imports of colonial are large, move off steadily, at very full prices

Potatoes.—The demand is heavy and the quotations are drooping. The best York cursels are selling at 140s. per ton

Smithfield.—Although the supplies on offer this week, has been seasonably small, the general demand has continued steady, at full prices.

Beef, from 4s. to 4s. 4s.; mutton, 4s. to 5s. 4d.; lamb, 5s. to 6s.; veal, 3s. 8d. to 4s. 8d., pork, 3s. to 4s. 4d. per 8 lb. to sink the offal.

Newgate and Leadenhall.—The trade is steady as follows

FRENCH PLAYS.—ST. JAMES'S THEATRE THIS EVENING, MAY 7, will be performed the New Play, entitled LES CONFIDENCES DE LA REINE DE NAVARRE; being the only occasion it can be repeated, owing to the rehearsals for the production of Les Pantoufles de Sa. Cyr, which will be revived on Monday next, May 9. The favourite Comedy of Mille. de la Seiglière will be performed next week, combining the services of M. Ledru, Mr Bognor, Mille Madeleine Brohan, and Madame Arnaud, who will make her first appearance in the character of La Baronne de Vaucourt. —Boxes and Stalls, at Mr. MITCHELL'S Royal Library, 33, Old Bond-street, and at the Box-office.

THE QUEEN'S CONCERT ROOMS, Hanover-square. Mme ARABELLA GODDARD begs to announce that her CONCERT will take place on FRIDAY EVENING, MAY 13, 1853, to commence at Eight o'Clock precisely, when she will be assisted by the following eminent Performers:—Vocalists Pyläeti Agnes Bury (From the Theatre Royal, Vienna, and the Gewandhaus-Concert, Leipzig—her First Appearance in England, and Herr Reichart. Instrumentalists, Violin, M. Sainton; Viola, Mr. Hill; Violoncello, Signor Piatti, Contrabasso, Signor Bottesini, Pianoforte, Mme Arbella Goddard. Conductor, Herr Molique.—Tickets, 7s each, Reserved Stalls, Half-a-Guinea; to be had at the principal Music-sellers; and of Mme GODDARD, 47, Wyndham-street Cavendish-square, where a Plan of the Room may be seen

MR. BRINLEY RICHARDS' ANNUAL SERIES OF PIANOFORTE RECITALS and MODERN PIANOFORTE MUSIC will commence on SATURDAY MORNING, MAY 21, at the HANOVER-SQUARE ROOMS. He will be assisted by the most eminent artists. Subscription tickets for the Series (reserved seats), One Guinea; single tickets, Half a Guinea; to be had at the Music-shops; and of Mr Brinley Richards, 6, Somerset-street, Portman-square.

WILLIS'S ROOMS.—HARP UNION.—Mr. Wells respectfully announces that the THREE MORNING CONCERTS, assisted by Eminent Talent, the first will take place on TUESDAY, MAY 10, at Three o'Clock. Under the Patronage of Her Majesty the Queen and her Royal Highness Prince Albert. Tickets to be procured of Mr. J. H. Wright, 59, Berners-street; Herr Oberthür, 67, Milton-street; and Mr. H. J. Trust, 13, Westbourne-grove.

MR. JAMES HANNAY, author of "Singleton Fontenoy" &c., proposes to deliver SIX LECTURES on SATIRICAL LITERATURE. The course will comprise Notices, Biographical and Critical, of Horace and Juvenal, of Erasmus and David Lindsay and George Buchanan, of Rabelais and the Leaguers, Swift and Voltaire, of some writers of the last age and of some contemporary writers and publications. Further particulars will be duly announced.

THE AMATEUR EXHIBITION, PALL-MALL, is NOW OPEN, from Ten till Dusk Daily, at the GALLERY, No. 191, PALL-MALL, opposite the Opera Colonnade. Admission, 1s. Catalogue, 6d

Gallery, 191 Pall-Mall. E. C. BECKER, Sec.

WHITSUNTIDE HOLIDAYS.—The admission to the ZOOLOGICAL GARDENS, in REGENT'S PARK is SIXPENCE for each person throughout Whitsuntide Week, except on Saturday. The collection is the largest in the world, and contains many animals which have never been seen in any other menagerie

THE FREEHOLD FRANCHISE, and ELIGIBLE INVESTMENT.—The FOURTH DRAWING for Rights of Choice on Estates in Middlesex, Surrey, Hertfordshire, Kent, and Yorkshire, and in other counties, will take place on the 31st inst., at the Offices of the CONSERVATIVE LAND SOCIETY, 33, Southampton-street, Strand, NEXT SATURDAY, the 14th instant, at twelve o'clock. Persons taking a £50 Share, and paying a Month's Subscription of five Guineas (viz. £6.5.) on or before the 19th, will be entitled to the advantages of the next day's drawing.

CHARLES LEWIS GRUNDISEN, Secretary

TO AMATEURS.—A Gentleman wishes to establish an AMATEUR SKETCHING CLUB. Parties are will be forwarded to any gentleman desirous of becoming a member, by his addressing a note to "Amateur," at Mr. MARY'S, 20, Cornhill.

PORTRAITS.—BARRATT and STANTON'S PHOTOGRAPHIC PORTRAITS are natural by expression and harmonious in colouring. Numerous pleasing Evidential Portraits on view. Miniatures taken for the smallest sum, and for presentation. Private sessions on appointment, or by post. 11, Regent-street.

CLASSES for the STUDY of PERSPECTIVE LANDSCAPE and FIGURE DRAWING.—Messrs. DICKSON and SON have the honour to announce that their Studio Figure Classes have RE-COMMENCED for the season. Ladies studying in the classes have the privilege of selecting works from the Messrs. Dickson's Water-colour Gallery, which contains works by the most eminent masters, including those of Copley, Fielding, Cox, Prout, &c.—Galleries of Art, 114, New Bond-street.

PHOTOGRAPHIC SCHOOL.—ROYAL POLYTECHNIC INSTITUTION.—The School is NOW OPEN for instruction in all branches of Photography, to Ladies and Gentlemen, on afternoons and from Seven till Ten o'clock, under the joint direction of T. A. Malone, Esq., who has long been connected with Photography, and J. H. Pepper, Esq., the Chemist to the Institution. A Prospectus, with terms, may be had at the Institution.

PRIVATE TUITION.—A Married Clergyman, residing south of London, could, after May, receive, in addition, into his family, TWO BOYS of respectable parentage, to whom he could secure high Classical and Mathematical attainments, and a highly-finished education in all the usual accomplishments. He would prefer children who require more than usual care and attention, and who greatly need, or would greatly profit by, home. To them the customary assistance is tendered. A parent peculiarly anxious for the well-planning of his child would find in the home arrangements and the educational system of the advertiser everything to secure the most careful supervision. The address—Rev. S. H., Church and State Gazette Office, 324, Strand, London.

CHELTENHAM GRAMMAR SCHOOL.—FOUNDED 1574.

HEAD MASTER—E. H. Humphreys, LL.D.; Editor of Horace, Author of Exercises on Latin Accidence, Lexicon to Virgil, Key to Latin Exercises, &c.

SECOND MASTER—Henry Nary Jeffery, Esq., M.A., of St. Catherine's College, Cambridge; Sixth Wrangler of 1849, Second Classman in Classical Tripos, Cambridge University scholar, and lately Second Master of Sedbergh Grammar School.

CLASSICAL AND MATHEMATICAL MASTER—Mr. James Scoresby, F.E.I.S., lately Head Master of the Rothesay Academy, Bute.

HEAD MASTER'S ASSISTANT—C. B. Brightwell, Esq., B.A., of St Edmund Hall, Oxford.

FRENCH AND ITALIAN—Monsieur C. Tessel, B.A., of the University of Grenoble.

GERMAN—P. Blaschke, Ph. D. of the University of Gottingen.

Together with a resident Drill Sergeant, and other Visiting Masters.

The Course of Instruction in this Establishment comprises a complete system of Classical and Mathematical Education, on the same plans of the Head Masters' and which has been honoured with the especial approval of the Royal Majesty the Prince Albert.

There are two Scholarships and Five Exhibitions of considerable value at Colleges in Oxford, in connection with this School.

The domestic arrangements for the Boarders are under the immediate superintendence of Mrs. Humphreys, who is also assisted by an experienced Matron.

The Head Master's house contains only three beds, and every pupil has a separate bed.

All such Boarders as desire them are allowed plots of garden, rabbit-houses, &c.

Boarders must be under Fifteen years of age at entrance, and must produce satisfactory certificates as to moral character and disposition; but they are allowed to remain at the School after that age, if the parents should afford satisfaction to the Head Master.

The Midsummer vacation will commence on the 23rd of June and end on the 1st of August. The number of Boarders is nearly complete.

TERMS

For Board and Education, including Modern Languages ... £50 per Annum.

Further particulars may be had of E. R. HUMPHREYS, LL.D., Head Master

April 26, 1853.

NEW BOOKS, &c.

Edinburgh, Glasgow, Hull, Bristol, Carlisle	6 10 0	4 5 0
Worcester, Cheltenham, Gloucester, Oxford	5 15 0	4 5 0
Birmingham, Rugby, Leamington, Coventry,	5 0 0	3 15 0
Lincoln	4 5 0	2 15 0
Wolverhampton, Huddersfield, Leeds, Shef- field, Derby	3 0 0	4 5 0
Manchester, Warrington, Stoke, Macclesfield	4 4 0	3 0 0
Liverpool, Chester	4 4 0	3 5 0

They enable the holders to proceed to Chester, Bangor, Dublin, Cork, and the Lakes of Killarney, and back again the Station at which the ticket was issued.

The holder of each Irish Tourist Ticket is entitled to have himself, his kit, at the office, 54, West-and-road, Dublin, at very reduced rates. Tickets for a tour in the county Wicklow, at Kenmare and Glengariff, via the river Shannon, for the journey from Dublin to Belfast for the Exhibition, and for the Coast Excursion from Dublin to Galway for the tour through Connemara.

Every purchaser of a ticket is presented gratis with a copy of the Illustrated Irish Tourist's Hand-book compiled solely for these tours.

The tickets are issued on receipt of information addressed to the Secretary and Holyhead Company's Office, 54, Westland-row, Dublin. See also Bradshaw's Guide, page 123.

COLD WATER ESTABLISHMENT, MILDRAD, near Bagshot, on the Bleak.—The Establishment, which was formerly under the common care of Dr Herbert Mayo, late senior Surgeon to the Middlesex Hospital, London, and Dr Charles Hennah, a German physician, and formerly pupil of Mr. Priessnitz, the Inventor of the Water Cure, is, since the death of the former gentleman, conducted by Dr. Hennah alone. No expense has been spared to render Mildrad a desirable and comfortable residence for English invalids, and its terms are so moderate as to place it within their reach. Even ladies and gentlemen not wishing to adopt the treatment of the Establishment will find it a most delightful residence as a boarding-house. For all particulars apply to Dr. HENNAH, who resides at the Establishment, and knows the English language.

NOTICE.—TO SHIPPERS.—M. DE COSTA ANDRADE and CO., Ostrich Feather and Artificial Flower Manufacturers, beg to announce to the trade the REMOVAL to more extensive premises, No. 6, 7, and 8, CHRISTOPHER-BUILDINGS, FORE-STREET.

THE CAMBRIDGE SHERRY, 36s. per Dozen Cash. Carriage paid.—At this price we offer to the public the same Wine as shipped by one of the late Duke of Cumberland's, and for H. H. the present Duke of Cambridge; and which is known by the Cambridge Mark on the Cork, imported by W. T. BELLINGHAM and Co., 4, Beaufort-buildings, London

PURE ROUSSILLON, 26s. per dozen, from the vineyard direct. One of the finest known red wines, firm bodied, of full colour, with fine violet flags, has the flavour of Burgundy, a longer resembling the finest Port, but fresher, smoother and purer taste, has the merit of not requiring any kind of improvements which are sold, as it is as easily as Port, is rich, racy, soft, and perfect delicacy. Will keep in any climate, from one to any quantity of a very perfect kind are its characteristics.—CONTOSTAVEN and NOEL, 67, Mincing-lane, Wine-merchants, Spanish Pale Sherry, 20s.; Ma. ; standard or natural, 24s. All sale however Free. All cash Terms.

HAIR JEWELLERY.—ARTIST in HAIR.—DEWINEY sends an ILLUSTRATED BOOK to any part of the Kingdom, for two postage stamps. Highly-mounted specimens kept for inspection.—DEWINEY, 179, Piccadilly, corner of Sackville-street, London

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 338, Strand, opposite Somerset House, are warranted not to vary more than half a minute per week. On receipt of a Post-office Order, payable to JOHN JONES, for £4 4s., one will be sent free. Jones's Illustrated Guide Book gratis.

HAWLEYS, Watchmakers and Goldsmiths, 186, Oxford-street, and 251, High Holborn; from 75, Strand, and Coventry-street.—Elegant Gold Watches, jewelled in four holes, maintaining power, with all the late improvements, £3 10s. Silver Watches, with movements equal to the above, £2 5s., a written warranty given with each. N.B., said the Gold Canes, from 6s. each. Established upwards of half a century. The only genuine firms of the name in London.

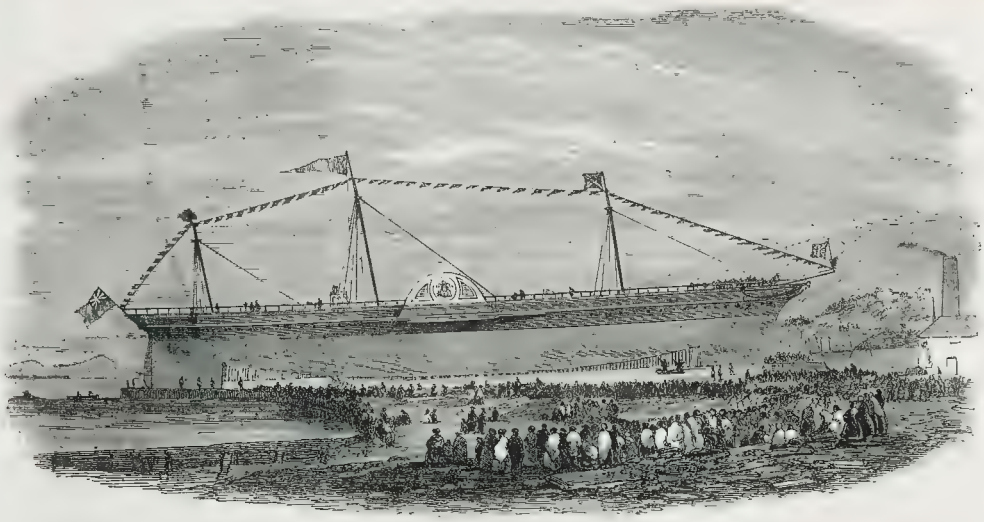
Complete lists, with prices, will be sent on application.—CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsby-fields Wolverhampton

CHEAP BOOKS.—CHEAP MUSIC.—A Discount of 2d. in 1s. on Books, and 6d. in 1s on Music, is taken off the published price, by PEARSON and SON, 70, Bishopsgate-street Within. Country orders despatched the same day. Music in large or small quantities sent carriage free for 6d



LAUNCH OF THE IRON STEAM-SHIP "ATRATO," AT GREENOCK.

LAUNCH OF THE "ATRATO," AT GREENOCK.

THE announcement that Messrs. Caird and Co intended to launch from their building-yard, Carlsdyke, on Tuesday week, the Royal Mail iron paddle steamer *Atrato*, "the largest ship in the world" attracted a vast concourse of spectators

Shortly after one o'clock Sir Michael and Lady Octavia Shaw Stewart arrived, and were received by Captain Miller and Mr. Caird. Lady Octavia was received by Mrs. Caird, who, with several other ladies, occupied seats on the platform, at the vessel's head, and Captain Miller put into her hand the bottle, slung from the vessel's bows by a Stewart tartan ribbon, explaining the process of naming the ship

Much had already been done in the way of preparation, and only the wedges in front of the paddle boxes had to be hardened up, and a few shores and keel blocks to be removed. At a quarter-past one the first wedge was struck, and the work went on rapidly; soon the immense mass was lifted and lay quietly in her cradle, kept in her position by the triggers and the three front keel-blocks. The "daggers" were next removed, and the centre keel-block knocked away, when the weight of the enormous mass crushing its way through the planking on which it rested on the blocks with a groaning noise, freed the vessel from the drag which prevented her progress; and, amid the most intense excitement and vociferous cheers of the spectators, she began to move. At this moment Lady Octavia hurled the bottle with most accurate aim, pronouncing at the same time the ship's name, and the *Atrato* glided quickly but smoothly down the ways amidst the thundering of the cannon, the most hearty cheers, and waving of hats, handkerchiefs, parasols, &c.; the artisans, in the enthusiasm of the moment, hurling their heavy hammers after her. The ways were carried far out, and the vessel, without anything resembling a plunge, and scarcely even a shake, entered the water in her natural position, running off so rapidly that it was found necessary to anchor her until the tugs which were in attendance could get attached to her

We subjoin a few particulars of the *Atrato*:—Early last year, the fine ship *Demerara*, built on the Severn, for the Royal Mail Steam-packet Company, unfortunately got stranded across the river soon after her launch, and was so much injured, that she had to be broken up. For this ship Messrs. Caird and Co. had the engines ready to go on board; and the directors immediately gave orders to the firm to construct an iron vessel to be fitted with them. That ship is the *Atrato*. To suit the machinery, it was requisite to maintain the same width as the *Demerara* had been, but the length has been considerably increased. Including engine-room, she will register 3462 tons. The *Great Britain* is of greater capacity by about 30 tons; but the *Atrato* is longer by 40 feet. Her dimensions are:—

Length over all	350 feet.
" of keel and forerake	316 "
Extreme breadth, including wings	72 "
Breadth of beam	42 "
Depth of hold	34 "

The size of the great war-steamer *Duke of Wellington* may be stated, by way of comparison:—

Extreme length	278 feet
Length of keel and forerake	240 "
Breadth	59 "
Depth	24½ "

The *Duke* being thus less than the *Atrato* by above 70 feet in length and 10 feet in depth; the width of the latter being, from the causes mentioned, less by 17 feet. The height from keel to top of bulwark-rail, is 43 feet. Her bow is surmounted by a spirited representation of an Indian deity, the work of Mr. Peter Christie, of Greenock

The *Atrato* has four decks, seven and eight feet respectively in height. The spar deck is flush from stem to stern, affording a promenade the length and breadth of a good street, 340 feet by 36. She is to have two funnels and three masts. The standing rigging is exceedingly light and graceful, being formed of Newall's galvanised iron.

The keel of the ship was formed of nine enormous pieces of iron, and the stem and stern-posts are each one piece, and both carried besides some distance along horizontally. The ship is divided into seven water-tight compartments, by strong iron bulkheads. The iron used in the construction of the hull is above 1800 tons. She is to be propelled by two beam-engines of the collective power of 800 horses

Internally, little has yet been done in the way of fitting up; but we may mention that she is to have accommodation for 224 first-class passengers.

The construction of such a ship as the *Atrato*, and the recent purchase of *La Plata*, afford the strongest evidence of the earnest desire of the Royal Mail Steam-Packet Company to fulfil their engagements with the Government and their duty to the public.

The Company have now at work a fleet of nineteen ships, above 32,000 aggregate tonnage, propelled by 8770-horse power of machinery; and they have in progress the *Atrato* and other four vessels, of 8000 tons in all, with above 2000-horse power machinery—making a total of above 42,000 tons and 11,000-horse power.

THE "WAR-ROCKET" CASE AT THE BOW-STREET POLICE-OFFICE.—EXAMINATION OF THE HUNGARIAN WITNESS.—(SEE PAGE 339.)

HISTORY OF THE REFORMATION IN THE SIXTEENTH CENTURY. Vol. V. By J. MERLE D'AUBIGNE, D.D. Oliver and Boyd.

The varied merits of this history have been so fully recognised by scholars and divines, that it were waste of words to descant on the erudition of the author, the industry of his researches, or the judgment with which he has arranged his materials. The present volume is exclusively devoted to the Reformation in England, commencing with the earliest introduction of Christianity into Britain, and continued down to the fall and death of Cardinal Wolsey. We learn, from the preface, that Dr. D'Aubigné, by order of our Government, has received copies of the national State papers, published by the commission of which the late Sir Robert Peel was president. He, therefore, has had access to the best authorities, and been enabled to consult authentic documents not previously explored. The publication of the work is opportune, as Rome is making powerful efforts to extend its spiritual and temporal dominion in the open face of day; while Puseyism is secretly attempting to undermine the foundations of Protestantism. Within the limited space to which we are necessarily confined, it is impossible for us to enter copiously into detail in reviewing the present volume; and, as we are thus driven to selection, we shall dwell rather on the earlier than on the later chapters, because the facts therein recorded are less popularly known, and also because the evidence therein contained refutes the assumption that Christianity was first taught to the ancient Britons by envoys or missionaries from Rome. This is a most material consideration to Protestants wavering in their faith, and who have not time at their disposal to consult our earlier annals. Whatever doubts or misgivings such persons may entertain will be removed by a perusal of the pages of D'Aubigné; and we shall now endeavour to give a rapid summary of this portion of his history. He justly remarks that "History is a wonderful organisation, no part of which can be retrenched. To confine the history of a people within the space of a few years, or even of a century, would deprive that history both of truth and life. We might, indeed, have traditions, chronicles, and legends, but there would be no history. To understand the present we must know the past." These canons of criticism are sound; for history is a lengthened chain; and if any of the links are lost, they can only be supplied by uncertain tradition or ingenious conjecture, and then we enter upon the domain of the vague, the speculative, and the deceptive. In all historical studies it greatly facilitates the labour of the student, if distinct and characteristic epochs are presented clearly to his view; for thus he more clearly seizes the peculiar features of those transition periods which separate one era from another, and stamp upon each its distinguishing impress. This method D'Aubigné has adopted. "Before the sixteenth century," he observes "this Church (of England) had passed through two great phases: the first was that of its formation; the second, that of its corruption. In its formation it was Oriento-Apostolical; in its corruption it was successively national-Papistical and Royal-Papistical. After these two degrees of decline came the last and great phasis of the Reformation."

Commerce was the instrument by which Christianity was first introduced into these islands. Vessels frequently reached the shores of Britain from the ports of Asia Minor, Greece, Alexandria, and the Greek colonies in Gaul. Many of the merchants who made these trading voyages, were acquainted with the history and doctrines of Jesus of Nazareth, and imparted their knowledge to the natives so early as the second century of the Christian era. Then simple churches rose, formed after the eastern type, in those mountains, forests, and western isles where Druidism had long held exclusive sway. Native preachers arose. Succat, better known as St. Patrick, was born near Glasgow, and established his fame in Ireland; while Columba, another Scotchman, founded the missionary college of Iona. "The sages of Iona," writes D'Aubigné, "knew nothing of transubstantiation, or of the withdrawal of the cup in the Lord's Supper, or of auricular confession, or of prayers for the dead, or tapers, or incense; they celebrated Easter on a different day from Rome; synodal assemblies regulated the affairs of the Church, and the papal supremacy was unknown. The sun of the Gospel shone upon these wild and distant shores." At Bangor, also, in North Wales, there was a Christian community, numbering, it is said, three thousand souls, and forming one of the chief centres of British Christianity; and it is certain that the missionary bishops of Britain traversed the Low Countries, Gaul, Switzerland, Germany, and even Italy. Here, then, we have historical evidence that Christianity was known and taught in Britain for centuries before the arrival of Augustine, who was sent to these islands in the year 597 by Pope Gregory, who has been styled "the last of the good and the first of the bad" Pontiffs of Rome.

At this era the Papal invasion commences. Augustine began the spiritual and temporal conquest of Britain, which it took the whole of the seventh century to accomplish. The Saxon Pagan soldiers razed Bangor to the ground. The monastery at Whitby, in Yorkshire, yielded to the sophism that the Pope was the successor of St. Peter, to whom the keys were given by our Lord; and, after a protracted resistance, Iona fell; its priests received the Latin tonsure; and Scotland bent the knee to Rome. But in the eighth century another son of Scotland arose, and boldly entered his protest against Papacy. To human tradition he opposed the word of God; to clerical materialism, a Church which is the assembly of the saints, and to Pelagianism, the sovereignty of grace. He made numerous converts; Pontifical Christianity was endangered; and Boniface, Archbishop of the German Churches, went to the rescue. It is interesting to note the subtlety of disputation in those early ages, and we shall extract from D'Aubigné the main points of the controversy:—

At first Boniface confronted the Scotchman with the laws of the Roman Church; but the latter denied the authority of these ecclesiastical canons, and refuted their contents. Boniface then put forward the decisions of various councils: but Clement replied, that if the decisions of the councils are contrary to Holy Scripture, they have no authority over Christians. The archbishop, astonished at such audacity, next had recourse to the writings of the most illustrious fathers of the Latin Church.

"THE WALK TO EMMAUS."—PAINTED BY H. WARREN.—FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.

THE above is the principal historical work in the Exhibition of the New Society of Painters in Water-Colours, and is painted by Mr. Warren, the President of the Society. The treatment is simple, but the figures are full of dignity and expression. The Saviour is clothed in a white drapery of a rich mellow tint, and discourses with the air of Divine authority to the two disciples, who appear to be wrapt in thought and reverential aspirations. A warm glow of sunlight gives a brilliant effect to this admirable picture

[illegible] and [illegible] but the Scripture told him that [illegible] God alone. Boniface, with indignation, now introduced the Catholic Church which, by its priests and bishops, all united to the Pope, forms an invincible unity; but, to his great surprise, his opponent maintained that there only, where the Holy Spirit dwells, can be found the spouse of Jesus Christ.

Clement was not the only opponent of Rome. Two of his countrymen, Sampson and Virgil, preached against the Pope's pretensions in central Europe; and it is worthy of record that Virgil, anticipating Galileo, had the courage to maintain that the globe was spherical, and avowed his belief in the Antipodes. For this opinion he was denounced by Boniface, and condemned at Rome. Then followed John Scot Erigena, a native of Ireland, not of Ayr in Scotland, generally known as Duns Scotus. He was a bold and independent thinker, and the first who taught philosophic rationalism. D'Aubigné thus states his creed:—

"The knowledge of ourselves is the true source of religious wisdom. Every creature is a theophany—a manifestation of God; since revelation pre-supposes the existence of truth, it is this truth which is above revelation, with which man must set himself in immediate relation, leaving him at liberty to show afterwards its harmony with Scripture, and the other theophanies. Reason, and first among reason, then authority. Authority proceeds from reason, not reason from authority."

Alfred the Great is next introduced into the historic panorama—the founder of the University of Oxford and the translator of the Psalms of David. After his death, intellectual darkness settled thickly on Britain. Nine Anglo-Saxon kings died in monasteries. The tax of Peter's pence was imposed; convents were multiplied; and the power of Rome was apparently consolidated. But a reaction followed. "England," says D'Aubigné, "decided her differences as a war against the Papacy—a war at one time secular and at another spiritual. William of Normandy, Edward III., Wickliffe, and the Reformation, are the four ascending steps of Protestantism in England."

Though William invaded England in the name of the Pope, from whom he had received a consecrated banner, he had determined never to be his vassal. Before he resisted the Papacy, he made sure of the submission of the English priests. He compelled Wulstan, Bishop of Winchester, to give up the crosier into his own hands, and all the rest followed the example. The Conqueror then brought new priests from Normandy, and nominated them directly to the vacant benefices. He insisted that all the clergy should take an oath to him, and that all synodal decisions should receive his counter-signature. "I claim," said he, addressing the Archbishop Lanfranc, "to hold in this hand all the pastoral staffs in my kingdom;" and when the Pope ordered the priests to put away their wives, the King cancelled the order. From this reign began the struggle between the Royal and Papal prerogative. All our readers are familiar with the audacity of Becket, and the mean pusillanimity of John, who surrendered his kingdom to the Pontiff, and took an oath to him, as lord paramount. Then followed the famous Magna Charta, and we reach the epoch of political Protestantism, when the Papacy first came into collision with modern liberty, for the Barons asked, "Is it the Pope's business to regulate temporal matters?" On the Pope ordering the English Bishops to find benefices for three hundred Italians, Grostête, Bishop of Lincoln, exclaimed that "to follow a Pope who rebels against the will of Christ, is to separate them from Christ and his body; and if ever the time should come when all men follow an erring Pontiff, great will be the apostasy. Then will true Christians refuse to obey, and Rome will be the cause of an unprecedented schism." Archbishop Bradwardine followed up these attacks, and Edward III. gave him every support and encouragement. That monarch had been galled by a remark made by one of his courtiers, who, alluding to the battle of Crecy, and the demand of the Pope, had said, "Gospel virtue, indeed, to the King. "France is becoming English; and, by way of compensation, England is becoming Italian." Then followed the statutes of Provisors and Præmunire, on which Fuller remarks, "If the statute of mortmain, put the Pope into a sweat, the statute of præmunire put him a fit of fever." Thus, nearly two hundred years before the Reformation, England showed herself impatient of the yoke of Rome.

We have now reached the era of Wickliffe, who was forty years of age when Papal arrogance stirred England to its centre. His sermons powerfully impressed all classes, and the sentiments he had expressed were re-echoed in some remarkable debates in the House of Lords, from which we take a few extracts:—"Feudal tributes due," said one, "only to him who can give feudal protection in return. Now, can the Pope wage war to protect his fiefs?" "Is it as vassal of the Crown or as feudal superior," asked another, "that the Pope demands part of our property? Urban V. will not dare to claim these titles. Well and good; but the English people will not acknowledge the second." "Why," said a third, "was this tribute originally granted? To pay the Pope for absolving John. He demand, John, a mere sinner—a kind of clerical swindling—which the lords spiritual and temporal should indignantly oppose." "No," said another speaker, "England belongs not to the Pope. The Pope is but a man, subject to sin; but Christ is the Lord of Lords, and this kingdom is of right the Lord's and Christ's alone." Thus, says D'Aubigné, the lords spoke, inspired by Wickliffe. Shortly after these debates, the citizens declared that "the Pope's briefs ought to have no effect in the realm without the King's consent. Every man is master in his own house.

Wickliffe was borne along on the tide of public opinion. He felt his popularity, and determined to strengthen it by translating the Latin Bible into English. In the meantime, in defiance of the monks, who said it was heresy to speak of the Holy Scripture in the vernacular tongue. He had very powerful friends among the nobility, but none ventured to follow him when he attacked transubstantiation, which he did in the following terms:—"Since the year of our Lord 1000, all the doctors have been in error about the sacrament of the altar; except, perhaps, it may be Berengarius. How canst thou, O Priest, who art but a man, make thy maker? What is the thing that grows in the fields—that ear which thou pluckest to-day shall be God to morrow! As you cannot make the works which He made, how shall ye make Him who made the works? Woe to the adulterous generation that believeth the testimony of innocent rather than the Gospel." At this time sprang up the sect called Lollards, or psalm-singers, from Lollen to sing. The spirit of Wickliffe's doctrines survived his death. His followers boldly declared that "every minister could administer the sacraments, and preach the cure of souls." In 1395, a petition was presented to Parliament for a general reform of the Church. "The essence of the worship which comes from the Church of Rome," said the petitioners, "consists in signs and ceremonies, and not in the efficacy of the Holy Ghost; and, therefore, it is not that which Christ has ordained. Temporal things are distinct from spiritual things; a King and a bishop ought not to be one and the same person." Richard II threatened the reformers with death and confiscation, and succeeded in repressing them, but he was soon dethroned, and put to death by Henry of Lancaster, son of the famous Duke, who had been the principal supporter of Wickliffe among the nobility. The reformers now made confident that their hopes would be realised; but the prelimate Arundel, when he placed the crown on Lancaster's head, said to him, "To consolidate your throne, conciliate the clergy and sacrifice the Lollards;" and the new King, eager to show his gratitude to the prelate, delivered every heretic he could burnt alive at the stake. It so happened that a pious priest, William Sawtree, was the first victim. His offence consisted in having said, "Instead of adoring the cross on which Christ suffered, I adore Christ who suffered on it." Then followed the "constitutions of Arundel," which forbade the reading of the Bible, and declared the Pope "not a mere man, but a true god." Lord Cobham next perished. He was dragged on a hurdle to St. Giles's-fields, suspended by chains over a slow fire, and cruelly tortured to death. Liberty was to rise from the blood of the martyrs.

It is evident that during the long period rapidly passed under review, this country was never sincerely attached to Rome. If its doctrines were nominally admitted, they had never sunk into the hearts of kings, nobles, or commonalty, or won the feelings or affections. In all times there had been a lurking dissent and protest, and even the submission of John was a political, not a religious, act. The foreign yoke was always despised and resisted, and the dictates of the Pope were never ordered into a right. He was constantly regarded as an intruder, an usurper, a foreigner; and the Italians, to whom he gave English benefices, were viewed as aliens, whose footsteps polluted the soil. History, therefore, l[illegible] us two important facts, worthy of deep attention in our days; first, that Britain was Christianised for centuries before the arrival of Augustine; secondly, that this country never formed part of the patrimony of St. Peter by any recognised or valid title, the Pope always having been considered as a pretender.

D'Aubigné then proceeds to the accession of the Tudors under Henry VII., when the revival of learning and the discovery of the art of printing came in aid of the cause of religious liberty. In this section of [illegible] history there are some delightful chapters, written in a graceful and [illegible] style. We are introduced to Erasmus, Sir Thomas More, Dean Colet, founder of St. Paul's School; the famous Brandon, Duke of Suffolk; and the youth of Henry VIII. and of Anne Boleyn. Thomas Cromwell and Wolsey also figure on the scene. Our author then places before his readers four reforming powers, and asks and answers the question, "Which reformed England?" He dissertates on Papal Reform, on Episcopal Reform, on Royal power, and on High and Low Church. "The High Church," he describes "as essentially Romish, and the Low Church as essentially biblical. In the one, the Church is above, and the WORD below; in the other, the Church is below, and the WORD above. These two principles—Evangelism and Hierarchism—are found in the Christianity of the first centuries, but with a signal difference. Hierarchism then almost entirely effaced Evangelism; in the age of Protestantism, on the contrary, Evangelism continued to exist by the side of Hierarchism; and it has remained—for, it is always de facto—the only legitimate opinion of the Church." The publication of the Testament in Greek, by Erasmus—in which labour that learned scholar had investigated the texts according to the principles of sacred criticism—and availed himself of the commentaries of the ancient fathers—produced as powerful an effect on the members of Oxford and Cambridge as the rural missionaries of Wickliffe had done on the simple people living in villages and hamlets; and the results are minutely traced through several chapters, in which Bilney, Fryth, and Tyndale occupy a prominent position. The introduction of Luther's works into England is then noticed, and the reply of Henry VIII., which earned for him the title of "Defender of the Faith." The careers of Wolsey, of Cromwell, and of Cranmer, are drawn with a discriminating hand. Indeed, every page of this instructive volume displays research, impartiality, and acute judgment; and, considering how much has been written on the subject, the reader will be somewhat surprised at the freshness and air of novelty that pervades the work. The style is excellent, simple, terse, and graphic. A stroke of the pen frequently paints a character and expounds a dogma. While the broad outlines of history are faithfully preserved and clearly exhibited, there are numerous minute delineations of individual character, which almost enable us to penetrate motives and reveal the springs of special action. We take leave of the work with commending it to the Protestant divine of all denominations, to the historical student, to the general scholar, and to those more thoughtful politicians who know how much political liberty is indebted to religious freedom.

MONTENEGRO AND THE SLAVONIANS OF TURKEY. By Count VALERIAN KRASINSKI. Chapman and Hall.

"The Turkish difficulty" may or may not be adjusted for the moment, but it arose out of the weakness and decrepitude of the Ottoman empire, and the half-spontaneous, half-instigated commotion of its heterogeneous populations. And it has proceeded, and will proceed, as decrepit by the day and by the hour; and those populations are becoming more openly and more fiercely hostile to the nominal power which still strives to compress their increasing strength and increasing discontent within its racked and shattered frame. The Turkish crisis may or may not be temporarily evaded, but it was, or is, a crisis of such a nature that it could find its proximate and more immediate occasion in Montenegro; and Montenegro is still there. Montenegro seems of but slight account geographically, but that country represents the influence by which two great powers act on Turkey; an influence nursed, fostered, managed, and employed from abroad; and yet so strong and vital in itself, that, even without any external encouragement, without any factitious support, it must have proved far more than a match for Islamism in a very few years. Montenegro represents the Greek race and religion, the Greek power and the Greek spirit—such as it was amid the disorders of the Lower Empire, and in the days of Byzantine degeneracy; not such as it was when, on the 29th of May, 1453, Constantine Palæologus was entangled in the breach of his capital by the feet of the victorious hordes of Mahomet II.; not such as it may appear at present in the little kingdom of Greece—not the Greek power in such circumstances as these, nor that Greek power at all; but another power under the same name, wielded with energies of a fierce and warlike race, which numbers more than ninety millions of souls, and is united by the bonds of one fanatical superstition. This is the power which yearns and strains to set up its throne at the Golden Horn, and which is now menacing the whole empire not only from without, but from within; and of this power Montenegro is at once a striking representative, and an advanced stronghold.

Montenegro, or the Black Mountain, so called by the Venetians, on account of the appearance of its hills, dark with forests of pine, is curiously situated. On the west, between it and the Adriatic, there is a narrow strip of Austrian territory; while on the north, south, and east, Turkey, with all its disorganisation and feebleness, surrounds this little fastness of predatory freedom and martial independence. Though not more than about 60 English miles long by 35 broad, Montenegro is so mountainous and rugged a country, and is peopled by a race so warlike and fanatical, that the power of the Ottoman empire, even in other and far different days, could never succeed in really subduing it. The inhabitants can muster more than thirty thousand combatants, in cases of extreme need.

Count Valerian Krasinski, in the work before us, treats with considerable detail the interesting subject of this country, and of the Slavonians of Turkey in general. When the present condition of that empire is borne in mind, such a work is allowed to be most valuable and valuable; and, as the author understands his subject, and throws sufficient light upon it, he deserves to receive attention from the public. The greater portion of the account which he here gives of that mighty Slavonian race who form the most numerous class in the population of European Turkey, a majority of the population of the Austrian empire, and nearly the whole population of Russia, has already been published in the "British and Foreign Quarterly Review." It is, however, likely that now it will be perused with avidity by all who have not seen it before, and consulted again by those who have. Independently of the vast interests connected with the future destiny of Turkey, the coming re-settlement of the continent of Europe (a re-settlement which cannot be very long delayed), and the part reserved for the Slavonian race itself to play hereafter—besides these important interests, we say, which invest Count Krasinski's work with peculiar attraction, there is much amusement to be got from his pages. They teem with illustrative anecdotes and humorous sketches, with characteristic sayings and doings, with effective descriptive passages, and with very entertaining narrative.

Having given to Montenegro the chief part of his little volume, the author surveys the general condition of the Turkish Slavonians. To Servia, to Bosnia, and to Bulgaria, he devotes separate and special chapters. The whole theme is treated with unquestionable ability, and with ample historical learning and statistical information. Naturally the eye turns, at the close of such a work, towards Russia; and our author's observations on that power are full of sense, and well borne out by his own arguments. His concluding words are worth quoting:—

Russia probably does not meditate any immediate attempt against Turkey, but, even were this the case, she would scarcely attempt to take possession of Constantinople, unless any serious difference between France and England gave her room to make such a bold step. Her policy would be to establish over the Slavonians of Turkey a direct or indirect dominion; and the latter would be no less effectively accomplished should a part of these Slavonians pass under the authority of Austria. She would thus make a near approach to Constantinople, come into immediate contact with the Greeks, outflank Austria, and establish a direct influence on the Slavonians of that country, which would place the Cabinet of Vienna in a state of dependence on Russia.

Many politicians in Western Europe imagine that Russia is a colossus upon feet of clay; that her defective administration, imperfect civilisation, immense extent of territory, and want of communication, are such sources of weakness that her power is more apparent than real. Undoubtedly, these are to a large extent elements of weakness, but they are evils by no means irremediable. Her defective administration may be improved by public reforms, her imperfect state of civilisation renders her population only the more docile to the will of the Autocrat, whilst the inventions of modern science may reduce incalculably the immense distances of her territory, and more than double her material resources. She will connect the most important points of her empire by railways and electric telegraphs; and the necessary means for constructing these she will find at the Exchange of London.

We can conscientiously advise the perusal of Count Krasinski's lucubration, reprint though it be. It is a timely and complete elucidation of a subject too little comprehended, and a help towards the solution of one of the most momentous questions in modern politics.

THE VALE OF LANHERNE, and other Poems. By H. SEWELL STOKES. A New Edition, with Additions: and Illustrations, drawn on stone, by C. HAGHE, from Designs by J. G. PHILP. London: Longman.

A happy temperament is a blessed possession, and ought to qualify the true poet—for cheerfulness is one of the first attributes of the Muse. It is the most conspicuous element, indeed, in the Homeric poems. This temperament Mr. Stokes evidently owns, and, in fact, owns to: for, relatively to the rural life which he describes, both in the didactic and lyrics before us, he confesses to a kind of optimism which passes it to his imagination, and observation also, in the hues of felicity. He entertains, he tells us, none of the fears of the Malthusians; and the visions of Ebenezer Elliott are strangers to his experience. The strong contrasts so powerfully exhibited in the poem of "The Splendid Village" exist not, he testifies, in the pastoral districts with which he is acquainted; neither is he afraid, with Goldsmith, that emigration will cause them to be deserted. For local evils, local benevolence is with him the panacea; and the distinction between rich and poor the means for its development.

The reader will find descriptions in this poem of much grace and power. The vale of Lanherne is in Cornwall, and here it is we are taught that the happy state of peasantry exists with which the poet is so well satisfied. He has looked on the objects which he delineates so favourably until he has loved them; and his partiality is to be attributed to that long acquaintance which endears the familiar to the heart and mind.

The occasional pieces are likewise of merit. They, for the most part, exhibit great ease and power of versification, with an originality of thought and imagery which entitle them to more than ordinary rank. The illustrations are worthy of the poet's text, and the whole must needs form a pleasant gift-book to those who may feel themselves associated, whether in fact or fancy, with the scenes and modes of life that form the subject of these picturesque stanzas—those of the main composition in the Spenserian form, which is ably mastered; and the more occasional subjects in a variety of skilfully-adapted lyrical measures.

The mariner's life, as led on the Cornwall coasts, seems to have become charming for our poet; and his verse frequently is redolent of the sea-breeze, and strong with salter feeling—a sentiment which inspires with force many an ode to be found in this handsome volume.

THE BOOK OF THE GARDEN. By CHARLES M'INTOSH, F.R.P.S., &c. Vol. I. Blackwood and Sons.

The literature of gardening has made most important advances since the commencement of the career of the late Mr. Loudon; and this result may be said to have been, in a great measure, achieved by his efforts, as his *Gardener's Magazine*, "Arboretum Britannicum," "Encyclopedia of Plants," "Encyclopedia of Gardening," and numerous other works, bear ample testimony. The "Book of the Garden" is one of the cyclopedian class, partaking much of the character of Loudon's Encyclopedias, but with the information very completely brought down to the present time. This explains, in great measure, what we should otherwise have considered objectionable in the execution of the work, namely, the great extent of quotation from contemporary periodical literature. The volume now before us, a goodly tome, treats only of the constructive part of the science, all detailed explanations of practical cultivation being reserved for another volume; whilst the history of gardening, which had been already fully chronicled by Loudon, is very wisely altogether omitted from the design of the book, except in so far as the details of its existing condition in this country will form in reality an ample chronicle of its present state and progress.

Though the history of gardening is not formally treated, yet the subject is briefly touched in an introductory chapter, in which, commencing with the gardens of sacred history, the author travels hurriedly through those of classic times, onwards to the present era. In this portion of the book is an allusion to the hanging gardens of the ancients, a subject which, in the present day of Assyrian discovery, possesses more than usual interest.

The celebrated hanging gardens of Babylon furnish us with the first notice of terraces being introduced into gardens; and, although Herodotus and others are silent on the subject, it is not improbable that these terraces had their mural decorations of parapets, vases, &c., as we learn that they were planted with trees of various kinds, arranged in rows, on the side of the ascent, as well as on the flat top. The terraces and groves continued fountains, seats, parterres, and banqueting-rooms, and combined the minute beauties of flowers and foliage with masses of shade and extensive prospects.

The existence of such gardens—evidencing, indeed, the imperial greatness of their founders—has been altogether doubted; but, among the many important discoveries of Mr. Layard, is a slab, found at Kouyunjuk, which bears a representation, of one of the Assyrian hanging-gardens, and thus entirely dispels the doubt of their having existed. They appear, in fact, to have been vast terraced slopes, and served admirably to relieve the monotony of the Eastern plains.

The burden of the volume under notice especially to the formation and arrangement of culinary and fruit gardens, the construction of horticultural buildings, and the laying out of flower-gardens. In treating of these subjects, the author discourses largely on such matters as the extent of plan, form, situation, and aspect for a garden; the construction, aspect, and materials of garden walls: the construction, heating, ventilation, &c., of all kinds of garden structures, from the conservatory and forcing-house to the fruit-room and ice-house: and the designing, laying out, planting, and artistic arrangement of flower gardens; together with all such architectural adjuncts, as fountains, vases, statues, and the like. On these, and a variety of kindred subjects which, in so comprehensive a subject as that of gardening, are necessarily interwoven with them—we find good evidence of industry and discrimination in the notice which has been taken of all the important suggestions of the present day, and the sensible and matter-of-fact statement of the merits and applicability. The author's extensive practical every-day experience, becomes here a valuable aid to those who may consult his opinions before indulging in the expensive refinements of the gardener's art.

Perhaps, in no department of gardening is there room for greater improvements than in the designing, and especially in the interior arrangement of glazed structures for the growth of plants, whether they require to be artificially heated or not. The Crystal Palace has already done something towards the direction of the public mind to this subject; and the re-erection of that building at Sydenham is destined, we cannot doubt, to do much more by setting a notable example how formality and monotony may be for ever banished from those scenes of the purest and most enjoyable of all domestic recreations—greenhouses or conservatories. Mr. M'Intosh has quoted on this subject some anonymous remarks by the writer of this notice, in which, referring to the ridge-and-furrow plan of constructing glass-houses, which the Hyde-park building has now familiarised to all, it was predicted some years since that this plan was destined to subvert the present monotonous and unsatisfactory arrangements in the interior of such structures, by facilitating the covering of larger areas of ground, in which the necessity of adopting some different style of arrangement must necessarily lead to improvement.

Gardens (it was said) would lose half their charms were we to see the same things displayed everywhere. It is, in fact, in the endless variety, in connection with intrinsic beauty, of which they admit, that their fascination must rest. And why should it not be so with horticultural erections for the growth of exotic vegetation? Why should these, which are to a certain extent invested with the additional charm of novelty, be deprived of the charm of variety? Why should we not have groves, and lakes, and flower-gardens, and rocks, and caverns, with their appropriate vegetation, within as well as without? In the former many beauties would be available either for admiration or study at all seasons; in the latter the fickleness of our climate often acts as a preventive to both these exercises.

The system of heating horticultural buildings by hot water is very fully treated, and most abundantly illustrated with diagrams; and great prominence is also given to that equally-important subject of ventilation, which is now receiving more of the attention which it merits, at the hands of gardeners, than has hitherto been the case. These are matters, in reference to which the great improvements which have of late years been effected in mechanical science have led to important changes since the time of Loudon.

One of the greatest achievements in modern horticulture, was the invention of close-glazed cases, by Mr. Ward, whose name is so honourably and justly perpetuated in connection with them. These Wardian cases have not only rendered practicable the cultivation of plants in the worst possible localities, *e.g.* the murky courts of a smoky city, but they have proved of the utmost value, both in importing to this country the flowers and fruits of other lands, and in transporting the most valuable vegetable products to countries where they have proved of inestimable value. They afford perfect protection while enclosing the plants a properly moistened atmosphere, shuts out extraneous and injurious agents; and this, simple as it is, is the whole secret of their success. Mr. M'Intosh has very properly drawn attention to these contrivances, which are not by any means so commonly known as they should be; for indeed, combining attention to their influence on domestic comforts, there is not a window in London which could not be made cheerful with its enclosed garden, nor a sitting-room which might not be decorated with choice flowers by the application of this principle. The following quotation describing an admirable contrivance of this kind for the preservation of cut flowers is very judiciously introduced:—

A flat dish, of porcelain, had water poured into it. In the water a vase of flowers was set; over the whole a bell glass was placed, with its rim in the water. This was a Ward's case in principle, though different in construction. The air that surrounds the flowers being confined beneath the bell glass was constantly moist with the water that rose in it in the form of vapour. As fast as the water is condensed it runs down the sides of the bell-glass back into the dish; and if means are taken to enclose the water on the outside of the bell-glass, so as to prevent its evaporating into the air of the sitting-room, the atmosphere around the flower would remain continually damp. What is the explanation of this? Do the flowers feed on the viewless vapour that surrounds them? Perhaps they do; but the great cause of their preserving their freshness is to be sought in another fact. When flowers are brought into a sitting-room they face, because of the dryness of the air. The air of a sitting-room is usually something drier than that of the garden, and always drier than so than that of a good green-house or stove. Flowers, when gathered, are cut off from the supply of moisture collected for them by their roots; and their mutilated stems are far from having so great a power of sucking up fluids as the roots have. If, then, with diminished powers of feeding, they are exposed to augmented perspiration, as is the case in a dry sitting room, it is evident that the balance of the gain and of the loss cannot be maintained. The result can only be their destruction. Now, to place them in a damp atmosphere is to restore this balance; hence they maintain their freshness.

This, in reality, exhibits the whole rationale of preserving cut flowers; and every lady who takes pleasure in having flowers in her room would do well to remember and apply it

Mr. M'Intosh's chapter on horticultural buildings is very ample; and in reference to the details of construction, is much more complete than any gardening book we know. Indeed we consider this much the best part of the volume before us.

We have only glanced briefly at a few of the outlying subjects, the limits of this notice not permitting even a full enumeration of the contents of the volume. Enough will, however, have been stated to indicate its general tenor, and at the same time to bear evidence that Mr. M'Intosh does not affect fine writing. The value of the book lies rather in the sound practical conclusions which a long life of active experience has enabled him to draw; its merit in this respect is so great that, as a whole, we have no hesitation in placing "The Book of the Garden" in the highest niche of garden literature

The volume before us, we may just state in conclusion, is very nicely printed in a bold, legible type; and is profusely illustrated with upwards of a thousand excellent wood engravings, by Branston, and thirty-three copper-plate engravings by Johnston.

JOURNAL OF A CRUISE AMONG THE ISLANDS OF THE WESTERN PACIFIC, including the Feejees and others inhabited by the Polynesian Negro Races, in her Majesty's ship *Havannah*. By JOHN ELPHINSTONE ERSKINE, Captain R.N. With Maps and Plates. John Murray.

The *Havannah*, a small frigate, sailed from the Bay of Islands in New Zealand on June 25, 1849; and, proceeding north-easterly, called first at the Nine, or Savage Island, situated about 19 deg. south latitude, and between 169 deg. and 170. deg. of west longitude. The people there—as the island is small, and lies out of the way of traffic, though it is occasionally visited by ships—are still in a very barbarous condition. They seem scarcely worthy of the attention of missionaries, whose zeal makes them brave the very worst kind of death. Having been in Captain Cook's time considered more completely savage than the inhabitants of any of the other islands, they still remain less changed by the influence of their European neighbours. On the ship approaching the island they went off in their canoes; and, seeing the telescopes of the officers directed towards them, probably took them for firearms, and made signs as if to have them put away. That being done, they boldly ventured on board, and bartered spears and other weapons for anything like cloth, with which they could cover their heads. The only provision they had with them was for their own refreshment—a sign that ships do not visit them very often. They were frightened at a dog, and had probably never seen such an animal before. They knew well, however, the use of iron; and one of them stole a chisel. Generally, they were honest; and when nothing was given them, they invariably gave one or two spears in exchange. They use a language like that of the New Zealanders, and they, no doubt, belong to the same race. The *Havannah* could not anchor at the island, nor did any of the officers or crew ever land on shore. This is rather tantalizing, as the people are considered to retain more of their pristine habits than any of their neighbours. The information concerning them is, accordingly, very meagre; which is the more to be regretted, as all the other islands visited by the expedition are frequented by ships than Nine Island; are inhabited by missionaries; and are better known to Europeans than are the people of this out-of-the-way little place.

From thence the *Havannah* proceeded on a stately kind of man-of-war visitation to the Samoa or Navigators' Islands and the Tonga or Friendly Islands, which were made so well known more than thirty years ago. From the Friendly Islands the *Havannah* proceeded to the Feejee group. The people of which are still, though undergoing a rapid change, not a little savage; and thence to the New Hebrides, afterwards to the Loyalty Islands; and, after visiting New Caledonia, proceeded to New South Wales. So was finished the first cruise of the *Havannah*. She afterwards went on a second cruise, which extended to the Solomon Islands, and may probably cause the publication of another book, should this one be successful

The present volume is soberly and quietly written. The total absence through the voyage of sickness amongst the crew, and of anything like unpleasant disputes with any of the natives—the temperate and orderly behaviour, both of the civilised and the uncivilised, are all testimonies to improvement amongst both. The illustrations, which are numerous, are very good, and give us excellent representations of the figures, complexions, and costumes of the inhabitants of the different islands. Including Jackson's graphic descriptions, the book is very interesting, and we should be glad to see the second cruise described as well as the first. We will copy from Jackson's "Narrative" an explanation of the custom which prevails through many countries, and has prevailed for ages, of wives being put to death on the death of their husbands, which we have not before met with, and an incident connected with the custom:—

As a chief's wives are strangled for the sake of exemplifying their fidelity and accompanying him to the invisible world, so the barbarous fate of death is often imposed upon courtiers and aides-de-camp, and always considered an honour and distinction. One reason of many, and perhaps the greatest, for strangling the wives of chiefs who have children surviving him, is that it is taken for a certain proof that these children are legitimate, and claim their rights as vasus to the places to which their deceased mothers belonged. If a mother neglected being strangled, it would leave a doubt in the minds of the people as to her fidelity; and if any of her children were to go to the places she belonged to, and claim property as their right, the owners would immediately embrace the opportunity of upbraiding the vasu with his mother being an unchaste woman, and saying that they would not allow him to carry anything off, because the infidelity of his mother cut off all his claim and rights as a vasu, and that it was an undeniable proof of her loving some other man better than his father that she had not been strangled with him. The wives of Tui Kila-kila's brother's wives wished to be strangled; but, being a little wiser than the generality of his countrymen, and not led away by the customs of his country, Tui Kila-kila advised all who had borne children to his brother to be strangled, as a matter of course. On the other hand, he said that the young women who had borne no children had no occasion to sacrifice their lives, knowing that they would make themselves very good wives, and add greatly to his advantage the greatness of a chief being estimated, in a measure, by the number of his women

Fourteen of these women readily acceded to this proposal, and, as far as I could learn, were extremely happy to escape with their lives, by the advice and opinion of such a great prince as Tui Kila-kila, whose infallibility dared not be questioned. But one young girl (who made up the fifteen that were to be saved, and on whose account it was also supposed, more than for any other reason, he proposed to save the others, so as to come at the object of his desire) dared to question his opinion of the propriety of living and violating the laws of betrothment, and demanded the privilege of being strangled. She asked Tui Kila-kila where was the man she cared or was worthy of living for now that his brother was dead? Tui Kila-kila was so piqued at the reflection on his wife only to his deceased brother, that he ordered the two women whose office it was to strangle her to haul taut at each end of the strip of cloth previously passed round her neck, which they obeyed; and as soon as she began [illegible] of agony he ordered them to slacken it, thinking, as she had tasted partially the pangs of death, she would repent of her foolishness; but with her it was different, for she seized the ends and began hauling tight again

complete what the stranglers had begun, and then the chief was with her football obstinacy, as he called it, and told the women to settle her quickly. This young woman was renowned for her beauty, she must have been young

---

A KEY TO UNCLE TOM'S CABIN. Presenting the original facts and documents upon which the story is founded; together with corroborative statements verifying the truth of the work. By HARRIET BEECHER STOWE, author of "Uncle Tom's Cabin." Published for the author by Sampson Lowe, and Co., Ludgate-hill.

ANOTHER COPY of the SAME WORK, published by Clarke, Beeton, and Co., Fleet-street, in which the author is said to have an interest.

The title of this work has for us the great merit of accurately describing its contents. It is really an account of the facts on which the story of "Uncle Tom's Cabin" is founded, with a great many statements, corroborative of Mrs. Stowe's picture of slave life in the United States. There are numerous extracts from journals, law-books, and private letters illustrative of the existing laws concerning slavery and its effects on the character, manners, and conditions of all classes. The work is called forth by the numerous attacks made on Mrs. Stowe by the advocates of slavery. To refute them, and to verify the incidents that [illegible] of slavery, Mrs. Stowe has published [illegible] work abounding in evidence of the inhuman and degrading effects—showing that it debases and brutalizes the white [illegible] tards the growth of skill and intelligence in the community, and places all the old slave states far in the rear of the free states. The narrative, by its thrilling interest, has just called the attention of the whole world to the subject—for never had a book an equal circulation to Mrs. Stowe's novel; and now its terrible impressions are riveted by a volume full of facts. The seathing contempt and indignation of the population of Europe already poured on the slaveholders, cannot fail to kindle, and we believe has already kindled, sentiments of burning shame in the minds of many Americans; and the improvement of a nation's morals, carrying with it a reform of an odious though very ancient institution, appears to be the coming and certain result of a work which has never achieved a nobler work. This is the first example, we believe, of a novel forcibly dragging politics and philosophy after it, and becoming the parent of a much needed social improvement

We need scarcely say, after referring to the title, that the book mentions the persons who were the originals of Uncle Tom, George Harris, Mr. and Mrs. Shelby, Eliza, Haley, Cassius, the St. Clares, Legree; and that all the characters of the novel are sketches of real persons. In general, too, the facts collected by Mrs. Stowe are stronger and more revolting than the fiction; and some of them will match any kind of cruelties ever perpetrated in the world. We will quote only one extract:—"On the 1st of September, 1845, a man by the name of Souther flogged a slave to death, because, as Souther alleged, he had got drunk, and traded with two persons, who were afterwards called to witness his punishment. The offence was thus described by Mr. Judge Field, before whom Souther was tried:—

"The negro was tied to a tree and whipped with switches. When Souther became fatigued with the labour of whipping, he called upon a negro man of his, and made him cob Sam with a shingle. He also made a negro woman of his help to cob him. And, after cobbing and whipping, he applied fire to the body of the slave. * * * * He then caused him to be washed down with hot water, in which pods of red pepper had been steeped. The negro was also tied to a log and to the bed-post with ropes, which choked him, and he was kicked and stamped on by Souther This sort of punishment was continued and repeated until the negro died under its infliction."

This scene of torture, it seems, occupied about twelve hours. It occurred in the State of Virginia, in the county of Hanover. Two white men were witnesses to nearly the whole proceeding; and, so far as we can see, made no effort to arouse the neighbourhood, and bring in help to stop the outrage. What sort of association, what habits of thought, does this presuppose in these men? The case was brought to trial. It requires no ordinary nerve to read over the counts of this indictment. Nobody, one would suppose, could willingly read them twice. One would think that it would have laid a cold hand of horror on every heart—that the community would have risen, by a universal sentiment, to shake out the man, as Paul shook the viper from his hand. It seems, however, that they were quite self-possessed; that lawyers calmly sat and examined, and cross-examined, on particulars known before only in the records of the Inquisition; passed on it "ably and eloquently argued" by educated, intelligent American men, that this catalogue of horrors did not amount to a murder; and, in the second language of legal precision, that "the offence, if any, amounted to manslaughter;" and that an American jury found that the offence was murder in the second degree. Any one who reads the indictment will certainly think that, if this be murder in the second degree, in Virginia, one might earnestly pray to be murdered in the first degree to begin with. Had Souther walked up to the man, and shot him through the heart with a pistol, before white witnesses, that would, it seems, be "murder in the first degree. As he preferred to spend twelve hours in killing him by torture, under the name of "chastisement," that, says the verdict, is murder in the second degree "because," says the bill of exceptions, with admirable coolness, "it did not appear that it was the design of the prisoner to kill the slave, and that design be properly inferable from the manner, means, and duration of the punishment.

It seems also that Souther, so far from being crushed by the united opinion of the community, found those to back him who considered five years in the Penitentiary an unjust severity for his crime; and hence the bill of exceptions from which we have quoted, and the appeal to the superior court; and hence the form in which the case stands in law-books, "souther v. the Commonwealth." Souther evidently considers himself an ill-used man, and it is in this character that he appears before the superior court.

The case shows both the possible cruelty of individuals and the callousness of the community. The whole book is deeply imbued with religious feelings—a living faith in the doctrines of Christianity is the well-spring of all Mrs. Stowe's many writings. It contains, at the same time, much philosophy and much legal lore. The narrative, or connecting parts of it, is adorned with much eloquence; and though it cannot, from its nature, interest the great multitude to the same degree as the novel, it, too, will have a large circulation, and may, with many persons, be more influential than the novel in strengthening their convictions against slavery.

SIGHTS AND SOUNDS—the Mystery of the Day. Comprising an entire History of the American Spirit Manifestation. By HENRY SPICER, Esq. Bosworth.

We are somewhat at a loss to know how to deal with the book. The first part of it is a serious account of the "rappings" and other manifestations of the spirit world in America, a sentiment that boards and other novelties besides that of being a comparatively recent discovery. Another part of it is a quizzical, rhapsodical account of American newspapers, and description of a journey in the United States and Canada, meant to be amusing, and which actually causes a broad smile to pass occasionally. There is also a complimentary statistical notice of Canada. But the staple of the book is the account of the rappings and the spirit manifestations, with a discussion of the theories by which they are to be explained. The conclusion is the profession of a belief "that manifestations of an *extraordinary character* are rife in the United States, and are becoming familiar in England; that demonstrations of a *similar kind* have been known among most nations of *remote antiquity*; that the American manifestations have been closely watched, carefully investigated, and submitted to every conceivable test by persons eminently qualified to conduct such inquiries, and whose characters entitle them to the fullest credit. That these have included, amongst other things, "that the theories of animal electricity, magnetoid currents, nerve-spirit, &c., will not suffice to explain the whole phenomena while *unconnected with some independent intelligence*" And that while writing seriously of the spiritual manifestations, mentions, amongst many other similar things, that "a chair which stood outside of our circle, and several feet from any one, was suddenly moved up to the circle and back, and rocked, and finally, with great rapidity, conveyed itself over the head of the person to the other, *winding its way among the people* who sat there, without touching them, and yet at times passing with a fearful rapidity within an inch or two of our persons." "A guitar, being placed on a table, was played upon, each separately at first, and finally all together, in marked time, which was beat out by raps, sometimes upon the viol, floor, ceiling, &c, the bow often touching the person there. Afterwards, the bass-viol and violin were raised above the heads out of their reach (except one end, which sometimes rested on their hand, head, or shoulder, often changing), and in this position they were played and rapped on, as by human fingers, and the time marked as before." The persons who communicate with the spirit world are called "media;" and Mr. Spicer records that a Mr. Daniel Hume, one of the media, "on a request being proposed that the attendant spirits would testify their presence by some irrefragable evidence," "was on the instant lifted into the air, and there suspended, by invisible agency, for a space of two or three minutes, without touching any thing or any person" We cannot comprehend a belief in spirit manifestations; and we [illegible] such palpable tricks as spirit manifestations; and we [illegible] by crossing

---

"THE BEDFORD MISSAL" IN THE BRITISH MUSEUM.

FROM the Annual Account "of the Income and Expenditure of the British Museum," just issued by order of Parliament, we are reminded that among the numerous additions during the year to the Manuscript Department is the celebrated "Bedford Missal," the companion of princes and the delight of bibliomaniacs, which has here found a worthy and (let us hope) final resting-place among the magnificent treasures of our national institution

By the courtesy of Sir F. Madden, the Keeper of the Manuscript Department, we are this week enabled to present our readers with Engravings of two of the most interesting pages in the manuscript, which although of necessity shorn of those brilliant adjuncts that render the pages of the book itself so attractive—present the portraits of the illustrious pair at whose command the manuscript was written.

The fifteenth century (the period at which this wonderful production first saw the light) may truly be called the "golden age" of this art of book illumination. It was then that the art of painting made rapid strides towards that perfection, to which it triumphantly attained in the succeeding century, and book-collecting began to divide with, the pursuit of arms the attention of this warrior Prince of the age. No gifts were more frequent, nor more highly prized by the noble and high-born, than those of illuminated book

In confirmation of this assertion, we need only point to the shelves of our National Library, where rest (among others) the ponderous volume of Romances, presented by Talbot, Earl of Shrewsbury, to Margaret, of Anjou; the fine copy of poems, by Christine de Pisa, presented by that lady, to Isabel, Queen of Charles VI., of France; the Bible of the Duke de Berri; and the beautiful Psalter presented to King Henry the VI., probably at the period of his coronation, in which the youthful King is several times represented—manuscripts deservedly famed for their brilliancy and the richness of their execution.

Amidst these the "Bedford Missal" now shines brightest, unrivalled for its colours, the delicacy of its hues, and the golden glories of its borders—"to an Englishman," says Mr. Gough, "the proudest and most interesting monument existing of the early art of book illumination."

Of all the princes of his time, John of Lancaster, Duke of Bedford was the most accomplished, and second to none in his admiration and encouragement of the fine arts, more especially that of painting

The most eminent French and Flemish artists found honourable employment in his service, and vied with each other in producing for him some of the most splendid books of devotion.

The volume in question is indisputably the finest that has found its way down to the present time, and was probably executed between the years 1420 and 1430, at which period the Duke governed France during the minority of his nephew, Henry VI.

In commencing a brief history of this remarkable book, we feel that we cannot do better than preface it with the following admirable description, drawn up by Mr. Evans, for the sale catalogue of Mr. Edwards's library:—

The celebrated Bedford Missal, a book of prayers and devotional offices, was the property of John Duke of Bedford, Regent of France, containing 59 miniature paintings, which nearly occupy the whole page, and above a thousand small miniatures, of about an inch and a half in diameter, displayed in brilliant borders of golden foliage, with interlaced flowers, &c. At the bottom of every page are two lines in blue and gold letters to explain the subject of each miniature—a circumstance, perhaps, only to be found in this expensive performance. But what enhances the value of this MS. in this country is, that it has preserved the only portraits remaining of the noble pair who formerly possessed it—John of Lancaster, Duke of Bedford, Regent of France, and Anne of Burgundy, his Duchess, interspersed with their mottoes—an elegant expression of gallantry of that time on his part, "A vous entier;" and on hers, "Fin aux contentz." Nothing can exceed the strength of character and high finish of the portraits. Mr. Gough has pronounced them the finest examples of the art of that period he had ever seen. Vertue engraved his portrait from one of these paintings. Another interesting characteristic in this fine MS. is the attestation of its being presented by gift of a Duchess, and by order of her husband, to King Henry VI. when he went to be crowned in France, and was splendidly at his Christmas at Rouen. This rich book is 11 inches by 7¼ wide, and 2¼ thick, bound in crimson velvet, with gold clasps, on which are engraved the arms of Harley, Cavendish, and Holles, quarterly.

The book having passed into Royal hands, its history becomes for a time, somewhat obscure. Mr. Gough suggests that the King did not take it with him on his return to England, but left it in his palace at Rouen; and that it fell, with the King's treasures, into the hands of Charles VII. of France, upon the capture of that place in 1448. Certain it is that it afterwards came into the possession of Henry II. of France, who caused his arms, with those of Catherine de Medicis, his Queen, to be inserted in the early part of the volume

From this time until the beginning of the eighteenth century (a period of nearly 200 years), the fate of our manuscript is uncertain; and we next find it in the hands of Sir Robert Worseley, of Appuldurcombe, in the Isle of Wight, Bart., to whose lady it had descended from her mother, Lady Frances Finch, who had married Thomas Thynne, 1st Viscount Weymouth, by whom it had been purchased in France for £100.

In the diary of Humphrey Wanley, librarian to Edward Harley, 2nd Earl of Oxford, one of the greatest collectors of his time, are the following notes:—"3rd May, 1715. The Secretary related that the fine Prayer-book, which the late Lord Weymouth bought at the price of £100, is now come into the possession of Sir Robert Worseley, who (having been asked) is willing to sell it to my Lord at the same price." And again:—"6th May, 1712. My Lord Harley was pleased to order that the Primer above-mentioned be re-delivered to Mr. Harbyn for Sir Robert Worseley, it being judged too dear at £100."

Nevertheless, it was afterwards purchased by Lord Harley from Lady Worseley, but for what sum does not appear; and by his Lordship two leaves were added at the beginning, which contain the arms of Harley and Holles quarterly.

From the nobleman it descended to his daughter the Duchess of Portland, in whose possession it remained until the 24th May, 1786, upon which day it again changed hands, being purchased by Mr. Edwards, bookseller, of Pall-mall, at the sale of the Duchess's gems and pictures, for the sum of £213.

But, although it passed into the hands of a less noble possessor, it was not without a contention with loyalty for the prize.

His Majesty King George III. gave (according to some accounts) unlimited commission to the learned Jacob Bryant, to bid for the book, intending to make a present of it to the College of Eton, as having belonged to its founder, Henry VI. But, according to others, and probably more accurate information, Queen Charlotte limited the commission to £200, expressing it as her opinion that it was extravagant to give more than that sum for a book.

Mr. Edwards seems to have truly appreciated the gem he had acquired, having bravely withstood several very tempting offers for it; and it was not until his death that it was again brought to the hammer, at the sale of his library, the 5th of April, 1815

We now find another noble competitor in the field, in the person of the late Duke of Marlborough, then Marquis of Blandford, who became its fortunate owner for the sum of £687 15s. The circumstances on the day of the sale of the Missal, there pricked forth from the lists two well-known bibliomaniacal champions, one yclept the Most Noble the Marquis of Blandford, the other Lawyer [illegible] John North, Esq.; the surrounding book-knights [illegible] tators, knowing the courage and daring of the adventu [illegible]

At length, after making [illegible] the prize for [illegible] the first-named champion gained the [illegible] lawful money of Great Britain; but the defeated knight is reported to have exclaimed, in returning from the [illegible]

Let me add that this reflects great credit upon [illegible]

Its subsequent history is soon told. From the noble Duke the Missal [illegible] the hands of Mr. Milner, but at what time [illegible]

THE ILLUMINATION TO FIRST PART OF BOOK.—"THE DUKE OF BEDFORD."

THE CHIEF ILLUMINATION TO SECOND PART OF BOOK.—"THE DUCHESS OF BEDFORD"

"THE BEDFORD MISSAL," RECENTLY REUNITED TO THE HARLEIAN COLLECTION OF MANUSCRIPTS IN THE BRITISH MUSEUM.

exactly known; rumour says for £800. Mr. Milner disposed of it to John Broadley, Esq., F.S.A., and at the sale of that gentleman's library, on the 19th of June, 1833, it was purchased by Mr. Cochran, the bookseller, on commission, for Sir John Tobin, alderman of Liverpool, for the sum of 1000 guineas. In the year 1836 it became the property (by gift) of the Rev. John Tobin, M.A., incumbent of Liscard, near Liverpool, who sold it in January last, together with other splendid manuscripts, including the "Hours of Queen Isabella of Spain," by Joan, wife of Philip the Fair, Archduke of Austria, and of Francis I. of France, to Mr. W Boone, bookseller, of Bond-street.

That gentleman, deeming the National Library to be the proper repository for such treasures, immediately offered them to the trustees, and the whole have become the property of the nation for the princely sum of £3000.

Having thus traced, as far as possible, the chequered history of this interesting monument of the middle ages, we will bring our notice to a close, with a brief description of the engravings upon the present page

The Duke is here represented kneeling within a chapel, with hands raised in the attitude of prayer, before St. George, attired in a red robe, richly embroidered with gold and furred at the neck and sleeves, which are black. Round the neck a rich collar, with a falcon volant appendant, and upon his head, which is close shaved, a small furred cap. The saint is depicted standing completely armed, with a nimbus around his head; over the armour is worn the mantle of the Order of St. George, lined with ermine, secured in front by a cordon, with the Garter on the left shoulder, and beneath the mantle a surcoat emblazoned with the arms of that saint. Behind him stands his armour-bearer, with his arms upon a pennon. The desk in front of the Duke is covered with a cloth, embroidered with his badge—viz. the roots of a tree, paly or, and his motto, "A vous entier," between them. The tapestry covering the walls of the chapel is ornamented in a similar manner.

The Duchess, attired in a robe also richly embroidered with gold, with the mitred head-dress so characteristic of the period, richly adorned with roses and pearls, reticulated at the ears, and wearing a necklace of pearls, is represented kneeling before her patron Saint, St. Anne, habited in a veil and wimple, by whose side is the child Jesus, holding a globe; and, between them, a young female saint—by a strange anticipation—representing the Virgin Mary, her daughter, crowned with a crown surmounted by five crosses. Behind her, an ancient chair, upon the back of which leans a venerable figure, probably representing the illuminator of the MS. himself. The back of the chair and the hangings of the chapel are embroidered with flowers, and the motto, "J'en suis contente." In the background over the hangings are four angels playing on musical instruments; and on the vaulted roof of the chapel are two more angels, looking down upon the group beneath.

In the original MS., these paintings are inclosed within handsome borders, formed of the badges and mottos before-mentioned, with small paintings of the martyrdoms of various saints, &c., and in the lower margin are introduced the arms of the Duke and Duchess, respectively.

To those of our readers who are desirous of learning more respecting this splendid MS., we would recommend a book published by Gough, entitled "An account of a rich illuminated Missal executed for John, Duke of Bedford," &c., &c. London, 1794, 4to, where an elaborate description of the curious treasure will be found.

PLATE PRESENTED TO DR. JEREMIE, BY THE HON. EAST INDIA COMPANY.

TESTIMONIAL

TO THE

REV. DR. JEREMIE.

THIS splendid testimonial, designed and manufactured by Messrs. Garrard, of the Haymarket, has just been presented by the Hon. East India Company to the Rev. Dr. Jeremie. The cup is silver gilt, 17 inches high, and embossed and chased in the Albert Durer style, weight, 100 ounces. The salver (weight 100 ounces) is 1 inches in diameter, and has a richly-chased border, inclosing the following inscription:—

To the REV. JAMES AMIRAUD JEREMIE, D.D., Regius Professor of Divinity in the University of Cambridge, this salver and cup are presented by the Court of Directors of the Honorable East India Company in acknowledgment of the high sense which they entertain of his long, zealous, and valuable services while he held the office of Dean and Professor of Classics in the College of the Honorable East India Company at Hallesbury, and in testimony of their respect for his character as a distinguished Scholar and Divine.

HEAD OF SIR THOMAS LUCY.

MANY who took part in the festal celebration of the natal day of Shakspeare, on Tuesday week, at Stratford-upon-Avon, are doubtless familiar with Charlecote, a short distance from the town of Stratford, and one o

"HEAD OF SIR THOMAS LUCY," FROM THE TOMBS AT CHARLECOTE.

the early haunts of our great dramatic poet. Perchance, a few "pilgrims" strayed from the festivity to inspect the beautiful new church, which, by the munificence of Mrs. Lucy, has been erected in place of the ancient church upon the verge of Charlecote Park. Here, as we stated in our Journal of February 19 last (wherein the Church is engraved), the beautiful monument, by Bernini, of Sir Thomas Lucy, has been enshrined in the Lucy Chapel; and, during a recent visit, a lady Correspondent (Miss Cole) sketched the head of the recumbent effigies of the grim old Knight, who, with his lady, is elaborately sculptured in statuary marble, and placed under an arcaded canopy. The head (which we have engraved) is a fine specimen of monumental sculpture.

The Shakspearean Festival of the 26th ult. we have Illustrated in the Number published with the present Supplement; and now, to quote the very interesting paper upon the Shakspearian sites, in the ILLUSTRATED LONDON NEWS, No. 361, "you retrace your steps (from Charlecote), cross again the little bridge, and are soon once more beneath the stately avenue of elms. Their lengthening shadows, and a far-off bell (which may have often struck upon the poet's ear), now warn you of declining day. You hasten on; and, as the eye, at the turn of the road, for the last time takes in the antique house, the gentle river, and the lessening turret of the village church, you muse upon the undying influence of the wizard who is enabled 'thus to spread the magic of his mind over the very face of Nature: to give to things and places a charm and character not their own; and to turn this working-day world into a perfect fairy-land.'"

HARLAXTON-HALL.

Lincolnshire is rich in architectural antiquities, and one of the most striking of the domestic class is Harlaxton Manor-house, situated in a remote corner of the beautiful village of Harlaxton, about three miles from Grantham. The mansion is said to have been originally built by John of Gaunt. Portions of the structure are in so dilapidated a condition, that it is almost considered dangerous to examine them. The entrance-hall contains some portraits, chiefly of the Gregory family, who have possessed the estate for ages past. In the noble rooms are various articles of olden furniture, armour flags, and a stone coffin, found in the neighbourhood some years since. Many curiosities have been dug up in the grounds—particularly an urn, containing burnt bones and coins; and a helmet set with jewels, now in the Cabinet at Madrid. The house contains some splendid paintings. Several of the windows are filled with painted glass; and there is a curious tapestry-room. A few yards from the hall, in what appears formerly to have been the park, are two stones, embedded in the earth, twenty-one feet apart, with the date 1622 on one of them, marking the place and extent of an extraordinary leap by one of the domestics, which he performed, it is said, for a wager, and which caused his death a few days afterwards.

A great portion of the ancient building is covered with luxuriant foliage; and the crumbling structure seems, in places, almost held together by thick ivy and clustering trees. The estate is the property of Gregory Gregory, Esq., who has been building near his ancient family seat a princely mansion, which has occupied nearly twenty years, and, it is said, has cost the proprietor from £8000 to £10,000 a year. The new mansion—which we have engraved, from a Sketch by a Correspondent—is now approaching completion. It is in the Jacobean style of architecture, and has numerous bay-windows, with pierced parapets, entrance porches, supported by columns; turrets with cupolas at the angles; and a larger tower, picturesque galleries, and chimney-shafts, such as characterise the [illegible] of the English [illegible]. Our Correspondent describes the splendid [illegible] as striking in grandeur of scale and beauty of detail, Belvoir Castle, which crowns the opposite height

MASK OF SIR ISAAC NEWTON.

(To the Editor of the Illustrated London News.)

In the Illustrated London News, for the 23rd of April last, I observed a notice of the manner in which the Royal Society of London had acquired possession of [illegible] what you very justly consider a most valuable relic—namely, a mask from the face of Sir Isaac Newton.

It has occurred to me that from the account given in your interesting Journal of the manner by which the Royal Society became possessed of this relic, and from the circumstance of its being as therein described much injured by rough usage, it might not be [illegible] altogether uninteresting to that learned body to be informed that the Hunterian Museum of Glasgow College is in possession of a similar mask in a state of [illegible] preservation as when first taken from the face of the illustrious deceased philosopher.

This cast I received upon the 16th day of July, 1819, from the hands of Mr. Flaxman, upon the occasion of his being in Glasgow for the purpose of superintending the erection of the bronze statue of Sir John Moore—the said mask to be deposited in the Hunterian Museum.

I think it will be still further interesting to [illegible] on the history recorded in his own handwriting [illegible] attached to the mask, of the manner in which it became the property of Mr. Flaxman himself.—" This cast from the face of Sir Isaac Newton was the property of Mr. Rubilnac, the sculptor, from which he executed the marble statue in Trinity College, Cambridge. After Mr. Rubilnac's death, it passed into the hands of my father, from whom I received it. (Signed) John Flaxman, R.A.P.S."—I remain, &c,

William Cooper,
Professor of Natural History, and Custodier of Hunter's Museum.

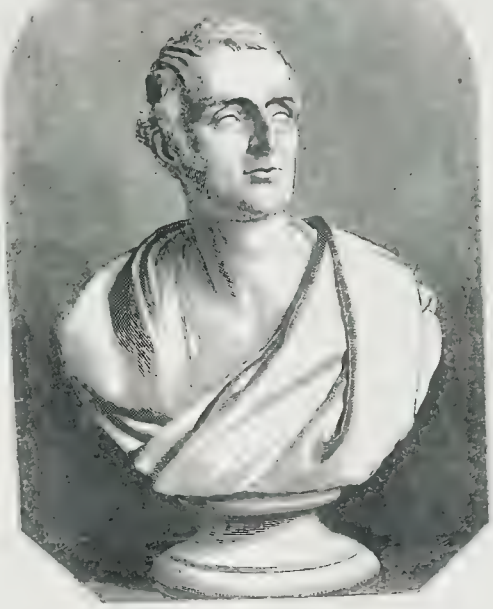
Glasgow College, May 1, 1843.

Fine Arts.

BUST OF THE LATE DUKE OF WELLINGTON.

BY E. W. WYON.

This fine bust has been beautifully executed in parian by Messrs Josiah Wedgewood and Sons, Etruria, Staffordshire. In this model it has been the sculptor's object to represent the Great Duke somewhat past the time of the battle of Waterloo, but before age had depressed his manly figure. Hence the difference between this and many of the representations lately published. The likeness in Mr. Wyon's bust is admirable; and it is altogether a superior work of art.



BUST OF THE LATE DUKE OF WELLINGTON, BY E. W. WYON.

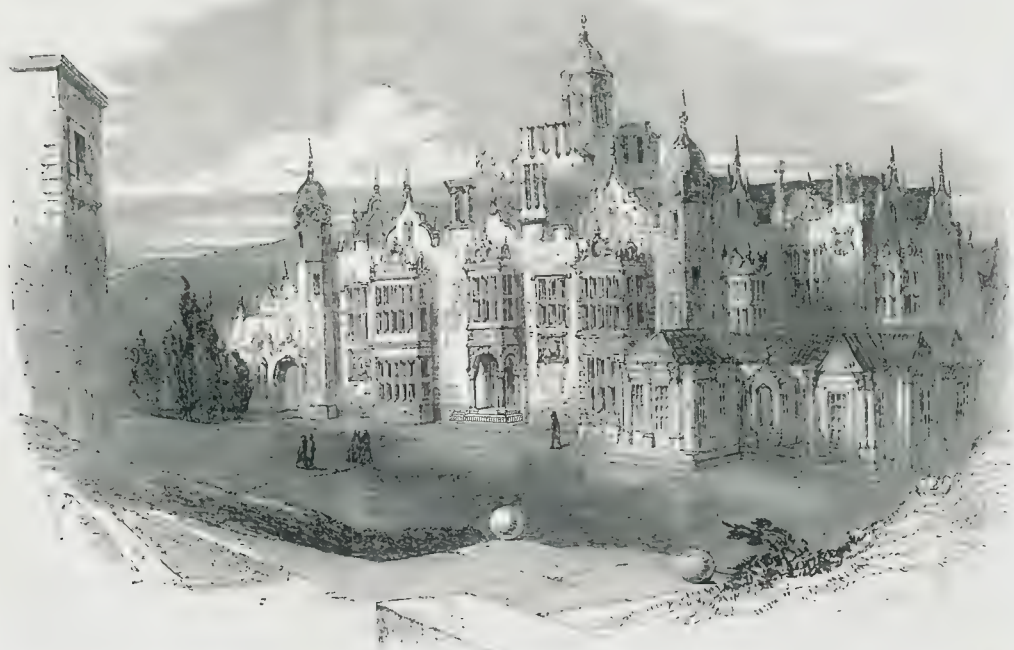
The "Arctic Council." By Stephen Pearse, Esq.

Messrs. Graves and Co. have just published an engraving, by Scott, from a highly-interesting historical group picture, entitled the "Arctic Council." This picture was painted by Mr. Stephen Pearse for Mr. Barrow, of the Admiralty; and, as its name implies, represents the principal commanders and men of note who have taken active part in the researches after a supposed North-Western Passage, assembled at the Admiralty, and discussing the plan of the search to be made for Sir John Franklin and his brave comrades. As a work of art the picture is entitled to high commendation, being full of spirit and character, whilst the individual portraits are, we believe, of unimpeachable truthfulness. Around the table some seated, some standing—are Captain Sir W. E. Parry, Captain Sir George Back, Captain Sir James C. Ross, Captain E. J. Bird, Rear-Admiral Sir Francis Beaufort, Hydrographer; John Barrow, Esq., Keeper of the Records of the Admiralty; Lieut.-Colonel Sabine, Captain W. A. B. Hamilton, Secretary of the Admiralty; Sir John Richardson, Inspector of Hospitals and Fleets; and Captain F. W. Beechey; whilst on the walls are represented portraits of Sir John Franklin, the Commander of the missing expedition of 1845, and Captain Fitzjames, who served under him on board the *Erebus*, where he was appointed to conduct the magnetic observations, and the late Sir James Barrow, who, during his official career, did so much to advocate and promote the Polar expeditions. The print is dedicated to Lady Franklin, and, we are sure, will be looked upon with deep interest by all who are proud of the enterprising spirit of our country, and feel a deep and painful interest in the fate of some of the bravest of her sons.

Ten Scenes in the Last Ascent of Mont Blanc By J. D. N. Browne. Macfarlan.

Those who are curious about the marvels and dangers incidental to an ascent of Mont Blanc will find here a more authentic and satisfactory account of them than any that has previously been produced, whether at the agreeable salle in Piccadilly, or in the Guide-books. Mr. Browne and his companions, the latest adventurers upon the ice-clad mountain, appear to have conducted their proceedings so skilfully, and with such "pluck," that the certificate of their nine guides and of the syndic states:—"What is most remarkable, and what was never effected before, these gentlemen employed themselves in sketching the great panorama, and enjoyed all their faculties." The sketches so produced are now published in lithography, and striking pictures they are of mountain difficulty and human daring. Amongst them the most remarkable are:—"Incident before reaching the Grands Mulets," a most perilous escalade, all hands holding on the ladder; "The Camp of the Grands Mulets;" "Searching for the Passage [illegible] and [illegible] ditto again all hands in one boat, on the edge of a fearful precipice);" "First View of the Italian side of Mont Blanc—Monte Rosa and the Matte Horn in the distance;" "The Top of La Côte, giving a wonderfuldea of the isolated position of the mountain top; and "Incidents in the Descent, and Valley of Chamounix:" the excursionists returning quicker than they went up, sliding down in a sitting posture, and taking the chance of when and how they may alight. These sketches are very spiritedly executed; and are accompanied by a lively narrative of the ascent to which they refer.

New Kaffir Exhibition.—The St. George's Gallery, Hyde-park-corner, formerly used as the Great Chinese Exhibition, has been taken by Mr Caldecott, a merchant, of Port Natal, for the purpose of presenting an exhibition of remarkable interest, consisting of a family of native Zulu Kaffirs—eleven men, a female, and a child. It is intended to represent the domestic manners, hunting the tiger, war-dances, superstitions, witch-finding, &c., of this wild and savage race; and Mr C. Marshall (the artist of her Majesty's Theatre) is occupied in preparing a number of striking scenes.



HARLAXTON HOUSE, NEAR GRANTHAM, NOW IN COURSE OF ERECTION

LITERATURE.

(*Continued from page 354.*)

[illegible] the sceptics. He makes some fun, and yet writes so much sense to be serious, that, on coming to the end of his book, we cannot decide whether it be *bond fide*, or a very prolonged and mixed piece of impertinence. The subject is very curious, as a specimen of Old-World superstition revived and extended across the ocean, and of the restless activity of the American race in propagating delusions. A brief history of the "rappings," such as might be compiled from Mr. Spicer's book, unmixed with other matters, would have been acceptable and popular. There is quite enough peculiarity in the wonders to gain a hearing for any and every kind of supernatural claim, if all of them do not command belief

"Spirit rappings" are not indigenous amongst the Americans. They have borrowed them, like many other things, from the Europeans. They were rife in England in the seventeenth century; and, amongst others, the worthy Mr. Mompesson, at Tedworth, was then almost drummed out of his house by the spirit of a vagrant musician whom he had unfortunately insulted. The "Poltergeist" of the Germans is as familiar to all the readers of *Daubiarie* as "Rubezahl," and dates from as far back. There are numberless histories of disturbing noises in many old houses—rattling table-drawers, midnight galloping at night in galleries, and all kinds of unearthly disturbances; and they have visited the families of the pious, like that of the Wesleys, as well as those of reputed great sinners. But all these were cases of mischievous or indignant ghosts, the spirits of individuals which, for injuries suffered or deeds done in the flesh, still thirsted for vengeance or sighed to unburthen a guilty conscience, and could not obtain repose till they had confessed their sins, revealed the deposits of some ill-gotten treasure, or plagued an oppressor to death. The American rappings are very different, and their historian should not have confounded a superstitious belief in the possibility of an injured or vindictive spirit visiting the earth with the theory professed by the Rappists, that the disembodied spirits of all who have ever lived are still around us, and can be summoned at pleasure and communicated with by some gifted and favoured persons. The first rappings date from March, 1848, and the theory from a subsequent period, yet so rapidly has the theory and the practice extended, that already, we are assured, "there are no less than thirty thousand *media* communicating" in all parts of the States with the souls of their deceased grandmothers, drowned brothers, hurried-away infant sisters, lost friends, and departed statesmen, and poets of ancient renown. "In the city of Philadelphia alone there are no fewer than three hundred magnetic circles, holding regular meetings, and receiving communications." To talk with a spirit in America is now as common as to communicate through the post-office or the telegraph; and men consult their dead ancestors about business as if they were their living partners. That wonderful agent, electricity, or magnetism, is asserted to be the means of communication; and a belief is confidently expressed and justified, too, by the rapid progress already made, if there be any true foundation for the whole, that we shall soon come to live in continual intercourse with the spirit world, just as we now guide our ships by the invisible magnetic fluid acting on the needle, and expect to guide them by it in all times to come. Such a wonderful change is not done justice to by Mr Spicer, or the Rappists themselves, who are obviously not yet conscious of the mighty revelation they are, according to their theory, the chosen instrument to make.

Since this review was in type, an article has appeared in the *Leader*, of March 12, entitled "The Rappists Exposed," describing the means by which the delusion is practised, and convicting the "medium" then in London, by her own answers, of being "an impostor." It seems that the answers wished for or expected are indicated by the majority of questioners to the "medium" by a hesitation or stoppage at the letters which compose it. This slight change is quite distinct from the practised "medium," and the thought of the questioner is comprehended. If there be no hesitation, the "medium" can give no correct answers; and if there be, the "medium" can be made to give any answer by raps which a skilful questioner desires.

NOTES AND EMENDATIONS TO THE TEXT OF SHAKSPEARE'S PLAYS. From early Manuscript Corrections in a Copy of the Folio (1632), in the possession of J. Payne Collier, Esq., F.S.A.; forming a Supplemental Volume to the Works of Shakespeare, by the same Editor. Printed for the Shakspeare Society.

THE STRATFORD SHAKSPERE. Edited by Charles Knight. Specimen Volume. Knight and Co.

This publication of Mr. Collier's has justly excited an unparalleled sensation among Shaksperian students. The copy of the folio of 1632, at the best, would not have been of very great value, but the MS. emendations, though written by an unknown hand, are of the greatest. That folio was preceded by one of 1623, which had been got up by Messrs. Heminge, Condell and John Heminge," the managers of the Globe Theatre, and the friends and fellows of Shakspeare. Of this, Mr. Knight takes a high estimate than has generally been accorded to it. The theatre, he says, "does not [illegible] a mere piracy," but was set forth by Heminge and Condell expressly to correct the errors, especially in the metrical arrangements, even in those plays which appear the most alike, afford satisfactory evidence that, in the publication, some manuscript was referred to." The edition in question included 36 plays of Shakspeare; all, in fact, usually attributed to him, except "Pericles." It is, unquestionably, the most authentic text of Shakspeare's plays, and most recent editions have been constructed upon it, asserted by reference to the previous quartos, with respect to the fourteen plays originally printed in that form. The second folio, published in 1632, has generally been condemned. Steevens, however, for purposes of his own, erected it into an authority. It is, in fact, a mere reprint of the former folio, with typographical errors peculiar to itself, and clumsy alterations of errors suspected in the first. Chance, negligence, and ignorance had done their utmost to render it worse than useless

It is on a copy of this exceedingly blundering edition that the MS corrections now published by Mr. Collier have been written by some unknown hand. Many of them are but restorations of the text to that of the quartos or former folios; others are at present without any authority but the internal evidence of their correctness. As there is reason to conclude that the emendator never consulted the quartos at all, his occasional agreement with them must either have been lucky guessing or some authoritative MS. text. In part, also, this may be said of the first folio, from which he boldly differs whenever there is occasion, on the occasion not always being obvious, and sometimes unsuspected by all subsequent commentators, and in which he sometimes adds entire lines, whose want was not felt until, by their introduction, it became clear that the readers of Shakspeare had [illegible] supplied the original text of [illegible] omissions by unconscious guesses. [illegible] copy on which these corrections are made is torn and disfigured, soiled with blots, dirt, grease, tobacco, wine, and beer, or other liquids, and defaced by holes burned in the paper, either by the falling of the lighted snuff of a candle or by the ashes of tobacco. It is evidently a volume that had been well used and much employed, in short, in active service. That service can scarcely said to be equivocal either, for numerous stage directions are added in the margin, the division into act and scene are carefully marked, and the passages to be omitted in representation crossed through. We should say at once that it was used as a prompt-book for some theatre where Shakspeare's plays were carefully acted.

The work came into Mr. Collier's possession quite in the ordinary way. He purchased it in 1849, of the late Mr. Rodd, the bookseller, as an imperfect copy of the folio of 1632, for the purpose of repairing another copy which he already had. It was some time before Mr. Collier discovered that he had acquired a treasure, and that the MS. corrections amounted to about 20,000 turned letters and punctuation included. On the cover he made out the name of "Thomas Perkins his booke;" which he, at first, thought might be the old actor who had performed in Marlowe's "Jew of Malta," on its revival shortly before 1633. At this time he fancied that the binding was about that date, and that the volume might have been his; but, in the first place, he found that his name was Richard Perkins; and, in the next, he became satisfied that the [illegible] calf was not the original binding. It is obvious, however, that [illegible] might have been the descendant of Richard; and there is [illegible] besides, in the internal evidence to connect the copy with theatrical purposes.

Thus stand the facts; and, in the present state of the case, it is evident that these emendations, however good, have little evidence in their favour beyond their internal value. We are ignorant of the [illegible] authority for his corrections. Mr Collier allows that they might, anonymous one—has done uniformly in all. If this be guess work, the result is miraculous. We are decidedly of opinion that the only consistent assumption is, that the emendator proceeded on instruction, and that, as no printed model existed, he received help from some manuscript supposed to be sufficiently authentic

Is it likely, then, that he lost the advantage of Shakspeare's original MSS.? Even if he had, it is clear that he did not depend even on them alone. Heminge and Condell, as Mr. Knight states, probably printed their edition (at least, in part) from Shakspeare's MSS. The errors of that edition were such as would naturally arise at press, when the process was not superintended by either author or editor, but left to the staff establishment of the printing-house; and it is among the internal evidences to the MS emendations in question that, for the most part, they relate to just such errors as would happen in such a case. Why, then, might not the emendations have had the Shaksperian MSS for their exclusive basis? Because of the stage directions and prompter's marks included in them. Those were not in Heminge and Condell's MSS., and were, therefore, not printed, as otherwise they would have been in their edition. But they would exist in other copies—to wit, in those made by the prompter for the use of the actors and the general use of the theatre: in the latter case, as worked from the whole play, and in the former, of the separate parts. While, therefore, there is no evidence to show that the emendator before us had access to Shakspeare's own MSS., there is plenty to suggest that he had consulted MSS. used at some theatre in which the stage business was marked, after other needful corrections of the text had been most carefully made.

There is a point at issue between Mr. Collier and Mr. Knight as to Heminge and Collier's authorities. The former doubts whether some of the manuscripts used in the first folio were not received by dictation, instead of being original. "If," says Mr. Collier, "there be one point more clear than another, in connexion with the text of Shakespeare as it has come down to us, it is that the person or persons who prepared the transcripts of the plays for the printer wrote by the *ear*, and not by the *eye*." Mr. Knight holds it "such a process to be utterly incompatible with the general accuracy with which the text even of Shakspeare's dialogue has been preserved to us," and directly opposed to all the known facts connected with the original editions. "We believe," adds Mr. Knight, "in Heminge and Condell, who, seven years after Shakspeare's death, collected his works, and affirmed that they printed them from *his papers*. We do not believe, except in the few instances of those *stolen and surreptitious copies*, which it was the object of the first folio to offer *perfect*, that *short-hand writers imperfectly took down the words as they mdistinctly heard them*; or that *inferior performers furnished the booksellers with such parts as they sustained, or could in any way procure from the theatre*; or that the same birelings, *listening, as they must have done, to the repetitions of the principal actors, would be able to recite, with more or less accuracy, whole speeches, and even scenes, which a little ingenuity would convert into a drama*. We do not *readily imagine*—we think it the wildest imagination that ever entered into the brain of man—*that what these inferior performers had thus got by heart, they might dictate to some mechanical copyist, and thus many words, and even sentences, which sounded like something else, would be misrepresented in the printed editions, and nobody to take the pains to correct the blunders*. Oh! much abused Macpherson, how authentic is thy 'Ossian' in comparison with *the text of Shakspere* as it has come *down to us!*"

For our parts, we think that the auricular theory (so to call it) has been carried too far; though, in relation to the quarto plays, no doubt it has some foundation; and Mr. Collier has instanced several errors which he supposes to have originated in that way. Thus, in the first of the quarto plays emended "Much Ado about Nothing"—Mr. Collier notes the correction—

"No glory lives *but in the lack* of such,"

for "behind the back." In a previous instance, also, we find another example—in the printing of *truths* for "proofs." For "our Hero died *defiled*, but I do live," the corrector substitutes "belied."

Next of this class, we have "Love's Labour's Lost;" where the copyist is supposed to have misheard "double" for *dull*. But the most notable of this class of errata occurs in one of the plays not out of the quarto-list of fourteen; namely, "Cymbeline." We give the whole, with th-comment, in the manner adopted by Mr. Collier.

We here (Act iii. S 4) arrive at a most singular instance of mishearing, which we must impute wholly to the writer of the manuscript used by the compositor. It is in a speech by Posthumus, where he supposed that Posthumus has been seduced by some Italian courtezan

"Some jay of Italy,
Whose mother was her painting, hath betray'd him:
Poor I am stale, a garment out of fashion," &c

Now, for "whose mother was her painting," of all editions, we are told by the amender of the folio, 1632, to read—

"Some jay of Italy,
Who smothers her with painting, hath betray'd him."

Mr Collier enters into an extensive argument to justify the amended reading; but it may be safely left to its own value on the mind of our readers. The whole play of "Cymbeline," according to the corrector, is very erroneously printed; and well it may have been so, if composed from a dictated copy. Heminge and Condell do not seem to have had here Shakspere's own manuscript; but a most corrupt substitute. We will adduce instances in proof

The following passage (A. i., S. 5) we will give as amended, indicating the blunders in brackets:—

Ay, and the approbations [approbation] of those that weep this lamentable divorce and her dolours [under her colours] are wont wonderfully [are wonderfully to extend him; be it but to fortify her judgment, which else an easy battery might lay flat, for taking a beggar without more [less] quality.

As thus corrected, nothing can be plainer than the text: as it stood uncorrected, it would be difficult to find anything more perplexed. In another scene, the plain phrase, "if you make a good your vantage upon her," had been corrupted into—"If you make your voyage upon her." For "the rich *cope o'er* sea and land," and "th' *summerbeach*," of another passage, the corrupt text reads "*crop on*," and "*summered*." In three other passages, in which the single letter, such as "bo-peeping" for "by peeping," "pay" for "play," and "contemn" for "condemn," makes the meaning clear and strong that was previously doubtful and weak. One strange line—

Like a full Acorn'd Boare, a Jarmen on,

is thus set right—

Like a full acorn'd boar, a foaming one.

This, however, is, evidently, a compositor's error, not the scribe's. The printer, as Mr. Collier says, "mistook the *f* which [illegible] begins for a capital *J*—then frequently carried below the line—and did not attend to the *g* at the end of the word."

As might have been expected, the existing corruptions of the text have found defenders. Association has lent a meaning to some, which, for the most part, being incapable of a literal interpretation, have been translated into metaphors—such, for example, as "her mother was her painting." These unfortunate words, assigned by the plain straightforward sense, a passage once deemed poetical, is reduced to simple prose. Mr. Knight and others, therefore, complain of some of the alterations as "prosaic." Could it be established that the alterations were conjectural, and their prosaic quality a characteristic of the guesser's mind, the objection would indeed be fatal; but as the case actually stands it goes for nothing. Amongst the corrections that have raised most discussion is that of *Lady Macbeth's* interrogation, "What beast was it then that made you break this enterprise?" Mr. Knight finds the passage in the folio "what beast was't then," &c. The word *breaking*

plexity, is peculiarly well adapted to secure the approbation of enthusiastic spinsters and romantic chambermaids. What, for instance, can be more harrowing than to "feel a grief inexpressible over a loss unendurable;" or more delightful than to have "flash eliciting, truth-extorting interviews" with one's mistress; or more inviting than to read of "life's hopes being torn by the roots out of a riven, outraged heart;" or more exciting than to be told by our suffering heroine that "with many a deep sob—with thrilling, icy shiver—with strong trembling, and yet a wild relief." The sketches of Madame Beck, the schoolmistress, and Monsieur Paul the professor, are excellent, though given, perhaps, too much in detail; while the story, although deficient in plot, is interspersed with incidents which render it amusing.

AMABEL; or, the Victory of Love. By ELIZABETH WORMELEY. Three volumes. Smith, Elder, and Co., London.

The title of the work now under notice is well calculated to mislead the reader who is unapprised of its merits: he takes the book up, supposing it to be one of those splurmeral productions in which love is treated as a mere passion, and its vicissitudes made a peg whereon to hang some silly tale, embellished with tawdry sentimentalism and questionable morality, but he will rise from its perusal agreeably disappointed: for seldom have we met a book in which the beauty and divine nature of true love is more faithfully delineated, or from which more wholesome counsel may be drawn. The tenor and execution of the work are in complete unison with the object sought to be accomplished; every fine and chaste feeling of the human heart is delicately but truthfully described, while human frailties are placed before us in a manner the best calculated to produce reformation, and corrected with a merge which encourages hope. After wading through the common-place novels which achieve a temporary triumph by pandering to depraved tastes or popular prejudices, it is cheering to the critic to light upon such a book as this; for it assures him that there are still to be found amongst our writers those who can explain a woman's feelings with a woman's delicacy—who can record her imprudence without raising a blush, and her repentance without sacrificing a principle—who can be honest without becoming coarse, and impressive without degenerating into bombast.

THE DOMESTIC MEDICAL AND SURGICAL GUIDE. By JABEZ HOGG, M.R.C.S. Ingram, Cooke, and Co.

This small work has been written at the request of Mrs. Caroline Chisholm, whose active benevolence in the establishment of emigration will, doubtless, cause her name to be remembered in after ages as the benefactor of her race. Such untiring energy in a good and great cause one rarely meets with even in these practical times. The object of the book before us is "to supply a want often found at sea, and in the far-off farming stations, and thinly populated districts of the colony;" and it is stated to be specially adapted "for families, emigrants, travellers, missionaries, village clergymen, and masters of vessels." The "Accident" cases are properly numerous; and there is a special chapter "on the Preservation of Health at Sea, with the Government Orders relating thereto." Altogether, the little work is well timed, and bears the stamp of professional warrant.

Science.

THE PHOTOGRAPHIC CAMERA.

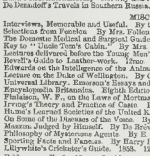
WITH the advance of spring, and the consequent probability of sunshine, we find that the means for obtaining photographic copies of nature, in her varied moods, begin to excite a considerable share of attention. The third ordinary meeting of the Photographic Society was devoted to the consideration and exhibition of the photographic camera; and the Society of Arts, as addenda to their exhibition, have collected the cameras then exhibited, and some others, which remain in their rooms for the inspection of members and their friends. The "Journal of the Photographic Society" (No. 3) is devoted to the subject of cameras, and the descriptions of such as were exhibited, at the evening meeting; but we regret to say that very few of these descriptions are intelligible to the practised photographer, and they certainly must be altogether more enigmatical to the unpractised amateur. The council of the Photographic Society, and the editor of their journal, would do well to remember that such conversations as those reported between Mr. Spalding, Sir William Newton, and others, at the meeting with their camera before them, have little use to the country member, who seeks for practical information in the journal as the sole return for his annual subscription. We say this in the best possible spirit, dealing the permanent success of a society which may, if properly directed, be much good (for an art which is amongst the most beautiful of the applications of science with which we are familiar.

From the numerous applications which have been made to us on the subject of cameras, and the general arrangements of the camera, we have determined to devote as much of our space as we can afford to an explanation of the instruments necessary for the successful prosecution of the art of Photography.

Although the manipulatory details of the Dagnerréotype, Calotype, and Collodion processes are essentially different, and consequently require, individually, peculiar adjustments in the mechanical arrangements of the camera, the main principles involved are the same in all.

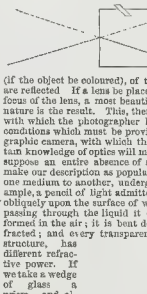
The camera-obscura—the dark chamber of Leonardo da Vinci—in its primitive form, is best understood by simply taking a box, blackened on the inside, and so closed that light is admitted only through one small hole in the end, having an opening or tube in the upper part, through which the opposite end may be seen, as in Fig. 1. If this dark

FIG. 1.



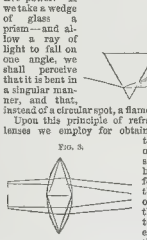
box be placed in front of an object strongly illuminated, the rays from it pass through the small hole, and form a picture on the remote end of the box. This spectral image is faint indeed, and inverted; but it is a true picture in lights and shadows, and in colours (if the object be coloured), of the material surfaces from which the rays are reflected. If a lens be placed in the hole, and a screen adjusted to the focus of the lens, a most beautiful miniature representation of external nature is the result. This, then, is the simplest form of the instrument with which the photographer has to work; but there are many other conditions which must be provided for in the construction of the photographic camera, with which the amateur should be acquainted. A certain knowledge of optics will materially assist the amateur; but we shall suppose the entire absence of such knowledge, and thus endeavour to make our description as popular as possible. A ray of light passing from one medium to another, undergoes refraction or bending. If, for example, a pencil of light admitted through a small hole is allowed to fall obliquely upon the surface of water in a glass, it will be seen that in passing through the liquid it does not continue in the same line as it formed in the air; it is bent down from the surface of the water, or refracted in a more every transparent medium, according to its density and structure, has different refractive power. If we take a wedge of glass a prism—and allow a ray of light to fall on one angle, we shall perceive that it is bent in a singular manner, and that,

FIG. 2



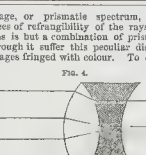
instead of a circular spot, a flame-like coloured image is the result (Fig. 2). Upon this principle of refraction depends the construction of the lenses we employ for obtaining miniature representations of nature. If the section of the object-glass of a telescope be examined, it will be seen to be actually two prisms placed back to back, the apex of each thus forming the edges of the lens; and, instead of the rays falling upon the outer surface are bent, in passing through the glass, in different directions, they come to a point, or focus, upon some plane equally distant from the inner surface of the lens (Fig. 3).

FIG. 3.



This being understood, the use of the lens in the camera will be apparent; and the object to be attained is to avoid the chromatic dispersion above alluded to, as producing coloured images or fringes of colour, and to secure equal distinctness of the image over every portion of the plane surface upon which it is received. The coloured image, or prismatic spectrum, is the result of the different degrees of refrangibility of the rays constituting white light; and, as a lens is but a combination of prisms, it happens that the rays passing through it suffer this peculiar dispersion, and we have, as the result, images fringed with colour. To obviate this, achromatic lenses were

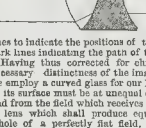
FIG. 4.



invented. These are compound lenses, made of two kinds of glass, having different dispersive powers, and so adjusted to each other, that the refraction of the rays in one direction by a flint-glass lens, is counteracted by the refraction of the rays in another direction by a lens of crown glass. This will be understood by examining the accompanying figure of an achromatic lens, and placing dotted lines to indicate the positions of the imaginary prisms to each other, the dark lines indicating the path of the rays through the two lenses.

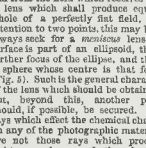
Having thus corrected for chromatic dispersion, another object is necessary distinctness of the image over every part of a flat field. As we employ a curved glass for our lens, it is obvious that different parts of its surface must be at unequal distances from the object in front of it, and from the field which receives the image behind it. To manufacture a lens which shall produce equal sharpness of definition over the whole of a perfectly flat field, is a task of some difficulty: but, by attention to two points, this may be accomplished. The amateur should always seek for a *meniscus* lens—that is, a lens whose outer convex surface is part of an ellipsoid, the focal distance coinciding with the further focus of the ellipse, and the inner concave surface being part of a sphere whose centre is that focus (Fig. 5). Such is the general character of the lens which should be obtained, but, beyond this, another point should, if possible, be secured. The rays which effect the chemical change on any of the photographic materials are not those rays which produce light or colour, and they have a higher degree of refrangibility, or are more bent than the luminous radiations are. This being the case, it is necessary that beyond the achromatic correction of which we have spoken, the lens should be so formed as to bring these actinic chemical rays within the plane upon which the luminous rays fall as a focus. This is of course the business of the optician, but it is important that the amateur should be aware of the points necessary to be attended to. It has been proposed to call such lenses *dinctinic* lenses, to distinguish them from merely *achromatic* lenses.

FIG. 5.



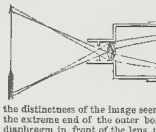
The lenses being the really important part of the photographic camera, we have devoted much of our available space to the explanation of them. A good lens being obtained, it is placed in a tube at one end of a box, with the necessary adjustments, and the instrument is complete. The most simple construction for the box is that shown in Fig. 6, where the dinctinic lens is placed in one box tube, slides into another, so that by moving the box backward or forward, we may secure the correct adjustment of the focus, which is determined by the distinctness of the image seen upon a plate of ground glass placed at the extreme end of the outer box. The figure shows the erection of a diaphragm in front of the lens, the object of which is to cut off all the rays of light extraneous to the object of which a copy is desired. Since the mathematical perfection of lenses is beyond even the refinements of optical manufacture, all lenses are more or less imperfect, and the more completely we can confine our operations to the centre of the glass, the more exact and beautiful will be the image which we shall obtain. Indeed, by availing ourselves of this fact, we may employ very cheap glasses, with which to commence our studies, if we blacken over every part of the surface but a small circle in the centre of the lens. It is not recommended that inferior lenses should be employed where good achromatic lenses can be obtained; but, under certain circumstances, an ordinary meniscus lens (which can be bought for a few shillings) will be found to produce pleasing and truthful pictures.

FIG. 6.



Beyond the simple contrivance we have named, of two boxes, one sliding within the other—which should be made of well-seasoned Honduras mahogany—it is necessary to make some arrangement for placing pieces of prepared paper in the camera, and withdrawing them when impressed with the picture without exposing them to the influence of daylight. In the cameras exhibited at the Society of Arts, this is effected in several ways; but, regarding simplicity and cheapness of construction, we would recommend the following plan. The ground glass at the end of the outer box should be fixed in a frame which falls into a groove, so as to be easily removed or put in its place. Some frames (as Fig. 7) should be made which fit exactly into the space occupied by the ground glass, so that, when a frame is put in its place, and the shutter drawn up, the prepared paper or plate coincides in situation with the place occupied by the ground glass previously. Several of these frames may very easily be made to fit into the box, and in each one the sensitive tablet may be placed. The photographer goes into the fields and obtains his pictures, which he carefully screens by closing the shutter of his frame, and so secures them until he is enabled to develop them with convenience.

FIG. 7.



Our object has been to describe a camera which may be constructed by any one, at a very small expense, and which will prove sufficient for the production of such photographs as may convey correct impressions of the objects copied. We have had especial reference to the paper processes, as these are, for the traveller, in every way the most convenient.

For the collodion process, if a dark room be at hand, such a simple camera as we have described will answer every purpose; but, for working in the open field, a more portable arrangement is desirable. For this purpose troughs must be adapted to the bottom of the camera, after the manner of some exhibited at the Society of Arts; or of those of which woodcuts are given in the *Photographic Journal*.

It should not be forgotten that upon the character of the lens, and the lens only, everything depends. The mode of fitting up the box may be regulated by the ingenuity or the fancy of the operator, since in this respect much may be disposed to make experiments, if they could do so without incurring the cost of a lens until they know whether they shall succeed or not, it may be interesting to them to know that if an ordinary telescope lens gives them a well-defined picture at a distance of twelve or fourteen inches from the inner surface of the glass, they may, by *stopping off*, as we have already described, succeed, to a certain extent, in procuring photographic pictures. In doing this, however, one point must be attended to particularly. Some of these lenses are corrected to make the chemical and the luminous focus coincide. It becomes necessary, therefore, since the chemical focus is somewhat shorter than the luminous focus, to place the prepared paper a little nearer the glass than that point at which the most perfect visual image is formed: for a focal distance of twelve inches, the length should be shortened a quarter of an inch

To obtain portraits, or copy any object where great exactness is required, a good dinctinic lens must be obtained. Hitherto our opticians, with the exception of Mr. Ross and one or two others, have not paid that attention to this matter which is necessary. They have been confounding, and most of them still continue to confound the prepared paper with those which are chemically active; and hence there are but few ordinary achromatic lenses which are effective for photography.

ENGRAVING PHOTOGRAPHS ON STEEL.—Mr. Fox Talbot announces the discovery of a process by which he obtains pictures upon steel plates by the solar rays; and then etches them sufficiently deep for their employment as ordinary steel engravings for printing from. The process is as follows:—A solution of sinigless has some bichromate of potash dissolved in it. This is spread over the steel plate and dried by the application of heat. Any object is then placed on the prepared plate, and being pressed close by a glass, it is exposed to sunshine. The yellow surface is rapidly turned brown over all the parts exposed—those covered remaining yellow. If the steel plate be now placed in water all the unchanged parts are dissolved off, leaving the metal nearly bare. By pouring over the plate some bichloride of platinum a very fine etching is rapidly made. With the proper care very beautiful copies of nature may thus be obtained.

NEW BOOKS, &c.

MESSRS. HURST and BLACKETT, SUCCESSORS TO MR. COLBURN.—

The DUKE of BUCKINGHAM'S MEMOIRS of the COURT and CABINETS of GEORGE III., from Original Family Documents. Second Edition, revised. 2 Vols., 8vo, with Portrait, 30s.

NARRATIVE of a JOURNEY ROUND the WORLD, comprising a Winter Passage across the Andes to Chili; with a Visit to the Gold Regions of California and Australia, the South Sea Islands, Java, &c. By F. GERSTAECKER. 2 Vols. 21s. (just ready).

FAMILY ROMANCE; or, Episodes in the Domestic Annals of the Aristocracy. By J. B. BURKE, Esq., Author of "The Peerage," &c. 2 vols. 21s.

EIGHTEEN YEARS on the GOLD COAST of AFRICA. Including an Inland Journey to the Ashantee Capital. By BROWNE, Esq., late Her Majesty's Consul at Accra. 2 vols. 21s.

London: JOHN W. PARKER and SON, West Strand.

THE NATIONAL MISCELLANY. No. I., price 1s., published this day, contains, Life and Works of Sir Joshua Reynolds—Year-Day—Dr. Johnson—The Old Royal Palaces—Last Days of the Stuarts—Literature, &c.

THE ILLUSTRATED LONDON NEWS

No. 621.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MAY 14, 1853. [TWO NUMBERS, 1s.

BRITISH RULE IN INDIA.

THE approaching termination of the East India Company's Charter naturally draws the attention of the public to the state of our Indian Empire, and the manner in which we have governed it. Few people have any precise notions as to what India really is. They have an idea of an Empire, vast, magnificent, teeming with wealth and barbaric splendour; covered in some parts with an immense population of docile Hindoos, and in others with a population no less numerous, of restless, dissatisfied, and warlike Sikhs, Scindians, and nations hostile to our power and supremacy. It may be well to state in a few words of what our Indian Empire in reality consists, and with what results, as regards ourselves and the welfare of the Indian nations, we have governed the country.

It appears from the "statistical papers relating to India," printed in the first instance for the Directors of the East India Company, and afterwards for the House of Commons, that British India, including the native states which are under our protection, covers an area of 1,300,000 square miles, a country more than half as large as Europe; and that it is inhabited by nearly 150,000,000 of people. The protected and other semi-independent states under the government of the native Princes of India, occupy upwards of one-half, or 717,000 square miles of this immense territory. The population of these native states is more sparse than that of the provinces which are under the direct control and authority of Great Britain, and amounts to but 53,000,000. This great country possesses a fertile soil, a favourable sky, an industrious and ingenious people, and abounds in every known and available source of national wealth. It possesses almost every variety of climate and production, and was the seat of learning, of art, of science, of commerce, and of a high order of civilisation, at a time when the savage inhabitants of the British Isles roamed in the woods, and painted and tattooed their bodies, like the New Zealanders. The Government of this splendid Empire—more splendid than ever fell to the share of the Roman Cæsars—consists of three separate departments; of which one is in India, and the other two are in London. The most ancient, and that which wields all, or nearly all, the civil, military, and general patronage, is the Court of Directors of the East India Company; the second is the Board of Control—a body that changes with each change of Ministry in this country, and which, under the authority, and with the advice of Parliament, exercises political power; the third is composed of the Governor-General, the Commander-in-Chief in India, and the large body of Englishmen subordinate to them who fill all the places of power and profit in the Presidencies, and collect and administer the revenues.

And how have these three jurisdictions performed between them the solemn and responsible duty which they have undertaken? Have they, acting as they do for the greatest and most civilised nation under the sun, extended the blessings of that civilisation to the tribes and races under their charge? Have they endeavoured, by the beneficence of their rule, to make the natives forget that they are a conquered people? Have they developed the rich and varied resources of the country? Have they undertaken large and necessary public works? Have they constructed canals, roads, and bridges? Have they provided for the first want of large agricultural districts, which only need irrigation to rank among the most fertile portions of the world, and to maintain large numbers of happy and prosperous cultivators? Have they endeavoured to diffuse education and a knowledge of the arts, sciences, and literature of Europe among the 100,000,000 of people committed to their charge? Have they given to the Hindoo, or to the Parsee, or to any other of the friendly and intelligent races that are directly submitted to their authority a fair share, or, indeed any share, in the local government of their own country? Impartial justice compels us to answer in the negative to most of these questions. It is true, they have not utterly neglected all these great duties. They have extended the influence of European civilisation so far as nearly to eradicate the abominable practices of the burning of widows, the systematic murder of female infants, and the horrible rites of Thuggee. With their sanction, if not their aid, the Bible has been translated into ten of the native languages and distributed extensively among Mussulmans and Hindoos

SCENE IN A MAGISTRATE'S CUTCHERY (OR COURT), IN OUDE.—(SEE NEXT PAGE.)

and twenty-two missionary societies have despatched their agents to almost all parts of the country. In addition to this, they have established upon the education of the people an annual sum, amounting to about one half of the salary of the Governor-General; and have turned their attention—but hitherto with few results, and none of any magnitude—to the increase of internal communications by means of roads and canals and also to the irrigation of some of the ruinous districts. With this we must end the catalogue of the benefits that British rule has conferred upon India. All the evidence collected upon the subject confirms the melancholy fact that under our blighting influence the condition of the native population of India is nothing less than "abject." The term was applied by Sir Thomas Munro, inapplicable to the condition of India in a generation that has passed away, and was again used by a competent and experienced witness so lately as 1846. Still more recently, Mr. Saville Marryatt, who passed nearly fifty years in the service of the East India Company, alleged "that India was verging to the lowest state of pauperism, and that of late years a large portion of the public revenue was paid by encroachment upon the capital of the country." Perhaps the most miserable peasants in the world are the Ryots of India. They are patient, laborious, and frugal; and subsist, on the average, at less than threepence sterling per day. They live in huts described as "not fit for English pig-sties;" and are clad in rags that are often insufficient for health, and sometimes for decency. "The Ryot lives generally," says a writer in the twelfth number of the *Calcutta Review*, "upon coarse rice and dholl; vegetables and fish would be luxuries to him. His dress consists of a bit of rag and a slender chudder. He toils from 'morn to noon, and from noon to dewy eve;' and, despite this, he is a haggard, poverty-smitten, wretched creature. This is no exaggeration. Even in ordinary times, and in ordinary circumstances, the Ryots may often be seen fasting for days and nights for want of food." Yet the people are deemed objects of a high revenue taxation, the only salt, the only luxury and indispensable necessary, is subjected to an enormous impost. "No intelligent people," said Lord Ellenborough, in 1852, "would submit to such a rule as ours;" and yet the Hindoos *are* intelligent, in spite of their great demerit of undue patience under gross misgovernment. Hence, there is always danger to our power in India; and hence we are compelled to classify with the utmost severity any attempt at military aggression against our power on the part of any of the semi-independent states. Their temporary success might awake the dormant but not defunct patriotism of the whole population—Mussulman as well as Hindoo—in which case the result might speedily be our total expulsion from the country. We are but a handful of men in India; for what are 10,000 civilians and 20,000 soldiers among a population of 150,000,000? We rule by the strong hand; we govern by terror; we rely upon the prestige of our invincible arms, and of our ancient as well as present renown; and if the natives but knew their own strength as well as the European Governors of India know it, not many years would elapse ere we should lose the last vestige of our proud dominion in the East crumbling to ashes beneath our feet.

While such is, in general, the condition of the British provinces, the numerous states that are still governed by their native sovereigns present, in every respect, a striking and favourable contrast. Wherever we "annex" a state—as we have recently done Scinde, Satara, and the Punjaub—the revenues begin to fail. We cannot govern like the native Princes. We cannot collect revenue like them; and though the taxes we impose are higher than those to which the natives have been previously subjected, the universal result is, that the proceeds are less. Scinde does not pay its expenses. The Punjaub is described as a bottomless pit of expense. Satara favours us with an annual deficit; and Pegu, our last acquisition, will no doubt produce a result as unsatisfactory as its unfortunate predecessors. Whilst we either begrudge the expense, or have not the means to found colleges and schools, to construct roads and bridges, and to lead the fertile canals of irrigation into the heart of the country, the native princes are more favourably situated, if not better disposed. One minor sovereign has found means to expend upon the education of his subjects an annual sum nearly ten times greater than that which the British Government feels itself called upon to bestow for a similar purpose; while none of the native potentates have neglected the important subject of irrigation. Even the Mogul Emperors, whom we overthrew and dispossessed, were fully sensible of its vast importance; and one of them, as early as the fourteenth century, constructed a canal for irrigation, 200 miles in length; and similar works were carried on by his successors until the downfall of their empire. It is only thirty years ago that the British Government first directed its attention to the subject.

It may not unreasonably be thought that if the consequences of British rule have been thus disastrous to the natives, there have been advantages on the British side which have rendered it worth our while to incur so tremendous a risk and so fearful a responsibility. No doubt there *have* been advantages on our side. The immense patronage of India must have been productive of immense enrichment to thousands of English families through many generations; and it is something in the world's eye that adds to our splendour, our dignity, and our power, that *we*, remote islanders, as we are, should be the lords of such an empire. But if the British power in India be subjected to one great test, that of its financial results, it will be found that while it has been oppressive to the people, it has been unprofitable to their rulers. In the year 1792, the public debt of the Indian Government slightly exceeded £7,000,000. After sixty years of successful but sanguinary and profitless wars, and constant annexations and extensions of territory, the public debt in 1850 amounted to nearly £51,000,000. The Indian Government is unable at the present moment to borrow money at an easier rate than six or seven, according to some accounts, ten per cent.

These, and many other circumstances equally condemnatory of the system we have hitherto pursued in India, will, no doubt, be brought to the light of day in the approaching discussions of the British Parliament. It is high time that India should be considered as something better than a nest of patronage. It is high time that public opinion should be thoroughly enlightened upon the consequences of our neglect and misrule; and that something should be done for the natives of India, as well as for the "handful" of Englishmen who administer its resources. Let us not "all cry sympathy to 'Uncle Tom'" and the slaves of America, whom we cannot liberate; but let us, for mercy's sake, devote a portion of it to the unhappy Hindoos, whose position we can raise from degradation and misery to comparative happiness, with more advantage to ourselves than even to them.

THE CRIMINAL LAW IN INDIA.

THE administration of the criminal law in India, by the Company's Courts, has, for fifteen years, been condemned by Government itself. At the same time, the obstacles to a just administration of the law are immense. The ignorance of the native pleaders; the corruption of the *omlah*, or native officers of the courts; the prevalence of perjury among all classes of native witnesses; the impossibility of checking oppression in the execution of the native decrees; the imperfect knowledge possessed by the Anglo-Indian judges of the multitude of dialects, and of the customs, manners, and ideas of the natives, contribute so many serious impediments to the healthy course of law, that justice becomes "a perfect *carpet nowhere* not worth the having."

The latter phase of inconsistency is shown in the *personnel* of the English magistrate, who, in the Illustration upon the preceding page, is presiding in a *cutchery*, or court, in Oude, where all the other actors in the scene are natives of the country. The investigation in progress is that of a charge of poisoning. In the right-hand foreground is seated the magistrate. On the left is the Sheristahdar of the court, reading the *Roobokaury*, or charge against the prisoner. Next is a burly native Guard reserving the prisoner's *puggree*, or head-dress, that the approver may have a distinct view of him. The prisoner is a professional poisoner, brought in irons before the English magistrate for the purpose of identification by the Government approver. Nearly in front of him is an old approver, closely scrutinising the prisoner's features. To the left of the prisoner is a line of six other approvers, each in his turn ready to confront the accused; these approvers, having all, conditionally pardoned for the purpose of detecting their former companions in iniquity. Behind these are two Sepoys of the Guard, and above them is the *punkah*. Behind the magistrate's chair are his *peons*, or attendants.

The scene, which is extremely picturesque and strikingly characteristic, is from a clever Sketch by Mr. B. D. Grant, 35th Regiment, Bengal Native Infantry.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

The bitter cold and cutting winds that have succeeded to the two or three days that ushered in "*le joli mois de Mai*" have had some effect in retarding the departure of the *beau monde*, who, cheated into the belief that the sunshine meant to last—the soft breezes intended still to blow—the lilacs and laburnums to burst into sudden glory—and, what is far more interesting as topic of conversation, *Parisiennes*, the summer toilets to be worn without risk of showers and hail-storms, now resign themselves (with pretty good grace, it must be admitted) to re-light their fires, put off their departures to the country, and pro'ong the season with a few more farewell balls, dinners, and soirées. Still, when the weather will let them, are the Champs Elysées and the Bois de Boulogne filled with gay promenaders—on foot, on horseback, and in carriages; still are the Jardins des Tuileries frequented by ladies, sitting in sheltered sunny corners, where the sun now and then peeps from behind the clouds, and the bitter wind does not blow; where wet nurses, in their more or less picturesque provincial costumes, carry about their nurselings, and where, when they have the luck to meet a *payes* (a country woman), they pass hours in conversing in the most unintelligible *patois*; where *bonnes* and governesses look more or less after their young charges, who are generally most extravagantly attired, with enormous hats, very short petticoats, very long waists, and a profusion of flounces, displaying altogether a contempt for artistic rules of proportion highly edifying to the beholders

The Empress's health slowly mends, but great care is still requisite to ensure her recovery; it is probable that she will pass nearly the whole of the summer at St. Cloud, with but little fatigue or exertion: it is said that, until the last moment, the Emperor hoped for a different conclusion to her sufferings, and but an hour before the accident dictated a reassuring letter to the Duchesse d'Alba, her sister, who is shortly expected in Paris

The funeral of the Spanish ambassador, Donoso Cortes, Marquis de Val de Gamas, whose almost sudden death, from the rupture of one of the principal vessels of the heart, caused so painful a sensation last week, was conducted with extraordinary magnificence. The body, which was embalmed by the process of M. Baland, was deposited in the vault of the church of St. Philippe du Roule, there to remain till it be transported to Spain.

The second exhibition of horticulture in the Champs Elysées, took place the end of last and the beginning of the present week. The interior arrangement of the tent was remarkably picturesque, and the general effect of the show—consisting principally of roses, azaleas, tulips, cinerarias, &c.—was extremely beautiful, though we noticed few individual specimens of great value or rarity. During the whole of the display the tent was crowded, and the number of English visitors was remarkable.

The Italian Opera gave, on Tuesday, the "Bravo," of Mercadante, a work little known in France, though highly popular in Italy. Madame Lagrange, as usual, had the honours of the evening. It appears that the re-port of this excellent singer's re-engagement for the Italiens next year is, at least, premature; and that M. Corti, the director, by a strange and incomprehensible inconsistency, offers to the cantatrice who certainly rescued the theatre from falling into utter inanition, a smaller sum than he gave to Mdlle. Cravelli, whose caprices, exaggerated pretensions, and frequent instances of ungraciousness, are certainly not calculated to tempt the public, greatly obscure her talents, and prevent her ever being what may be considered a sure card to any theatre. On his own part, M. Corti, having already obtained double the subvention accorded to Mr. Lumley, now demands from the state an additional sum amounting to half as much more. As may be supposed, therefore, the interests of the Italian Opera for next season are not in a very promising condition; joined to which, the want of an *ensemble* of first-rate or even truly good singers, deprives the chefs-d'œuvre of Rossini of any constant and real attraction which, in the days of such geniuses as Rubini, Tamburini, Lablache, Persiani, Grisi, Mario, united, rendered the Italian Opera probably the most enchanting entertainment in the world.

Three books of considerable interest and merit have recently appeared in Paris—an event as rare as welcome in the present state of French literature: these are—"Les Critiques et Récits Littéraires," of Edmond Texier, whose "Tableau de Paris" was one of the most striking and successful books of last year; "Les Nuits Anglaises," of Méry; and "Le Monde Prophétique," of Henri Delauge. All are, in their different forms and subjects, works of real charm, talent, and amusement, the last-named, in particular, contains a series of details, anecdotes, and theories on the subject of magnetism, witchcraft, and other mysterious and occult sciences, full of singular interest.

We hoped, dear readers, to be able to give you this week the result of our experience on the subject of the moving tables; but, alas! we are yet unable to speak from personal observation—our table having resolutely refused, after a sitting of upwards of an hour—to stir the hundredth part of an inch. Why or wherefore, we pretend not to say, as the fact of its sullen ones performing a variety of magical evolutions, is beyond a doubt. Like Jacob Faithful's father, we will hope for "better luck next time."

In attendant, we will give you the result of our experiments with the key—experiments of which the invariable success renders us competent to speak with certainty. We took a common door-key, placed it between the leaves of a book, about the middle of the volume, crosswise, so that the ring projected beyond the margin; the book was then tightly tied round with a piece of tape, so as to make it hold the key by the pressure, though the key itself was not otherwise attached. The key and book were then held suspended by two persons—ourself and another—by each placing a fore-finger extended beneath the ring of the key, the point just touching the stem. We both, earnestly fixing our attention on the object, agreed to desire one end of the book to turn to the right: in a few seconds a certain inclination in that direction became visible, and gradually the key, turning like a pivot on the fingers, brought it round to the point indicated. We then, by mutual accord, opposed our desires. For a much longer time the book and key remained immovable; at length a barely perceptible movement in our direction became apparent, and, after a long struggle, the book slowly and hesitatingly crept round as before. We have since repeatedly tried the experiment with different persons, and always with the same results—a rapid turning where the wills accord, a much slower and more painful one where they oppose, and then the direction followed being invariably that of the person whose will or whose magnetic fluid is the stronger—a fact which is easily tested by comparison with the various other persons assembled; and finally, where two persons are of equal force, which may be proved by the same means, a total absence of motion. We doubt not some strong minded individuals will sneer at our experiences; for ourselves we only repeat, in perfect good faith, the result of innumerable trials

FRANCE.

The report of the Committee of the Legislative Body on the Budget renders an account of the financial position of the country. As to the financial situation, the committee is of opinion that the Budget for 1854 offers all the conditions of a *bond fide* equilibrium. It approves of all the savings effected in the Ministerial departments, and particularly the diminution in the credits for the army. The committee declares that it looks on that circumstance as a remarkable indication of the policy of the Government. "It is the most eloquent commentary that can be given," says the report, "on the expression which has re-echoed through Europe —'The Empire is peace.'"

Amongst the amendments accepted by the Government is one which reduces by one million the credits allowed to the department of Public Works for ordinary works; another, which gives a saving of 700,000f. on the Budget of War; and lastly, one diminishing by 300,000f. the subvention accorded to the Imperial Colleges. The total of the savings accepted by the Council of State is 2,079,000f.

There have been of late some unmistakeable indications of opposition in the Legislative Corps on various questions, such as the Jury Bill, the bill on Civil Pensions, &c.; but the Emperor appears pleased with the Deputies, and the session has been prolonged to the 28th inst.

The project for the re-establishment of the penalty of death for political crimes has been agreed to by the Council of State. M. de Cormenin, the eminent political writer, alone abstained from voting on the occasion

The last new project at Paris is the formation of a company for the construction of lodging-houses, on an enormous scale, for the working classes. The company will be guaranteed 4½ per cent on their outlay; but the Administration, that is the Government, will have the power to fix the maximum of the rent to be charged for the rooms. For a night's lodging and a single room, 20 centimes, or 4 sous will be the maximum. These immense buildings are to be erected in the finest and healthiest quarters of Paris, in the immediate neighbourhood of the railroad termini. They will be furnished with wash-houses, bathing places, gardens, walks, &c., and otherwise provided with every comfort suited to the class for which they are intended, and to whom the apartments will be let out, furnished, or unfurnished, at a moderate rent. A similar undertaking for the accommodation and comfort of the subaltern employés of Government offices, and persons whose means are limited, is also to be entered upon. The healthiest spots will also be selected for these buildings, and they will have the advantage of gardens, baths, and other comforts; it is even said that eating-houses will be comprised. There also a certain amount of interest will be guaranteed; but, as in the former case, the Government will have the power of fixing the maximum of rent to be charged.

It is certain that the poorer classes have suffered a great deal from the vast improvements that have been going on, and are still going on, in Paris. The narrow and filthy streets inhabited by these classes, with their over-crowded and unwholesome houses, are being swept away, and it is calculated that already not less than 1500 houses have been levelled to the ground in those parts of the city. The consequence is, that the working men, who were the principal tenants, have been obliged to move elsewhere; and the disappearance of such a mass of buildings has had the effect of raising to an exorbitant degree house rent in every quarter of Paris—having in many instances increased full 50 per cent within the last few months

It is stated that, a few days ago, the Emperor stopped in the garden of the Tuileries to chat with a gendarme, and that the man having told him that he was not happy, as he was in love with a girl, but could not marry her because he had no money, his Majesty made him a present of 500f.

BELGIUM.

The general discussion on the bill for increasing the Belgian army to 100,000 was brought to a close on Friday, the Chamber of the Representatives declaring, by a majority of seventy-two to twenty-one, in favour of that number; and it is easily to be perceived that late events and rumours have contributed in no slight degree to this important and much-debated result. In the course of the discussion M. Dumortier observed that if the people of Belgium entertained the opinion expressed by an honourable member, that the Belgian army could not resist a French one, they had better affix placards on the frontier, announcing "Belgium to be sold cheap." The patriotic declarations of M Dumortier were loudly cheered in the Chamber, and, even although against the rules of the house, in the public tribunes. All the members of the late cabinet—the Rogier one—voted for the bill, as did also such eminent liberals as M. Verhaegen and M. Lebeau

The Budget demanded by the Government is 32,000,000 of francs. Although so small a country, this is not the first time that Belgium has supported an army of nearly that amount; and the appeal made by M. Van Ostrolop to the frightful expenses of the French occupation in 1796, when 42,000,000f. were demanded within twenty-four hours, and the country otherwise drained of its resources, doubtless diminished very much the disinclination of the representatives to pass a measure inflicting increased burdens upon their constituents.

There is no doubt the increased Budget and the visit of King Leopold and his people soon to Vienna are (as in reply of the Belgian Government to the threats of annexing Belgium, which Louis Napoleon lately permitted himself to use when complaining of Austrian intervention in the East.

HOLLAND

The Papal Internuncio has addressed circulars to the Catholics, announcing the introduction of the Ecclesiastical Hierarchy. The Catholic journals state—"The ecclesiastical authority has passed into the hands of the twelve Bishops, which is the cause of so much alarm. The Government has seen this, and has not attempted to interfere. It has, in fact, done exactly what the preceding Ministry did. Under the Protestant Minister the *Oprietander* said—'The Episcopal hierarchy is indeed an accomplished fact, but the Ministry has consummated fact.' Under the Ministry of Van Hall this hierarchy has become an accomplished fact." This is the assertion of a Catholic journal. No Governmental measure has yet legally established this "consummation;" and, therefore, it exists only upon sufferance, as the Catholic journalists very well know But, in presenting this statement in the guise of a "consummated fact," it is hoped to allure people into the belief of its legality, as though, having been in possession by force, the absolute fact of this possession necessitated its absolute right and legality, all laws to the contrary notwithstanding. This is Catholic doctrine in ecclesiastical matters.

GERMANY

The Prussian Budget, in which receipts and expenditure are very nearly balanced, has been adopted

The King of the Belgians, with the Duke de Brabant, arrived in Berlin on the 4th. The King of Prussia went to meet his Royal guest at the Potsdam railway station. The King of the Belgians was expected in Vienna on the 12th.

SWITZERLAND.

The Government of the canton of Freiburg has decreed a forced loan of £10,000, to meet the deficiency caused by the expenditure in suppressing the insurrection of the 22nd ult.

SPAIN.

The Duc de Rianzares, husband of Queen Christina, arrived at Bayonne on Tuesday, at noon, and immediately set out for Paris. The Count San Luis was expected to accept the post of Minister for Foreign Affairs.

It is said that the differences between the Court of Vienna and the Piedmontese Government are in course of arrangement, if they are not already settled.

TURKEY.

The question of the Holy Places seems in a fair way of being settled, the principal difficulties being raised rather upon the manner than the matter of the ratification Prince Menschikoff wishes that the privileges which the Sultan is disposed to accord to the Greek Christians under his sway, shall be embodied in a formal treaty between Turkey and Russia. The Turks agree only to the granting of a firman. The Porte cannot, they say, with any regard to its own honour as an independent nation, submit to a treaty with a foreign power which would give it such influence over persons who, however they may be Greeks by religion, are, nevertheless, subjects of the Porte. The Patriarch of Constantinople, the head of the Greek Church, is the subject of the Porte, and, as such, owes allegiance to it, and not to a foreign power. It is difficult, however, to suppose that the ostentatious Russian Embassy will be content to retire without having gained more than a firman granting to their co-religionists in reality no more than they have practically possessed for some years past in Jerusalem. What Russia really wishes is to assume a protectorate over the Greek Church in the Ottoman Empire, a claim which, if conceded, would, in creating a Russian empire over 10,000,000 of Ottoman subjects, at once extinguish what remains of Turkish independence. The movements of the Russian Embassy are still veiled in mystery, and are a puzzle to the oldest diplomatists. Some fear that Russia will achieve a secret *coup de main*, similar to that of Cronstadt. Skelessi, and that the Ambassadors of the great powers will hear, to their consternation, that all is concluded before they have well learned what is going forward. But the circumstances are since changed, and the Monarch who now wields the Ottoman sceptre is a great contrast to the vigorous Sultan Mahmoud, and is much less likely to commit himself to so momentous an act. Letters from Odessa speak of the preparations for war in the different ports of the Black Sea as going on with the greatest activity. The Turks have aroused themselves, and are arming as well as they are able

JAMAICA

From Jamaica we have advices to the 21st ult. The House of Assembly had passed the Provincial Revenue Bill, and tacked to it appropria-

tion clauses in which it was ordered that salaries should be paid at the reduced rate contemplated by the last Retrenchment Bill. This bill was sent to the Council, and on the 15th they rejected it unanimously, not having the power of amending a bill of supply. In consequence of this the Governor prorogued the Legislature on the 19th until the 24th to afford the House an opportunity of retracing their steps, and enacting a bill more agreeable to the Council

AMERICA.

By the *Arctic* we have advices from New York to the 30th ult. The Secretary of State was about to take up for consideration the North American Fisheries' question, as well as the subject of commercial intercourse with our Canadian colonies.

The territorial dispute between New Mexico and Mexico was beginning to excite apprehensions. Governor Lane, of New Mexico, had issued a proclamation claiming the Mesilla Valley, which was left in the State of Chihuahua by, as he asserted, a palpable error of Mr Bartlett, the late United States' boundary commissioner, and had called upon Colonel Sumner for the aid of the military under his command to take possession of the disputed ground. This assistance was declined by the Colonel, and the Mexicans immediately occupied it with all the troops they could collect. The Mexicans are reported to be very determined to retain possession of the Mesilla Valley, and threatened to arrest Governor Lane if found trespassing on Mexican territory The *Washington Union*, which is supposed to express the opinions of the President, "does not undertake to say at the present moment whether Governor Lane has acted with due caution and circumspection, or whether the exigency was so sudden and pressing as to require prompt action on his part without waiting for a diplomatic understanding with Mexico through the State department; but, in the meantime, denies that Governor Lane has been guilty of forcible intervention, or has committed a spoliation on Mexican territory. There is no doubt but that the district which Governor Lane claims belongs to the United States, and is a part of the territory of New Mexico."

The general movement for increased wages was manifesting itself in the United States as extensively as in England, and strikes were causing inconvenience

In the Canadian Parliament on the 20th ult. Mr. M'Kenzie's motion for an address in favour of the liberation of the Irish exiles was rejected by a majority of six.

INDIA, CHINA, AND THE CAPE.

The following despatch has been received, in anticipation of the Overland Mail, dated Trieste, May 11:—On the 19th of March the force under Sir John Cheape captured the stronghold of the robber chief Menton, near Donabew, after four hours' obstinate fighting, in which 102 rank and file were killed and wounded. Nothing was known with certainty of the state of affairs at Ava, or of the military movements of our troops. Mr. Luard, of the Indian civil service, had been suspended for having offered, if a public inquiry were allayed him, to prove certain judges guilty of infamous conduct in the discharge of their judicial functions. A public investigation as to the truth of Mr. Luard's challenge was unanimously desired by the Indian press. Great indignation prevailed throughout India in consequence of the report that the Home Government intended to renew the Indian Charter for ten years, without waiting for an inquiry

Intelligence had been received from China down to March 27th, at which date Sir G. Bonham had gone to Shanghai. The insurrection had advanced with such rapid strides that the Emperor had been forced to demand assistance. It is reported that letters from Shanghai to the 3rd of March contain an announcement that the British residents had provisioned their ships, and were prepared to embark in case of emergency; that the Chinese authorities had applied to the British Consul for aid to enable them to protect Nankin, and to quell the rebellion; and that the Consul had referred the matter to the Colonial Government at Hong-Kong.

By this mail advices have been received from the Cape down to the 22d of March. The Kaffir war had been finished by the complete submission of the rebel chief Sandili, he and his tribe having been driven across the Kei. The treaty of peace was concluded by Gen. Cathcart on the 9th of March.

NATIONAL SPORTS.

NEWMARKET SECOND SPRING MEETING.—TUESDAY.

£50.—Koh I-noor, 1. Waverley, 2.
Match, £200.—Feversham, 1. Young Norval, 2.
Match, £100. Rally, 1. British Tar, 2.
Sweepstakes of 25 sovs. each.—Ethelbert, 1. Harbinger, 2.
£50.—Feversham, 1. St. Faith, 2.
Sweepstakes of 10 sovs. each Nightshade, 1. Otranto, 2.
Miserably cold and stormy weather during the morning was succeeded by a tolerably fine afternoon. The attendance of company was only moderate.

WEDNESDAY.

Sweepstakes of 50 sovs each.—Pantaria, 1. Ilex, 2.
Handicap Sweepstakes of 10 sovs each. Brawn, 1. Convict, 2.
Sweepstakes of 10 sovs each. Desdemona, 1. Polly, 2.
The Nobleite Stakes.—Nutshell walked over, after a dead heat with Chief Baron Nicholson

Handicap Plate of 50 sovs.—Guy Mannering, 1. Jack the Giant Killer, 2.
The Jockey Club Plate.—Ilex walked over.

THURSDAY.

Handicap Sweepstakes,—Sophistry, 1. Ada, 2.
Sweepstakes. Gleaster, 1. Cyrus
Sweepstakes of 10 sovs.—Alma, 1. Splitvote filly, 2.
Handicap Plate.—Desdemona, 1. Sir Hallcock, 2
Match.—Councillor mare walked over.

SHREWSBURY RACES. THURSDAY

Salopian Stakes. Cuckoo filly, 1. Little Bossom, 2
Herbert Stakes.—Whalebone, 1. Eccentricity, 2
Cleveland Handicap.—Audubon, 1. Count Leon, 2
Longer Stakes.—Brown Brandy, 1. Catriana, 2
Queen's Guineas.—Goldfinder, 1. Knight of the Whistle, 2.

OAKS

7 to 1 agst The Queen | 8 to 1 agst Peggy

GREAT PEDESTRIAN FEAT.—On Monday last, an officer of the 1st Royal Regiment, only eighteen years of age, without training, was backed to walk fifty-six miles in twelve hours, for a wager of £100. The gallant young gentleman started at seven o'clock, and did his work well, until about the thirtieth mile, when he became evidently distressed; but still he held his way, and ultimately gained the victory, with four minutes to spare. He only gave half an hour to refreshment during the day.

ATTEMPT AT EXTORTION ON THE CHANCELLOR OF THE EXCHEQUER.—At the Marlborough-street Office, on Wednesday, Mr. Glaistone appeared to prefer a charge against a person for an attempt to extort money or a situation from him. The person so accused was one William Wilson, 24, Belvidere-road, Lambeth, commercial traveller, who stated "that about half-past twelve on the 11th inst., he saw Mr. Gladstone addressing a lady of his acquaintance in Panton-street, Haymarket, and they immediately turned down Panton-street, and walked about fifty yards down the first turning in Panton-street, and then made their way across Coventry-street into Prince's-street, where he charged Mr. Gladstone with being in company with the lady above alluded to. He then said he had no desire to make an exposure of one he so much admired, and whose character was known to be so unspotted as hers, and further said if Mr. Gladstone could procure him a situation, that he would not expose him, and if not, he would communicate Mr. Gladstone's conduct to the *Morning Herald* newspaper, and also charge Mr. Gladstone with being with the woman in question, upon which Mr. Gladstone called him a liar; and ultimately Mr. Gladstone granted him permission to write him a letter about a situation." The facts appear to be, that the Chancellor of the Exchequer left the House of Commons at eleven P.M., and drove to the Royal Italian Opera-house in his brougham, which he also sent away On leaving the Opera he walked homewards by way of Long-acre and Panton-street, where he was accosted by an unfortunate woman, who earnestly begged attention to her story. Mr. Gladstone continued to walk on, the woman still following, when a man came up, of whom she appeared, or affected, to entertain great apprehension, and clung to Mr. Gladstone's arm for protection. It was at this moment that the man made the above charge. The prisoner was remanded till Friday, in order that the police may have an opportunity to make inquiries into his previous character.

COFFEE AND CHICORY.—The Excise officers are proceeding vigorously against retail coffee-dealers who vend coffee adulterated with chicory without the proper labels required by the recent Treasury minute; and a great number of persons were on Wednesday fined sums varying from £3 to £20 each.

GREAT CHESS MEETING AT MANCHESTER.

The assembly of the Northern and Midland Counties Chess Association took place on the 6th and 7th inst., in the long room of the Royal Exchange, Manchester, and attracted a numerous attendance of gentlemen interested in the game, from all parts of the country.

The room was amply supplied with chess-boards; and at the upper end was a refreshment-table, from whence tea, coffee, jellies, ices, solid viands, and wines were liberally dispensed to the numerous visitors. Play commenced about eleven a.m. Several minor matches were contested between members of the Manchester Chess Club and the Hungerford Club. Mr. Lowenthal played a match with Mr. Allen the odds of the Rook, but was beaten. Mr. Williams (London), and Mr. Hopping (Manchester), have been playing a match of two games, both of which were won by the Manchester amateur. Mr Staunton conducted a game (in which he gave the odds of the pawn and first two moves) against Sir John Hanmer, the Rev. S. Burnell, Mr. Greg, and Mr. King his four antagonists consulting together. This was a tough encounter, and terminated in favour of the allies. Mr. Staunton played a game against Messrs. C. A. Duval and Kepping, the two best players in Manchester—the latter consulting together on their moves. In this contest, which was sharp, but short, the Manchester amateurs were beaten. "A double consultation match" was also arranged; this consisted of two games, played simultaneously—Messrs. Löwenthal and Horwitz being partners on the one side, against Messrs. Harrwitz and Williams on the other. These two games excited very general interest, and were keenly contested up to about nine o'clock on the first evening, by which time Messrs. Lowenthal and Horwitz had obtained a manifest advantage. At the request of their opponents, the continuance of the battle was postponed until the next day; and then, very much to the regret and disappointment of the meeting, Messrs. Harrwitz and Williams' arrangements prevented its conclusion. We shall give these games, if possible, in our next.

The play of Saturday comprised many interesting struggles. Mr Horwitz played a fine game against Sir John Blunden and the Rev. S. Burnell, in consultation, and won it. Mr Harrwitz played a game, in which he gave the pawn and move, against Messrs. Rall and Hirst, who consulted together; which Mr. Harrwitz scored. Mr. Löwenthal conducted several games at the same time against various amateurs, in whom he gave various odds; and, in the majority of cases, came off victorious.

At six o'clock on the second evening, the members of the association and their visitors, adjourned to the Queen's Hotel to dine.

THE DINNER

The chair was occupied by Mr. C. A. Duval, supported on his right by Mr. Staunton, and on his left by Sir George Stephen. Mr. Cronheim, secretary of the association, was vice-president.

The cloth being drawn, the usual loyal toasts were given by the Chairman, who, in proposing the first toast in connection with the association, said that this had been the great chess meeting of the season—the only provincial town or city in England; and, with the exception of the Exhibition year, even in London itself. Manchester had on this occasion brought together a greater number of chess celebrities than were perhaps ever before assembled in a country town. These meetings had a most beneficial effect; and he believed the morals of chess were never to be better seen than over the board; for chess was not merely manual, but also moral gymnastics. These annual meetings might be regarded as a sort of parliament—the collective chess wisdom of the nation—in which the laws of the game might be discussed, amended, and settled; matches previously made, chivalrously fought out; and the relative strength of the members fairly tested. With the toast he would couple the name of a gentleman long known and thoroughly respected in the chess world; who, if he did not originate, had largely contributed to making the association what it is (Applause). He proposed "Success to the Northern and Midland Counties Chess Association, and a health to Mr. Cronheim, of Halifax" (Loud cheers)

Mr Cronheim, in acknowledging the toast, said, that the Yorkshire Chess Association was the parent of the larger one. Four gentlemen—Mr. Robinson, of Wakefield (now present); Mr. Shepherd, of Wakefield, Mr. Cadman, of Leeds (whom he had seen in the Exchange-room playing), and Mr Rhodes, of Leeds; were the founders of the present association; and he had had the honour of joining them, on invitation, and unit nights his humble efforts with theirs. Mr. Cronheim then, at great length, and in a speech of remarkable learning and elegance (which we regret being unable to give), expatiated on the history and antiquity of chess; and concluded (amid general applause) by proposing a eulogy on the game, as a valuable means of mental training and moral discipline; and by giving the health of the chairman, which was received with loud cheering.

The toast was cordially acknowledged by Mr. Duval, who humorously observed that it was a noted custom now, at dinners, for people to go on drinking each other's health, very much to the detriment of the wine; and he thanked those gentlemen who had run that risk for his sake. They were honoured with the presence of distinguished strangers from the three kingdoms; and he would propose the health of the gentleman who had honoured them with their company—coupling with the toast the name of a gentleman, an ornament of a learned profession Sir George Stephen

Sir George Stephen, in acknowledging the honour done to himself, said that, if in no other merit of chess, at least in that it had brought him many friends, and friends of a species of brotherhood, of whose friendship, without chess, he should never have had the chance. He thought he had long perceived a tendency in chess to raise our own people to their proper position in the world, and in some degree raise them also to honour and respectability. If one feature of this beautiful game were more excellent than another, it was that it had in many instances produced a kindness, a generosity, and a reciprocity of affection, the poor and the rich, the low and the high. The gentleman on his right (Mr. Staunton) whom they all knew and admired, had, in his modesty, passed over that which expressing what all felt (Applause), had told him recently that he had received two or three communications, illustrating this tendency. The St. George's Chess-club (of which he Sir George was a member), he understood from Mr. Staunton, had come to a resolution, in remodelling its form, that there should be no exclusiveness of caste; that the respectability of candidates for admission to the club, and their ability to play the game, should be considered quite sufficient testimonials to warrant their election: and when we knew that that club enumerated among its members some of the highest branches of society, we might fairly quote that as proof that this levelling principle in the right direction was one essential element of chess play. He now had to bring some business before the meeting (Hear, hear). Mr. Staunton could not, with propriety, perhaps, have done that which he had requested him (Sir George) therefore to do for him. They all knew that Mr. Staunton was regarded among chess-players as the very highest of the highest class (Hear, hear). It was the natural and just consequence of pre eminence, that it should be challenged. It was a responsibility which pre-eminence involved in any branch of science, in any pursuit or department of knowledge inevitably attached to itself But it did not therefore follow that every challenge so offered must be accepted (Hear, hear). Mr. Staunton had felt it due to his own position, after the numberless contests which he had fought and won, not to accept any challenge that had been recently given; but to announce the terms upon which he would challenge the whole world. He had asked him (Sir George) to state those terms to them; he would not have stated them, if they had not appeared to him (Sir George) to be reasonable, fair, and just towards all parties; and terms, therefore, upon which Mr. Staunton might consistently, with honour and propriety, proposed that challenge to the public. With that introduction, he would state the terms

FROM MR STAUNTON

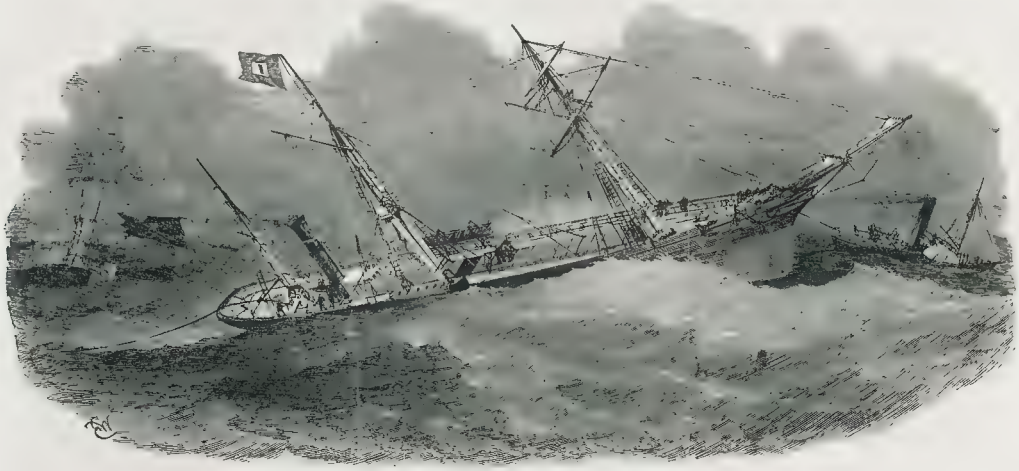
With the view of promoting the interests of chess as generally exhibited at the present time, Mr Staunton proposes to challenge any one of the best of twenty players of the day, or the world, upon the following conditions:

1st. The challenger of the challenge be resident abroad, that the stake on each side shall be not less than £250. (The object of proposing a large stake in this case is to ensure to the party who leaves his country to play, some remuneration for the sacrifice of time as well as for the expenses of travelling, &c. to which he must be subjected)

2nd. If the challenger be a player resident in this country, that the amount of stake on each side shall be from £100 to £200, at the one or the other party

3rd. That the match be played in a private house and, to prevent the tedious of the combatants being destroyed by an influx of lookers-on, that not more than three friends of each player be permitted to be present

4th. That an arrangement, either according to the plan suggested in the *Chess-Player's Chronicle* of February, 1851, p. 61, or to that proposed by Mr Boyle-road, in the December *Chronicle* of February, 1852



THE "WILLIAM HUTT" PAYING OUT THE ELECTRIC CABLE.

THE SUBMARINE ELECTRIC TELEGRAPH CABLE
FROM ENGLAND TO BELGIUM.

In our last Number we briefly chronicled the successful completion, on Friday, the 6th instant, of the hazardous work of laying down this important link of telegraphic communication between Great Britain and the Continent of Europe. We now give an illustrated narrative of the more interesting incidents of the operation all the difficulties of which have been so admirably overcome by Messrs. R. S. Newall and Co., the manufacturers of, and contractors for laying, the cable, aided by Captain J. Washington, R.N.

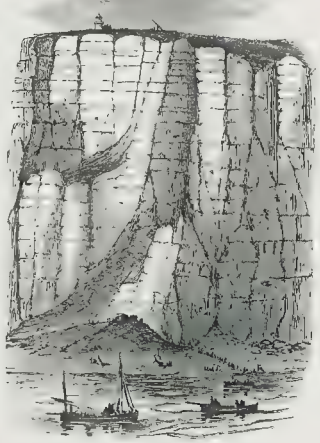
The cable was made under specification and contract for the European and American Submarine Telegraph Company, of which the Lord de Mauley is chairman, and Messrs. Wollaston and Crampton engineers. It is constructed on the same principle as that made in August, 1850, by Messrs. Newall and Co., for the Dover and Calais line, and described in our Journal. The Calais line contained but four insulated telegraph wires. The Belgian line contains six wires insulated by the double covering of gutta percha, manufactured, under Mr. S. Statham's directions, by the Gutta Percha Company. The gutta percha laid into a rope is se ved with prepared spun-yarn, and covered with twelve thick iron wires, of a united strength equal to a strain of forty to fifty tons—more than the proof strain of the chain-cable of a first-rate man-of-war.

One of the Illustrations represents the yard of Messrs. Newall and Co.'s manufactory, at Sunderland. The farther of the two gigantic coils is that which has been laid down to Belgium; and the workmen are represented pausing for an instant (whilst the scene is being calotyped by Mr. Newall) in the work of coiling the cable into the hold of the *William Hutt*, on the 26th of April. This coil measured 51 feet diameter outside, 28 feet inside, and 4 feet 6 inches in height. The length of cable made was upwards of 70 miles—the weight about 500 tons—the cost above £33,000. It took 100 days to manufacture the rope, and 70 hours to coil it into the *William Hutt*.

The coil in the foreground has been made for the English and Irish Magnetic Telegraph Company. It has also six insulated wires. But in the details of its construction and composition some improvements have been introduced, derived from experience in manufacturing the Belgian, Danish, and other cables. This rope is 25 miles in length, weighs 180 tons, was manufactured in 24 days, and cost about £18,000. It is to be laid down next week, with the aid of Mr. Palmer and the *William Hutt*, weather permitting

During the past winter, about 450 miles of submarine telegraph cables have been made by Messrs. Newall and Co., who have, at Gateshead and Sunderland, the largest rope manufactories in the world.

As soon as there was reasonable prospect of the weather serving for the operation of laying down the cable, Messrs. Newall and Co. applied to the Admiralty for assistance in directing the course; and their Lordships very promptly and liberally responded to their application -appointing Captain John Washington, R.N., to mark out the line, and guide the expedition generally; giving him for the purpose the use of H.M.S. *Lizard* (Commander Ricketts) and H.M.P. *Vivid* (Captain Smithett) for the service. The Belgian Government, with equal consideration of the national importance of the undertaking, promised that a Belgian steamer, with experienced pilots, should attend, to render assistance on the Belgian coast, should it be required.



CAVE, AT ST. MARGARET'S, SOUTH FORELAND.

The *William Hutt*, commanded by Mr. Palmer, of Gateshead, who built her, and having, besides her own crew, twenty of Messrs. Newall's most experienced mechanics and riggers on board, arrived in the Downs on Sunday night, the 1st of May. On Monday, Captain Washington, with Captain Smithett, in the *Vivid*, went to lay out buoys on the course Two were laid at ten and twenty miles from the South Foreland; but the weather was too boisterous, and the barometer too unsteady, to admit of prudently starting on Monday night, or with the dawn of Tuesday morning, as had been intended.

Messrs. Newall, C. Liddell, and L. Gordon, the contractors for the work, arrived at Dover in the course of Monday afternoon, as did also Lord de Mauley, Sir James Carmichael, Mr. J. W. Brett, Mr. J. Brett, and Messrs. Wollaston and Crampton (engineers), to watch the proceedings in the interest of the Submarine Telegraph Company. Dr. O'Shaughnessy (telegraph engineer of the East India Company), Mr. J. W. Kennard, and other visitors, were also interested observers of all the arrangements.

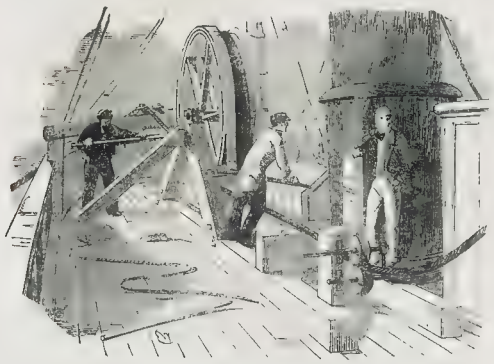
Tuesday morning proved unfit for proceeding with the work. In the course of the day Lord de Mauley and his friends went on board the *William Hutt*—where everything and every man was found in perfect readiness for the start, when Captain Washington should give the word.

Towards evening the wind went to the south and west. The barometer had been steadily rising, and at eight o'clock all hands were ordered on board; Mr. Newall and his partners, and managers and men, on board the *William Hutt*; Mr. Brett, Sir James Carmichael, and the engineers of the Telegraph Company, with their friends, on board the *Lizard*. The *Lord Warden* steam-tug of Dover, and a flotilla of fishing-boats, which it was intended to use as buoys, all anchored in Dover Roads. The night was calm, but the sea fog was dense, and continued so till early dawn on Wednesday morning, when it cleared off, and the shriek of the *Vivid's* whistle gave signal to all to weigh anchor. This vessel took the fishing-boats in tow. The Tug, the *Lizard*, and the *William Hutt*, dropped down to St. Margaret's abreast of the South Foreland Lights; and, when backed to within 500 yards of the shore, the *Hutt* cast anchor: 200 yards of the cable was then coiled into a large boat. As this boat rowed towards the shore, six other boats in succession supported the cable as it was handed out. When the first boat reached land, the 200 yards were coiled out; some 40 men got on shore, and uncoiling and pulling up the slack, speedily got the end of the cable into the cave in the cliff at St. Margaret's. Here Mr. W. Reid, jun., son of the veteran telegraph engineer, adjusted the ends of the conducting wires to telegraph instruments, and left an assistant, to communicate with the vessel as she went on her course At 6.10 a.m. the *William Hutt* was again under way, the *Lord Warden* attached to her as a tug: for, with a heavy cable being paid out into deep water astern, it is not easy to steer a vessel going at a slow speed with a strong tide running. Besides, the *Hutt* being an iron vessel, having a constantly varying mass of iron on board, her compass was of no use. The compass of the tug was adjusted by Captain Washington, and the means of taking a true course were thus insured.

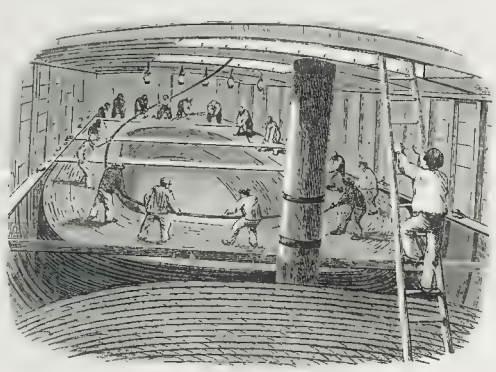
From two miles an hour, at starting, to three miles, four miles, five miles, six miles an hour, the speed improved in the course of the first hour The men in the hold got familiar with the work Mr. Newall and his managers gained confidence in the working of all their arrangements

Scarcely half an hour from starting had elapsed when the wind came up from the east, bringing with it a fog that enveloped the whole squadron, and became so dense that the tug could scarcely be seen at her short distance ahead of the *Hutt*.

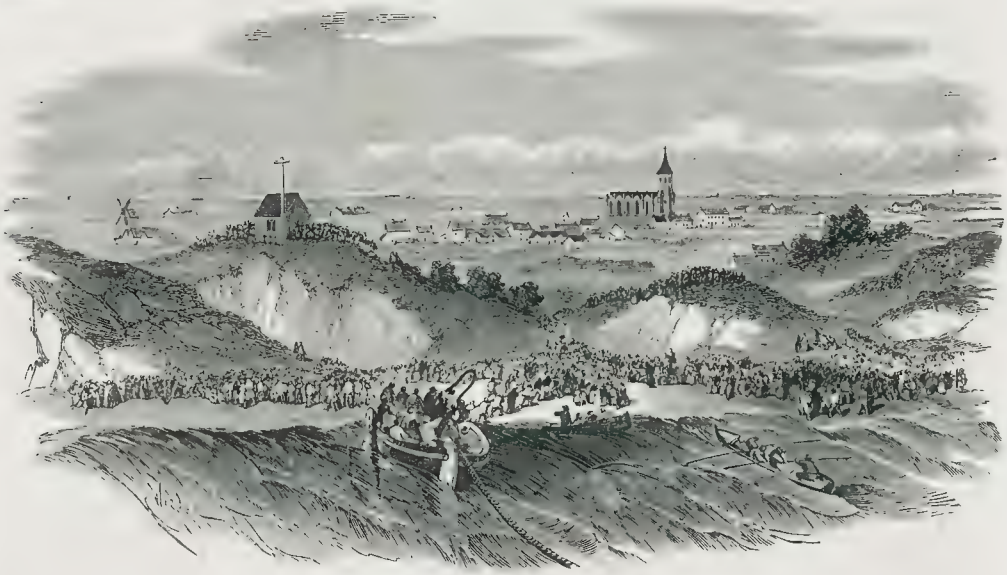
The buoying-out the course, in these circumstances, could have been of no use; the fishing-boats were, therefore, held in reserve by the *Lizard*



THE CABLE BREAK.



THE HOLD OF THE "WILLIAM HUTT."



LANDING THE END OF THE CABLE, AT MIDDLEKERKE.

The *Vivid*'s speed, and the science and experience of Captain Washington and Mr. Smithett, now displayed the advantages the expedition derived from the Admiralty assistance; for, by running out to sea, by sounding, and other means, the *Hutt* was constantly assured that she was holding a true course. The Belgian mail-packet passed the squadron as they lay at anchor, spoke them, and took the news to Ostend; whence the Belgian Government steamer, *Le Rubis*, with M. Masui, Director-General of Railways; M. Vinchent, telegraph engineer, &c; came out to meet the English party.

Mr. Reid kept up the courage of those on board by assuring them of the perfection of the cable, which he tested as he went along. All went on smoothly at five to six miles an hour, through the mist, with the tide, against the freshening wind; and at half-past one p.m., when the tide turned, a council having been held, the *Hutt* anchored in ten fathoms water—thirty-two miles of rope having paid out.

The tide turned at eight p.m.—the wind freshened, and blew half a gale—the mist disappeared—the lights of Dunkerque were visible. Anchor up—and on went the *Hutt*, with the little tug ahead.

At one a.m. on Thursday it was considered prudent to anchor for the night, for the *Hutt* was then within the first of the shoals of the Belgian coast, and the night was very tempestuous. Our Artist has shown the *Wilhem Hutt*, as she started on Thursday morning at eight o'clock, with the Belgian coast full in view. The indicator on the break wheel showed that fifty-two miles had been paid out, and Captain Washington found that there were fourteen miles still to go to Middlekerke. All went on as it had done from the commencement; not a kink, nor a broken wire: no more serious accidents than the bilge pipes of the *Hutt* choking, which caused a delay of an hour. By three o'clock on Thursday the *Hutt* dropped anchor, with Middlekerke, the point fixed by the Belgian Government as the point of landing, due south. The boisterous weather precluded the possibility of landing the end of the cable that evening; so, after messages had been sent through the cable to the newspapers, to the friends and to the homes of those who were in the *Hutt*—the *Ruby*, the *Vivid*, the *Lizard*, and the *Lord Warden*, went into Ostend for the night; and all hands, save those necessary for the care of the *Hutt*, regaled themselves in the Hôtel des Bains, retiring early to prepare for the work of the morrow.

Through the British Consul's agency, a Flemish schuyt was hired to take 500 to 700 yards of the coil on board for landing the Belgian end of the cable. By nine o'clock the whole squadron and all hands were on board, or on the shore at Middlekerke, and active preparations making for the landing. A warp was got on shore from the *Hutt*. The schuyt was freighted with the end of the cable. The three Flemings of Blanckenberg, who formed her crew, presented the most ludicrous picture of astonishment, when the sailors and rope-coilers from the Tyne, jumped down into the schuyt, began to clear away the mast and sails, preparatory to coiling in the cable; they could only speak Flemish; but Jack contrived to make them comprehend that they were useless, by calling out "Caboose, caboose!" and literally driving the poor fellows into the caboose or cabin, where they remained all the time the rope was being coiled, occasionally putting out their heads to see what was going on. In a short time the required length of cable was in the schuyt; the boats of the squadron took her in tow; and, amidst the cheers of the squadron, the cries of the Middlekirke peasants, men and women, and the booming guns of the *Vivid*, the end was safely landed, and carried up the Dunes into a hut of the coast-guard. The wires were joined up to an instrument, and then followed the first direct message through to London, announcing the successful termination of the enterprise—"Union of Belgium and England, twenty minutes before one p.m., 6th May, 1853."

THE BELGIAN, AND ENGLISH AND IRISH ELECTRIC TELEGRAPH CABLES, IN THE MANUFACTORY, AT SUNDERLAND.

CALENDAR FOR THE WEEK.

SUNDAY, May 15.—Whit Sunday. O'Connell died, 1847.
MONDAY, 16.—Whit Monday. Mrs. Hemans died, 1835.
TUESDAY, 17.—Tallcyrand died, 1838. Dr. Jenner born, 1748.
WEDNESDAY, 18. Ember-week. Oxford Term begins.
THURSDAY, 19.—St. Dunstan. Anne Boleyn beheaded, 1536.
FRIDAY, 20.—Lafayette died, 1834. Columbus died, 1506.
SATURDAY, 21.—The first Railway Act passed, 1801.

THE DUBLIN GREAT EXHIBITION.

ON the interesting event for Ireland of the OPENING of the DUBLIN INDUSTRIAL EXHIBITION, and during the continuance of the Exhibition,

THE ILLUSTRATED LONDON NEWS

WILL BE ENRICHED BY

SPLENDID ENGRAVINGS

Of the most interesting objects exhibited. The Series of ENGRAVINGS will commence MAY 21, and

A DOUBLE NUMBER

Will be published on the 28th of MAY.

During several hours of the day, in the DUBLIN EXHIBITION, a MACHINE for PRINTING ENGRAVINGS may be seen at Work.

Among the Engravings in the ILLUSTRATED LONDON NEWS will be found the Newest and most Interesting Articles Exhibited from France, Germany, and other Parts of the World.

Exhibitors, for terms, should apply to Mr. WILLIAMS, ILLUSTRATED LONDON NEWS Printing Machine, DUBLIN EXHIBITION

THE ILLUSTRATED LONDON NEWS is published every week. Price Sixpence.

Subscribers in Ireland are requested to apply early to W. H. SMITH and SON, to secure copies. New subscribers should send subscriptions for a term of not less than Thirteen Numbers. Single Copies, Sixpence each; Double Numbers, extra

W. H. SMITH and SON, Publishers for Ireland, Eden-quay, and Dublin Exhibition Stand at the Office, 198, Strand, London.

WITH the present Number is published a SUPPLEMENT, containing splendid Engravings from the best Pictures in the Exhibition of the Royal Academy; a copious Review, &c. Price of the DOUBLE NUMBER, One Shilling.

*** The Engravings of Mr. Ward's Picture of "The Execution of Montrose," and of Mr. Millais' "Order of Release," announced to appear in the present Number of the ILLUSTRATED LONDON NEWS, are unavoidably deferred. Also, Notices of the Exhibition of Paintings by Modern German Artists and the Exhibition of Drawings and Sketches by AMATEUR Artists.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 14, 1853.

EXACTLY eleven years ago—on the 14th of May, 1842—appeared the FIRST NUMBER of the ILLUSTRATED LONDON NEWS. Our old subscribers will not think us guilty of vanity in reminding them of the anniversary, while our newer friends will excuse us if we dwell for an instant on the fact that we, also, have a birthday. Upon such an occasion it is fitting that we should express our gratitude, both to our old and new friends, as well as to the public in general, for the unprecedented support and patronage which this Journal has enjoyed. That this success has been unmerited on our part we will not be guilty of the mock modesty of asserting; neither would we make such an imputation upon the common sense of the public as to imply that for so long a period, and with such increasing good-will, it could bestow its favour and its patronage where they were not deserved. No doubt we are indebted for some portion of our success to the novelty of our design; but we think we may also claim some credit for the manner in which it has been carried out; for we can truly say that we have spared neither time, nor labour, nor expense, to record and illustrate every great and important event, and every remarkable and interesting occurrence of our time, whether in our own country, on the Continent of Europe, in the Eastern or Western Worlds, or even in remoter and comparatively unknown districts and regions of the globe. In politics, our course has never changed. We have invariably steered clear of mere party, and conscientiously endeavoured, without fear or favour, to support the cause of good government, and the moral and intellectual elevation of the people. As regards the peculiar feature of our paper—its illustrations—we may remark that, during the eleven years of its existence, the events which we have had to depict have always been of the most interesting and varied, and often of the most stirring and important character. The wars in India and the Cape, revolutions in almost every country of Europe except our own, together with insurrections in a score of capitals all these have been faithfully chronicled in our pages, by means of the pencil as well as of the pen. Regal visits and progresses—courtly and noble festivals—public assemblages—the construction of docks, railways, and other great or national works—the building and consecration of ecclesiastical, and the inauguration of municipal edifices—public amusements of every kind, from the Italian Opera to the sports of the deer-stalker and the angler—views of scenery—and the portraiture of countless individuals famous in the senate, in the pulpit, and at the bar; or eminent in literature, science, and art: all these form but a fraction of the subjects which we have weekly been called upon to illustrate. To judge of the value of our publication in the present day, and to form something like an idea of the interest with which our posterity in fifty or a hundred years hence will look back upon our pages, we have but to fancy with what curiosity, the men, women, and children of 1853 would turn over the pages of an Athenian or Roman *Illustrated News*, if such a work had been of possible existence at a period so remote; or over any similar publication, if our ancestors in the days of the Charleses or the Georges had been able to carry out a similar idea, and had depicted for us the personages, the costumes, and the events of their time. That we supplied a public want is evident from the steady and increasing support bestowed on us from the first to the eleventh year of our existence, when we have attained a circulation larger than that enjoyed by any other journal in the kingdom. The fact is also proved by the successive establishment of similar publications in the three most civilised countries in the world. No sooner did the ILLUSTRATED LONDON NEWS escape the dangers that are incident to new-born publications, as well as to new-born babes, and arrive at something like growth and maturity, than the French, encouraged by its prosperity, established the *Illustration*. At a later period, the Germans launched their *Illustrirte Zeitung*; and, still more recently, the Americans, not only took our idea, but assumed a portion of our name, and established the *Illustrated News*, as if there were no other journal in the world which was universally known by and had pre-occupied that designation. But we will not complain of our Transatlantic contemporary, but wish him and all our other children and imitators the success which is sure to follow them if they deserve it. For our own parts, we will but add, in conclusion, that the public favour which we enjoy, has never had the effect of making us relax or abate in our exertions to maintain the ILLUSTRATED LONDON NEWS in the pre-eminent position it has attained; but, on the contrary, has incited us to render it more and more worthy of the support of the British people.

THE public of Europe has at last received something like precise information as to the scope and objects of the mission of Prince Menschikoff to Constantinople. The world is not left utterly in the dark as to the extraordinary demands which the strong Emperor of all the Russias has thought fit to make upon the weak Sultan of the Turks. And if the mission of Prince Menschikoff be extraordinary, the ends sought to be obtained appear at first glance to be no less so. If we are to believe the latest intelligence that has reached us from Constantinople, the demands of Russia include not only matters political, but affairs ecclesiastical, and plans that are purely architectural. The Russian Ambassador is reported to have been authorised to declare to the Sultan that he disapproves of all the promises that have been made to France in relation to the Holy Sepulchre. The Czar objects to the right, proposed by the Marquis de Lavalette, on behalf of the Emperor of the French, to be granted to the Latin Catholics, to pray two days in the week at the tomb of the Virgin Mary, and contends that the Roman Catholics ought to enjoy no other privileges than those which are granted to other Christian communions, viz., permission to pray after—and not before—the Christians of the Greek Church have finished their religious ceremonies. The Russian Ambassador has also declared that his master is quite opposed to the reparation of the Cupola of the Holy Sepulchre, in the style of the ancient architecture, as desired by France; but that he prefers and insists upon the repairs being in the Byzantine style. In the last place, the Czar demands a treaty or diplomatic act which will, once for all, prevent the resumption of any claims on the part of France with regard to the Holy Sepulchre, or to the Protectorate of Christians in the East. To these demands it is understood that the Porte has acceded, with the approval of the British Ambassador, and not only without a protest from, but with the consent of, M. Delacour, the new Ambassador of LOUIS Napoleon.

All this is curious enough, but it is still more curious that the Russian Emperor, who claims to be the head of the Greek Church in his own country, and a veritable Pope, as far as Russia is concerned, should seek to assert a claim to pre-eminence over all other Greek Christians on the part of the Patriarch of Constantinople, a prelate of but small power or influence, and whose authority was thrown off by Peter the Great, and never since acknowledged by any of his successors. What motive the Czar may have in thus endeavouring to re-establish a Papacy in Constantinople, and to oppose an Eastern to a Western Pope, we are yet unable to imagine; but that it is directly or indirectly connected with the grand object of Russian ambition, the expulsion of the Turks from Europe, we can very readily believe. The Sultan seems to have yielded readily enough upon all the other points, holds firm for the present against this. Negotiations, with respect to the Patriarch, are still pending, and if the Sultan be supported by the British Ambassador, as we are informed is the case, in his refusal to accede to the demands of Russia, it is probable that some time will elapse before they are brought to a termination.

Whatever may be the result, it is pretty evident, both from the past and from the present course of these remarkable proceedings, that LOUIS Napoleon is still anxious to cultivate a Russian alliance; M. de Lacour, his successor, has adopted a different policy, and has allowed the Czar to have his own way. The French Emperor thus plays but a small part in the East, instead of the larger one which he intended. When will France and its rulers see that their best and safest ally is Great Britain?

OPENING OF THE DUBLIN INDUSTRIAL EXHIBITION.

The following is the official programme of the opening of the Exhibition on Thursday:

The carriages of the Knights and Officers of the Most Illustrious Order of St. Patrick assembled in the Upper Castle yard, at half-past seven o'clock, and awaited the arrival of his Excellency from the Viceregal Lodge, Phœnix-park; on which the whole proceeded through the Lower Castle-gate, by Dame street, College-green, Grafton-street, Nassau-street, Leinster-street, and Clare-street, to the grand entrance of the Exhibition, in Merrion-square, in the following order:—

Carriages of the Knights and Officers of the Most Illustrious Order of St. Patrick
His Excellency's Household
His EXCELLENCY

On arrival at the Exhibition his Excellency was received by a guard of honour; and as the entrance, by the Executive Committee.
A procession then formed as follows —

Members of the Committee, two and two.
Officers of the Order of St. Patrick.
Knights of the Most Illustrious Order of St. Patrick, two and two, according to their Stars, wearing the Collar of the Order
His Excellency's State Household.

His Excellency the Lord-Lieutenant,
Grand Master of the Illustrious Order, wearing the Collar of the Order, and the Badge and Ribbon of the Garter Star
a state Usher

Her Excellency the Countess of St. Patrick

In this order they proceeded, conducted by the Executive Committee two and two, to the throne prepared for his Excellency.

While the procession moved up the middle avenue of the Centre Hall to the dais, the orchestra, of 1000 performers, played the National Anthem. Their Excellencies having taken their seats, the orchestra performed the Hundredth Psalm; Handel's Coronation Anthem "Queen of the Isles, Victoria, Regneth, the glory of all Nations; Let all the People rejoice, and say God save the Queen; Alleluiah! Amen, Amen, Alleluiah!"

Then the Chairman, accompanied by the members of the General Committee, and the principal officials of the Exhibition, presented an address to the Lord Lieutenant; at the conclusion of which he introduced Mr. Dargan, and also Mr. Benson, the architect, to his Excellency.

The orchestra then performed Mozart's Motett—"O God, when thou appearest." After which the Right Hon. the Lord Mayor of Dublin, in his robes of office, accompanied by the members of the Corporation, in their civic dresses, presented an adress from that body, to which his Excellency replied. At its termination, the orchestra performed the "Hallelujah Chorus."

This having been concluded, a procession was formed, and the Chairman, with the members of committee and the principal officers, conducted his Excellency and the Countess of St. Germans round the building, during which the orchestra performed March from "Athalie" (Mendelssohn).

Their Excellencies having returned to their seats on the dais, the orchestra performed the "Hymn of Praise" (Mendelssohn); which being concluded, his Excellency commanded the Ulster King of Arms to declare the Exhibition open After which the orchestra performed "The Heavens are telling" and "Hallelujah Chorus. This being terminated, their Excellencies left the Building in the same order now as on their entrance, the orchestra performing the National Anthem.

METROPOLITAN NEWS.

* Below Average. † Above below the average.

The reading of the barometer decreased from 30.01 inches at the beginning of the week to 29.58 inches by 6h. p.m. on the 7th, increased to 29.59 inches by 2h. p.m. on the 8th, decreased to 29.48 inches by 9h. p.m. on the 9th, increased to 30.14 inches by 9h. a.m. on the 11 h, and decreased to 30.00 inches by the end of the week The mean reading for the week was 29.78 inches. The highest point during the week has been very unseasonable, and the mean daily temperatures have ranged from 4½° to 14° below their averages The mean daily temperature on the 6th was 42·2°, being the lowest mean recorded as having happened on that day since the year 1831, when it was 39·7°; the mean daily temperature on the 7th was 38·2°, and on the 8th 42·6°, being of lower value than any reached on those days as far back as the register extends, viz., 1814. The mean temperature of the week was 4 ·5° *below* the average of the same week in thirty-nine years, and is the coldest week ending May 12th since the year 1837, when its mean temperature was even lower, viz., 4·4°. The range of temperature during the week was 27·9°, the highest reading (59·4°) on arriving on the 12th, and the lowest (31·5°) on the 11. The mean daily range of temperature during the week was 19·6°. Rain fell during the week to the depth of rather more than six tenths of an inch. A pale solar halo was seen on the south west occurred during the morning of the 8th, and hail fell frequently on the 8th and 9th.

Lewisham, May 14th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending May 7, the births of 1276 children were registered in the metropolitan districts: of these, 676 were boys, and 755 were girls. In the eight corresponding weeks of the eight preceding years, the average number was 1410. The number of deaths registered in the week was 1159, exceeding the number in the preceding week by 70, thus showing that the extreme coldness of the weather has completely checked the improvement which had been going on for three weeks. The number of deaths exceeded the estimated mortal by 140 The number of fatal cases of zymotic diseases was 217 (their average is 180); of these 1 only was small pox, there were 21 of measles, 40 of scarlatina, 68 of hooping-cough, and 41 of typhus; of dropsy and cancer, 64 (their average is 43); tubercular diseases, 203, to which consumption contributed 144. To diseases of the brain, 103 (their average is 138); of these, there were 58 of apoplexy and 24 of paralysis. Diseases of the heart and blood-vessels, 41; diseases of the lungs, &c., 294 (their average is 314); of these there were 115 of bronchitis and 83 of pneumonia, and to violence, privation, &c., 41. Under ten years of age, 647 under fifteen years of age has increased from 507 last week to 561 in this; those of persons of sixty years and upwards, from 227 to 253; whilst those in the middle period of life remain nearly unchanged.

THE ROYAL SOCIETY.—LORD ROSSE, as President of the Royal Society, held his second conversazione on Saturday evening, at Somerset-house, which was numerously attended. Some interesting specimens of fossils, portfolios of photographic pictures, and various curious objects of the microscope, were displayed in the saloon

VAUXHALL-BRIDGE PIER.—The directors of the Vauxhall-bridge Company have resolved upon entirely removing the pier at which passengers by steam-boats have for several years been accustomed to embark and land, having been advised that it is calculated injuriously to affect the solidity of the fabric

THE BRITISH MUSEUM.—The Museum re-opened on Monday morning, after having been closed for the past week, in order to undergo the customary cleaning, and to effect improved arrangements of the contents; the hours of admission, both to the general departments and the reading-room, have been extended to 4 o'clock, at the evening, and will continue so until the end of August.

NEWSPAPER STAMPS.—On Monday a return was issued of the halfpenny newspaper stamps in the United Kingdom during last year. The total number of such stamps was 16,668,824; and the amount paid for the same, £34,682 14s. 2d. In England the stamps at a halfpenny numbered 10,275,864, in Wales, 11,418, in Scotland, 235,720; and in Ireland, 145,116.

THE LAMBETH CHARITIES.—Under the will of a Mr. E. Wallett, who died in 1807, there the rent and profit of certain estates to be divided among sixteen poor and necessitous persons, sixty one years old and upwards, resident in the parish of St. Mary, Lambeth, and an equal portion for the poor of the parish of Christ Church in the same parish The parish was afterwards divided into several districts, over each of which was an incumbent. The Master Tinney drew up a scheme for making the funds applicable to the purposes intended, but the incumbents wishing the whole fund should be devoted to educational purposes applied to Vice-Chancellor Kindersley, who set aside the report, and ordered the whole fund to be applied. Against this judgment Lawrence and churchwardens of the mother church appealed to the Court of Appeal, and their Lordships allowed the appeal, and held that, as the parish of Christ Church formerly was the parish in which the testator lived, a very excellent one, of the district, it was not right that their funds should be otherwise employed. The Master's Report was ordered to be restored.

THE STOCK EXCHANGE.—It is expected that the Stock-Exchange will be removed next Wednesday to the Hall of Commerce, the difficulties in the way of that arrangement having been overcome The new edifice will be of a very superior character, although the absence of frontage prevents any exterior architectural design. The Hall of Commerce itself would have been particularly appropriate, but in that case some means must have been devised for getting rid of the space upon which the Stock Exchange now stands, and which, being encompassed by houses, would be available only for a purpose analogous to that to which it is at present devoted The Excise-office was at one time thought of as a temporary refuge during the rebuilding of the Stock-Exchange, but its distance was felt as a disadvantage. Next, the Auction Mart seemed to be appropriate to the section, but the Hall of Commerce is in all respects more suitable.

LONDON AND BRIGHTON RAILWAY.—The London-bridge terminus is now undergoing a considerable enlargement, in order to meet the great increase of traffic expected on the opening of the Crystal Palace at Sydenham. The station has been widened to almost double its former width, and several buildings pulled down to admit of this alteration. Additional lines of rails have been laid down, so that three or four trains will be enabled to discharge their passengers at one time. That portion which is at present used by the Croydon trains will be devoted to the Crystal Palace traffic

JEWISH DISABILITIES.—We understand that an energetic movement is in silent, but effective progress, among those friends of civil and religious liberty who feel indignant at the course pursued by the House of Lords, in rejecting, for the seventh time, the proposal affirmed by nineteen majorities of the House of Commons, for the removal of Jewish disabilities. *Morning Chronicle.*

SOCIETY FOR IMPROVING THE CONDITION OF THE LABOURING CLASSES.—The valuable services of Mr. Henry Roberts, F.S.A.—who, since the establishment of this excellent society, in 1844, has filled the arduous and responsible office of honorary architect to the above society, and under whose able and direction the several important establishments now open throughout the metropolis have been erected were on Tuesday acknowledged in a very gratifying manner by the presentation of a handsome service of plate, at the Freemasons' Tavern, where a few noblemen and gentlemen, members of the committee, entertained Mr. Roberts at dinner. The Earl of Shaftesbury was in the chair; and among the other gentlemen present were Viscount Ebrington, Lord Haddo, Lord Moreton, Major Leth, Mr. J. Egerton Hubbard, Mr. W. Long, Mr. R. B. Seeley, &c. The noble Earl, in presenting the testimonial, adverted to the untiring zeal and long experience of Mr. Roberts, under whose direction the plans for the society's various model houses had been carried out, so as to produce a vast amelioration in the condition of the working classes. The plate was then brought forward. It consists of a beautiful centre-piece, with a dinner set and tea service, and a handsomely-based salver, appropriately inscribed. Mr. Roberts returned thanks, the chairman for the kind expression of his feeling, and gratefully accepted the handsome gift. The proceedings terminated with a vote of thanks to the noble chairman.

MEETINGS AND ANNIVERSARIES.—On Saturday the fourteenth anniversary of the Royal Naval Female School, took place at Willis's Rooms; the Society for Aid to Dressmakers and Milliners, the same day, at the Mansion-house, and on Wednesday, at Willis's Rooms, on Monday, the Jews Orphan Asylum, at the London Tavern; on Tuesday, the Ragged School Union, at Exeter-hall; and the Cambridge Asylum for Soldiers' Widows, at the United Service Institution; on Wednesday, the Royal Literary Fund, at the Freemasons' Tavern; the Society of Arts, at the Institution, Adelphi; the Royal Free Hospital, at the London Tavern, the Festival of the Sons of the Clergy, at Merchant Taylors' Hall, the Protestant Association, at Exeter-hall, the Servants' Iris of Provident Society, also on Tuesday, at the Globe, in great Marlborough street, on

THE COURT.

OSBORNE.—The Queen remains in the enjoyment of her accustomed retirement when at Osborne. Occasional drives in the vicinity of the Royal demesne, and daily walking exercise in the park and gardens, form the chief amusement of the Court.

The Earl of Aberdeen, the Earl of Clarendon, and Sir Edwin Landseer, have been the guests of her Majesty during the past week.

Lieut.-Colonel the Hon. A. Gordon has arrived as Equerry in Waiting to his Royal Highness Prince Albert, to succeed Colonel Wylde, Groom in Waiting to the Prince.

Their Royal Highnesses the Duches of Cambridge and the Princess Mary visited her Royal Highness the Duchess of Kent on Wednesday, at Clarence-house, St. James's.

The Countess of Clarendon gave a magnificent ball on Wednesday evening, at the official residence of the noble Earl, in Downing street. The invitations included upwards of a thousand members of the aristocracy.

The Earl and Countess of Yarborough and Lady Sophia Pelham left Arlington-street, on Saturday, for St. Lawrence, Isle of Wight, where the Lordship intends to remain until the end of the Whitsuntide holidays.

The Countess of Eglinton had an assembly on Saturday evening, at the family mansion in St. James's-square.

The various members of the Ministry have issued invitations for a full dinner-party on the 24th instant, in celebration of the Queen's birthday.

MUSIC.

NEW PHILHARMONIC SOCIETY.

At the third concert, at Exeter-hall, on Wednesday night, under the direction of Herr Lindpaintner and Dr. Wylde, the scheme included Mendelssohn's Symphony in A Major, Mozart's "Figaro Haydn" overture, "Weber's "Oberon," Rossini's "Gazza Ladra," Sterndale Bennett's Pianoforte Concerto in C Minor (performed by Miss Arabella Goddard), Dr. Wylde's music to "Paradise Lost," a scena from Gluck's "Iphigenia en Aulide," and a *bis* by Lindpaintner (both sung by Staudigl).

The music to "Paradise Lost" and the Pianoforte Concerto were the features of the evening. In respect to the former, the subject chosen for musical treatment is most infelicitous; and it is no discredit to Dr. Wylde that he has failed in successfully illustrating Milton, inasmuch as a Beethoven, a Mendelssohn, and a Spohr, in all probability, could never have succeeded. Detailed analysis of a work, therefore, which can only be regarded as the exercise of a very clever student, would be useless; and Dr. Wylde must devote his time and attention, for the future, to more practical and profitable themes. At all events he has proved, by this ambitious effort, that he has more inventiveness than he has hitherto received credit for; and his next composition will be looked for with interest. Miss L. Pyne, Herr Staudigl (who did double duty, Paschee being absent, from illness), Mr Lockey, Herr Reichart, and Herr Kuchler were the principal singers. Miss L. Pyne was encored in the most interesting solo in the "Paradise Lost"—"For spirits, when they please;" and the compliment must be shared between composer and vocalist.

ORCHESTRAL UNION.

The second concert of the series took place last Saturday at the Hanover-square Rooms, and the crowded attendance proved the growing interest in the excellent performances of the "Orchestral Union." under Mr. Mellon's able direction, with Mr Cooper as *chef d'attaque*. The programme included Beethoven's first Symphony in C, Auber's "Zampa" overture, Macfarren's "Charles II." overture, and Mendelssohn's "Melusine." Mr. Winterbotton performed a movement of Davidy's Pianfoone Concerto, and Mr. R. S. Pratten a flute fantasia, of his own writing. The vocalists were Miss Ransford and Mr. Benson. The third concert will be on the 18th of June.

THE HARP UNION.

The success attendant on the *matinées* at Erard's rooms has induced the members of the Harp Union to arrange a series of morning concerts at Willis's Rooms, the first of which was on Tuesday last. Her Majesty and Prince Albert, and a long list of distinguished amateurs, patronise this novel undertaking, and the able performances of Herr Oberthür, Messrs. Wright and Trust, amply justify the patronage. They were aided by Mdlle. Clauss, Miss Messeni, Madame Macfarren, Messrs. Herr Holzel, Herr Romberg (violoncello), and Mr. Benson.

NOTES OF THE WEEK.

The third performance of the Quartet Association took place on Thursday morning, at Willis's Rooms. The programme consisted of Ries' Quintet in F, No 1, Op. 70; Beethoven's Quartet (posthumous), in F flat, Op. 127; and Beethoven's Sonata in B flat, Op. 45, for pianoforte and violoncello; the artistes were Mdlle. Clauss, Messrs. Salmton, Cooper, Hill, and Piatti

Herr Hölzel, of Vienna, who composes pretty chamber romances, and sings them with taste and feeling, gave a Matinée on Wednesday, at Willis's Rooms, assisted by Madame Spitzer (a singer of distinction from Germany), Mdlle. Anna Zerr, Herr Reichart, Herr Schnitzer, Herr Pischek, and Herr Staudigl. This congregation of Teutonic talent was strengthened by the presence of the charming Mdlle. Clauss; by Koenig, the cornet par *excellence*; by Herr Graff, a new violinist of ability; and Herr Schuh, the trombonist; Herr Kuchler and Mr. F. Mori being the accompanyists

Mr. Donald King, the tenor, and Mr. Lawler, the basso, assembled their friends and patrons, last night in Freemasons'-hall, to test to a well-selected scheme; the performers being our most distinguished native professors, including Misses Louisa Pyne, Poole, Messent, M Williams, Pyne, C Henderson, Broughton, Bassano; Mrs. D. King, Mrs A Shewon; Messrs. Lockey, Manvers, E. Land, Benson, Borrani, F. Bodda, and Shoubridge, with Blagrove, Rowland, Willin, R. S. Pratten, and Howell, as instrumentalists. In addition to this attraction, the members of the Abbey Glee Club sang in glees and madrigals

The Sacred Harmonic Society performed last night at Exeter-hall, under Costa's direction, Mendelssohn's "Elijah" the principal singers being Miss Louisa Pyne, Miss F. Rowland, Miss Dolby, Mrs. Bassano; Messrs Lockey, Benson, H. Barnby, and Formes. Next Friday Handel's "Creation" will be given

Mrs. John Macfarren, a clever pianiste, aided by Sainton, Piatti, and Benedict, Miss Bassano, Madame Macfarren, Miss C. Nott, Mr A Pierre, and Mr. F. Bodda, gave a matinée last Saturday, at the Queen Anne-street Rooms. The selections were from Mendelssohn, Beethoven, Handel, Macfarren, Donizetti, Piatti, Curschmann, Torre.te. Haas, Thalberg, Henry Smart, Proch, Pixis, &c. Mr. Walter Macfarren was the accompanyist

Miss Arabella Goddard had her annual concert last night, at the Hanover-square rooms, with full orchestra, under Molique's direction. The programme included Mendelssohn's pianforte concerto in D minor, and a quintet in G minor for pianoforte and stringed instruments, by Mr Macfarren. Sainton, Hill, Piatti, Bottesini, Fraulein, Agnes Bürz (a new singer from Germany), and Herr Reichart, were the artistes announced to support the accomplished *bénéficiaire*.

Miss L. Rheinmeich, a vocalist, had an evening concert at Willis's rooms last Tuesday, with the co operation of Miss E. Bentley (pianiste), Mr. R. Blagrove (concertinaist), Bottesini, Miss Dolby, Mr. G Perren, Mr. F. Bodda, and Mr. F. Mori (accompanyist).

Her Grace the sixth duchess of Chandos' Music took place last Monday, at the Queen Anne-street Rooms, which was well attended. Esdyn's quartet in F, No. 82, and Mozart's quintet in D, were beautifully played by Herrn Janna, Hennig, Goltzie, Horschelt, and Mr. W. F. Reed. The vocalists were the German quartet "Union" and Miss Huddart. Madame Grossenhagen Cundall was announced to sing, but was absent from indisposition.

The fifth Philharmonic Concert will take place next Monday, under Costa's direction.—The fourth meeting of the Musical Union will be on Tuesday.—Mr. Hersee's overture, "Jerusalem," first performed at the last Norwich Festival, will be produced at Exeter hall next Wednesday, by the Harmonic Union.—Herr Molique will commence his annual series of concerts of chamber music next Wednesday, at Willis's Rooms; and Mr Brinley Richards's classic concerts begin next Saturday.

The installation of the Earl of Derby as Chancellor of the University of Oxford, is to take place on Tuesday, the 7th of June next. On Wednesday morning, the 8th, a Grand Miscellaneous Concert will be given in the Sheldonian Theatre, under the direction of Sir Henry Bishop; and, on the following day, the "Installation Ode" will be performed, written by the Professor of Poetry, the Rev. T. L. Claughton; and composed by the Professor of Music at Oxford, Sir Henry Bishop

M. Niedermeyer's new five-act opera, "La Fronde"—the libretto by MM. Maquet and Jules Lacroix, produced at the Imperial Academy of Music in Paris on the 2nd inst.—is not considered so good as his two previous works, "Stradella" and "Marie Stuart." Mdme. Tedesco, Mdlle. la Grua, M M. Roger, Obin, Marié, Lucien, Koenig, Prévot, and Guignot sustained the principal parts.

The *New York Herald* says:—"We are to have a new opera-house —one on a magnificent scale. We learn that 188,000 dollars have already been subscribed, and twenty-five per cent paid in. Only 12,000 dollars are now wanted to make up the sum required for this splendid enterprise It is in contemplation to have it completed in December next, and open with Grisi and Mario.

THE THEATRES.

ROYAL ITALIAN OPERA.

Donizetti's "Lucrezia Borgia" was repeated on Saturday and Monday—on the last-mentioned evening with the addition of the second act of "Il Barbiere," to the delight of the amateurs, who prefer to hear a good opera rather than to see a bad ballet. On Thursday, for the extra night, the first act of "Norma," with Grisi and Penco, and the whole of "I Puritani," with Mdme. Bosio, Mdlle. Bellini, Ronconi, Formes, and Mario, formed the entertainment. Verdi's "Rigoletto" is announced for to-night (Saturday).

ST. JAMES'S.

M. Regnier last week reappeared on this stage, and made his bow in two pieces new to Londoners—"Le Gendarme Jadis," a one act piece, by M. Henri Murgers; and the other M. Marivaux's well-known play of "Les Jeux de l'Amour et du Hasard. In the latter we have to record Mdlle. Brohan's success in the part of *Silvia*. On Wednesday the talents of both were associated with those of M Lafont, in "Les Demoiselles de St. Cyr," who, as *Vicomte Roger*, accomplishes one of the most difficult histrionic tasks—that of restraining sentiment within conventional limits, and yet so far and skilfully indicating it, that it may tell with even more pathos than if it had been fully expressed. The French stage abounds in character requiring this kind of art, which has here to imitate not the natural but the artificial, and requires in the artist both tact and observation. M. Regnier, as the parvenu *Dalancley*, is above criticism, as well as competition. The part is of his own making; and the caricature in it is managed with a blended force and reticence only to be attained by a well practised taste. Mdlle. Brohan acted the part of *Charlotte de Mérian* with a dignity which seems to suit her style and powers, and which served to contrast the character with that of *Louise*, which lost nothing of its vivacity in the hands of Mdlle. Fiemy. The play itself, notwithstanding its frequent performance, still continues to be one of the most pleasing of M. Alexandre Dumas' compositions.

STRAND.

The performances at this little theatre continue to attract. "The "Beggar's Opera" has been performed during the week, and the travestie of "Macbeth" still excites great laughter. Never-heless, the indefatigable managers have added a musical sketch, entitled "The Black Swan," which is not without merit and cleverness, though exceedingly slight.

Miss Romer will begin her operatic campaign at the Surrey Theatre, next Monday, with Herr Lutz as musical director and conductor: Mr. E. Stirling as stage-manager. Balfe's "Siege of Rochelle" will be the opening opera. The spirited directress has engaged Miss P. Horton, Miss Eliza Nelson, Miss Neville, Messrs. Borrani, Kuchler, C. Romer, O. Summers, H. S. Craven, and Traver.

PROFESSOR AYTOUN'S LECTURES ON POETRY AND THE DRAMA.

ON Friday week and last Monday, Professor Aytoun, of Edinburgh, a well known contributor to *Blackwood*, delivered his first and second lectures on Poetry and Dramatic Literature, to a fashionable and aristocratic audience, sufficiently numerous, and politely attentive. The Professor's manner was not imposing; but it became animated as he proceeded; and his voice, rather inaudible at first, gradually grew distinct and clear. In his definition of poetry, Mr Aytoun seemed to include, like D'Alembert, the fine arts in general, and eloquence in particular. Indeed, he tested the value of poetry by its capability of effective recitation, and on this account preferred Homer, Shakspeare, and Scott, to Wordsworth and other meditative minstrels. The public, in his opinion, required an audience, and demanded an oral utterance, such as he enjoyed of old in the institutions of the Bardic Order, and the Minstrel College of Greece—such as had the Druids, Sennachies, Scalds, Trouvères, and Homeric rhapsodists. His songs, under such favourable conditions, were not artificial; indeed, too much art was unfavourable to the production of high poetry. Instance, the poetry of Pope, and the works in verse written in accordance with the French canons. Compare also the artificial school of the last century, at its close, with the powerful poetry of rude times; which latter the Professor illustrated by reciting the well-known death-song of Regner Lodbrog.

In his second lecture, Professor Aytoun re-stated his leading principle, and boldly announced that, in his opinion, the best poetry was that which gained the most immediate audience, and was most generally understood. Poetry, however, was as various in its forms and spirit as nature in her species and influence. Accordingly, a common standard of criticism is impossible. To an Oriental taste our poetry would be wanting in fervour; to ours the poetry of the last superabounds in extravagance. French tragedy, to us, was monotonous and unnatural: to the Frenchman ours was deficient in art. As an English imitation of the former, Addison's "Cato" was ineffective, because uniform throughout in its pitch. Chaucer, on the contrary, displays every variety of style. But he and others were coloured by foreign influences. Spenser from Italian fountains; Dryden from French. The latter seldom touched the sensibilities; but Otway was exceedingly tearful. Pope was a disciple of Boileau: he sparkled, indeed—but like frost; and we wished for the thaw. The prodigality of poetry in the age of Queen Anne, the influence of his example was like the rush into full blossom of vernal flowers when the frost was taken from the ground. Poetry, when read, should be the simplest. The reader is too much engrossed by art, and pays too little attention to nature. Yet, like the pre-Raffaelites, it is well we should study the old masters.

The object of the lecture was to treat of the Epical cycles. The Epos was the first in date. Hence, we demand not only the original author of the subject, the latter being always older than any author; and permit to the epic poet the unlimited use of previous materials. Homer was but a recipient of traditions—these he committed to the furnace of his genius, and poured them forth again, a fluid mass, to be recast in a mould of his own devising. The "Wrath of Achilles" was but the portion of a larger theme; this is the reason why the poem is incomplete. The remainder was left for a succeeding singer to illustrate. Of more modern epics, "The Cid" had a fitting argument; but time enough had not been allowed for tradition to grow and expand. Virgil, on the contrary, came too late for his subject; besides addressing a pre-imagined few, instead of the multitude for which Homer sang. A fixed locality was a great advantage to a poet. Troy was to Homer a spot which lent its associations to his story, and gave to its details an air of reality. Spenser's poem was wanting in this advantage—there was no place on earth to which the action might be referred. Homer's work read like history. Virgil, however, failed to realise, and was extremely artificial. But the stories of antiquity were as different as the periods and the places. The lecturer then drew a picture of old Greek life; the scene being the Olympian games, and the recital thereat of Homeric poems, and Pindaric odes, followed by a dramatic excentration on the Thespian cart. With this description the lecture, which was throughout interesting, though not always correct in its judgments, was harmoniously and gracefully brought to a close.

INVITATION TO HER MAJESTY TO VISIT HULL.—The Corporation of Hull assembled on Friday, and adopted a memorial to her Majesty, soliciting a Royal visit in the course of the ensuing season. It is thought that her Majesty will arrive with the prince of Wales and suite, and that she will pay her first visit to the town and port on her way to Scotland in the autumn, when the annual gathering of the British Association will, in all probability, be sitting.

FLAX CULTIVATION IN IRELAND.—The Royal Flax Society Belfast, have received a letter, notifying that the Treasury had authorised the issue of £10 0 0 to defray the expenses of instructors in the growth and preparation of flax in the nine counties of Munster and Connaught to which the Irish reproductive fund applies.

LEIGHTON BUZZARD CROSS.—A well-executed view of this beautifully restored monument has just been issued by Mr. John Sumner Austin, architect, Bedford: it shows both sides of the High-street of Leighton, looking south-west, and the restored cross in the centre. In our notice of the latter work, at page 261, we were in error in attributing the figures of the Martyrs' Memorial, at Oxford, to Mr. Cox: they were sculptured by Mr. Henry Weekes.

A THRIVING TRADESMAN.—A few days since, in the pleasure-grounds of Thoresby, Nottinghamshire, the seat of Earl Manvers, there was taken a thrush's nest, containing two lace collars, and about three yards of lace, which had been missed from the drying-ground, and were supposed to have been stolen.

ALDERMAN SALOMONS.—On Wednesday, Lord Chief-Justice Campbell decided against the appeal of Mr. Salomons in the Court of Error. His Lordship concluded his judgment thus:—"He had the honour of introducing an act, when Mr. Salomons became Sheriff of London, to enable him to fulfil the duties of the office, and Lord Lyndhurst brought in an act to enable the Jews to hold all municipal offices But as long as the law stood as it at present did, he had no doubt that Jews could not be admitted into Parliament. His own private opinion was, that he regretted the act had ever been passed to exclude Jews from sitting in Parliament. But he sat there to declare and to put a just construction upon acts of Parliament, and in doing so he thought they were to be excluded. The judgment of the Court of Exchequer must therefore be affirmed, and the verdict for the penalty must stand.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Clerkship of the Crown for the Court of Queen's Bench, Ireland, has been filled up by the appointment of Mr. James Nangle, sessional solicitor for the East Riding of Cork.

It is stated that satisfactory arrangements have been made by the directors of the Berlin Water Company with Sir William Cubitt, who is to undertake the supervision of the works as chief engineer.

The Russian Government has announced its intention of doubling the duty on imported books

The *Argo*, which left Southampton on Sunday for Australia, takes out about £50,000 in specie, 500 tons of cargo, and sixty passengers

The Grand Duke of Oldenburg has ordered the discontin uance of the German cockade in the army, which has been worn since 1848.

The Rev. Drs. Ullathorne and Moore were released from Warwick gaol on Wednesday week, without payment of the costs, by order of the Master of the Rolls, they having given up all the property they possessed.

The steamer *Independent*, with 500 passengers on board, ran on shore on the 16th of February on the coast of California, and was totally destroyed by fire: 150 persons lost their lives.

The *Lætia*, of the Royal Yacht Squadron, belonging to Mr. T. Hodges, sailed on Saturday from Sheerness harbour for Austra a, with numerous goods about to take his final leave of this country for the gold regions

The May fair of Ballinasloe took place on Saturday week. The sales were made at a very considerable advance upon the prices of last year, and all the cattle were eagerly bought up.

A boy, of H.M.S. *Albion*, met instant death on the 26th ult., at Malta, by falling from the mizentop of that vessel.

The *Newry Telegraph* reports that on Friday week, attempts were made to burn two houses, with their residents, in the neighbourhood in which Mr Chambre was nearly assassinated a short time since

Mr. Sill, the attorney in the case of seat stealing at Brighton, in connexion with Broome the pugilist, has been struck off the rolls by Lord Campbell

Two men, named Duff and Conolly, have been remanded on a charge of conspiracy to murder Mr. Boyd, one of Mr. Dargan's pay-clerks, while on his way with the money chest to the railway works at Carraemines.

A deputation from the operative ropemakers had an interview on Monday with the Lords of the Treasury, to protest against any alteration taking place in the import duties on foreign yarn and rope.

A terrible collision took place on the Michigan Southern Railroad, on the 20th ult., by which twenty persons were killed, and fifty or sixty injured

The Lord Chancellor has appointed Graham Willmore, Esq., Q.C. to succeed the late Mr. Carrow as Judge of the Wells County Court

The King of Prussia intends to confer the Order of the Black Eagle on the Duke of Brabant; and Prince Frederick William of Prussia is to have the Grand Cross of King Leopold's Order.

Mr. Chester Allen has been appointed deputy clerk of the peace for Westminster, Mr. A. G. Maude having found himself unable to discharge the duties of that office and of deputy clerk of the peace for the county

The Brandenburg and Lusatian Agricultural Board announce that the grand cattle and agricultural show will be opened on the 21st inst., in the Berlin Thier Garten, which is well adapted for this purpose

On Wednesday week an explosion took place of one of the boilers on the premises of the York street Flax-spinning Company, Belfast, when two boys were killed, and five others seriously injured.

It is calculated that there are no less than 100,000 foreign refugees in London

Mr. Henry Levy Keeling, of the firm of Keeling and Hunt, of Mouse-yard, and a Jew, has been unanimously elected churchwarden of St. George's, Botolph lane.

The Queen has appointed M. Pedro Nolasco Casis to be Consul in Jamaica for the Republic of New Granada.

Father Gavazzi is lecturing at New York with great success; he has requested his lectures a second time for the benefit of those who were crowded out on the first occasion.

A gentleman, just returned from Australia, states that without another case or bale of drapery goods being sent over, there are sufficient on hand to serve the colony *for the next six years*.

The University of Kiel (Holstein) has just conferred on Mr. Donaldson, Professor of Architecture in University College, London, the degree of Doctor in Philosophy, in recognition of his works in illustration of ancient art, of his professional standing, and in acknowledgment of services rendered to that University in forming their collection of antique sculpture.

Mr. James Plunkett, Q.C., was on Wednesday appointed Chief Clerk to the Insolvent Debtors' Court, Dublin, in the room of J. T. Lloyd, Esq., deceased.

Cheapside was on Wednesday restored to general traffic, having been closed nearly three weeks for repair of the road.

Locusts have appeared in several parts of Turkey, which threaten to spoil the crops. The silk crop will be damaged in consequence of some late frosts

Upper Canada has lost one of her most eminent men. Robert Baldwin Sullivan, Judge of the Court of Queen's Bench, died in Toronto, on the 14th ult.

The Bavarian Government has announced that the privilege accorded to English travellers since April, 1846, is withdrawn, and that in future they must, in travelling in Bavaria, have their papers *viséd* like other strangers

The Great Central and Chartered Gas Companies have undertaken the lighting of the public lamps in the City for three years, by contract.

At a recent duel near Victoria, Texas, between Lieut. Brady and a Mr. Burnett, an innocent bystander, named Walpole, was shot dead, but neither of the combatants was injured.

On Sunday last the Archbishop of Canterbury delivered a sermon in St. Giles's Church in behalf of the Royal Orthopædic Hospital, in Bloomsbury-square.

Lord Ellesmere and suite embarked on Tuesday, under a salute, on board the *Leander*, 50, Captain King, in the Sound; and sailed the day following for New York.

Lord Shaftesbury has laid on the table of the House of Lords a bill to amend the Chimney Sweepers Act. Persons under sixteen are not to use the trade of a chimney-sweeper, under a penalty of £10. The law has been evaded in this respect.

The Greenland Seal Fishery promises to be very abundant this season, fifteen ships having already taken 61,700 seals.

The Irish Encumbered Estates Court on Tuesday, property was sold that realised £56,010.

Helmforth was visited on Monday last with a very heavy fall of snow; it fell from six in the morning during the whole day, and did much damage.

The Newfoundland seal fishery has been thus far one of the most successful seasons ever known. Two hundred and fifty thousand seals have already been caught.

It is announced that Mr. Justice Patteson and Mr. G. Cornewall Lewis will be two of the members of the City Corporation Commission

The Rochester Hotel, New York, was destroyed by fire on the 29th ult., and four persons burnt to death. The loss is estimated at 20,000 dollars.

The British corvette *Dedalus* arrived at Panama on the 12th of April with 100,000 dollars in specie, on its way to England. The purser of the vessel was assassinated at San Blas, but no particulars are given

A deputation from Liverpool, consisting of Mr. Charles Turner, M.P., with Mr. D. Rowland, and Mr. John Shepherd, master pilot, had an interview with the Right Hon. E. Cardwell, on Tuesday, at the Board of Trade.

On Saturday night a fire, attended with a great destruction of property, broke out in the premises belonging to Mr. Hitchock, saw-mill proprietor, in London-street, London-road

Messrs. Smith, the extensive newsvenders, of the Strand, intend having a railway communication between their office on Edinburgh, Dublin, and the Exhibition building, during the period it remains open.

James Conolly, aged fourteen, on Monday last, while riding a race on Blackheath, was thrown out of the saddle, and dragged nearly half a mile by the stirrup: when picked up, he was found quite dead.

A meeting was held on Monday at Merthyr, when resolutions in favour of the ballot were unanimously carried

It is understood that the splendid scale are making at Plymouth for the approaching visit of the West of England Agricultural Association to that town

"THE TEAZER" ATTACKING MEDINA, ON THE SIERRA LEONE RIVER.

ATTACK ON MEDINA, SIERRA LEONE RIVER.

WE have just been favoured, by a correspondent at Sierra Leone, with the accompanying portrait of Keleh Moodah, Chief of the Mandingo Town, Medina; also, with a sketch of an assault on that town by H.M. screw steamer *Teazer*, Lieutenant Rich, and the boats of H.M. brig *Linnet*, under the direction of Commander Need. Appended is a view of the centre of the town, showing that portion occupied by the Chief.

Medina is situated ten miles to the north of Trutown, at the entrance of the Sierra Leone river; and is one of the largest and most regularly built native towns of the country. It stands on flat land, at an elevation of 150 to 200 feet from the sea; it is surrounded by a strong mud wall and stockades; and fortified by a battery of five small pieces of ordnance, placed in a commanding position for defence in case of attack from the shore, as the only approach to it is by the ascent of a very steep cliff, which might readily be defended by fifty resolute men.

The town of Medina and the country, for one mile inland, is within British jurisdiction; although the Government of the colony rarely exercises its authority, a treaty having been entered into with the chiefs for the protection of British interests and the suppression of the slave-trade; notwithstanding which, it was currently believed, Keleh Moodah connived at this nefarious traffic, and even afforded protection to the slave-dealer, while outwardly professing to the Government of Sierra Leone his wish for its abolition, and his earnest desire to fulfil the conditions of his treaty; in short, he has always been a troublesome neighbour, and hostile to the advancement of the colony.

His recent humiliation was brought about by his own obstinacy in refusing to deliver up a British subject who was kidnapped and carried across to his town, as well as the party who committed the act, although formally demanded to do so by his Excellency Governor Kennedy, who on receiving intimation of the fact, instantly despatched the Government messenger to him.

Keleh Moodah having utterly disregarded the commands of his Excellency, he made a requisition on Commander Need to send the *Teazer*, either to bring back the parties in question or to destroy the town. The *Teazer*, accordingly, got up steam on the morning of the 11th March last, and proceeded to the Bullom shore, taking in tow the boats of the *Linnet*; and at nine a.m., came to anchor one mile off the land. All the boats were then manned, and, having effected a landing, the men were marched up to the town, where Commander Need and Lieutenant Rich were received by Keleh Moodah and Sirreh Moodah, his head man. Commander Need then explained the object of his visit, and desired to have a conference with the chiefs. On this the tom-tom immediately beat for a war palaver, which sounded far and near; and in less than ten minutes, numerous petty chiefs, with war men, numbering about 500, all armed with spears, cutlasses, and firelocks, and no lack of ammunition, flocked to their chiefs' rendezvous. Commander Need then read in a quiet and dispassionate manner the Governor's despatch, on which the chiefs conferred together for some time; and having resolved not to deliver up the captive and the accused, Commander Need retired with his men to their boats, followed by the native warriors, who, on the embarkation of the sailors and marines, performed on the shore, in a most grotesque manner, the war dance, imagining that they had scared the white men. But they were deceived; for, in half an hour, the *Teazer* opened fire with shot and shell on the town, supported by a cross fire from the gun-boats of the *Linnet*. The guns ceased firing after a quarter of an hour, when Captain Need again landed, and marched up to the now deserted town. After a little delay, the Chief appeared, gave himself up to spare the town, and was brought as a hostage for the men demanded, it having been ascertained that they were not in the vicinity. The Chief felt, as he said, degraded in the eyes of his people and the chiefs. He had no excuse to offer the Governor for his conduct, who allowed him to be at large on giving his word not to attempt to leave the colony until the delivery of the men in dispute—who were given up in a day or two after. The Chief then returned to his town, having been taught a lesson not to tamper with the Governor of Sierra Leone, or to disregard the treaty which he had signed.

KELEH MOODAH, CHIEF OF MEDINA.

The attack on Medina is considered a politic measure, and will have a wholesome moral effect on the minds of the several chiefs who reside on the river and surrounding country.

It was generally supposed and believed by Keleh Moodah himself that he was too strong within his town to be made to feel the power of British law and authority; and he assumed, on this, a certain disregard of the Governor and his communication, for which he has dearly paid by the humiliation he suffered in being made a prisoner.

His Excellency was pleased to express himself highly gratified with the forbearance and humanity displayed on this occasion by Captain Need, who only used those measures of coercion necessary to effect his object—by ceasing to fire the moment he perceived the natives retire; and for his humanity in not wishing to destroy so large a town, if he could accomplish his purpose otherwise.

The Governor also notified to Lieutenant Rich his sense of the activity shown by him in carrying out his orders, and the effective manner in which he brought his guns to bear. This is not the first time his Excellency has remarked the good and valuable services rendered to the colony by that officer.

We are indebted for the accompanying Sketches to Mr. H. J. Brownrigg, Deputy Assistant-Commissary-General.

CENTRE OF THE TOWN OF MEDINA.

ANNUAL MEETING OF THE BRITISH AND FOREIGN SCHOOL SOCIETY.—LORD JOHN RUSSELL, M.P., IN THE CHAIR.

BRITISH AND FOREIGN SCHOOL SOCIETY.

THE anniversary meeting of this excellent institution—always a scene of great interest—this year received additional *éclat* from the presence of an American authoress of world-wide celebrity; and from the distinguished share taken by the president of the proceedings in the educational movement of the day.

The meeting was held on Monday, in the Borough-road school-room. It was preceded, as usual, by an examination of the scholars in various branches of religious and secular education. Among the visitors at the examination were Lord J Russell, who delivered a brief address at its close; and Mrs. H. B. Stowe, who, o being introduced by the Rev. T. Binney as "The Mother of Uncle Tom," was received with rapturous applause by the children. At the meeting, the chair was oc upied by Lord John Russell.

Mr. Dunn, the secretary, read the forty-eighth annual report, which, after adverting to the promising condition of elementary education in England, furnish d a rapid sketch of the society's proceedings during the year.

The boys' model school had admitted 842 children, and the girls' school 420 Twenty-seven pupil teachers had been apprenticed by the Committee of Council. Important alterations had been made during the year, at a cost of £1063 3s. 8d., towards which the Committee of Council gave £500. 160 students had been admitted into the Normal School for Young Men, and 143 young women into the Female Training Establishment; sixty had been examined for certificates o rit, and 140 teachers had been appointed to schools During the y· · fty-four new schools had been established, affording accommodation for 7000 children; 296 towns had been visited by agents for school inspection; ninety-seven public meetings had been held, and twenty-four lectures delivered in different parts of the country; 124 grants in money or school materials had been made. Important efforts had also been made to promote education in the colonies and other foreign parts. The sale of school materials at reduced prices, had increased. The receipts during the past year (including a subscription of £100 from her Majesty' amounted to £19,538 16s. 10d.; and the expenditure to £18,771 11s. 3d.; leaving a balance in hand of £567 5s 7d. The society urgently appealed for increased subscriptions.

The Bishop of Manchester, in moving the adoption of the report, expressed the pleasure he had felt in witnessing the examination, being, as it was, no got-up display, but the result of an education eminently practical and real; and the conviction he entertained of the beneficial nature of the results of the Minutes of Council of 1846. He believed it was quite possible to carry the s supporting system much too far; and that, in many instances, the necessity of the case could only be met by a public rate (Hear, hear). Such a rate would in no degree paralyse voluntary efforts, but would, he thought, rather stimulate them.

Viscount Ebrington seconded the resolution, which having been adopted, the meeting was addressed by the Rev. F. Close (of Cheltenham), the Rev. Dr. Duff, the Rev. F. Johson, and the Rev. W. Westaby.

The Rev. Dr. Hoby proposed a vote of thanks to the Duke of Bedford, the President of the Society, and to Lord John Russell, for his conduct in the chair; which was seconded by Sir J. Kaye Shuttleworth.

Lord John Russell, in acknowledging the vote of thanks, said:

It is impossible not to see that that which I stated a year or two ago from this place—namely, that we were getting into a position in which the question of education would soon be ripe for further measures and more extended application—is now coming happily to pass. * * * * Some question has been made to-day with respect to the promotion of education, as we have always endeavoured to promote it, in connexion with religion. That was, from the commencement, the principle of this institution, and I trust it will ever continue to be (Hear, hear). At the same time, as many reflections have been thrown out against those who promote secular education, I may perhaps say, without at all being the advocate of opinions from which I differ, or a scheme from which I entirely dissent, that, in some instances, the mode in which religious education has been given has afforded some advantage to the arguments and some plausibi ity to the schemes of those who promote secular education (Hear, hear). * * * I think we who belong to the British and Foreign School Society have always done our best to avoid that error, and I believe that in the future education of this country it will be much more avoided than it has hitherto been (Hear, hear). I certainly can never think that in either of the schemes put forward by those who are for secular education the great purpose of education is sufficiently answered. There are those who say that half a day or two days of the week, and the whole of the day on Sunday may be given to religious teaching and instruction; they thus, as it were, give up two days for religious instruction—which is, in fact, the education of the soul—while they leave four days of the week for that

THE CITY OF WORCESTER, FROM THE OXFORD, WORCESTER, AND WOLVERHAMPTON RAILWAY.

which is secular education only. I say this is a most unhappy and most unwise division; that neither in respect of time nor in respect of the subject is that an education which the future statesmen of England ought to receive (Cheers). I say that secular and religious education ought to be mixed together; that the instruction should be imparted to educate, as Mr. Close has wisely said, the body, the mind, and the soul together; and when this task has been accomplished, then indeed you may be proud of your work.

OPENING OF THE OXFORD, WORCESTER, AND WOLVERHAMPTON RAILWAY.

On Saturday last the remaining portion of this Company's line of railway, from Oxford to Evesham, was opened under the most distinguished auspices. The other portion, from Evesham to Wolverhampton, was opened about a year ago, so that the whole length of the line is now about ninety miles. The chief stations upon the branch opened on Saturday (which is about forty-nine miles in length), are—Banbury, Cha bury, Ascot, Shipton, Addlestrop, Moreton-in-the-Marsh, Honkley, Campden, and Honeywood. Most of these stations were, on Saturday, decorated with flags, evergreens, and flowers, attended by bands of music, and lined with persons who, notwithstanding that it rained heavily throughout the day. The works on the line are not generally heavy, though in the first fifteen or sixteen miles from Oxford there have been nearly fifty bridges to construct. The special train, conveying the directors and their friends from London to Oxford, passed over very slowly. The line is only laid down singly, though with the compound gauge, broad and narrow; with crossings and sidelines half a mile in length at every station, to enable one train to pass another without difficulty. The works do the utmost credit to the contractors and engineers employed in the construction.

At Evesham the party from Oxford was joined by a large number of gentlemen from Dudley, Worcester, and surrounding districts, who returned with them to Oxford

The line was to be opened to the public on Monday, but this is rendered impossible by the circumstance of Captain Simmonds, the Government inspector, having required the alteration of certain switches at the point of junction with the Great Western line at Wolvercot, and the Great Western company having refused to agree to any code of signals for working into their station at Oxford without a reference to the Board of Trade. In consequence of this latter circumstance the carriages of the Oxford company could only be brought down to the point of junction, about three miles from the Oxford station, the company having to remove from one set of carriages to another at that point.

THE DINNER.

On the return of the company to Oxford, they were joined by fresh additions from London, who arrived by a special train, which left Paddington at half-past one o'clock. The directors and their guests then proceeded to the Town-hall, where a very elegant dejeuné had been laid out for between 500 and 600 guests. Sir John Pakington, M.P., presided, supported by Earl Talbot, the Earl of Macclesfield, Lord Redesdale, Lord Lyttelton, Lord Lovelace, Lord Lyveden, Lord Rimsley, the Hon Frederick Leigh, Sir Henry Armytage, M.P., Sir Thomas Wrangton, Bart., Colonel Lawrence, Mr. Geo. Dalton, M.P., Mr. Macgregor, M.P., Mr. Spencer, M.P., Mr. Heywood, M.P., Mr. Peto, M.P., Mr. Worsley, M.P., Mr. Hubert, M.P., Captain Rushout, M.P. (Chairman of the Company), Sir Jas. Mr. Lees, Colonel Edwards, Colonel Edwards, Admiral Lloyd, Sergeant Gaselee, and a large number of the landed gentry of Oxfordshire, Worcestershire, and the adjacent counties

The customary loyal toasts having been drunk,

The Chairman next proposed "success to the Oxford, Worcester, and Wolverhampton Railway" (Cheers), with their best wishes for the prosperity of the directors and shareholders (Renewed cheers). He was old enough to recollect when he used to leave Worcester at five or six o'clock in the morning, and arrive at London at ten o'clock at night, well shaken, in what was called a well-appointed coach. Within the last few years, however, they had had the advantage of a double railway; indeed, few districts in the kingdom had been better served (Cheers). But they could not help thinking that the Oxford and Worcester line had a most important district to develope, every encouragement to obtain the traffic of it, and every inducement to the inhabitants of Worcester they might have to travel either to Oxford or London. But he (Sir John) had no doubt the directors would long continue to have a well-filled table, and have the honour of entertaining the Lord Mayor.

Lord Talbot, M.P., Colonel Edwards, Colonel Lawrence, Admiral Lloyd, and Sergeant Gaselee, also severally responded to the toast.

Mr. Peto having briefly acknowledged the compliment,

Mr. Peto, M.P., had to thank them for the cordial manner in which they had united the firm with which he was connected; but he was most desirous to impress upon them that it was to their able instructions and their well-regulated works on, and more especially to his friend Mr. Watson, that they were indebted for the success with which the works that they had undertaken had been carried out. He trusted the day was not far distant when all who were then present would meet in the beautiful grounds at High Wycombe—if no public house presume to say that he was sure they would be placed entirely at their service by their noble proprietor (Lord Carrington) to celebrate the turning of the first sod of a third and independent line, which Wycombe and Oxford would bring this and the adjoining districts not only in direct communication with each other, but with the metropolis (Cheers).

The following toasts—"The University of Oxford," "The Railway Interest of the United Kingdom," "The Mayor and Corporation of Oxford," "The Learned," "The Two Houses of Parliament," &c.—having been given and responded to, the company broke up shortly after five o'clock, and were conveyed soon afterwards, by special trains, to their respective destinations.

The illustration upon the preceding page shows a portion of the railway at Worcester, with the city in its interesting Cathedral, backed by the bold outline of the Malvern hills.

NAVAL AND MILITARY INTELLIGENCE.

WOOLWICH, May 7.—His Royal Highness the Duke of Cambridge and General Lord Hardinge, commanding-in-chief, arrived at the Royal Arsenal, Woolwich, to-day, accompanied by Mons. Gudin, inventor of its improvements in small arms, and Mr. Jacob Dawson, the inventor of an American rifle for loading at the breech, the object of the visit being to witness experiments with the respective small arms of these inventors. Colonel Congbline submitted a new field battery ammunition-carriage of a remarkably light construction, which is attained by supporting the ammunition boxes and seats for the men on steel springs. A wonderful addition of ammunition can be carried in this field battery ready for firing on horseback than those previously in use. Forty-six rounds are carried for the 6-pounders and eighty-four rounds for the 12-pounders, which would appear to afford them in the east. Afterwards several rounds were fired from another steel gun, and the distinguished visitors left the Arsenal for London.

ROYAL HORSE ARTILLERY.—Captain Wood's troop, after being augmented to the full strength of men and horses—124 horses being now the number in each of the two augmented troops—left the garrison on Tuesday morning, on their march to Brighton, where the troop is to be stationed.

THE CAMP AT CHOBHAM.—The preparations for encamping a division of the army begin to approach completion. Lieut.-General Lord Seaton, an experienced officer, will command in chief. The troops will consist of four regiments of cavalry, twenty four pieces of artillery, and three brigades of infantry, each commanded by a Major-General. The whole force will amount to about 6000 men, with 2000 horses, and after the troops composing the first division have had three or four weeks' practice in field evolutions, they will be replaced by a similar force for the same period. The Sappers and Miners from Chatham will form part of the force encamped, fieldworks and entrenchments will be thrown up, and bridges of pontoons, in which the most of recent inventions may be tested, will be thrown over some narrow portions of Virginia Water.

AN ENCAMPMENT ON THE CURRAGH.—An encampment on a large scale is to take place on the Curragh, and besides the King's Dragoon Guards and 11th Hussars, a troop of Horse Artillery is ordered from Dublin, a squadron of the 3rd Dragoon Guards from Athlone, three troops from the 16th Lancers, two field batteries of Artillery, and five regiments of the line, will complete the garrison. It is also said the Duke of Cambridge will inspect the whole, after his arrival in Ireland from the encampment on Bagshot Heath.—*United Service Gazette.*

WOOLWICH, May 10.—The *Phœnix* screw steam-sloop proceeded to Greenhithe on Thursday, to have her compasses adjusted; and it is expected she will leave the river for the Arctic regions this day (Saturday).

MANNING THE ROYAL NAVY.—Some highly-interesting and important correspondence between the Treasury and the Admiralty, together with the report of a committee of naval officers, and her Majesty's order in council relating thereto, have just been presented to Parliament by her Majesty's command.

Sir James Graham, First Lord of the Admiralty, held a levee at Whitehall on Monday, which was numerously attended

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, MAY 6.

The Registration of Assurances Bill, strongly supported by the Lord Chancellor, Lord Lyndhurst, Lord Campbell, and Lord Overstone, and opposed only by Lord St. Leonards, was read a third time by a majority of fifty-seven votes against twenty-nine.

HOUSE OF COMMONS.—FRIDAY, MAY 6.

Mr. Duffy having been ordered to attend in his place to-night, there was a full attendance of members to hear his explanation.

The SPEAKER read the words of the hon. member's speech to which exception had been taken—"that the grossest corruption ever practised in the days of Walpole and the Pelhams has been practised under my own eyes upon Irish members in this House." He trusted the hon. gentleman was prepared with such explanation or apology as would be satisfactory to the House.

Mr. DUFFY said he had not meant to state that money had been given to secure the votes of certain Irish members. What he meant was, that by accepting office, they had discreditably abandoned their principles for the purpose of their own personal advantage and advancement. That he took to be political corruption.

Lord J. RUSSELL said it did not at all appear to him that the charge now made was the same that the hon. member had preferred last night He doubted even whether it could be called discreetly. At all events, those Irish members who had taken office under Government were quite equal in ability as they were in honour and honesty to any competitor who might bring charges of this nature against them.

The House then went into Committee of Ways and Means, and the amendment moved by Mr. Lawless on the previous evening, that the Income-tax be not extended to Ireland, having been put, was negatived by 246 votes against 61

Another "scene" took place, in which the Irish members took part, and in which a statement was made by Captain MAGAN, that when the Irish members held a meeting up-stairs, during the existence of the Derby Administration, certain members of Parliament who attended assured them that if the Government that was then expected to come into office, did obtain office, no Income-tax would be imposed upon Ireland. Captain Magan proceeded to speak of the "incoherent wanderings" of the hon member for Clonmell (Mr. Lawless), and of "his guilty conscience" and a disgraceful scene of noise and disorder ensued. Mr. LAWLESS, who rose in a state of great excitement, in vain attempted to gain a hearing; and tumultuous and deafening shouts of "Order!" "Chair!" and "Spoke!" rendered it impossible either for the Chairman, Mr. Lawless, or any other hon member to obtain a hearing. When the confusion had subsided, Mr. FITZGERALD moved an amendment, with the view of exempting from Income-tax incomes derived from trades and professions in Ireland. The CHANCELLOR of the EXCHEQUER said he proposed to make certain alterations in the machinery, so as to make the Income-tax as little unpopular in Ireland as possible; and Mr. FITZGERALD offered to withdraw his amendment. Mr. M'MAHON, however, opposed the withdrawal, and the debate proceeded. Mr. R. M. Fox implored his Irish fellow-countrymen never again to repeat in that house the scenes which had been witnessed yesterday and to night. The amendment was put, and negatived, without a division.

HOUSE OF LORDS.—MONDAY.

On the presentation of a petition by the Earl of SHAFTESBURY, praying for the registration and inspection of nurseries,

The Archbishop of DUBLIN declared that additional protection was wanted for the individuals immured in these establishments. He related an instance of gross oppression which had occurred within his own knowledge; and said he wished to see encroachment on domestic privacy. He had never been charged with a wish to abridge the civil or religious liberties of his fellow subjects, but he was convinced that some measure was necessary for the better security of the freedom of his fellow countrymen.

The Bishop of NORWICH related a case in which a Roman Catholic mother applied to him, to know where her child, a girl fifteen years old, had been placed. There was no doubt she was in a nunnery; and the mother wanted to know where her child really was, and to have, occasionally, access to her.

On the motion of the Earl of SHAFTESBURY, a standing order was adopted to secure due accommodation for the working classes whenever thirty or more houses were proposed to be pulled down by an Improvement Bill

The Land Improvement (Ireland) Bill went through committee.

HOUSE OF COMMONS.—MONDAY.

Mr. WILSON, in answer to a question, said that grocers might mix chicory with coffee; but that in every case the mixture must be sold in packets, labelled "Coffee and chicory." "Coffee and chicory mixture." If the mixture were sold without that label, the seller was liable to penalties.

The debate upon Church-rates was postponed until Thursday, the 26th inst.

The reported attempt to obtain the votes of Irish members against Lord Derby's Government, by a promise that an Income-tax should not be imposed upon Ireland, was brought under the notice of the House by Mr. E. BALL. Lord J. RUSSELL stated that no pledge was entertained by the Whig party were the late Government to come in power to make any such bargain, and, so far as he knew, no such contract was made with the Irish party. He would not say that the Whigs would never make any such promise, as circumstances might arise which would render it necessary. Captain MAGAN said the pledge was made by three Irish members of Parliament and he would put a notice on the paper, to give them an opportunity of making explanation.

Lord J. RUSSELL (in answer to Sir F. Baring) said he should post pone until Friday, the 20th, the introduction of his bill to disable persons employed in Her Majesty's dockyards and gun-wharfs, and other civil establishments of the Admiralty and Ordnance, from voting at elections of members to serve in Parliament for the following boroughs:—Chatham and Rochester, Greenwich, Sandwich, Portsmouth, Devonport, Plymouth, Harwich, and Pembroke.

THE BUDGET.

The House then went into Committee of Ways and Means.

Mr. PALMER moved an amendment, the effect of which was to define the annual value of any lands, tenements, or hereditaments, as "the net annual value, after due allowance for repairs, insurance, and management." The Chancellor of the Exchequer had shown that real property was now paying 9d. in the pound to the Income-tax instead of 7d.; and schedule A could not in fairness be called upon still to pay 9d. in the pound instead of 7d., having, in addition, a Legacy-duty imposed upon it.

Mr. ALCOCK supported the Budget; Mr. MILLS, the amendment.

Mr. HEYWOOD doubted whether the Income-tax with all its inequalities, was not more equitable than indirect taxation upon articles of universal consumption. The Income-tax affected some 500,000 only, whereas the indirect taxes affected some 30,000,000 of persons. These indirect taxes were really an Income-tax upon the poor, because they spent a relief from the Income-tax upon articles which were taxed; and he believed that no less than twenty per cent of their incomes went in the shape of indirect taxes to the Government.

Mr. BUCK supported the amendment for the sake of the smaller freeholders. Mr. ACLAND thought it deserved the consideration of the Government. Colonel HARCOURT, having been asked by the late Chancellor of the Exchequer to vote the continuance of the Income-tax for three years, without any such alteration as was now proposed, could not in May vote it at 6d to be unjust and inequitable which in December he had voted to be just and equitable. Mr. SPOONER said that, in 1845, Lord J. Russell declared that the Income-tax was full of fraud, vexation, and inappropriate inquisition. If it were full of fraud and vexation then, it was equally so now; but still the noble Lord proposed to vote for it. Mr. BRIGHT, adverting to charges for insurance, &c., thought it would not be difficult to show that the manufacturers paid 9d. in the pound, as well as landlords. He believed that no class had ever lived there was more dissatisfaction with the mode and manner of the assessment than with the amount of the tax. He should like to see the Commissioners chosen from a list of names sent in by the tax-payers. He should vote against the amendment. Sir T. D. ACLAND said the Budget bore rather heavily upon landed property; but, take it for all in all, it was the noblest and most comprehensive attempt to regulate the finances of the country which it had been his good fortune to witness during the forty years he had been in Parliament. Sir W. JOLLIFFE regarded the Legacy-duty as the acme of injustice.

The CHANCELLOR of the EXCHEQUER contrasted his scheme with that of his predecessor. Last December Mr. Disraeli proposed to give his landed proprietors an unmitigated Schedule A with land paying 9d in the pound; a mitigated Schedule D, in which trades and professions paid 9d; a perpetual Income tax, and a land Legacy-duty *in posse*. That was in fact a proposal to relieve others at the expense of those in Schedule A. The immediate effect of the amendment would be a loss to the revenue of £400,000. But the loss would not stop there: for if Schedule A were relieved to the extent of 10 per cent, an equivalent reduction would have to be made in Schedules C and D, as a total loss to the revenue of £1,000,000. Such a proposal broke up not only the Income-tax but the whole financial proposition of the Government, which held out something like an outline of a general policy, tending to place the finances of the country on a footing of security, to confirm public credit, and to do justice between one class and another of the community.

Mr. DISRAELI remarked upon the inconsistency of the Chancellor of the Exchequer in proving that real property was at present unfairly taxed and then immediately proposing that it should be subjected to a new tax. The right hon gentleman proposed to compensate the possessors of skill and intelligence for the unfairness of their assessment to the Income-tax, by placing a duty upon successions. But, if the Legacy-duty were a tax of compensation for the Income-tax, which was to terminate at the end of seven years, it ought to be a temporary tax Sir J. Graham, not long ago, declared that such a motion as the present ever ought to be resisted. "We found our case (said Mr Disraeli) upon the argument of the Chancellor of the Exchequer, and upon the recommendations of the First Lord of the Admiralty"

Lord J. RUSSELL pointed out the inconsistency between the principle now advocated by Mr. Disraeli, and that stated by him, not only last December, but in the last week on the motion of Sir E. B. Lytton. When the right hon. gentleman brought forward the Budget in December, and again no later than last Monday, he declared that there ought to be a difference between permanent and precarious incomes in the balance of the latter. Now the right hon. gentleman said that permanent incomes should have their burdens lightened as against precarious incomes.

Last Monday the right hon. gentleman said the stick was bent in one direction; and now they say the stick is bent in an opposite direction, and they propose a totally opposite course. Last Monday they said there was no grievance which in one case could be redressed, but they proposed to lighten it, but, because the House refused to accede to the proposal, they now say the opposite scale has become too heavy, and they propose that it should be lightened. Why, what is this conduct on the part of the right hon. gent en and those who follow him, but treating the great question of the Income-tax as a plaything with which they may tamper, and which may be used for party purposes, without any regard to the permanent of our finance or to the settlement of the question? (Hear, and cheers) It must show, I think, to the country, and I will show to the country, that these great and mighty interests of finance interests upon which the safety and well being of the country depend—are treated by the right hon. gentleman in a manner to suit his party purposes at least with such levity and caprice ("Oh, oh!" from the Opposition benches, and cheers from the Ministerial side); that he so changes from week to week the principle upon which his policy is founded, that it would be impossible for this House or this country to rely upon any financial plans of which he might be the founder (Cheers) I am sure he told us trades and professions reserved all our compassion (hear). It is the land which is to be the sole object of our regard. We have now ask—using a somewhat vulgar expression, which has, however, been employed by the high authority by which it was once adopted—"Do I or whel. this life is the jest?" (Great laughter and cheers). Last week it was one interest; this week it is another, and no one is able to say what the proposal of the next week may be.

Lord J. MANNERS observed, that the noble Lord had not answered the claim of justice put forward by Mr. Palmer by appealing to the details of another claim of justice on Monday last.

The House then divided—

Against the amendment	376
For it	251
Majority for Government ..	125

HOUSE OF LORDS. TUESDAY.

EARL GREY brought the discontinuance of transportation under the notice of their Lordships, complaining of the precipitation with which the present Government had abolished transportation, without first consulting Parliament. He defended the reformatory system ending in transportation, which he had introduced, and attacked the evidence for the opposition, which they offered to the continuance of transportation. The Australian colonies had been created by convict labour and by the Imperial expenditure for convict purposes; and they had no right now to turn round and raise an outcry against transportation. He feared that if transportation were not struggling with a difficulty created by Earl Grey himself, who, in one of his despatches, as it was understood by the Governor and the colonists, had certainly held out an expectation that no more convicts would be sent to their island. He declared that that the Government of this country had no right to send convicts to any colony against the consent of its inhabitants; and yet, when the Government, according to the wishes of the people of Van Diemen's Land, determined that transportation to that colony should cease, they were met by this motion

The Earl of CHICHESTER opposed the motion, and proposed an amendment, declaring it to be the opinion of the House that transportation should only be applied to the graver offences, that it should be limited to certain colonies, and that a more complete system of secondary and reformatory punishment should be introduced at home.

The Earl of DERBY supported the motion of Earl Grey. He argued that the time had arrived for discontinuing transportation to Van Diemen's Land, seeing that so strong a feeling had been expressed in that colony. His Government had not abolished it, as the same intent on as the present Government, but they took time to make the necessary arrangements, which the present Government had not done. He concurred with the noble Earl in thinking that the Government had acted imprudently and hastily.

The Duke of NEWCASTLE detailed the arrangements made in the prisons in this country for receiving the convicts who were under sentence of transportation. Convicts would still, and in limited numbers, be sent to West Australia. The proportion of convicts in Van Diemen's Land, at present, was about one to three of the population. Not more than 4000 convicts were sent annually; and if transportation were abandoned, our growing population would soon find 30,000, too small a number to be dreaded. Convicts might, in future, be employed in public works, under the system of Colonel Jebb, in making harbours of refuge, in works of fortification, and in the dockyards. Convict labour used to be a great grievance to the free labourer; but there was now no redundancy of free labour, and this ground of complaint was entirely obviated.

Lord CAMPBELL supported the address. Since he had the honour of a seat on the bench he had never sentenced any criminal to transportation for less than ten years, and, if their Lordships followed his advice, they would not allow any judge to transport for a shorter period than ten years. That was the term within which there was hope a man might become a useful member of society. He was fully persuaded that a secondary punishment so good as transportation had never been, and never would be invented. He would give his cordial support to the motion of his noble friend.

After a few words from the Lord CHANCELLOR and the Duke of ARGYLE,

The House divided—For Earl Grey's motion, 37; for the Earl of Chichester's amendment, 84; majority against Earl Grey's motion, 17.

HOUSE OF COMMONS.—TUESDAY.

INSPECTION OF NUNNERIES.

Mr. T. CHAMBERS rose to move for leave to introduce a bill to facilitate the recovery of liberty in certain cases He admitted that his bill was pointed more directly at monastic institutions. They were described as places of calm retreat and seclusion, where ladies who desired it might retire from the world, and enjoy that tranquillity and peace which they could not enjoy in the busyer scenes of life. But this description was not universally true. The public would not believe that all the inmates of those establishments were contented and voluntary inmates, inasmuch as the buildings were uniformly bolted, barred, and grated like prisons, and all the architectural arrangements made apparently for one object, viz, that of safe custody. Internally, there were not only cells, refectories, and chapels, but dungeons. He did not wish to obtain power to enter nunneries and free ladies from [illegible] but to

vows, if they desired to remain subject to those vows; but, if there were a class of nuns who wished to quit those establishments, the British Constitution ought to enable them to obtain the freedom which they desired. In almost every Roman Catholic country provision was made for the liberation from conventual establishments of dissatisfied inmates:—

In Prussia no novice could take the veil without being first examined as to the sufficiency and propriety of her motives in desiring to take that step. In Russia no convent could receive a nun without making an application to the Synod of Moscow, and producing an affidavit from the novice, showing that it was of her own free will and choice that she was about to enter the institution. In Bavaria monks and nuns were allowed by law for more than three years, and the civil authorities visited all convents every quarter, not only for fiscal purposes, but in order to restore to the world and to society all nuns who might desire to quit them. The exclusion of their convents. In Austria the inmates of conventual institutions might at any time address the civil government privately, stating their desire to leave the convents, and such applications were never refused attention. In many of the convents in France the vows were temporary, and the mayor of each arrondissement had the power of visiting any convent whenever the civil authorities of a locality thought it necessary to do so. The Roman Catholic Relief Act declared that the existence in this country of any religious community or monastery of males was utterly illegal; but the act contained a saving clause as to religious communities of females, which at that time protected only some half-dozen of such institutions. He found, however, that there were now seventy-five nunneries in England and Wales. The nun could not state her wrongs, and, practically, she was out of the reach of redress. The law of England stood helpless at the porch of a nunnery, just as the Emperor of old stood helpless outside the gate of the palace at Rome. The inmates of such institutions were under a system of restraint. A woman under the bondage of perpetual vows was subject to absolute and irresponsible power, which was exercised under the cloak of inviolable secrecy. The most terrible feature of these institutions was, that they were affiliated with similar institutions on the Continent, by which means any inmate offending the superior might at any moment, without the knowledge of her dearest friend, and without appeal to the law, be transported from this country for life; and it was impossible for any sisters of just or to trace out the direction the exile had been carried. It might be said that his proposition would be an insult to the feelings of ladies of high rank and station. If there was no wrong done, there could be no reason why they should resist the appearance once in seven years of a gentleman whose only object would be to make inquiries; and, if wrong was done, the delicate feelings of ladies of rank and station were not to be placed in opposition to the means of doing justice to helpless and unprotected women in the power of irresponsible and despotic authorities, and perhaps of saving their lives. What he proposed was, that the Secretary of State for the Home Department should have the power of appointing any person, or persons, and that those persons, having reasonable grounds to believe—it was the phrase used in a great many acts of Parliament in reference to similar subjects—that improper occurrences existed in any nunnery, should enter the house or building, should have power to go down to the county in which it was situate, there to select a justice of the peace, and in his company to proceed to the place, to ascertain the circumstances, and to see the persons with reference to whom complaint was made. If these gentlemen should be of opinion that the facts which had been brought under their notice were well founded, they would return down and issue a writ of *habeas corpus*, to give the parties suffering the means of obtaining freedom

In conclusion, he appealed to the House to give these persons, who were [illegible] the protection of an inspection.

Mr. C. BERESLEY, who seconded the motion, could not conceive why this country should stand almost alone, with the exception of Spain and Italy, in respect to the inspection of nunneries. The hon. gentleman had also to mention that in Mexico, where the whole population was Roman Catholic, a law was established for the frequent visitation of nunneries.

Mr. BOWYER opposed the motion. The question was whether convents were to exist at all in this country or not; because any inspection by a person appointed by the Government of the day would have the undoubted effect of suppressing nunneries in this country? The education of Roman Catholic ladies was chiefly conducted at these establishments, and the consequence of this inquisitorial and tyrannical inspection would be that the great body of the Roman Catholic ladies would go abroad to be educated. There were two species of convents—one of the more active order, and one of the active order. There were only four houses in all England of the contemplative order. As to the active order, the persons placed in those establishments went out, and might be met daily in the discharge of their Christian duties. The convents elected their superiors and all their officers annually, and it was quite probable they would elect officers who would coerce and tyrannise over the inmates of the convent

Mr. Spooner hartily also opposed the bill. There was no female Roman Catholic in the middle ranks in Ireland who did not owe her education to those convents. The inferior classes were also educated by means of those convents, and made good servants and good wives, and this proved them to be the best friends of the country and of property. He appealed to the noble Lord, on the part of the Government, whether he would needlessly sanction, by allowing this bill to be brought in, an insult which would rankle in the breast of every Roman Catholic of this kingdom?

Mr. FREWEN stated some facts which had come to his knowledge, which made it appear to him that it was not only desirable, but essential, that [illegible] and numerous other sections of the community.

Mr. NEWDEGATE said it was simply preposterous to assert that no young women were kept in these institutions against their will, seeing that several such acts proved that compulsion was practised upon both the inmates and the minds of many of these nuns. With such facts before us we could not remain shut up, and were satisfied with their condition, no one desired to interfere; but it was the duty of Englishmen to see that none of them were shut up against their will or otherwise subject to illegal restraint in these places.

Lord J. RUSSELL opposed the introduction of the bill. He certainly did not approve of these institutions; on the contrary, as a Protestant, he thought there were often grievous consequences. He contended that unless Parliament prohibited the existence of convents altogether, they could not reach the evils which the supporters of this bill had pointed out. Seeing the consolations which the convents afforded to one class of females, and the charitable object of education and visiting the sick to which others of the inmates devoted themselves, he confessed he was disposed to leave the question to the opinions and sense of the Roman Catholics themselves. A remedy like this, differing from the ordinary law of the land, could hardly be used without exciting feelings of great indignation on the part of the Roman Catholics, who would think their religious institutions unduly interfered with. He had no reason to believe that the present law was not sufficient for the protection of personal liberty; and with this feeling he must refuse his assent to the introduction of the bill. The noble Lord resumed his seat amid cheers from the Irish members.

Lord E. HOWARD (who married Miss Talbot) denied that that lady was detained in her convent against her will. On the contrary, she expressed herself with great gratification at the comfort and happiness she had experienced there, and of the happiness it was to live in such an abode.

So little did she regret her residence in a convent, that she carried on now—oh, but it was disgraceful to have these private matters brought forward in this way! It was disgraceful that he should have to allude to the personal affairs of his own household in order to refute those false accusations (Cheers). He was going on to say, when he was led away by those feelings, that he could not see why they could against Jesuits and monasteries; yet there they were, increasing every hour, and laughing in their faces.

He could state things which had come under his own eyes; but, if he did, they would a reply by be denied, the power of denial being one which the Roman gentlemen was perfectly wonderful (Hear, hear). He did not think it right that there should be anywhere a number of the Queen's subjects who could not appeal to her for protection through the ordinary channels, the police, constables, magistrates, and judges of the country. That which he had seen abroad might occur here. He had seen abroad parents force their daughters into convents in order that other favourite daughters might have larger jointures; and he believed there were many such instances. He objected very much to ladies who had taken vows being encouraged to break them; but he must tell the House some few things that had happened, notwithstanding the vigilance of Protestant eyes. This was a statement which had been made to him by a priest who had left the Roman Catholic faith. He had been a curate, officiating at [illegible]. There was a boarder and pensioner at the school of a nunnery, with boarders from the ages of four to eighteen. It then became his duty, as her guardian, to consult her wishes relative to entering the "Nunneries," she replied, "are not such good places as you imagine. I would not pass my life among them for anything you could offer. As to the nuns, they are in a state of continual strife among each other; and the crimes committed among the ladies who are boarders are too shocking to mention" ("Oh, oh!" and cries of "Name the nunnery"). These convents were, in fact, one of the means by which the Popish treasury was filled, and that was one great reason why they were patronised. It was not that ladies might pass their time there in private devotion—not a bit of it.

He thought the country was not prepared the only course that was proper and necessary, and that was for the suppression of monasticism altogether.

Mr. LUCAS declared that the House was asked to legislate without any evidence of facts on which to found legislation.

Mr. WHITESIDE reminded the House that the whole history of the interior of a convent in Cork had been not long since brought before the Court of Chancery in Ireland.

In that case a deed was obtained from Miss Macarthy against her will, and for the advantage of this convent, although she wished to bestow a portion of her property upon her brother and sister; and he must say he conceived that a greater act of tyranny than was exposed in that case could not be practised upon a young and innocent woman. Four or five cases were reported in the records of the Irish courts in which influence of this kind had been brought to bear upon persons possessed of property.

He did not think the bill now before the House would be effectual; but he was satisfied that the entire subject of the relation of these conventual establishments to the State must, with due respect to the feelings and rights of the Roman Catholic gentry of Ireland and England, be seriously and comprehensively regarded by the Legislature of this country.

The House divided. The numbers were—For the motion, 133; against it, 11—majority in favour of the motion, 23

Mr. GREGSON called attention to the Treasury order of February last, relating to the sale of mixtures of coffee and chicory. Mr. J. WILSON stated the number of convictions and punishments under the order, to prove the *bonâ fide* intention of the Government to prosecute in all cases of its infraction. In the two months since the order was issued there had been 1644 inspections by the officers of various grocers' stocks, attended by 94 convictions and fines, and by 135 punishments of a minor description. The Excise had hitherto confined the fines to 40 and 40*s*, but notice had now been given that for future offences the extreme penalty would be inflicted.

HOUSE OF COMMONS.—WEDNESDAY.

Mr. CRAUFURD'S Sheriffs' Courts (Scotland) Bill was thrown out by a majority of 134 against 58

The House went into committee on Mr. M. Gibson's County Rates and Expenditure Bill, but no progress whatever was made with the clauses

HOUSE OF LORDS.—THURSDAY.

On the motion of Earl GRANVILLE, the Exchequer Bills Bill was read a second time. The noble Earl having then moved the suspension of the standing orders, which was agreed to, the bill passed through its remaining stages.

The County Election Polls (Scotland) Bill, and the Chimney Sweepers Regulation Act Amendment Bill were severally read a second time; and the Cathedral Appointments Bill was read a third time.

In reply to the Earl of MALMESBURY, the Earl of ABERDEEN said, from the state of public business in both Houses of Parliament the Government felt that they would not be able to introduce measures in the House of the present session on the subject of the revision of the Poor-laws. He, however, entertained a strong hope that such a measure would be introduced in the next session of Parliament.

On the motion of the Earl of ABERDEEN, it was agreed that the address to her Majesty in relation to the borough of Chichester, agreed to by the House of Commons, and communicated to the House of Lords on the 14th of April, be taken into consideration this day six months. It was further agreed to, that Lord Redesdale should communicate the fact of such a resolution having been adopted by their Lordships to the House of Commons.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

In answer to a question, Sir W. MOLESWORTH said, the present constitution of the Board of Health would terminate with the next session of Parliament, and Government would bring in a bill within that period for renewing it, with such modifications as might be deemed desirable

Sir F. KELLY asked the Chancellor of the Exchequer, whether it is intended to lay the succession tax on interests in property under settlement, during the life of the party entitled to the property; or on interests in property reverting under settlement to the donor or settler of such property? Whether it is assumed, that when the succession tax shall be imposed, the registration of all deeds of settlement will be compulsory by law?

The CHANCELLOR of the EXCHEQUER said, the points had not been overlooked; and with regard to the last question, he would say it was not intended to interfere compulsorily.

In reply to a question from Sir R. H. Inglis, Mr. FITZROY said he would certainly oppose having the Hackney Carriages Bill referred to a Select Committee. He also would be disposed to frame clauses to put down the nuisance of advertising vans, but there was great difficulty in dealing with it.

THE IRISH DISPUTE.

On the motion for going into Committee of Ways and Means,

Captain MAGAN said, that the information which he gave to the House the other night, with respect to an understanding between the Irish members and the Government, that if the former would aid them to turn out the late Government, the Income-tax should not be extended to Ireland, was derived from the hon. member for Roscommon, and the hon. member for Tralee

Mr. FRENCH said, that everything that took place was above board, and that he [illegible]. He saw Mr Hayter, and asked him a question upon the subject of the rumour of an understanding such as was stated. Mr. Hayter said he could only speak of one member of the party (Sir C. Wood), who had said that, if they succeeded to power, it was not their intention to extend the Income-tax to Ireland. He communicated this interview to a meeting of Irish members, and he saw nothing in the whole matter which was not in the natural course of things.

Mr. M. O'CONNELL corroborated the statement of Mr. French

Mr. HAYTER said his memory would not bear him out as to the whole of the conversation referred to by Mr. French. In some portions of which he thought he must have been mistaken. He stated, as he had a right to do, his own opinions, but he thought he had not stated that he could not have stated—the opinions of other people, as if he was authorised to do so

Sir C. WOOD said, it was quite possible that he might have stated that Ireland, with the existing charges upon her was in too exhausted a state to bear our Income-tax

Mr. MALINS said he was of opinion that the whole thing must have originated in a misapprehension on the part of Captain Magan, who had made an erroneous charge, and was called upon to make an apology.

Captain MAGAN denied that he had made an erroneous charge.

After some further conversation the subject dropped; and the House went into Committee of

WAYS AND MEANS.

The CHANCELLOR of the EXCHEQUER moved a resolution, to the effect that, in respect to annuities, and profits arising out of lands, professions, and trades, there shall be paid, for every 20*s*, for two years from April 5, 1853, 7*d*.; for two years from April 5, 1855, 6*d*.; and for three years from April 5, 1857, 5*d*.; "and for and in respect of the occupation of lands, tenements, and hereditaments (other than a dwelling-house occupied by a tenant, distinct from a farm of lands), on every 20*s*. of the annual value thereof, a moiety of each of the said sums, 7*d*., 6*d*., and 5*d*., for the above named terms respectively."

Mr. VANSITTART moved as an amendment, in the second resolution of the Chancellor of the Exchequer's, to insert the words "one third" instead of "a moiety," his object being to assess the profits of the farmer for the purpose of taxation under the Property-tax, from one half of the rent he paid to one third

The CHANCELLOR of the EXCHEQUER resisted the amendment.

After considerable discussion, the committee divided, when the numbers were—For the amendment, 60; against it, 320. Majority against the amendment, 60.

The original resolution was then agreed to.

The CHANCELLOR of the EXCHEQUER then moved the following proposition:—"That towards raising the Supply granted to her Majesty, the Stamp duties payable by law upon, or for, or in respect of legacies, shall be granted and made payable upon and for every succession to the beneficial enjoyment of any real or personal estate, or to the receipt of any portion or additional portion of the income or profits thereof, that may take place upon, or in consequence of the death of any person, under whatever title, whether existing or future, such succession may be derived." The right hon. gentleman prefaced his resolution by a speech of considerable length.

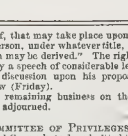
The discussion upon his proposition was then adjourned until to-morrow (Friday).

The remaining business on the paper having been disposed of, the House adjourned.

COMMITTEE OF PRIVILEGES.—HOUSE OF LORDS.—The claim of Lord Gervase to be admitted to vote for Representative Peers in Ireland was heard and admitted on Thursday; the counsel for the claimant being Mr. Alexander, Q.C., and Mr. Peter Burke.

OBITUARY OF EMINENT PERSONS.

SUSAN, MARCHIONESS OF DALHOUSIE.



LADY DALHOUSIE, who was taken from her passage home from India on board the *Monarch*, died when off Land's End, on the 4th inst. The vessel had had very fine weather until Sunday last, when a strong southerly gale came on, which produced in her Ladyship such a degree of extreme debility from seasickness, that she sank under it on the 5th.

Lady Dalhousie had just completed her 50th year. She was the eldest daughter of the present Marquis of Tweeddale, sister of the Duchess of Wellington, and niece maternally of the Duke of Manchester. Her marriage with the Earl (now Marquis) of Dalhousie, took place January 21st, 1838, and its issue consists of two daughters. Lady Susan Georgiana Ramsay, born January 9th, 1837; and Lady Edith Christian Ramsay, born October 6th, 1839.

SIR GODFREY WEBSTER, BART.

SIR GODFREY WEBSTER died on the 1st inst., at Battle Abbey, Sussex, in the 80th year of his age; and is succeeded in the title and estates by his eldest son, now Sir Augustus Frederick Webster, R.N., C.B. Sir Godfrey entered the Royal Navy in 1838, and attained the rank of Commander in 1850. In 1841, being then Lieutenant, he took part in the operations on the coast of Syria, including the bombardment of St. Jean d'Acre; and, in 1847, he was appointed to the command of the *Tartarus* steamer

He was son of the late Sir Godfrey Vassall Webster, Bart., by Charlotte, his wife, daughter of Robert Adamson, Esq. He married, in 1831, Sarah Joanna, youngest daughter of William Murray, Esq., and widow of the Hon. Charles Ashburnham.

GENERAL SIR THOMAS GAGE MONTRESOR, KT., K.C.H., K.C.

THE death of this gallant officer occurred on the 26th ult., at Dover.

Sir Thomas was born at New York, in 1774, the third son of John Montresor, Esq., Chief Engineer in America, descended from the ancient French family of Le Tresor. He entered the army in 1793; was Deputy Assistant Quartermaster General in Flanders, in 1794; and served as Aide-de-camp to Lord Hutchinson in the expedition to Egypt, in 1801. He rose to Lieut.-Colonel he received on bringing the despatches from Cairo. From 1803 to 1810 he was in India; for some time in command of the 2nd Dragoons, and afterwards of a subsidiary force at Hyderabad, where he distinguished himself by the suppression of a serious insurrection. During four years he commanded the troops of the Peninsular Army, where he was taken prisoner, and detained thirteen months. Subsequently, he shared in the brilliant exploits of the Peninsular campaigns, and received a cross and three clasps for Busaco, Albuhera, Badajos, Nivelle, Nive, Orthes, and Toulouse. He was also present at the storming of Seringapatam, and numerous other actions; and completed his military career at the crowning victory of Waterloo. Sir Robert was a General in the Portuguese army, Lieutenant-General in the British service, and a Knight of the Tower and Sword. He was also a Knight Commander of the Bath, and a Knight of the Tower and Sword.

He married Miss Very, only child of William Vesey, Esq., of Farnhall, Hunts.

THE LATE DUKE OF WELLINGTON'S WILL (public at Paris) is chiefly known as a testamentary and commercial curiosity. An attempt having been made to assassinate Louis Napoleon in the Bois de Boulogne, which was by repeated with success, I [illegible] during my visit to Paris. He then [illegible] was in [illegible] assistant executors in these words: "I leave to the trustees [illegible] Act of Parliament to carry into execution the objects of the [illegible] power to sell and dispose of the whole or any part of my personal estate [illegible] my debts to be paid; and bequeaths to each of his executors a year's wages. To his second son, Lord Charles Wellesley, he leaves £1000 a year, or £20,000 on attaining the age of [illegible] eldest son, Arthur Marquis of Douro should receive all the par [illegible] grants, and the pension and estates given to him by the Sovereigns of Spain, Portugal, and the Netherlands; Apsley-house, and all the furniture. There are no other bequests, either specific, public, or private, but a codicil, dated [illegible] with, there is a [illegible] also [illegible] property he was in possession of when he died [illegible] Lord Charles Wellesley, £2,500; [illegible] the funds, £1000, and of private security, £2,500. The character of his Grace's autograph is, throughout, light and thin: the will is signed "Wellington," and has his seal, and bears date 17th February, 1848. The will ease are C. Campbell, Colonel and Captain Dragoon Guards; Geo. Wheeler, 4th Dragoon Guards; Arthur Hill, Esq., and Henry [illegible]. The will was received at Messrs. Coutts's banking-house on the 23rd February, 1848, where it has ever since remained in an envelope, sealed with his Grace's seal, and endorsed "Duke of Wellington's will." which was only opened on the 18th of September, 1852, being four days after his decease, by his confidential legal adviser, John Parkinson, Esq., and in the presence of the present Duke. The will is closely written on the entire four sides of a sheet of foolscap. The personal effects, as we have before noticed, were sworn under £200,000. The executors, according to the terms of the will, and who were the trustees under the parliamentary grant referred to by his Grace, being then in office as Prime Minister (Earl Derby), Chancellor of the Exchequer (Disraeli), and Speaker of the House of Commons, having renounced probate, letters of administration (will annexed) were granted to the Duke of Wellington, one of the executors of the deceased, there being no residuary legatee named in the will.

THE LATE LUDWIG TIECK.

IN our Journal of last week we announced the death, on the 28th ult., at Berlin, of the poet Tieck, the rival of Schiller and Goethe; one of the few survivors of a past age of German literature, and not the least of those who made it illustrious. Tieck was born in Berlin on the 31st of May, 1773; so that a few days only were wanting to complete his full measure of fourscore years; although severe physical suffering, from gout—the attacks of which began as early as 1806—encroached on the best part of his existence from that period onward, and for many years before its close had reduced him to a nearly helpless state.

Tieck's poetical and prose works are very numerous; but perhaps the principal of them are "Der gestiefelt Kater," "Fantasus," "Rothkelchen," "Die heilige Genofeva," "Der Blaubart," and "Vittoria Accorombona."

The Romantic school, in which Tieck appears both as the virtual founder and the chief illustrator (says a writer in the *Athenæum*), was rather the natural product of a peculiar and morbid state of things on minds of a certain [illegible] child temper, than [illegible] [illegible] public [illegible] [illegible] [illegible] [illegible] [illegible] life wherein

NEW WAREHOUSES ERECTED FOR MESSRS. BROWN, SON, AND CO., MANCHESTER

their spiritual energies could take root—easily led the young men of genius, of whom Tieck was foremost, to seek a sphere for their exercise in reveries of sentiment, in dreams of old chivalry or legendary fictions, in what seemed earnest and picturesque in the Church of the Middle Ages as well as in the simplicities of early devotional Art. Such are among the main themes of this poetic school—which appear with seducing effect and in various forms of treatment, in Tieck's pages, in place of that heartfelt veracity which alone gives force and endurance to poetic creations. They are, as Tieck himself has somewhere said, Dream-shadows of things and feelings—often gracious, tender, and affecting sometimes, in another phase of their development, delightfully freakish, sparkling with quaint irony, or revelling in the broadest humour. But the stuff of which they are made, the moods of thought which they express, are altogether visionary, fleeting, and unreal. They leave no distinct traces on the mind: in form, they are constantly tending towards

THE LATE LUDWIG TIECK

the vaguest confusions of styles; in effect, they are essentially retrograde and unproductive

Long before the close of his career, Tieck seems to have determined upon a new poetic course, not only leading straight away from the direct absurdity and secondary abuse which had grown upon the Romantic basis which he had formerly laid, but also diverging widely enough from his own earlier literary practice. In this change, which began with the publication of his novels in 1821, the desire to obtain a substantial historic ground for poetic composition is strikingly significant.

In the field of European literature, Tieck was versed as few other men have been; with something of an especial preference for Spanish and English. His love for the latter—as shown by his many excellent labours on our old dramatists, as well as in the translation of Shakspeare—gives him especial claims to regard in this country

His splendid library, which was sold a few years back, was an evidence of judgment as well as of good fortune in the collection of literary treasures, while it showed the wide range of his pursuits

Though Prussian by birth, he passed the greater part of his life at Dresden; and, in addition to his literary labours, distinguished himself by his extraordinary skill as a reader. Royal and aristocratic audiences used to assemble to hear him read with as much enthusiasm as they would have done to hear a first-rate cantatrice. Of late years he resided in Berlin, and enjoyed a liberal pension from the King

NEW WAREHOUSE AT MANCHESTER.

THE style of this building approaches a palatial character, befitting the establishment of a merchant prince; and altogether it is a great ornament to the city of Manchester. It has been built for Messrs Brown, Son, and Co., and is adapted for the sale of every variety and description of manufactures for home and foreign consumption. The building is six stories in height, and covers an area of more than 1000 square yards. Notwithstanding that the height of the several floors does not exceed 11 feet, great architectural effect has been obtained. The main dimensions are:—Frontage, 75 feet; sides, 115 feet; height, 62 feet. The whole has been admirably executed in stone: the bold line of corbels throughout the façade, the ornamental chimneys, and other details, are excellent The architect is Mr. Walters, of Manchester, who, with the very liberal fund placed at his disposal, has produced a building highly creditable to his taste and skill.

EXPLOSION OF GUNPOWDER AT WIGAN.—THREE LIVES LOST.

THE wreck in the Illustration shows all that remained of a house at New Springs, near Wigan, after a recent explosion of gunpowder, by which three persons were killed, and the lives of several others were endangered

The house consisted of three rooms on the ground floor, two fronting the highway. One was occupied as a shop, kept by Hugh Smallshaw, and the other as a sitting room; and behind the shop was a kitchen The room over the kitchen was occupied as a store-room, and those above the shop and sitting-room were bed-chambers. The basement story was divided into three cellars. Adjoining was a cottage, separated by the sitting-room just mentioned from the shop.

There are several collieries in the neighbourhood, and two new pits in process of being sunk. Smallshaw kept in stock blasting powder for sale to miners, and had several casks on hand. At the time of the accident there were three casks, containing 50 lbs. each, in the store-room, and one about half full behind the shop counter. The shop was lighted with candles; and hither, at about half past eight o'clock on Friday night, the 30th ult., Mrs Lever, wife of a collier, went to purchase bread. There were then in the shop Smallshaw and his wife; in the kitchen, the servant woman and four children—the youngest an infant in a cradle: and in the cellar a nurse girl, in all nine persons, including Mrs. Lever. Suddenly there was a terrific explosion, flames rushed out of the shop window and across the road, and in a moment the house lay in ruins. The room over the shop was completely lifted up, and fell at the back of the premises, and the front was blown into the highway; but the remainder of the tenement fell into the cellars. The loud report caused by the explosion was heard at a distance of about three hundred yards; and a crowd quickly collected round the ruin, which was by this time enveloped in flames. The fire having been sufficiently subdued, search was made for the unfortunate sufferers. The infant was found on the margin of a brook at the back of the house, amongst a heap of rubbish; and, strange to say, comparatively little injured. In the front cellar, Smallshaw, his wife, and Mrs Lever were found lying two or three yards apart. They were all very much burned and severely bruised. Mrs. Smallshaw was barely alive, and expired about one o'clock next morning. The other two persons were quite dead. Further search was then made in the ruins; and Edward Banister found and rescued his sister (the servant) and the two eldest children. They were fastened amidst the rubbish in the cellar below what had been the kitchen. Subsequently the remaining child and nurse-girl were taken out. They were all more or less injured by burns and bruises, but none of them were seriously wounded, with the exception of the nurse-girl

It is fortunate so many escaped, for the building was blown down to the foundation; and had it not been for the manner in which the kitchen ceiling fell in and covered the servant and children, the fatality would, no doubt, have been more extensive: the escape of the infant seems to have been almost miraculous. We have stated that there were three half-casks of gunpowder in the store-room above the kitchen. These fell with the room itself and the rest of the contents into the cellar, and there lay in the midst of the burning rubbish. The top of one of the casks which had been opened was covered with a piece of rough canvas stitched on: it is said that a burning flour-sack was pulled from the top of this cask, yet the powder in it and the other two casks was not ignited. Had this 150 lbs. of powder been "fired," especially while the children, servant, and nurse-girl lay in the rubbish, the consequence might have been a still more awful sacrifice of life. As it was, the casks were safely removed. The cottage adjoining Smallshaw's house was much

REMAINS OF A HOUSE, AT WIGAN, AFTER AN EXPLOSION OF GUNPOWDER.

shaken; a clock which hung against the wall was dashed across the house, and the wall partially forced in. The blast must have been very powerful, for in a field on the opposite side of the highway, a tablecloth, canister, and some slates were found, at a distance of about 100 yards from the building. On Monday an inquest was held upon the bodies, when, after hearing the evidence of several witnesses, a verdict of "Accidental Death" was returned

The immediate cause of the explosion remains a mystery. It appears that candles were used in the shop, and a spark may have fallen or a snuff been unthinkingly thrown into the open cask of powder behind the shop counter. On the other hand, it was stated at the inquest, that sparks were seen to come out of the cellar window below the shop before the powder exploded, and that there was a fire in the cellar. It is possible that sparks may have ascended the cellar chimney which was connected with the fire-place in the shop, and that one or more of them thus found their way into the powder-tub which stood in or near the empty fire-place

PARLIAMENTARY PORTRAITS.

MR. PHILLIMORE, Q.C., M.P. FOR LEOMINSTER.

DURING the late general election, it was remarked that a large proportion of the new candidates were members of the legal profession—either advocates or solicitors. Of the latter class some few obtained seats; for instance, Mr. Hadfield, for Sheffield; and Mr. Morrough, for Bridport: although in no essential respect could their previous pursuits bear on their new duties as Members of Parliament. Of the host of barristers who preferred their pretensions to the electors, many got in whose former career had been passed in comparative obscurity, and who had not even attained that amount of proficiency in public speaking, the possession of which is one of the pleas urged in favour of the choice of barristers by constituencies. In justice to the latter, it must be admitted that by far the greater number of the advocates returned to Parliament at the late election were men of sufficient professional standing and success to warrant their lifting their aspirations still higher; and of these, one not the least worthy is Mr. John George Phillimore, the member for Leominster.

MR. J. G. PHILLIMORE, Q.C., M.P. FOR LEOMINSTER.—(FROM A DAGUERREOTYPE BY BEARD.)

Mr. Phillimore comes of a good parliamentary, as well as of a good legal stock. The explorer of "Hansard" will find the name of Dr. Phillimore, as a frequent and influential speaker, in days almost beyond the memory of the present generation—ere Wellington was famous—and "when George III. was King." If we mistake not, this gentleman was an active politician at the time when the present Marquis of Lansdowne, then Lord Henry Petty, was Chancellor of the Exchequer. He was also a distinguished advocate in the Ecclesiastical Courts, where "Phillimore" would seem to have become a household name.

Mr. Phillimore, M.P., is the eldest son of Dr. Phillimore. He was born in the year 1809. His mother was the niece of the first Lord Bagot, daughter of the Rev. Walter Bagot, of Blithfield, in the county of Stafford (Lord Bagot's brother), and Anne Swinnerton, of Butterton, in the same county. Mr. Phillimore was educated at Westminster; from whence he proceeded to Christ Church College, Oxford, where he was made a faculty student, and took his degree of B.A., before he had reached his twentieth year. Called to the bar, he became a member of the Oxford Circuit, and for some time he was the leader at the Shrewsbury sessions. He steadily advanced to a considerable reputation among the profession as a sound lawyer, and a safe advocate. He had also distinguished himself by several legal works of much ability, which are well thought of by those most competent to form a judgment of their legal merits. Of these we may mention Mr. Phillimore's "History of the Roman Law," and his "History of the Law of Evidence," as standard works. Mr. Phillimore is also the author of two lectures on Jurisprudence and the Canon Law; and of two pamphlets on Law Reform, which excited much attention; and of which one of the chief features was that they recommended the abolition of special pleading, before the issuing of the recent commissions on Law Reform, which have led to such important changes. Mr. Phillimore also published a *brochure* entitled a "Letter from the Ghost of Sir William Saunders;" and he wrote a vindication of Robert Phillimore's "Lyttelton," from the strictures on it in Mr. Croker's review.

In January, 1851, Mr. Phillimore was appointed Reader on Jurisprudence and Civil Law to the Honourable Society of the Middle Temple. In the July following he was made one of her Majesty's Counsel, and on the first day of Michaelmas Term in the same year he was elected a Bencher of Lincoln's Inn. In June of the present year the delegates of all the Inns of Court fixed on Mr. Phillimore as the most fit person to be Reader on Constitutional Law and Legal History; and he was accordingly appointed to that useful, and, in a professional point of view, responsible office by all the Inns of Court.

Mr. Phillimore married the second daughter of the Lord Justice Knight Bruce. In politics he professes himself a Whig; and at the last general election he was returned to the House of Commons as member for Leominster. The seat had been filled by Mr. Frederick Peel, who, however, went elsewhere; and Mr. Phillimore, after a contest with Mr. J. P. Willoughby, was returned by a majority of 16; polling 206 votes to his antagonist's 190. Mr. Phillimore has since made his *début* with effect as a speaker.

ST. ANNE'S CHURCH, HIGHGATE RISE.

THE consecration of the new Church of St. Anne, Brookfield, Highgate-rise, took place on Tuesday last. The impressive ceremony was performed by the Lord Bishop of London, in the presence of a large congregation, including several of the clergy, and many of the principal families in the neighbourhood.

This church has been erected and endowed at the private expense of Miss Anne Barnett, as a memorial church to her late brother, Mr. Richard Barnett, who was a partner in the firm of Sir Henry Meux and Co., the eminent brewers. The situation is between Kentish-town and Highgate, and adjoining Holly Lodge, the residence of Miss Burdett Coutts. Amongst the trees and fields it has a most picturesque appearance; and it will be a very great accommodation to the inhabitants of the district, there having been no church nearer than Highgate or Kentish-town. The style, which is Early English, has been very happily carried out, both with regard to its general effect, and attention to the details and workmanship, by Messrs. Wm. Cubitt and Co., of Grays-inn-road. The length of the nave is sixty-seven feet, which is divided by columns into five bays; width of the north and south aisles seventeen feet, and the width of the nave the same as the chancel, nineteen feet six inches. The length of the chancel is twenty seven feet, the clear height of the aisles is thirty, and that of the nave forty-three feet. The height of tower and spire from the ground is 140 feet. The aisles and nave have high pitched open timber roofs, and form three pointed arches. The chancel rises three steps from the floor of the church, and is paved with Minton's tiles. There is a clerestory, lighted by five two-light windows on each side. Accommodation is provided for 600 persons, 110 of the sittings being free. The reading-desk and pewing are principally of pitch pine, varnished. The height of the pewing is greater than is now generally adopted; which, it is thought, will add to the comfort of the worshippers, the pew-doors are lower than the pewing. Hot-water pipes run along the passages of the nave and aisles to warm the church. The tower is open above the western entrance, and forms a gallery, which is lighted by the western window of the tower. Externally, the church is built of rubble stone, from Chapel Town, in the neighbourhood of Leeds, laid in courses, and is of a warm brown colour, forming an agreeable contrast with the Bath stone dressed work of the windows, doors, and quoins. The total expenditure upon the church, including hot-water apparatus, gas, enclosing fences, &c., will be £7000. The organ is a very superior instrument, manufactured by Mr. Walker, of Francis-street, Tottenham-court-road, at a cost of £450 the expense of which has also been defrayed by Miss Barnett. The Rev. Mr Stooks, who until recently officiated at St. James's, Westminster, is appointed by the benevolent foundress the Incumbent of the district.

After the ceremony of consecration, Miss Barnett provided an elegant déjeuner for the Bishop and several guests; which ended the day's proceedings, to the satisfaction of all who had taken a part in this good work.

PRESENTATION OF THE SHAKSPEARE TESTIMONIAL TO KOSSUTH.

THE public presentation of this interesting Testimonial to M. Kossuth took place at the London Tavern on Friday evening, last week. Long before the hour appointed for the presentation the large room at the tavern was densely crowded. In the gallery were Madame Kossuth and family, and several Hungarian ladies. The chair was taken by Lord Dudley Stuart, who entered the room at seven o'clock, accompanied by M. Kossuth, Mr. Cobden, Sir Joshua Walmsley, Mr. C. Gilpin, Mr. Nicholay, and some of the more distinguished of the Hungarian exiles. M. Kossuth looked exceedingly well, and was received with a hearty burst of cheering, which was renewed again and again before the proceedings were allowed to commence. Prominently on the platform was placed the testimonial itself, consisting of a neatly constructed model of Shakspeare's house at Stratford-upon-Avon, in which was placed a splendidly-bound copy of "Knight's Shakspeare," ornamented with the arms of the Kossuth family, and elaborately decorated in crimson silk and gold. On the front is a silver plate, with the following inscription:

Purchased with 3215 pence, subscribed by Englishmen and women, as a tribute to Louis Kossuth, who achieved his noble mastery of the English language, to be exercised in the noblest cause, from the page of Shakspeare.

Lord Dudley Stuart having addressed the meeting in a speech that was loudly cheered, in accordance with repeated suggestions from the

THE KOSSUTH (SHAKSPEARE) TESTIMONIAL.

rear of the meeting, the testimonial was elevated to the balcony on the platform; and Mr. Douglas Jerrold, having mounted the table, addressed M. Kossuth in a speech replete with poetic feeling and epigrammatic point. M. Kossuth rose to respond, and was greeted with great enthusiasm. Having been induced to mount on chairs, the better to be seen and heard, he commenced by saying he felt, after an abstinence of some months from public speaking, almost the embarrassment of a debutant. He replied first to the concluding sentiment of Mr. Jerrold's address.

My Lord, I have been deeply touched by the precious addition to the numerous tokens of friendship and sympathy to my country, with which people of different climates, different in origin, in language, religious worship, habits, and political organization, has favoured me; tokens worthy to adorn the national hall of new-born Hungary, once the trial of national misfortune shall pass. And may I sink or swim, may I live or die, I trust to God they will be placed there, as grand as memorials of the brotherly tie which unites the national members of mankind to one common family, which has one common father there above. To those memorials the old Magyar will lead the children of the children to inspire them with the same just feeling of brotherly affection to their fellowmen, and tell them how we have merited those tokens of world-wide sympathy by having fought bravely, and endured unsparingly for freedom and fatherland; and admonish them to remain worthy of that sympathy by using wisely, and by unsparing resolution, that freedom which we will have conquered for them. That, sir, permit me to say, will be a more adequate use of this your valuable gift, than should I with selfish egotism of innocent joy only keep it to delight me and my children with at my own humble fireside

M. Kossuth went on to characterise the might of public opinion; but we have only space to quote his striking description of the circumstances under which he became acquainted at once with Shakspeare and the English language

For months (said Kossuth) I was in a damp lonely chamber; seeing neither the sky nor the earth, with none of those inexhaustible consolations which bountiful nature affords to misfortune and sufferings. And there I was, without a book to read, without a pen to write: there I was with God, with my tranquil conscience, and with meditation alone. But it is fearful to be alone, with nothing to meet the gazing eye. Imagination raises its dreadful wings and carries the mind in a magnetic flight to mysterious regions, of which no philosopher has ever dreamed I gathered up all the strength of my mind, and bade him stop that dangerous soaring. It was done, but I got afraid of my-self So I told my fellers to give me something to read. Yes, answered they, but nothing political. Well, give me Shakspeare, with an English grammar and a dictionary; that you will take, I trust, not to be political. Of course, no, answered they, and gave it to me—and there I sat musing over it. For months it was a sealed book to me, as the hieroglyphs were long to Champolion, and as Layard's Assyrian monuments still are. But at last the light spread over me; and I drank, with never-quenched thirst, from that limpid source of delightful instruction. Thus I learnt to write English I know. But I learnt something more besides. I learnt politics. What, politics from Shakspeare? Yes, gentlemen. What else are politics than philosophy applied to the social condition of men? and what is philosophy but the knowledge of nature and of the human heart? and who ever penetrated deeper into the recesses of those mysteries than Shakspeare did?

Since his release from Kutayah, he stated he had made 600 speeches—had been listened to and acclaimed by literally millions of people. This was because he had spoken for liberty, because he had held up the bleeding image of his country. And the best thanks he could give for this testimonial, and similar honours, was the assurance that he and his country in word and deed would, at any time, but would never give up the resolve of retrieving independence M. Kossuth then proceeded to inveigh against the House of Austria, adding—

I beseech you but to read the declaration of independence of Hungary I will let it be reprinted and sold for a shilling in England to print it (A parenthetical exclamation that excited immense cheering) that it may be recalled to the memory of the world

He concluded by again expressing his trust in the force of public opinion, and his heartfelt gratitude for this gift

Alderman Wire, Sir Joshua Walmsley, and Mr Cobden then addressed the meeting—the last named at some length—in severe reprobation of the Government.

Mr. Gilpin moved, and Mr. Nicholay seconded, a vote of thanks to the chairman; who announced that several meetings to sympathise with M. Kossuth were in preparation. The meeting broke up with hearty cheering for Kossuth and his family

The copy of Shakspeare presented to Kossuth, is superbly bound in mulberry-coloured morocco. The case containing the books is the model of Shakspeare's house, very delicately executed by Messrs. Howitt, of High Holborn. The interior and exterior are of white holly, to represent lime-wash; the outside transverse timbers of black oak. The roof is made of birch, to represent thatch. The doors are of brown oak, with black oak graining. On a silver plate above the centre window is the inscription

ST. GABRIEL'S CHURCH, PIMLICO.

One of the most agreeable duties we have to perform is to chronicle the progress of Church extension—not by means of funds provided by Parliamentary grants, but by the munificence of private gentlemen, or voluntary offerings of the zeal and piety of the laity. It is impossible to note the new churches which are week by week adorning by their picturesque beauty almost every nook and corner of this favoured land without a feeling of pleasure that our national prosperity is taking this outward and grateful form of expression; nor is it otherwise than a subject of congratulation that a purer taste now presides over the selection of the architectural features of our cosies natural edifices than prevailed a few years ago. The latest instance we have to record is that of St. Gabriel's Church, Warwick square, Pimlico, which was consecrated on Thursday morning last, by the Right Rev. the Bishop of London. The Bishop, with his chaplains, was received at the door of the church about half-past ten o'clock, by the Chancellor of the Diocese, the Registrar, Minister, and Churchwardens, and was by them conducted to the vestry-room. He was proceeded in his route to the communion-table the Minister (the Rev. Brymer Belcher, B.A.) presented to the Bishop the petition, praying him to consecrate the church. The petition having been read aloud by the Registrar, a procession was formed, and the Bishop with the chaplains and clergy of the district, in surplices, their robes walked from the east to the west end of the church and back again, repeating alternately the 24th Psalm. The deed of consecration was then presented to the Bishop by the minister. After the usual prayers and the Litany, the Bishop preached the consecration sermon, in which he pointed out the importance of consecration which the Bishop signed. The name of the church was then read by the officiating minister, the Rev. Thomas Fuller, Perpetual Curate of St. Peter's, Pimlico. The communion service was read by the Bishop, and notice was given that the holy communion would be celebrated on the following Sunday. The Bishop, then preached an eloquent sermon. The musical services were under the direction of Mr. Bare, of St. Peter's Church. The Countess of Ashburnham and several ladies of distinction were among the congregation, which was very numerous

St. Gabriel's Church has been erected by subscription; the Marquis of Westminster having (as in the case of St. Michael's Church) contributed the munificent sum of £5000, besides the value of the freehold site. The finely Decorated style of architecture has been adopted, and the building is constructed of Kentish rag-stone, with Caen-stone dressings throughout. There is a campanile tower and spire, 150 feet high, attached to the north-west corner of the church; with a bell-chamber, calculated for a peal of ten bells, only one of which is at present provided. At the north-east corner of the church is a sacristy, having a priest's door from the chancel. The aisles are divided from the nave and chancel by seven arched bays of Caen stone, carrying a clerestory. There is a gallery at the west end of the church, standing free of the stone-pillars: this being found requisite, from the great want of church accommodation, in the extensive and increasing neighbourhood. The ceiling of the chancel, and the face of the east wall, have been appropriately decorated by Mr Bulmer, of Sloane-st. The church is calculated to hold 1150 adults and children, in pews and open free benches.

The dimensions of the church are as follows:—Length of the nave and aisles, eighty feet, and fifty-seven feet wide; length of the chancel, thirty three feet, and twenty-six feet wide; length and width of the chancel-aisles, thirteen feet; height of the nave to the apex of the open timber roof, sixty feet; height of the aisles, twenty-four feet; height of the chancel to the top of the vaulted ceiling, forty feet.

There is a spacious and lofty crypt, under the church and chancel, many feet below the level of the adjoining streets

The Rev. Brymer Belcher, late curate of St. Peter's Church, Eatonsquare, is the first Incumbent

The total cost of the building, including the vaulted enclosure, iron railing, warming-apparatus, and gas-fittings, is £9350

Messrs. T. Cundy are the architects; Mr John Kelk is the builder; the iron-work and gas-standards are by Mr. Thomas Potter. The handsome and elaborately-carved stone font was executed by Mr. Samuel Cundy, of Lower Belgrave-place, and presented by him to the church. The chancel is paved with Minton's encaustic tiles, at the expense of the Incumbent.

CHURCH, UNIVERSITIES, &c.

BISHOP OF NATAL.—The Rev. J. W. Colenso, son of Mr. Colenso, of Lostwithiel, has been appointed Bishop of Natal.

PREFERMENTS AND APPOINTMENTS.—The Rev. A. P. Saunders, D.D., to the Deanery of Peterborough. The Rev. H. S. Richmond, M.A., to the Rectory of Bishopstone-cum-Seaford, near Stow-on-the-Wold. The Rev. J. James, to the Rectory of Avington, Berks. The Rev. A. J. Maclean, to the Head Mastership of Bath Grammar-school; and the Rectory of Charlcombe, Somerset. The Bishop of Lincoln (Dr. Jackson) has appointed the Rev. T. F. Henney his Lordship's Examining Chaplain. The Rev. J. R. Young, M.A., to the Rural Deanery of Leamington. The Rev. W. H. Havergal, M.A., and the Rev. J. Jones, M.A., to be Vicars Choral in the Cathedral Church of Hereford. The Rev. J. W. Parr, to an Honorary Canonry in Manchester Cathedral.

THE INSTALLATION.—A sumptuous entertainment will be given to the Earl of Powis, on his being installed into the Vice-Chancellor, in the hall of Worcester College, on Tuesday, June 7; and on Thursday, June 9, his Lordship, as visitor of Pembroke College, will be entertained in the College Hall by the Master and Fellows of that College.

NEW CHURCH AT DEANSHANGER.—It is our pleasing duty this week to record the laying of the corner stone of the new church at Deanshanger, in the parish of Passenham, Notts, which took place on Tuesday last.

CATHEDRAL AND COLLEGIATE CHURCHES.—It appears, from a return, that the Ecclesiastical Commissioners for England have received, since the 24th of June, 1852, £30,250 5s. 11d. on account of suppressed stalls

MRS. H. B. STOWE AT STAFFORD-HOUSE

On Saturday last a number of ladies and gentlemen assembled at Stafford-house for the purpose of meeting those who promoted the "Women's Memorial" every," and others interested in the visit of Mrs. H. B. Stowe to this country, and to give expression personally to the respect and admiration which the distinguished lady excited. Among those present observed the Duke and Duchess of Sutherland, the Duke and Duchess of [illegible] and Countess of Shaftesbury, Lord John Russell, Lord and Lady Lansdowne, the Earl of Carlisle, Right Hon. W. Ewart, [illegible] Monckton Milnes, the Archbishop of Dublin, Mr. and Mrs. Whately, the Marchioness of Allesbury, Frances Countess of Waldegrave, Lady Mr and Mr. Cowper, Lady Catherine, the Bishop of Oxford, Lord and Lady Mahington, Lord Panmure, Lord and Lady [illegible] Hamilton, Lord Grimsby, the Dean of St. Paul's, Dowager Countess of Carlisle, the Earl of Harrowby, the Chevalier Bunsen, Mrs. Milman, Lady Dover, &c.

The Duke of Sutherland having introduced Mrs. Stowe to the assembly, a short address was read and presented to her by the Earl of Shaftesbury.

After perusing the address, Mrs. [illegible] (writer) thanked the assembly for the honour and kindness done to his sister, and read a letter to her from Mrs. C. Clay on the subject of negro [illegible]

After partaking of refreshments, Mrs. [illegible] who were present congregated in one of the splendid saloons apart; and Mrs Stowe, [illegible] between the Duchesses of Sutherland and [illegible] entered freely into conversation with her numerous visitors. In the course of her observations she stated that the ladies of England were not at all aware of the real state of feeling of the ladies of America on the subject of slavery. It must not be judged of by the answers sent to the address, nor by the statements in the American newspapers. The ladies of England seem not to be at all aware of the deep feeling of sympathy with which "Uncle Tom's Cabin" was received in America long before it was known in England. The press in America had invariably spoken highly of "Uncle Tom's Cabin." The first word that ever appeared in print against "Uncle Tom's Cabin" was the article in the *Times*. It was then reprinted and re-echoed in our papers, and widely circulated in the form of a tract. The Literary and other manifested against the ladies' address showed how much its force had enraged the advocates of slavery. You in England are happily ignorant of slavery, yet that address has shown your sympathy, and sympathy is very sweet. There is no bitter feeling really between the ladies of the two countries; but [illegible] ways in which the power of their husbands' personal and political [illegible] stood forth and were what they felt on the subject. One good, she [illegible] Uncle Tom's Cabin" was now forgot ten; but it should be mentioned that 60,000 copies of the "Key to Uncle Tom's Cabin" were sold in three days. The practical question was, what can be done? Mrs. Stowe's work [illegible] God first of God, but man also could do something. Sympathy must continue to be expressed. British subjects in Canada must be educated. The use of free grown cotton must be encouraged. The ways in which the great work may be aided by the people of England; remembering that, after all, the issue is in the hand of Him who ordereth all things. [illegible] began to disperse soon after [illegible] Mrs. Stowe having to be thoroughly [illegible] with the [illegible] of the day

DREADFUL LOSS OF LIFE.—The loss of the steamer *Independence* off Margarita Island, in the Pacific (from California), is fully confirmed, and in all the Spanish papers. Of the 153 saved there have been 178 Among the names are those of E. Collins and two children, R. Ford, and R. Francis, all of England Out of eighteen Jews on board, sixteen were sunk by the weight of gold-dust in their pockets. One gentleman offered 60,000 dollars to any one who would save his life, but in vain.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that, of late, a considerable decrease has taken place in the stock of bullion in the Bank of England—it being now under £15,000,000—money continues remarkably abundant and cheap, whilst the rates of discount in London and other parts of the kingdom have thrown demanded by the Bank. In our manufacturing districts the greatest activity prevails; and wages, owing, in some measure to the comparative scarcity of good hands, are advancing. The shipping trade was certainly never in a more prosperous state than at present; nevertheless, some parties complain that our great prosperity cannot last for any lengthened period, arising from the low rates upon capital; and it is argued that increase in counts of money will be transferred to other and more profitable markets. As regards the future, much will, of course, depend, upon the extent of the remittances from Australia and the United States. The exports of the precious metals between this and the close of July will be very large—probably £2,000,000 sterling—and Sweden—chiefly for railway purposes. The continued decline in the value of Exchequer-bills render it a matter of doubt whether the securities falling due in June and August will be taken at the rate of par now payable on March bills. Strong efforts have been made to support the rates by bringing up large parcels, yet prices have ranged from 1s to 1s. 3d. discount. Bills have been opened at the Bank of England to receive the names of stock-holders who are desirous of converting into any of the three description of new securities offered by the Government The number of applications to the present time has been small—representing a sum under £1,000,000 sterling. The whole of the foreign exchanges continue unfavourable to this country

On the whole, the market for Consols has ruled very steady, and prices have been fairly supported, although the actual purchases of stock have not been to any large extent. On Monday, Bank Stock was done at 218. Three per Cents Reduced were 100¾; the Three per Cent Consols, 100⅝; the New Three-and-a-Quarter per Cents, 103½; and Consols for Account, 100⅝. India Bonds were 98s. to 99s.; and Exchequer Bills, 3s. to 4 pm. There was rather more doing on Tuesday, and Consols were very firm. Scarcely any fluctuation took place in the quotations on Wednesday. The transactions in Bank Stock were limited, and the highest quotations were realised:—Bank Stock, 220½; Three per Cents Reduced, 101; Three per Cent Consols, 100¾; New Three-and-a-Quarter per Cents, 103½. Long Annuities, 5 3-16. India Bonds: 98s. to 99s.; Ditto, under £1000, 98s. South-Sea Old Annuities, 109; Consols for Account, 100⅝; and Exchequer Bills, 3s. to 4s. pm.

Foreign Funds are not generally, we consider very little attention; but no very material change has taken place in the quotations. Brazil on Five per Cents have been done at 100½; the Four and a Half per Cents, 100¾ to 101; Danish Five per Cents, 101½; Grenada, Deferred, 11¾; Greek, Red, 9¾; Ditto, Blue, 8¾; Mexican Three per Cents, 21; Peruvian Scrip, 8¾ pm; the Deferred, 6¾ to 6¾; Spanish Three per Cents, 49¾ to 49¾. The New Deferred, 24¼; Spanish Certificates, 6¾ per cent; Ditto Two-and-a-Half per Cents, 6¾; Ditto, Four per Cents, 90¾; Russian Five per Cents, 110; the Four-and-a-Half per Cents, 104¾; Venezuela 38; Sardinian Five per Cents, 97¾ to 98¾; Buenos Ayres, 68; Chilian Six per Cents, 104.

Miscellaneous Securities have been in but moderate request. Australasia Bank Shares have sold at 87½; Bank of India, Australia, and China, 28½; English, Scottish, and Australian, 11¾; London Chartered Bank of Australia, 15¾; London and China, 29; London and Westminster, 20¾; Oriental Bank, 22¾ to 23¾ ex New; Union of London, 15¾; Australian Agricultural, 3¾; British American Land, 7¾; Crystal Palace, 6; Ditto, of France, 2¾; General Screw Shipping Company, 1¾; Hudson's Bay, 25¾; Land and Mineral, 10 to 9¾; Peninsular and Oriental Steam, 87; Ditto, New, 87; South Australian Land, 47; South Australian Investment, 2¾; Van Diemen's Land, 1¾; East and West India Docks, 85; St. Katharine, 101¾; African Steam Ship, 4¾; Assam Tea, 10¾; Australian Tea, 3¾; Australian Wool, 4¾; Canada Five per Cent Bonds, 102¾; Ditto, Six per Cent Bonds, 115¾; General Steam, 3½; Hudson's Bay, 29¾; Royal Mail Steam, 77. The imports of bullion have been £141,000 from Australia, and 188,876 dollars from New York.

Railway Shares have been in but moderate request. In the general quotations no material change has taken place. We understand that, at length, amicable arrangements have been entered into between the North-Western and Great Northern companies. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 29½; Ambergate, Nottingham, and Boston Junction, 6½; Bristol and Exeter, 102½; Caledonian, 68; Chester and Holyhead, 24½; Eastern Counties, 13½; Eastern Union, 10½; East Lancashire, 74; East and West India Docks, and Birmingham Junction, 58; Great Northern Stock, 89; Ditto, A Stock, 55; Great Western, 69; Lancaster and Carlisle, 94; Lancashire and Yorkshire, 80; Ditto, West Riding Union, 83; Leeds Northern, 16¼; London and Blackwall, 8⅝; London and Brighton, 103½; London and North-Western, 119; Ditto, Six Shares, 23; London and South-Western, 90½; Manchester, Sheffield, and Lincolnshire, 36½; Midland, 75; Ditto, Birmingham and Derby, 62½; Newport, Abergavenny, and Hereford, 14; North Staffordshire, 6, 12; Oxford, Worcester, and Wolverhampton, 35⅝; Scottish Central, 98; Scottish Midland, 62; Shrewsbury and Birmingham, 16; Ditto London and North-Western, Guaranteed Stock, 73; South-Eastern, 75½; South Wales, 39¾; Waterford and Kilkenny, 10; York, Newcastle, and Berwick, 70; York and North Midland, 61¾

LINES LEASED AT FIXED RENTAGE.—Clydesdale Junction, 55; Hull and Selby, 11.3; Lowestoft, 4 per cent, 96½; Manchester, Buxton, and Midland, 8½; Midland Bradford, 107, Northern and Eastern, 67; Royston and Hitchin, 121; South Staffordshire, 9; West Cornwall, 11½; Wilts and Somerset, 16¾.

PREFERENCE SHARES.—Aberdeen, 8s ex div.; Ditto, No. 2, 4¾; Eastern Counties, 1 pm.; Ditto, New, 2¾ pm.; Ditto, 3 premium; Eastern Counties Extensions, 1s prem.; Great Northern, 5 per cent, 112½; Ditto, 4½ per Cent, 7½; Great Western, Redeemable, 4½ per Cent, 100; Consolidated Bristol and Birmingham, 5 per Cent, 124; Ditto, 4 per Cent, 84; North British, 11⅝; South-Eastern, 39½; South Wales, 39¾; Waterford and Kilkenny, 10; York, Newcastle, and Berwick, 70; York and North Midland, 61¾

LINES LEASED AT FIXED RENTAGE.—Clydesdale Junction, 55; Hull and Selby, 11.3; Lowestoft, 4 per cent, 96½; Manchester, Buxton, and Midland, 8½; Midland Bradford, 107, Northern and Eastern, 67; Royston and Hitchin, 121; South Staffordshire, 9; West Cornwall, 11½; Wilts and Somerset, 16¾.

PREFERENCE SHARES.—Aberdeen, 8s ex div.; Ditto, No. 2, 4¾; Eastern Counties, 1s prem.; Ditto, New, 2¾ pm.; Ditto, 3 premium; Eastern Counties Extensions, 1s prem.; Great Northern, 5 per cent, 112½; Ditto, 4½ per Cent, 7½; Great Western, Redeemable, 4½ per Cent, 100; Consolidated Bristol and Birmingham, 5 per Cent, 124; Ditto, 4 per Cent, 84; North British, 11⅝; South-Eastern, 39½; South Yorkshire, 19½; York, Newcastle, and Berwick, 70½; York and North Midland, 61¾

FOREIGN.—East Indian, 25½; Ditto Extension, 9½; Great Indian Peninsular, 7½; Luxembourg, 7¾; ditto 6 per Cent Preference, 1¾; Namur and Liege, with Interest, 7¾; Northern of France, 37½; Paris and Lyons, 44½; Paris and Orleans, 44¾; Royal Swedish, 7¼

Mining Shares have continued flat. On Thursday, Agua Fria were 2¾ to 3; Australasian, 2¼; Ave Maria, 4; Imperial Brazilian, 8; Copiapo, 3; Great Nugget Van Serpi, 4; South and North American, 8½; Nouveau Monde, 2¾; Port Phillip, 1½; United Mexican, 4¾; West Mariposa, 1¾.

THE MARKETS.

CORN EXCHANGE.—Owing to the heavy imports of foreign grain and flour to the second for all kinds of English wheat, the trade was heavy, at a decline in quotations. Fine foreign qualities have been held at full currencies; but all other [illegible] have given way 1s. per quarter. The Norfolk trade has ruled very dull, at 1s. per quarter less money. Beans and peas tolerably firm, at full quotations; but foreign [illegible] sold on easier terms.

English.—Wheat, Essex and Kent, red, 32s. to 48s.; ditto, white, 36s. to 50s.; Norfolk and Suffolk, red, 30s. to 46s.; ditto, white, 36s. to 50s.; Lincolnshire and Yorkshire, red, [illegible] ditto, white, 36s. to 50s.; Northumberland and Scotch, red, [illegible] ditto, white, 36s. to 50s.; Rye, 26s. to 30s.; Barley, 20s. to 26s.; Malting ditto, 30s. to 32s.; ditto and Norfolk malt, 34s to [illegible] Beans, Ticks, 28s. to 30s.; Harvison and Pigeon, 30s. to 32s.; Egyptian, 30s. to 32s.; Peas, White boilers, 30s. to 32s.; potato ditto, 32s. to 34s.; Tourmial and Cork, [illegible] Oats, Potato, 20s. to 24s.; Youghal and Cork, [illegible] Poland and Danish, 20s. to 24s.; ditto, old, 30s. to 32s.; Potato ditto, 30s. to 32s.; white, 30s. to 32s.; feeders [illegible] Tares—old, 38s. to 40s.; new, 32s. to 34s.; Rapeseed, 42s. to 44s.; Linseed, 42s. to 44s.; Foreign, French flour, 34s. to 38s.; 2nd qlty, 30s. to 32s. per sack.

Flour.—Town-made, 36s. to 38s.; Essex and Suffolk, 34s. to 36s.; Norfolk, 32s. to 34s.; Stockton, 32s. to 34s.; American, 30s. to 32s. per barrel.

Foreign.—French flour, 34s. to 38s.; 2nd qlty, 30s. to 32s. per sack.

Wheat.—Demand for all kinds of seeds, as the season for sowing is now over, is heavy, the quotations are almost nominal. Canary-seed still sells on the usual terms

Linseed, English, white, 52s. to 56s.; Baltic crushing, 47s. to 50s.; Mediterranean and Odessa, 46s. to 48s.; Hempseed, 29s. to 31s. per quarter. Coriander, 9s. to 10s. per cwt. Brown mustard-seed, 7s. to 8s.; white ditto, 7s. to 9s.; and tares, 5s. 6d. to 6s. 6d. per bushel. Canary, 42s. to 47s. per quarter. Linseed cakes, English, £9 0s. to £9 10s.; Foreign, 47 10s to £9 10s. per ton. Rape cakes, £4 10s. to £5 per ton. Canary, 45s. to 47s. per quarter. Rod clover, 60s. to 84s.; Alsike, 52s. to 60s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; and seconds, 6d. to 7d. per 8lb. loaf.

Imperial Gazette Averages.—Wheat, 44s. 6d.; barley, 24s. 6d.; oats, 19s.; rye, 30s. 7d.; beans, 35s. 8d.; peas, 36s. 3d.

The Seven Years' Average.—Wheat, 44s. 6d.; barley, 24s. 6d.; oats, 19s. 11d.; rye, 30s. 9d.; beans, 35s. 6d.; peas, 36s. 1d.

Duties.—Wheat, in barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—The business doing in all kinds of tea is limited, yet prices continue to be firmly supported. The public sale, which will take place on the 24th inst., will consist of 16,000,000 lbs., against 15,935,381 lbs. in 1852.

Coffee.—Fine coffees are in request, while the inferior sorts remain unsaleable. The public sale, which will take place on the 17th inst., will consist of 3,400,000 lbs., against 3,373,016 lbs. in 1852.

Sugar.—The demand for refined goods has been active, at full prices; otherwise the demand is heavy for all descriptions of raw sugar, at previous currencies.

Coffee.—The demand for all kinds is in request, at from 44s. to 47s. per cwt. Ratafee are on the advance. Red Smyrna, 42s. to 45s.; black, 50s. to 55s.; Benin, 36s. to 40s.; Valencia, 40s. to 46s. per cwt.

Provisions.—Irish butter—the arrivals of which are but moderate—is in good request at full prices. Landed Cork, 94s. to 96s.; Limerick, 92s. to 94s.; Waterford, 92s. to 94s. per cwt. Foreign butter sound. Fine Dorset, 96s. to 100s. per cwt.; fresh, 16s. to 18s. per dozen 2lbs. Foreign bacon in moderate demand. Bacon is in demand. Waterford singeable, 62s. to 64s.; heavy, 61s. to 63s. per cwt. Lard dull at 54s. to 56s. per cwt. Irish hams steady, and 6d. to 6s. 6d. for logs. Hams are very rare and in demand.

Hops.—The market has become less active, and prices are a shade lower. Pockets are to spot, 67s. to 87s. per cwt. Town tallow is scarce, and worth 36s. to 37s. per cwt. Rough fat, 2s. 8d. per 8lb.

Oils.—The general demand is in a sluggish state. In prices we have no change to notice.

Coals.—Carr's Hetton, 19s. 6d.; Hartlepool, 19s.; Haswell, 19s.; Hartley, 18s. 6d.; Hetton, 18s. 3d.; Eden Main, 17s. 6d.; Belmont, 16s. 9d.; Hilton, 18s. 3d.; Casson, 17s. 6d.; Adelaide, 17s. 6d.; Wylam, 16s. 3d.; Tanfield, 15s. per ton.

Hay and Straw.—Meadow hay, 42s. to 84s.; clover ditto, 54s. to 84s.; and old clover, 74s. to 84s. per load. Straw, 24s. to 30s. per load.

Spirits.—Most kinds of rum are in better request, at full prices. Proof East India is selling at 1s. 8d.; and Leewards, 1s. 7d. per gallon. Brandy is rather scarce, and in request. Cognac, best brands of 1831, 6s. 1d. to 7s. 1d.; ditto, 1830, 7s. 1d. to 7s. 3d. per gallon. Genuine sorts are rather higher.

Hops.—The transactions in most kinds are limited, yet prices are well supported. Mid and East Kent pockets, 80s. to 110s.; East Kent, 110s. to 126s.; Sussex, 105s. to 120s. per cwt.

Wool.—The next series of colonial wool sales—at which about 90,000 bales will be offered—is supposed to commence on the 19th inst. Privately, very little is doing

Potatoes.—The supply being decidedly off, the demand has somewhat improved. York Regents are worth 70s. to 80s. per ton

Smithfield.—Although the supplies of fat stock on offer have been reasonably extensive, general demand has had rather a steady sale.

Beef, from 3s. to 4s. 4d.; mutton, 4s. to 5s. 4d.; lamb, 5s. to 6s.; veal, 4s. 2d. to 5s.; pork, 3s. 8d. to 4s. 4d. per 8lb., to sink the offal.

Newgate and Leadenhall.—These markets continue to be well supplied; nevertheless, the trade is firm, as follows:—

Beef, from 2s. 6d. to 3s. 8d.; mutton, 3s. 6d. to 4s. 6d.; lamb, 5s. to 6s.; veal, 3s. 8d. to 4s.; pork, 3s. 6d. to 4s. 6d. per 8lb., to sink the offal.

Newgate and Leadenhall.—These markets continue to be well supplied: nevertheless, the trade is firm, as follows:—

Beef, from 2s. 6d. to 3s. 8d.; mutton, 3s. 6d. to 4s. 6d.; lamb, 5s. to 6s.; veal, 3s. 8d. to 4s.; pork, 3s. 6d. to 4s. 6d. per 8lb., to sink the offal.

SEWING MACHINES.—The greatest Invention of the Age. Important to Shoppers, Tailors, Corsetmakers, and Dog Makers. The Lancashire Sewing Machine Company have the honour to announce that they have succeeded in establishing a new kind to a new MACHINE for this purpose, but especially patented by themselves, possessing the following advantages over any other or hand labour: 1. The stitching is more uniform and much stronger than is possible for hands to make it. 2. The machine is simple in its action and construction, and will produce more work than any twenty hand sewers. 3. It will work a circle, curve or turn a square corner, as well as sew a straight line, and will hem, fell, gather, and put on gores at one operation. 4. The Machine may be seen in operation at the Company's Offices, 2 Lawrence-lane, Cheapside, London, or 36, Blackfriars-street, Manchester.

DEAFNESS.—NEW DISCOVERY. The ORGANIC VIBRATOR, or Artificial Tympanum.—Valuable newly-invented, very small, silicious objects at a distance of from four to five miles, which is found to be available for Deafness, and is of great importance, being used by Gunmakers. TELESCOPES, possessing such extraordinary powers, that some, if not all, will be able to read the name of Landseer, on Jupiter's Moons, Saturn's Ring, and the Lunatic Stars. They supersede every other Kind, and are of all sizes for the Waistcoat-pocket. Shooting. Military purposes, &c. Opera and Race Glasses, fitted with wonderful powers; a number of sizes to choose from; also, a few twelve pounds instead. Invaluable newly invented sweetness Immediately they are placed before the eyes, without pain or inconvenience, clear and distinct the most aged defective sight is brought to the youthful, natural, and agreeable focus.

DEAFNESS. NEW DISCOVERY. The ORGANIC VIBRATOR, or Artificial Tympanum.—Valuable newly-invented, very small, invisible Whalebone Ear Tubes, for the use of the Deaf, entirely different from all others, and of a kind that has never before been introduced, or probably ever can be, produced. Being of the same colour as the skin, it is perceptible to nobody, and may be worn constantly at church and at public assemblies, the impleasant sensation of which, and the singing noise in the ears, are entirely done away with by the assistance that possibly could be desired. Sold by SOLOMONS, Aurists and Opticians, 39, Albemarle-street, Piccadilly

E. and A. DE MORNAY'S PATENT SUGAR-CANE MILL.—This Mill is presented to the notice of the Planter, as having accomplished the desiderata of obtaining by simple machinery a large proportion of that juice which hitherto has been lost. Experience gained during twelve years' successful competition on more than One Hundred Sugar Estates in Brazil, enables the Patentees to assure the planter of the great and advantages of their invention. It may be observed that the most common defect of the old cumbrous sugar-mill. This Mill, with less motive power, extracts 15 per cent more juice than the common mill. Encreasing power is so great that it reduces labour the all almost entire of fuel from juice, and actual saving for fuel after two hours' exposure to the open air. G. W. FIELD, Agent, 4, ADAM-STREET, STRAND.

10th May, 1853.

Office Hours from 9 to 5 daily, and on Friday from 9 to 8.

STEAM to AUSTRALIA.—For ADELAIDE, PORT PHILLIP, and SYDNEY.—The AUSTRALIAN ROYAL MAIL STEAM COMPANY'S new and splendid Screw-propelled Steamship Screw Steam-ship VICTORIA, 1678 tons register, 450-horse power, William Dunning, Commander, will leave the East India Docks here on or about the 6th of JUNE, and embark passengers at Gravesend the day following. The above Steamer has already been in the North Sea two days on an experimental trip; and, more thoroughly to prevent any disagreeable motion, she has been fitted with Bennet and Betts' Patent Gimbals, and return to London, before finally starting on her voyage. The Victoria will go direct from London to the Cape, and thence to Adelaide, Port Phillip, and Sydney, thus obviating the great loss of time experienced on the voyages by the steamers that touch at one or other of these ports. To guarantee the accompt liment of this desired end she will be supplied with a large quantity of 1000 tons of coal, and no fear of exhaustion is to be able to spread as much or more canvas then any of the fast-sailing packets. The extraordinary steady speed has been proved beyond a doubt that the sea-going qualities and speed of the ship are such as to enable her to carry under canvas or steam sufficient for any emergency of the screw.—Particulars as to passage and freight may be obtained on application at the Company's offices, 32, Lombard-street or to CHARLES WALTON, jun., 31, Eastcheap, London-bridge.

OCEAN PARCELS DELIVERY COMPANY, Agar-street, strand opposite Charing-cross Hospital (). This Company has been formed with the view of supplying a cheap, rapid, and certain Parcels Delivery to the Public, and the large quantities of goods by the best established Steamers and Sailing Vessels to all parts of the World. Every description of Merchandize, except Contraband, must have the mark of such a medium of communication; and it shall be the object of the Company to supply the most desirable, directing their attention to the three chief points—Speed, Safety, and Economy. Prospectuses, with the Rates made up for Australia, India, North and South America, the West Indies, the Continent of Europe, and all parts of the World, and Insurance effected free of commission.

G. W. FIELD, Manager.

MECHI, 4, LEADENHALL-STREET, London.—The best and cheapest Dressing-cases for ladies and gentlemen, travelling bags, and all articles of elegant use and luxury. Every thing for the Toilet and Work-table. A superb Stock of Papier Maché articles displayed in elegant Show-rooms.

HAWLEYS, Watchmakers and Goldsmiths, 108, CITY ROAD, and 31, KING WILLIAM-STREET, London-bridge, beg to announce that their Stock of Gold Watches, jewelled in four holes, possessing power, with all the improvements, £3 10s. Silver Watches, with movements equal to the above, £2 5s., a written warranty given with each Watch. Solid Gold Albert Chains, 30s. each. Established upwards of half a century. The only genuine firm of the name in London.

A HANDSOME PRESENT.—A GOLD 9s 6d. each and fine GOLD CHAIN, first class movements once, for £3 10s., very suitable for a present. The description of the watch is as follows:—Horse-head gold case, gold dial, horizontal movement, four brass jewelled, mainspring, compensation balance, second, and all the recent improvements. A written warranty given, and a twelvemonth trial allowed. The watches may be had of the Trade, Hawley and SONS, Watch Manufacturers, 17 and 18, Cornhill, opposite the New Royal Exchange. Any of these elegant patterns may be forwarded through the Post-office with perfect safety, upon the receipt of an order for the amount.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, CORNHILL.—This beautiful metal continues to stand unrivalled amongst all the substitutes for silver. Its intrinsic value, durability, power, and its general appearance, fully sustain its position. It is upwards of thirteen years since this manufacture was introduced by Sarl, and during that time it has been copied under many spurious and unprincipled imitations, the present demand exceeds any former kind, and one of all sizes for the Wholesale trade. Shooting. Military purposes, &c. Opera and Race Glasses, fitted with wonderful powers; a number of sizes to choose from; also, a few twelve pounds instead. Invaluable newly invented sweetness Immediately they are placed before the eyes, without pain or inconvenience, clear and distinct the most aged defective sight is brought to the youthful, natural, and agreeable focus.

DEAFNESS. NEW DISCOVERY. The ORGANIC VIBRATOR, or Artificial Tympanum.—Valuable newly-invented, very small, invisible Whalebone Ear Tubes, for the use of the Deaf, entirely different from all others, and of a kind that has never before been introduced, or probably ever can be, produced. Being of the same colour as the skin, it is perceptible to nobody, and may be worn constantly at church and at public assemblies, the impleasant sensation of which, and the singing noise in the ears, are entirely done away with by the assistance that possibly could be desired. Sold by SOLOMONS, Aurists and Opticians, 39, Albemarle-street, Piccadilly

NEW MUSIC, &c.

D'ALBERT'S NEW POLKA, FLORETTA, and new waltz HELGAR, are both published this day, beautifully illustrated by BRANDARD. Price 3s. "The last compositions of this highly popular composer.—CHAPPELL, 50, New Bond-street.

D'ALBERT'S ROSALINDA VALSE.—Now ready, a second edition of this popular waltz, splendidly illustrated in colours. Price 4s. CHAPPELL, 50, New Bond-street.

THE MILITIA.—The most popular composition of the season is HURRAH FOR THE MILITIA. This patriotic and loyal song, arabic, lined with a beautiful interpair in colours, may be had by order at all Music and Print Shops, price 2s.—Published by LEVEY, QUE, KOMADAS, and Co., 69, Cheapside, London

INGRAM, COOKE, AND CO.'S LIST OF NEW WORKS.

THIRD EDITION OF

WEBSTER'S DICTIONARY OF THE ENGLISH LANGUAGE.

COMPLETE IN ONE VOLUME, ROYAL OCTAVO.

EXHIBITING THE ORIGIN, ORTHOGRAPHY, PRONUNCIATION, AND DEFINITION OF WORDS; COMPRISING ALSO A SYNOPSIS OF WORDS VARIOUSLY PRONOUNCED BY DIFFERENT ORTHOEPISTS; AND WALKER'S KEY TO THE CLASSICAL PRONUNCIATION OF GREEK, LATIN, AND SCRIPTURE PROPER NAMES.

A NEW EDITION, REVISED AND ENLARGED BY C. A. GOODRICH, PROFESSOR IN YALE COLLEGE.

WITH THE ADDITION OF A VOCABULARY OF MODERN GEOGRAPHICAL NAMES, AND THEIR PRONUNCIATION.

Handsomely printed upon a fine paper, in a clear, readable type, in double columns, royal 8vo, extra cloth, 1265 *pages,* 16*s.*; *strongly bound in russia, marbled edges,* £1 4*s.*; *half russia,* £1; *calf gilt,* £1; *half-calf,* 18*s.*

Dr. Webster's Dictionary has long been considered the very best yet published. The work has passed through a number of editions, and in each improvements have been made, by the addition of new matter, and the correction of previous errors, until the Work is now emphatically THE STANDARD DICTIONARY OF THE ENGLISH LANGUAGE. One important feature in this book is its being a DICTIONARY OF SYNONYMS. Under each of the important words all others having the same general signification are arranged together, except in cases where they have been previously exhausted in framing the definitions. This arrangement will be found of frequent use, even to those who are practised in composition, while it affords important aid to young writers in attaining grace, variety, and copiousness of diction

The chief value of a Dictionary consists in its *definitions*—in its giving a clear, full, and accurate exhibition of all the various shades of meaning which belong by established usage to the words of a language. It is in this respect especially that Dr. Webster's Dictionary has been generally considered superior to every other; and to this point, therefore, the labours of the present Editor have been mainly directed. No efforts have been spared to consult the most recent and valuable works, not only in lexicography, but in the various departments of science and the arts embraced in the Dictionary. As these subjects are in a state of continual progress, every important word in its various applications has been diligently examined and compared with the statements made on each topic by the latest and most approved authorities. In addition to this, the Editor has been assisted by various distinguished Professors, who have revised the definitions belonging to their several departments.

On the subject of PRONUNCIATION much labour has also been bestowed in this Edition. A careful comparison has been made with the latest authorities, and wherever changes seemed desirable, they have been introduced. The Key to Pronunciation has been somewhat enlarged, and the *pointed letters* have been used to a still greater extent. Many thousand words have been re-spelt, and no effort has been spared to render the work in all respects a COMPLETE PRONOUNCING DICTIONARY.

The NEW WORDS that have been added amount to several thousands, and the Dictionary now contains 27,000 words more than "Todd's Edition of Johnson."

CAUTION TO BOOKSELLERS AND THE PUBLIC.

The Publishers of WEBSTER'S DICTIONARY, Royal 8vo, feel the necessity of once more calling attention to the undermentioned NOTICE, as a very inferior English Dictionary is now being extensively advertised as "Webster's Dictionary Improved and Modernised."

NOTICE.—WEBSTER'S DICTIONARY OF THE ENGLISH LANGUAGE. Royal 8vo, cloth. The Trade is respectfully informed that "WEBSTER'S DICTIONARY OF THE ENGLISH LANGUAGE," Royal 8vo, can only be obtained of the present Proprietors, Messrs. Ingram, Cooke, and Co.; no other English House having any interest whatever in this Property.

It becomes necessary to state this fact, as an erroneous opinion is prevalent that "Worcester's Dictionary," which is avowedly a mere compilation from the materials of Webster (see Title of Worcester), is the book announced as published at 227, Strand.

THE NATIONAL ILLUSTRATED LIBRARY.

The RAILWAY ANECDOTE-BOOK.—For the Reading of Railway Passengers. Two Thousand Anecdotes for One Shilling. Royal 8vo. In wrapper, 1*s.*; or, bound in cloth, 1*s.* 6*d.*

An ILLUSTRATED BIOGRAPHY of FIELD-MARSHAL the DUKE of WELLINGTON, embracing his Military and Political Career. In clear legible type for Railway Readers. Post 8vo. In elegant wrapper, 1*s.*; in cloth, 1*s.* 6*d.*

WELLINGTONIANA—Anecdotes, Maxims, and Opinions of the Duke of Wellington. Collected by JOHN TIMBS, Compiler of "Laconics," author of "Popular Errors Explained," &c., &c. Post 8vo. Illustrated. In wrapper, 1*s.*; bound in cloth, 1*s.* 6*d.*

LOUIS KOSSUTH, Governor of Hungary. Authentic Life of, from Childhood to his Overthrow by the combined Armies of Austria and Russia. 8vo. Embellished with beautiful Engravings, and uttered in Illustrated Wrapper, 1*s.*

A STORY WITH A VENGEANCE; or, How many Joints may go to a Tale. Inscribed to the genuine number of Railway Travellers, and dedicated to the rest. By ANGUS B REACH and SHIRLEY BROOKS. Steel Engraving by JOHN LEECH, Esq.; and Eight Cuts by SMYTH. Crown 8vo. In wrapper, price 1*s.*; neatly bound in cloth, spotshed edges, price 1*s.* 6*d.*

The DOMESTIC MEDICAL and SURGICAL GUIDE for the NURSERY, the COTTAGE, and the BUSH. Written at the request of Mrs. Caroline Chisholm, by JAMES HOGG, M.R.C.S. With Advice for the Preservation of Health at Sea, and the Orders of the Government relating thereto. Crown 8vo. In wrapper, 1*s.*; cloth, 1*s.* 6*d.*

New Edition, with upwards of Fifty Illustrations by John Gilbert, engraved in the finest style of art by Daniel Brothers,

The SALAMANDRINE; or, Love and Immortality. By CHARLES MACKAY, LL.D., Author of "Egeria," "Legends of the Isles," &c., &c. Super-royal 8vo. Enamel'd boards, gilt edges, £1 1*s.*; Ditto, cloth, gilt edges, £1 1*s.*, Ditto, morocco, elegant, £1 7*s.* 6*d.*

POPULAR ILLUSTRATED EDUCATIONAL WORKS RECENTLY PUBLISHED.

The FIRST SIX BOOKS of EUCLID, with numerous Exercises. Printed on a New Plan, with accurately executed Diagrams. Demy 8vo. Cloth, 2*s.* The present work, embracing the First Six Books of the 'Elements of Euclid,' or, in other words, the fundamen of Plane Geometry, is intended as a companion volume to that issued with on Practical Geometry, the one embracing the theory, the other the application. The text adopted is that of the distinguished mathematician, Dr Simson. In very few instance has any change been made, and that only when it seemed to be positively necessary. Several attempts have been made, by altering the text and the arrangement, to reduce the propositions of Euclid to what may be considered a more popular form, but those have been attended with little success; and a text like that of Simson, clear, direct, and instructive, like absolute truth itself will always be adopted by scholar and student. It has been thought unnecessary to extend this volume beyond the first six books of the Elements, or to enlarge it by notes, as it will be followed by other works carrying the subject forward. A number of EXERCISES on each book have been given, the solutions of which will be published separately.

The ILLUSTRATED PRACTICAL GEOMETRY. Edited by ROBERT SCOTT BURN, Editor of the "Illustrated London Drawing-book." Demy 8vo. Cloth, 2*s.*

FIRST LESSONS in ARITHMETIC, on a NEW PLAN. By HUGO REID, late Principal of the People's College, Nottingham, and Author of numerous Educational Works. Demy 8vo. Cloth, 2*s.*

MECHANICS and MECHANISM. By ROBERT SCOTT BURN. With about 250 Illustrations. Demy 8vo. Cloth, 2*s.*

Second Edition.

The ILLUSTRATED LONDON DRAWING-BOOK. Comprising a Complete Introduction to Drawing and Perspective, with Instructions for Etching on Copper or Steel, &c. Illustrated with above 200 Subjects for Study in every Branch of Art. By ROBERT SCOTT BURN. Demy 8vo. Cloth, 2*s.*

Second Edition.

The ILLUSTRATED LONDON GEOGRAPHY. By JOSEPH GUY, Jun., of Magdalen Hall, Oxford; Author of numerous popular Educational Works. Demy 8vo. With about 100 Engravings of Cities, Costumes, and Wonders of the World, &c. The drawings are made with great care from truthful sources—so necessary in an Elementary Geography. Nine Maps have been engraved by a novel process expressly for this work, and are corrected to the present period. Cloth, 2*s.*; Coloured Plates, 3*s.*

One Hundred and Fortieth Thousand,

The ILLUSTRATED LONDON SPELLING-BOOK. Illustrated by upwards of One Hundred and Seventy Beautiful Woodcuts of Objects and Scenes described; forming by far the most absurdly-Scientific to Learning ever published. 144 pages. Cloth, 1*s.*; ditto, with Coloured Plates, 2*s.*

Forty-first Thousand,

The ILLUSTRATED LONDON READING-BOOK; containing a Series of Lessons on the most Amusing and Instructive Subjects. Selected with great care from the best English Authors in Prose and Verse. The whole beautifully Illustrated with above Two Hundred and Fifty Engravings. Cloth, 2*s.*

Thirty-first Thousand.

The ILLUSTRATED LONDON INSTRUCTOR: being a Companion to the Reading-Book. Consisting of Extracts from English Classical Authors, from the Colonial periods of English Literature to the present day. With One Hundred and Twenty Fine Engravings. Cloth, 2*s.*

ILLUSTRATED NEW TESTAMENT (authorised version); with upwards of 150 Engravings. Beautifully bound in embossed gilt cloth, gilt edges, price 5*s.*

JOHN BARNETT'S New Edition of WADE'S HAND-BOOK to the PIANO-FORTE, comprising an Easy Rudimental Introduction to the Study of that Instrument and Music in general, the Art of Fingering according to the modes of the best Masters, every Style of various Exercise Series, &c., in all the Major and Minor Keys, and interspersed by Relaxations from Study, consisting of Popular Mood es and Romances, and to relieve from the Pianoforte Compositions of the most celebrated Masters, also a Short and Easy Introduction to Harmony or Counterpoint, and a new Vocabulary of Terms. Demy 4to. Neatly bound in cloth, with Engravings and Diagrams, price 6*s.*

LONDON: INGRAM, COOKE, AND CO.; AND ALL BOOKSELLERS.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, MAY 14, 1853.

SUPPLEMENT TO THE

ILLUSTRATED LONDON NEWS.

No. 622.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MAY 14, 1853. [TWO NUMBERS, 1s.

EXHIBITION OF THE ROYAL ACADEMY, 1853.

GENERAL REVIEW.

As the result of repeated visits to the rooms of the Royal Academy, we beg now to submit the following general review, in which we have endeavoured to include some mention of every work of mark and likelihood, or which would at all interest either the lover of art or the ordinary visitor. The labour attendant upon our researches no one will underrate who knows the scene of crowding and crushing which the principal rooms have usually presented during the greater part of each day since the Exhibition has been opened; and we may add that it has only been by going very early in the morning that we have been able to obtain a proper view of many of the most important pictures. When the rooms become full, it is painful to see the good people pressing forward actually within nose-length of the pictures "on the line," where they cannot possibly see anything of them, except as so many square feet of painted canvas; at the same time effectually preventing those behind them, who are at the proper distance for taking in the general scope of the artists' labours, from catching even a glimpse of the frames. As for the pictures hung above-head, up to the very ceiling, it is a neck-breaking task to examine them—and, even then, without the aid of an opera or racing-glass, *à quoi bon* the painful exertion? It is high time that the monstrous absurdity involved in this state of affairs should be remedied—that proper "hanging" accommodation should be provided in all our public galleries, by which due regard may be had to the height and distance at which the pictures are placed from the eye (regulated by their dimensions and style of colouring), and also the light which is to fall upon them. Meantime, the Royal Academy would consult both the interests of exhibitors and of the public by putting up a railing round the three principal rooms, at about a yard distant from the walls, by which, as respects the principal objects of attraction on the line, the evil we complain of would be mitigated.

In proceeding now to give our *resumé* of the principal works in the Exhibition, we need hardly state that, in order to confine the matter to something like reasonable limits, we have restricted our observations to works of oil painting and sculpture, being those of most general interest.

EAST ROOM.

1. "The Royal Pair of the Jungle." By H. Calver. A fine lion and lioness (life size): somewhat tame in execution. This picture hangs over the door of the Great Room

7. "A Turkish Merchant." By D. Macnee. A good study as regards both the head and the hands; the drapery and background sober and agreeable in tone

8. "A Sunny Evening." By T. S. Cooper, A. In some respects, a pretty little landscape; but the sky too cold; and what sun-rays there are, too pale to justify the title.

9. Is "A Scene from the 'Merchant of Venice'"—by J. Hollins, A.—illustrating the well-known passage where *Shylock* admonishes his daughter:—

> *Jessica*, my girl,
> Look to my house I am right loth to go:
> There is some ill a-brewing towards my rest,
> For I did dream of money-bags to-night.

The *Shylock* is not exactly "the Jew that Shakspeare drew," and Kean's wondrously impersonated: he wants the cunning calculating eye, and that air of depression and sadness, which asserts well with his constant brooding over the sufferings of his tribe. The figure, however, is a manly one, and well painted. *Jessica* is an insipid-looking miss; and *Launcelot*—though in good case—of too stolid aspect for the "merry devil" his young mistress describes him to be. The general execution is satisfactory.

10. "Bethany." By W. E. Dighton."

> And fast beside the olive-bordered way,
> Stands the blest home where Jesus deigned to stay.

We cannot compliment the artist on the execution of this view, it being tame and ineffective

12. "Cornelian Bay, near Scarborough." By A. Clint. A charming little sea-view, full of nice detail, and most agreeable in tone.

13. "The Thorny and the Flowery Path." By T. Uwins, R.A. Mr. Uwins here attempts to "point a moral" for the especial behoof of the rising generation—representing a youth, evidently of impassioned temperament, hesitating between the counsels of a stern-looking monk, who seeks to induce him to enter the cloister, and the more cheerful invitations of a party of pleasure-seekers, who are indulging in a dance, inspired by the juice of the grape. The subject-matter of this picture is too sententious to attract much sympathy; but the execution is artistic; and the colouring—particularly of the more cheerful portion of it—florid and effective.

15. "The Angel Directing the Shepherds to Bethlehem." By W. F. Woodington. There is much merit in this composition. The attitudes of the figures are well conceived, but they are a little hard in the execution; they have also a curious appearance of being in relief, owing to the manner in which the light falls, being derived from the star in the distance, reflected by the white robe of the Angel. In this idea—which is very appropriately adopted—the artist follows an example set by Correggio in his celebrated picture of "Christ on the Mount of Olives."

16. "Highlands." By Niemann. This picture represents a wide expanse of moor, broken with rude boulders, and thinly covered with stunted herbage It is clever in parts; but, as a whole, is sombre, and less pleasing than many other of this artist's works.

20. "A Dominican Monk Preaching" S. A. Hart, R.A. No one can say this is a bad picture; but certainly few would be likely to call it an agreeable one, or one calculated to elevate the sentiments of the beholder. The monk is of forbidding countenance, and cadaverous hue; and he lays down the law as if he were presiding at an *auto-da-fé*.

21. "Off the South Coast." By J. Wilson, jun Delicately painted, but wanting in tone.

22 "Melancthon." By A. Johnston. This picture illustrates an anecdote related by D'Aubigné of the great Reformer:—

> A French traveller having one day found the Preceptor of Germany rocking his infant with one hand and with a book in the other, started back in surprise; but Melancthon, without being discomposed, so warmly explained to him the value of children in the sight of God, that the stranger left the house (to use his own words) wiser than he entered it.

The story is well told; and the execution throughout delicate and pleasing; Melancthon's wife, with her golden hair, and light-blue

No. 488. "SOPHIA AND OLIVIA"—(FROM "THE VICAR OF WAKEFIELD")—PAINTED BY T. FAED.

head dress, is a bright set-off to the sombre drapery of the other two figures.

28. "Wellington's First Great Victory—the Battle of Assaye." By A. Cooper, R.A.

The victory of Assaye (says the author of "The History of the Highland Clans") was one of the most brilliant achievements ever performed by the British arms in India, whether we consider the immense disparity of force, or the obstinacy with which the enemy sustained the contest. Ninety-eight pieces of cannon, and an immense quantity of military stores fell into the hands of the victors. The enemy had 1200 men killed, and about 3000 wounded.

All battle scenes, however, when taken as a whole, are difficult and ungrateful subjects—mere masses of confusion, more fitting for scenic painting than easel pictures; and the one before us has evidently been hastily knocked off, being crude in treatment and weak in colour.

26. A Sketch. By Miss Harriet. A small picture of a lady reading; hung too high to judge of its merits.

27. "Romping." By J. Colby. Another small piece, representing, apparently, Venus and Cupid dancing.

28. "The Running Stream." By J. Colby. Under this title, we have a pretty group of a little girl and boy embracing.

32. "Mont Richard, on the Cher, France;" and, 34, "Part of the Old Walls at Bacharach, on the Rhine." By W. Callow. Two small views, very nicely painted.

35. "The Poacher—Scene on a Highland River." By F. R. Lee, R.A. This is one of the best landscapes Mr. Lee ever painted. It represents a deep dell, where "the Poacher" is hard at work spearing salmon.

36. "The Incredulity of St. Thomas." By F. Overbeck. Overbeck, the leader of the "Revival" school in Germany, enjoys a very high repute on the Continent, and deservedly so; for his Scriptural pieces are marked with many of the essential qualities of high art—a firm and graceful outline, and a dignity and sobriety of character which distinguished the earlier masters of Italy. But, on the other hand, there is a certain passionless formality about his figures, and a general dryness about his style, which are inconsistent with the idea of great and original genius. To the work before us these remarks are in every respect applicable. Whilst the figures, by their action and expression, worthily illustrate the solemn passage where Christ says unto St. Thomas—"Reach hither thy finger, and behold my hands; and reach hither my hand and thrust it into my side; and be not faithless but believing," there is nothing to command our emotions; whilst the colouring is so pale and ill-assorted as to repel on a first glance.

39. "Annie Laurie." By F. Wyburd. A pretty little head, in a red and green plaid shawl

42. A Study. By W. Cooper. An old man's head, with a haggard expression.

43. "On the Fell." By F. W. Keyl. A clever group of sheep.

44. "*Claudio* and *Isabella*." By W. H. Hunt.

> *Claud.* Ay, but to die, and go we know not where;
> * * * * * 'Tis too horrible!
> The weariest and most loathèd worldly life,
> That age, ache, penury, and imprisonment
> Can lay on Nature, is a Paradise
> To what we fear of death
> *Measure for Measure*, act iii., scene 1.

This is a strongly-coloured picture, of the pre-Raffaelite school, and displays considerable merit, but also the mistake of carrying matters a little to excess. The attitude and aspect of *Claudio*, as he holds up one of his manacled legs in his hand (in itself a very good illustration of moral weakness) degrade one of the most singular and masterly of Shakspeare's creations to the level of a *Tyke*, or stage poltroon. On the other hand, the face of *Isabella*, as—in reply to his remark, "Death is a fearful thing!" she exclaims, "And a shamed life hateful!"—is heroic and commanding in the extreme.

45. "Cow and Calf." By F. W. Keyl. A companion-piece to No. 43, also very good.

46. "Night." By Sir E. Landseer, R.A.:—

> The moon, clear witness of the fierce affray,
> Her wakeful lamp held o'er that lonely place,
> Fringing with light the wild lake's fitful spray,
> Whilst madly glanced the Borealis race."

This and its companion (No. 69, "Morning") are, without doubt, two of the most masterly productions which have ever come from the hand of this great animal and landscape painter. Two noble red deer are engaged in mortal struggle, their antlers locked in one another; and the glazed and half-closed eye of one of them indicates that the death-scene is near at hand. The scene is a savagely wild one, and the elements are also at strife; admirably realising the lines quoted from the poet. The colouring is broad and deep-toned.

47. Portrait of Sir Elkanah Armitage. Painted by subscription for the Town-hall of Manchester. By G. Patten, A.

54. "Dr. Christison, M.D., Professor of Materia Medica in the University of Edinburgh." By Sir J. Watson Gordon, R.A. Both the above are good and characteristic portraits.

55. "Intercession." By J. P. Knight, R.A. This head, intended to represent the Redeemer in the act of interceding for the souls of men, is a clever Academy study, but has no pretensions to the Divine character it assumes. The drapery is rich in colour—crimson and blue—and effectively disposed in broad masses.

56. "On the Thames, at Magpie Alt." By A. W. Williams. A pretty landscape.

57. "H.M.S. The *Victory* (with the body of Nelson on board) towed into Gibraltar, 28th of October, 1805, seven days after the battle of Trafalgar." By C. Stanfield. This fine picture admirably realises the grand and impressive scene so well described in Lieut. Paul H. Nicholas's narrative:—

> Disabled ships continued to arrive for several days, bringing with them the only four prizes rescued from the fury of the late gale. The anchorage became covered with ships. In the mole lay six dismasted hulls, whose battered sides, dismounted guns, and shattered ports presented unequivocal evidence of the brilliant part they had taken in the gloriously contested battle; a little beyond, the more recently arrived lay at their moorings. At this proud moment no shout of exultation was heard, no joyous felicitations were exchanged, for the lowered flag which waved on the *Victory's* mast marked where the mourned hero lay, and cast a deepened shade over the triumphant scene.

This unrivalled painter has in this work fairly eclipsed all his former productions in the same line. The bold swell of the sea, the curious details of the various disabled shipping, and the heavy, solemn sweep with which the *Victory* comes in amongst them, are of the very poetry of pictorial art.

58. "The Lady Sophia Anderson Pelham." By E. Grant, R.A. An extremely graceful and spirited portrait: the young lady riding on her pony in a park. There is a little confusion as to the rights and lefts of the pony's fore-feet, owing to failure in perspective.

62. "The Death of Grafton—a celebrated Bloodhound." By E. Grimston. A picture in which the sportsman will take a deep interest. The fine old bloodhound meets his death by falling headlong down a precipice. The drawing is full of spirit and truth.

65. "Portrait of the Honourable Miss Hobhouse." By R. Buckner. The head and hands delicately painted; the dress plain white, with pale pink scarf.

66. "Portrait of Richard Cobden, Esq., M.P." By G. Patten, A. An unmistakeable likeness.

67 "The Prophet Daniel." By J. P. Knight, R.A. Another masculine head, with black, instead of a golden yellow beard; and in as rich green dress: but it has nothing to the purpose with the prophet Daniel, or the lines quoted in the catalogue:—

> By the waters of Babylon there we sat down,
> Yea we wept when we remembered Zion.—*Psalms* cxxvii.

68. "The Mill Stream." By H. Jutsum. A very genuine and agreeable little piece.

69. "Morning." By Sir E. Landseer, R.A.

> Locked in the close embrace of death they lay,
> Those mighty heroes of the mountain side—
> Contending champions for the kingly sway,
> In strength and spirit matched, the fought—and died.

The companion picture to No. 46; and how magnificently does it close the terrible drama enacted the "night" over. The two combatants are dead, their antlers still locked and jammed together; and their bodies will soon become the prey of the fox and the eagle, which are already preparing to pounce upon them. Meantime a calm has succeeded to the tempest, and the mountain tops are illumed with the broad rays of the rising sun, casting their reflexes upon the surface of the still lake beneath.

70. "Portrait of Lieutenant-General Sir Charles Napier, standing beside his Arab Charger, Red Rover." By E. Williams. A fine likeness of the old hero of Scinde; but the colouring, unfortunately, opaque.

74. "La Perla de Triana." By J. Philip.

> Mislike me not for my complexion—
> The shadowed livery of the burnish'd sun.

A spirited study of a Spanish gipsy, with a fine, intelligent expression, and dressed in pink wrapper and black mantilla; her gold hair-bodkin and smart ear-rings shewing the love of finery inherent in the race.

75. "The Gillie's Courtship." By A. Cooper, R.A. Represents a scene of courtship in a stable, where is also a white horse. A crude performance.

76. "Florence and Boatswain." By J. C. Horsley. A nice little sketch of a bright-eyed, well-dressed, intelligent-looking girl, leaning against a rough old dog—"Boatswain" to wit.

79. "Fruit." By J. J. Chalon, R.A. Painted, more probably, from "stage properties" than nature.

80. "Mother and Child." By C. W. Cope, R.A. A happy mother hugging her infant, patting its back, and "hushing" it to sleep. A charming little performance.

89. "The Cathedral of St. Stephen, Vienna." By D. Roberts, R.A. A marvellous linear perspective (note particularly the projection of the clock over the arch); all it wants being the addition of aerial medium and genial tone to entitle it to claim rank with works of the highest class in the same line.

93. "The Old Dutch Cow." By J. Ward, R.A. A very old cow, and very ill treated.

94. "A Little Music." By J. J. Chalon, R.A. An evening assemblage of very wiry ladies and gentlemen congregated round a pianoforte. This sketchy, crude affair must surely have escaped unawares and unauthorised from some very old and forgotten shelf in the artist's studio. We cannot believe he would seriously produce it as a specimen of his individual talent, or the incorporate genius of the Academy

95. "La Vivandière." By A. Cooper, R.A. The artist's old white horse again! (which seems nearly worn out in his master's service), bestrode by a stout damsel in regimentals, who discourses with a cuirassier. The colouring is poor and slaty. [We cannot help remarking upon the imprudence of placing three such miserable specimens of Academic prowess as this and the two last-mentioned in juxtaposition, and in the principal room.]

97. "A very clever little "Study of a Dog's Head." By H. C. Trery.

106 "The Letter." By A. C. Chisholm. A clever little picture of a woman, leaning over a balustrade and perusing a letter with earnest interest

109. "The Poacher—Scene on a Highland River." By F. R. Lee, R.A. This artist here again is very successful. The scene is of a bolder character than in No. 31; with a brawling stream dashing through the midst.

110. "The Truant Defeated." By W. Hensley. This clever little picture we engraved and described last week. It exhibits a little rascal, who has been shamming illness, in order to keep away from school, most unmistakeably detected by the doctor. It is a capital idea, and the painting carefully finished.

111. "Cordelia Receiving the News of her Sisters' Cruelty to Lear". by A. F. Patten—falls far short of realising the character and incident intended.

113. "A Nile Flower." By F. Stone, A. An arch-looking female, shading her eyes with her hand.

114. "The Early Lesson." By T. Faed. A nice little bit;—a mother teaching her son his letters.

116. "A Dame's School." By T. Webster, R.A.

> In every village mark'd with little spare,
> Embowered in trees, and hardly known to fame,
> There dwells in lowly shed, and mean attire,
> A matron old, whom we schoolmistress name SHENSTONE.

This is a theme which has served Mr. Webster in good stead on more than one occasion before; and we very much doubt if he has not already extracted all that is to be got out of it. He has sought to vary the scene in the present production by representing the dame "caught napping," the scholars grimacing and gesticulating, and enjoying the *laissez aller* enjoined by the position of affairs after the usual fashion of school folk—that is, artists' school folk. Altogether, compared with others of the same kind, it is a feeble effort.

117. "The Provost of Peterhead." Painted for a public Institution in Edinburgh. By Sir J. Watson Gordon, R.A. A good Portrait

124. "Ruth sleeping at the feet of Boaz." By Sir C. L. Eastlake, P.R.A.

> He went to lie down at the end of the heap of corn: and she came softly, and uncovered his feet, and laid her down. . . . And he said, Who art thou? And she answered, I am Ruth, thine handmaid: spread, therefore, thy skirt over thine handmaid; for thou art a near kinsman. . . . And she lay at his feet until the morning.—*Ruth* iii., 7—14.

This picture occupies the place of honour in the great room, we presume out of deference to the artist's claims as President of the Academy; for in no other respect can we allow it to be entitled to such a position. It is weak and mannered in the extreme. Boaz looks vacantly towards the heaven; Ruth is asleep in anything but a natural or comfortable attitude; and the faces of both are singularly devoid of expression and interest. The colouring comprises an uncertain assemblage of various hues of red, in confused association with yellow, brown, cold blue, pale yellow, &c. Sir C. Eastlake's accomplishments in all that concerns the theory and poetry of art are of a high order, but in the practice of art he is confessedly so inferior as to cause us to regret he does not forego it, and devote his undivided attention to the general interests of the profession and the culture of art, in which his influence would be most valuable

129. "The Village Post-office." By W. F. Witherington, R.A. Here again, as in Webster's "Dame School," we have an instance of working up old materials, instead of seeking new ones, of which there are [illegible] to the industry to seek, and the fame to [illegible] to the purposes of his art. The post-boy, on horseback stands at the village post-office door, where the old post-mistress hands him the "out" letter-bag. The "in" bag, it is to be presumed, has been expeditiously opened, and its contents distributed in the short interval which has occurred since his arrival; as on one side we observe a female poring over a letter with apparent satisfaction, and on the other a family group mourning over bad news from foreign parts, of which the said post-boy, still on his horse, preparing to start off again, has been the bearer. Generally, this picture wants keeping, especially in the colouring, which is gaudy and patchy.

139. "Portraits of a Mother and Daughter:" each taken during childhood, and after eighteen years' interval. By C. W. Cope, R.A. Clever little portraits, in small circular frames; the heads in each full of character; and the styles aptly illustrative of the periods when they were respectively painted.

140. "The Meeting of Jacob and Rachel:" Genesis xxix., 9. By W. Dyce, R.A. A masterly little picture. The action of Jacob, as he rushes to greet Rachel, is highly impulsive: she, on the other hand, exhibits a reserved demeanour not altogether free from the charge of coolness. The limbs are admirably rounded, and the flesh texture delicately finished in a subdued hue. The landscape, the sheep, and various accessories, are well designed, and the execution highly finished.

142. "A Summer Afternoon." By W. F. Witherington, R.A. A scene of hay-making; but the sun very cold.

143. "San Pietro in Castello, Venice, and the Julian Alps, on a November Evening." By E. W. Cooke, A. Remarkable for breadth of treatment, and warmth and transparency of colouring.

145. "Head of a Scribe." Study for a portion of one of the frescoes in the New Palace, Westminster. J. R. Herbert, R.A. We regret to say that this is the only production exhibited by this artist. It is an intelligent head: done with much of that freedom of brush for which the fresco-painters of old were so distinguished.

155. "A Wild Sea-shore at Sunset." F. Danby, R.A. A well-chosen spot, under a fine bold sky; and painted with all the richness and transparency for which the artist is noted. The middle distance, however, appears to us to be too dark, considering the position of the setting sun just on the horizon.

156. "Getting the Dinner." J. F. Pasmore. This is a slight misnomer. The dinner runs a good chance of having to "get" itself; for the cook has gone to sleep in her chair, all the vegetables are unwashed on the ground near her feet, and the dog is about to run off with the uncooked meat from the dresser.

157. "Opie, when a Boy. Reproved by his Mother, for Painting his Father's Portrait on Sunday." By J. Absolon. Here, also, we have a single work, as the contribution of an artist to the Exhibition; but it is an extremely interesting one, and of most praiseworthy execution. It depicts an authentic episode in the career of genius; and the emotions it inspires are of a mixed kind: the conscientious and devout mother reproving her son, for what she conceives to be a desecration of the Sabbath; the latter, meekly contrite for his error; whilst, at the other side of the picture, the father contemplates his son's handiwork with unaffected pride and satisfaction. The background is filled up with a landscape, introducing the village church. In all parts this little work is most delicate and genial in its treatment.

160. "A Study from Nature." By R. Rothwell. Exhibits a little rustic leaning against a post and grinning at the spectator. Nothing very new in the idea, but cleverly hit off

161. "Escape of Eliza." By F. S. Carey.

In that dizzy moment her feet, to her, scarce seemed to touch the ground, and a moment brought her to the water's edge.

The enormous stride with which the artist has gifted the heroine is the only point of remark in this production.

168. "Castle of Chillon, Lake of Geneva, Switzerland." By J. Danby. A very beautifully-painted view of a romantic spot, immortalised by the verse of Byron.

169. "The Rustle of the Tapestry."—Scene in the Tower of London, Anno Domino 1483. By H. C. Selous.

> Evil expecting not, yet vaguely fearing,
> Shrinking at every sound, not knowing wherefore.—*Old Play.*

An imaginative episode in the unhappy story of the young Princes who were murdered by order of the usurper Richard III. One of them is in bed, fast asleep; the other, whilst kneeling at his evening devotions, is startled by some indistinct sound near the apartment, which fills his heart with dread and dire misgivings. Mr. Selous has thrown more of poetry and expression into this little picture than we have usually found in his works. The manipulation throughout is of a very perfect order.

170. "Children of the Mist." By Sir E. Landseer, R.A. A herd of deer on a mountain side, seen indistinctly through a mist. A masterly sketch.

171. "Lady Jane Grey and Roger Ascham." By J. C. Horsley. A touching incident in the life of the unfortunate Lady Jane Grey.

Roger Ascham, her early tutor, visiting her at Bradgate, finds her in her chamber reading the Phædo of Plato, in Greek (the rest of the family being abroad hunting in the park); and to his inquiry why she did not join in the amusements in which the others were engaged, she replied with a smile, "I wisse (think) all their sport in the park is but a shadow to that pleasure that I find in Plato. Alas, good folk, they never felt what true pleasure means.

There is a sweetly melancholy expression in the face of Lady Jane, which admirably realises the sentiment of the occasion.

174. "Othello Relating his Adventures." By C. W. Cope, R.A. A capital picture, illustrating one of the most entrancing narrations in the whole range of the drama.

> *Othello.* Her father loved me; oft invited me;
> Still question'd me the story of my life
> From year to year; the battles, sieges, fortunes
> That I have passed, &c.

The various characters are well discriminated. The old senator listens with calm dignity, but undisguised interest, to the adventures of the soldier of fortune—more admiring the prowess and the success of his achievements than sympathising in the personal suffering and risk by which they had been accomplished. *Desdemona*, with her womanly heart, is engrossed more with the "dangers" than the hard-bought triumphs of the battle-field. *Othello*, the warrior all over, is earnest and eloquent of speech; but his hands show, perhaps, a little too much action for conversational discourse. The colouring is rich, varied, and harmonious

176. Portrait of H.R.H. the Duke of Montpensier, in the uniform of Cavalier Maestrante, of Grenada. By Don A. Giuliani. A striking portrait, but not flattering, being rather hard in treatment.

182. "The Forest Portal." By R. Redgrave, R.A.

> The broad-arched portal of the grove
> Welcome the coming . . . . .
> Gray old trunks that high as heaven
> Mingle their mossy boughs.

There is much of good intention, and a real feeling for nature evinced in this little landscape, which represents a group of broken foliage on the outskirts of a wood. The yellow lights falling amongst the trees, however, are hardly supported by the cold blue sky seen above.

183. "The Nut-gatherers." By A. Bouvier. A small land-cape, executed in a small manner: after the fashion of a tea-tray

186. "Violante." By Sir C. L. Eastlake, P.R.A. Expressionless and of undecided outline. Shakspeare's heroine is dressed in an old-fashioned green dress, set off with a pearl necklace. The flesh is unbecomingly flushed.

187. "Up on the Brae-side." By H. Jutsum. One of Jutsum's genuine little English landscapes, composed of a heath, through which a small stream flows; upon which are a shepherd and his flock.

189. "The Poachers." By T. Earl. Another clever little landscape; with dogs, rabbit-stealing.

190. "Park Scene, with Fallow Deer." By F. Hargett. A similar remark applies to this as to 183.

191. "Venice." By D. Roberts, R.A. A capital picture, in the artist's best style. The water admirably pellucid.

192. "The Confession of St. Thomas." By J. P. Knight, R.A. Another version of the subject adopted by Overbeck, in his picture already noticed. Though there is a great deal of merit in parts of this work, we cannot admire it as a whole, wanting as it is in "keeping." Some of the heads are expressive, and studied upon good models; but many of them betray low intellectuality and affectation in their position and expression; and what is most unfortunate is, that the head of Jesus is by no means the best, or most commanding of the number. The colouring of the flesh is uncertain, and the infusion of a little chiaroscuro over the whole is sadly wanted.

194. "Study for a Susanna." By J. Ballantyne. An Academy study, but from an ill-chosen model.

198. "Mares and Foals, the Property of his Majesty the King of Wirtemberg." By T. B. Zwecker. Hung very high; but the animals appear to be well painted. The landscape rather feeble in colouring.

201. "Maternal affection." By H. W. Pickersgill, R.A.

> —— Joyful in a mother's gentlest cares,
> Blest cares! all other feelings far above!
> Herself more sweetly rears the babe she bears,
> Who never quits the breast no meaner passion shares

A good deal of florid and effective colouring is bestowed upon this group of mother and child; which, however, would, in our opinion, have been more agreeable if more simple in costume.

202. "Devock Water." By W. J. Blacklock. A lake and mountain scene; delicate, but cold in treatment

204. "Winter." By G. Travers. We fancy we discover some merit in this little picture, for all it is hung low, and almost out of sight.

207. "Solomon at the Rock-hewn Dial, Pondering o'er the Flight of Time." By S. A. Hart, R.A.

> Vanity of vanities, saith the preacher Vanity of vanities; all is vanity. *Ecclesiastes*, i., 2

We cannot recognise the Solomon of the Scriptures in this showily-dressed figure, which is much more like that of the magician of an Easter-piece giving the signal for a shift of scene. The palm and other Oriental plants are richly coloured.

209. Portrait of H.R.H. the Duchess of Montpensier, Infanta of Spain. By Don A. Guiliani. A companion to No. 178, and to which the same remarks are applicable.

213. "Children!—They have nailed him to a cross." By J. Leslie. A very clever group; but not at all in keeping with the solemn subject referred to in the title appended to it. It consists of an old woman, of very ordinary cast of features, apparently admonishing or scolding three children as ordinary as herself; and, supposing her warning or rebuke to apply to the offence of stealing apples, or some other juvenile delinquency, nothing would be more appropriate or successful. The crucifix which she holds in her right hand alone reveals the more ambitious theme aimed at by the artist. This painted out, and another title substituted, the picture might be pronounced a good one.

214. "*Polly Peachum*." By C. Baxter. All Mr. Baxter's female faces are pretty, and this is as pretty as any; but it wants character—fancy *Polly Peachum* without a character!—and the bottle and glass on the table are not sufficient to indicate that the gallant *Macheath* has presided over the recent festivities.

215. "A young Missionary." By G. B. O'Neill. A pretty little girl teaching the Scriptures to an aged Indian woman, who listens with marked attention. Nicely painted.

216. "A Brittany Interior." By E. A. Goodall. One of those simple little subjects which this young artist treats so agreeably, and with such artistic and careful finish. The only figures are those of an old woman spinning, and an old man eating soup, at the side of the fire.

217. "The Iron Mask." By C. Landseer, R.A. The old mysterious story of the man in the Iron Mask, has furnished the worthy Keeper of the Academy with the subject for the present very carefully-studied and carefully-painted picture. Who the "Man in the Iron Mask" really was, will probably never be ascertained (any more than who was the author of "Junius"); nor do we think it a matter of much importance to inquire, he and all those interested in his fate having long since departed from the scene. M. Delort, however, as the result of recent researches in the archives of the French Government, states positively that he was an Italian, of the name of Matthioli, and that he was born on the 1st of December, 1640. Whoever he was, the strict seclusion in which he was kept, is well known. It is stated in Ellis's "History of the Iron Mask"—

> The servants who bring him his food, his confessor, and a physician from Pignerlas, a town six leagues distant, were the only persons permitted to see him, and that only in the presence of the Governor, St. Mars, and his Lieutenant, Blanvilliers. The mask was not, as has been erroneously supposed, made of iron, but one of *black velvet* strengthened with whale bone, and fastened behind the head with a padlock, which did not prevent the prisoner from eating or drinking, or impede his respiration.

The artist has represented the physician feeling the prisoner's hand, and a page carrying in a wine carafe on a tray. A constrained silence reigns amongst the group, in strict keeping with the story.

221. "Devonshire Stream, with Cattle." By W. Carter. A good little picture; hung very low

224. "Waterloo, 1815." By G. Jones, R.A. Mr. Jones has painted more than one picture of this great battle, which have been honoured with the special approval of the Great Duke himself. In the present picture the Duke, attended by his staff, is directing the advance of the army. Lord Hill is in the foreground, about to mount a horse, his own having been killed under him. The Marquis of Anglesey is issuing orders for the cavalry. The Foo Guards are already advancing to the attack; and the Light Brigade, under Lord Seaton, is taking the enemy in flank. The British line, under Sir J. Kempt, extends to the left until it unites with the Prussian artillery, which has opened on the French. The French troops, infantry and cavalry, led by Marshal Ney, are descending to make their last unsuccessful attack on the British force. Lord Fitzroy Somerset, wounded, is on the Duke's right, conducted to the rear by General Alava.

225 Is an attempt in the highest walk of art—by J. Severn—and, though, in some respects, somewhat singular in treatment, is altogether of a very high order of merit. The subject is that of Mary Magdalene buying the precious ointment, with which she afterwards anointed the body of Jesus; and, at the time of doing which, she is supposed to have been permitted to foresee the crucifixion of Our Lord.

> She hath done what she could, she is come aforehand to anoint my body to the burying. Verily I say unto you, Wheresoever this Gospel shall be preached throughout the whole world, this also that she hath done shall be spoken of for a memorial of her. *Mark* xiv. 8.

The singularity of the composition consists, in part, in the introduction, on one side of the picture, of the actual buying and selling of the ointment, at the stall of a Jewish apothecary—(the latter a capital figure, life-like and earnest)—a very matter-of-fact transaction, of the earth earthy; whilst, on the other side, is a presentiment of the very opposite character—that of the angelic host, bearing the cross, crown of thorns, and other emblems of the crucifixion. It must be added, that the superior importance is given to the latter by the attitude of the Magdalene, who, leaning against the wall, looks upward, wrapt in contemplation of the miraculous manifestation. This figure, also, is very well conceived, and well wrought out; but her cold blue drapery, coming as it does in the centre of the picture, is destructive of harmonious effect. The little angels, also, are somewhat after the style of the period immediately preceding the decline of sacred art.

233. "Hors de Combat." By A. Cooper, R.A. The old white horse *in extremis*, stretched on the ground; the gallant owner wounded, and resting against his body. Hard fate! hard "treatment" also!

234. "The Mother's Hope." By G. E. Hicks. Another pretty group of a mother and child, the latter undergoing its toilet for the cradle.

MIDDLE ROOM.

235 "A Window-seat at Wittenberg, 1526: Luther, the married Priest." By A. Christie. This might serve as a companion to Mr. Johnson's "Melancthon" (92); and, singular enough, there is a pretty wife and a cradle in both.

237. "The Two Sisters." By W. Crawford.

> Bessie's hair's like a lint-tap,
> She smiles like a May morning
> * * * * *
> Mary's locks are like the craw,
> Her een like diamonds' glances. *-Vide Old Ballad.*

The originals may be very pretty; but, without having seen them, we protest that they are not done justice to in the hard vulgar lineaments before us.

243. "Looking up Loch Etive, from Taimuilt, Argyleshire." By F. R. Lee, R.A. This picture has evidently been hastily produced, betraying a "manner" of handling in which the saving of time has been the main object considered. The general treatment is cold and hard, and the distance implied by the diminutive proportions of the shipping on the river, is not borne out by any attempt at atmospheric aids.

244. "Il Sacro Monte, Orta, Piedmont." By G. E. Hering. A picture of moderate merit.

246. "An Episode of the Happier Days of Charles I." By F. Goodall, A. The only work, we regret to say, exhibited by this very clever artist. It is a brilliant picture, cabinet size, representing Charles I., in his happier days, surrounded by his family and Court, enjoying a water excursion in the state barge, on the Thames, opposite Hampton Court The King's expression is benign and kingly; the Queen exquisitely beautiful, but rather inanimate; the Royal children are amusing themselves with feeding the swans with cake, a supply of which is carried by a black page in attendance. The old waterman and the bargemen at the oars, the halberdiers and others composing the group, are all so many studies, their heads full of life, and instinct with thought. The colouring and general execution are in the highest degree finished and effective. Of this picture we present an Engraving.

249. "The Arctic Council." By S. Pearce. This is a very interesting group picture, representing some of the most distinguished Commanders and others who have borne part and lent aid in our various Arctic expeditions, assembled round a table at the Admiralty, for the purpose of discussing the plan of search for Sir John Franklin. It comprises portraits of Sir George Back, F.R.S., Sir William Edward Parry, F.R.S., Captain E. J. Bird, Sir James C. Ross, F.R.S., Sir Francis Beaufort, K.C.B., F.R.S., John Barrow, Esq., F.R.S., F.S.A., Colonel Sabine, V.P.R.S., Captain W. A. Baillie Hamilton, Sir John Richardson, C.B., F.R.S., Captain F. W. Beechey, F.R.S.; and in frames on the wall, of Sir John Franklin, K.C.H., F.R.S., Captain James Fitzjames, and the late Sir John Barrow, Bart., D.C.L.

250 "The Sirens." By V. Mottez.

> * * * Wide around
> Lie human bones. * * * *
> For swift the dangerous coast, let every ear
> Be stopp'd against the song! 'tis death to hear!
> Firm to the mast with chains thyself be bound. *-POPE'S Odyssey.*

The sirens are of a heavy sort, and the water, too, having a very leaden appearance.

256. "Henry Morton rescuing Lord Evandale from the fury of Burley, at the skirmish of Drumclog." By A. Cooper, R.A.

> Just as he had assisted Evandale, who was much wounded, to extricate himself from his dying horse, and to gain his feet, the two horsemen came up, and one of them exclaiming—"Have at the red coated tyrant!" made a blow at the young nobleman, which Morton parried with difficulty, exclaiming to the rider, who was no other than Burley himself—"Give quarter to this gentleman, for my sake—for the sake," he added, observing that Burley did not immediately recognise him, "of Henry Morton, who so lately sheltered you."

A stirring incident from Scott's "Old Mortality;" in which Mr. Cooper has been more successful than in some other works of his we have had occasion to notice in the present Exhibition.

247. "The Tax Gatherer." By G. B. O'Neill. A scene of real life—we fear, one of every-day occurrence, in which the serious and the comic are ingeniously blended. The relentless tax-gatherer has knocked at the door of a humble—apparently, an orphan home; a timid but intelligent girl answers the summons, prepared to beg the official to "call again," with the best grace she can command; whilst another sister listens behind the door; and, in the back-ground, the care-worn mother is actually pale with nervous apprehension. Mr. O'Neill has thrown a great deal of individuality into the various figures; and has painted every part of this work with great care and happy effect. We have much pleasure in engraving it.

260 "Rimembranza d'Italia. A maiden watching the bridal procession of her lover and rival." By E. H. Harden. A small female study, in the face of which keen observation and intense jealousy are powerfully depicted.

265. "The Order of Release, 1651." By J. E. Millais. This remarkable production, which is, perhaps, the most attractive individual picture in the Exhibition, represents a Highlander who has been taken captive in the Civil Wars, released from prison by virtue of an order which has been procured by his wife. Overcome by his emotions, and weak from loss of blood, and from subsequent privation, the man throws himself upon his wife's neck, at the same time pressing her hand. She, proud and full of joy at the success of her exertions, hands the order of release to the old soldier who acts as gaoler, who scrutinises it in a very business-like manner, wholly indifferent to the emotions passing in the bosoms of those whom it so deeply concerns. In our last week's notice we bore testimony to the admirable pathos thrown into this simple little group, and to the high finish of the various parts—more particularly the flesh surfaces, and the texture of the different materials of clothing. These are triumphs of manipulation which must be seen to be appreciated: and which no words of ours can ever praise. We shall, therefore, now confine what further observations we have to make to other points—points involved in the general composition. It will be remarked of this picture, as of the others hitherto produced by Mr. Millais that it is composed of very few figures; that it is single in its action; and that in arrangement it occupies a single plane; a very simple style of composition, dispensing with the necessity for air, or distance behind the figures; and also avoiding all those opportunities for the arrangement of light and shade in which a master's hand has always distinguish itself. Mr. Millais, by this arrangement, has had his task easier; but his triumph is undoubtedly curtailed by it: and we hope that as he has now achieved so much in the way of local colouring, and evinces so much command of the means of expression he will, in future works, aim at higher game than any he has hitherto ventured upon, both in regard to the number and character of the figures, and the judicious treatment of linear and aërial perspective. There are now two points in the composition itself which we are disposed to cavil at. In the first place, the cutting off part of the soldier's figure by the door is a caprice, which had better have been dispensed with. There was plenty of room to show him entire; and the very fact of chopping him in two, attracts attention to itself as a fact to the prejudice of the interest attaching to the principal group. In the next place, with all respect for the big and faithful dog, which is most admirably painted, we object to his participating on equal terms with the happiness of his master and mistress: his presence, where he stands, his red tongue licking their joined hands, is intrusive: and pictorially, as well as for the poetry of the situation, he would be much more happily introduced at his master's feet.

267. "Playing at School." By Miss M. A. Cole. A comical conceit, cleverly hit off: a little girl sedulously attending to the schooling of four very awkward dolls

268. "A Corner of the Hop-garden." By Eliza Goodall. A nice little picture; introducing a group of children sporting in a hop-garden.

270. "An Interior." By F. D. Hardy. Rather a blank interior, though in itself well painted. The only sign of life is in a cat sitting by the fire.

272 "The Chevalier Bayard, *sans peur et sans reproche*, Conferring the Order of Knighthood on the Infant Son of the Duke of Bourbon, when visiting the Prince, on a journey to Moulins." By J. C. Hook, A. A well arranged group, with a dignity of character commensurate with the chivalrous incident. The old nurse, whose mien is respectful, holds up the infant Prince to receive the recognition of the order of knighthood, the father and mother looking on with expressions of intense interes and satisfaction.

282. E. W. Cooke's facile, broad, and delicate style, is admirably exemplified in a "View in Venice," inscribed—

> Venegia, Venegia,
> Chi non te vede, ei non te pregia.
> *Vide Love's Labour Lost.*

283. "A Stormy Lake." By F. R. Lee, R.A. In this work we have to complain of careless execution—the outline of the mountain being crudely laid on, the water hard, and the general effect cold and unsatisfactory

284. "The Right Hon. Lord Campbell, Lord Chief Justice of England." By F. Grant, R.A. A very good picture; but, as a portrait, not so strikingly like as we could wish.

291. "Twins." By Sir E. Landseer, R.A. A composition of lambs and a sheep, watched over by two dogs. Fine individual studies; but the details of texture are not so successfully realised as in most of the productions of this unrivalled artist.

293 "San Giorgio Maggiore and the Salute, Venice, with Fishing Craft off Chioggia and of the Lagune." By E. W. Cooke, A. The companion to 282, and quite equal to it for soft aerial effect and delicate transparency of water; the gaily-coloured fishing craft executed with wondrous realness of detail.

294. "Angelo Participazio, having rescued his bride from the pirates, returns with her to her family."—*Venetian History*. By F. R. Pickersgill, A. An animated scene; the various figures showing mixed emotions of triumph and joy at the return of their long-lost relative. In the prow of the boat is a suit of chain-armour, a trophy of war. The colouring is bright and healthy.

296. "On the East Lynn, Devon—Early Morning." By J. Dearle. A well-painted view of a pleasingly-diversified country.

297 "A Sea nymph and Cupids." By F. Cruickshank. Very carefully painted, with a certain smack of prettiness about it; but altogether wanting in the poetry, without which such subjects are, in our opinion, without attraction

298. "A Summer's Sunny Afternoon" By T. S. Cooper, A. A masterly landscape, in many respects, particularly in the character of scenery and its breadth of treatment; but the sky is too cold for "a summer's sunny afternoon.

> Louis was forbidden to remain in her room without witnesses. * * *
> One day, however, Blanche discovered her son and daughter-in-law alone together, the former concealed behind the chair of the latter. She said, with a frown, "Go hence: here I alone am Queen"

302. "Field-Marshal the Marquis of Anglesea." By the Hon. H. Graves. A capital, soldier-like portrait, full length, in uniform.

> The composition is very clever and telling. The figure of the Queen Mother, standing, and half turned round, and the fierce expression of her features, are in themselves disagreeable rather than otherwise; but the submissive aspect of the weak young Monarch, and the feminine tenderness of his pretty wife, come in admirably as a contrast, and constitute the charm of a picture, upon the execution of which the artist has evidently bestowed great pains. We regret to add that it is the only work he exhibits this year

325. "An Affray in the Pyrenees with Contrabandistas." By C. Stanfield, R.A. A fine realisation of wild mountain scenery; the front being occupied, to a great extent, with a dark rocky mountain; whilst in the background the bright peaks of the distant glaciers rear their heads. The incident of which this spot is the appropriate scene, is depicted with great spirit

326. "Corfe Castle, Dorsetshire—Sunset." By J. P. Pettitt. An ivy-clad ruin, the local colours of which are elaborated somewhat in imitation of the style of Anthony; the upper part illumined with a broad sunlight.

327. "The Emperor Charles V. at the Monastery of Yuste, August 31, 1558." By W. M. Egley An incident in the cloister life of Charles V., as related in a recent work by Mr. Stirling—

> The sunshine again tempted him into his open gallery. As he sat there, he sent for a portrait of the Empress, and hung for some time, lost in thought, over the gentle face, which, with its blue eyes, auburn hair, and pensive beauty, somewhat resembled the noble countenance of that other Isabella, the great Queen of Castile. He next called for a picture of Our Lord Praying in the Garden, and then for a sketch of the Last Judgment, by Titian. Having looked his last upon the image of the wife of his youth, it seemed as if he were now bidding farewell, in the contemplation of these other favourite pictures, to the noble art which he had loved. * * * * Thus occupied, he remained so long abstracted and motionless, that Mathieo (the Flemish physician), who was on the watch, thought it right to awake him from his reverie.

What we miss in this picture is the fine feeling of melancholy the story itself cannot but inspire in all minds having a spark of veneration for genius of angular and high order. The face of Charles V. is stern enough, but it wants sentiment; Mathieo, in gait and attire, has more the appearance of an ordinary domestic attendant than of a physician. The colouring, also, wants keeping: the cold stone wall at the back, harmonising ill with the bright and varied colours in different parts of the foreground.

331. "Now I'll tell you what we'll do." By F. Stone, R.A. "Now" we hardly know what to say about this very sprightly *genre* picture. Four young country lasses lounging on the ground in the midst of a field, evidently concocting mischief; and the eldest, having hit upon some bright idea, with pointed finger, and a broader leer than the

EXHIBITION OF THE ROYAL ACADEMY.

rest, exclaiming, "Now I'll tell you what we'll do." The others, by their consenting smiles, at once admit the project to be "first rate." There is much fun of a taking kind in the idea; but, unfortunately, much vulgarity of type in the models and in the general treatment.

340. "The Lost Path." By R. Redgrave, R.A. This is also a comical affair, but in another sense. Two extremely well-dressed children have lost their way in a tangled wood, and are sitting upon a bank, crying, in sore affright. One of them, the young lady, has scratched her legs, and hurt her foot with a thorn: there lies her sock on the ground, with marks of blood upon it to attest the latter fact. The trees and herbage are picked out with all the care and nicety of the pre-Raffaellite or Modern Antique school.

341. "An Auction." By W. H. Knight. A good bustling representation of the business of a furniture sale: the characters assembled being variously but intently engaged in the proceedings—some bidding against one another, and others scanning the merits of the different lots.

346. Represents a little girl, with very marked features, and dressed in a white bib, with flowers in her hand, plucking another from a growing fuschia, in pot. A pre-Raff. specimen; to which the following lines are given in the Catalogue as illustrative:—

Thou who hast given me eyes to see,
And love this sight so fair,
Give me a heart to find out thee,
And read thee everywhere.
Christian Year.

347. "Zuyder Zee: Fishing Craft Returning to Port." By E. W. Cooke, A. Another capital seapiece by this admirable artist.

348. "The Ruins of the Temple of Luxor, on the Plain of Thebes." By W. E. Dighton.

The moon is up, and yet it is not night:
Sunset divides the sky with her.

Treated with good breadth, and under a lurid Oriental sky.

349. "The Proud Bird of the Mountain. By J. Wolf.

Firm on her perch
Her ancient and accustomed rock—she sits,
With wing-couched head; and to the morning light
Adjusts her tawny-vent'rous fragment, coped with snow.
Grahame's Birds of Scotland.

A noble eagle perched on a rock, in the midst of a snow-storm. A capital performance.

360. "The Church of the Saluté, Venice." By Mrs. G. E. Hering. A creditable little specimen. The venerable pile seen dimly through the darkness by the light of the moon.

361. "The Shooting Pony." By A. Cooper, R.A. A very decided improvement upon the poor Old White Horse, whose tragic end has been already commemorated (No. 233); but still a little more roundness of drawing, and softness in the textural finish, would be desirable

362. "Queen Isabella of Castile, with her daughters, visited many of the nunneries, taking her needle with her, and endeavouring by her conversation and example to withdraw the inmates from the low and frivolous pleasures to which they were addicted."—Vide Prescott's History of "Ferdinand and Isabella." By J. C. Hook, A. A very agreeable quiet picture. In the centre, the illustrious Royal family, with some of their protégées, are occupied at tapestry work; at the sides are various groups of nuns, who have evidently not yet entirely corrected themselves of their "low and frivolous" habits, one of the youngest amusing herself, whilst lolling out of window, by tickling the nose of an elder "sister," who is asleep, with a peacock's feather. The artist has shown much judgment in the distribution of colour, the richest and fullest tones being in the centre, where the principal personages are assembled.

[illegible] "The Launch." By G. Smith. A burlesque adventure of a youngster afloat in a washing-tub, which his comrades are shoving off with a long pole.

367. "An Irish Peasant Boy." By R. Cahill. A ragged little urchin asleep, with his head resting against a stone bench. His unpillowed rest tells of a friendless and rugged destiny. The outline is firm and correct, and the colouring unaffected and vigorous.

"The Happy Spring Time." By T. Creswick, R.A. The artist has attempted the difficult task of representing the earliest buds of spring upon the extremities of the branches of his trees; but, instead of indicating them generally by means of colour, has sought to individualise them, and that without the aid of the peculiarly refreshing green which they should bear. The result is disappointment: an unpleasant spottiness of surface being substituted for the bright fringe-

No. 592. "DEATH OF THOMAS A BECKET, ARCHBISHOP OF CANTERBURY, DECEMBER 29, [illegible]"—PAINTED BY J. [illegible]

No. 595. "THE AWAKENED CONSCIENCE."—PAINTED BY T. BROOKS.

EXHIBITION OF THE ROYAL ACADEMY.

NO. 199. "DR. WATTS VISITING SOME OF HIS LITTLE FRIENDS."—PAINTED BY A. RANKLEY.

work of nature's creation. To this we must add that the sky and water are too cold for a bright spring day. In other respects the landscape is artistically treated, with good flow of outline and breadth of treatment.

376. "His Grace the Duke of Portland.' By F. Grant, R.A. Here is the true presentment of a "fine old English gentleman—one of the old ten time." The venerable Duke is seated in an easy attitude in an arm-chair; his legs clad in leather breeches and top-boots. He has a common oak stick in his hand, and his face wears the pleasant smile of one at peace with himself and all the world. This admirable portrait is the more interesting from the fact inscribed upon the frame of its having been painted at the expense of, and presented to the original by nearly 800 of his tenantry in testimony of their affection and respect.

377. "Meet of the Limerick Fox-hounds at Croom Castle—a By-day; consisting Portraits." By J. W. Cole. A good sporting scene.

380. "The Answer." By W. M. Wyllie. A small picture of a female, with an unopened letter on the table: hung quite at the top of the room, but appears to possess merit.

381. Study of a Head. By E. W. Long. An Indian, in his native costume. Exceedingly good in tone and expression.

382. Portrait of Hiram Power. By H. W. Phillips. An artistic portrait of the sculptor of "the Greek Slave"—represented in profile—putting the finishing touches to a marble bust.

388. "Caspar and Duck: the property of H.R.H. the Prince of Wales." By A. H. Corbould. A very pretty pony and favourite black dog, with groom attending. Extremely well painted.

390. "A Street in Verona." By D. Roberts, R.A. A rich architectural scene.

395. "The Sick Lamb." By R. Ansdell. A very clever specimen of animal painting.

396. "The Execution of Montrose, at the Cross of Edinburgh, on the 21st of May, 1650." By E. M. Ward, A. This is the first of a series of eight pictures for the Commons' Corridor in the Houses of Parliament, painted by order of the Royal Commission; and the manner in which Mr. Ward has acquitted himself of the task shows that he well appre-

NO. 514. "THE CITY OF REFUGE."—PAINTED BY E. ARMITAGE.

ciated the honour conferred on him in being selected for it. The Marquis of Montrose's name stands in the annals of our history as one of the bravest and stanchest champions of the Royal cause; and, when condemned to an ignominious death, after being taken prisoner in battle, he still exulted in the part he had taken, and seemed to look with pride upon the fate to which it had conducted him:—

> Montrose (writes Lord Mahon, in his "Political Essays"), as proud of the cause in which he was to suffer, had clad himself in rich attire—"more becoming a bridegroom," says one of his enemies, "than a criminal going to the gallows!" At the foot of the scaffold, a further and parting insult was reserved for him: the executioner brought Dr. Wishart's narrative of his exploits, and his own manifesto, to hang around his neck; but Montrose himself assisted in binding them, and, smiling at this new token of his enemies' malice, merely said, "I did not feel more honoured when his Majesty sent me the Garter!"

The artist has treated the subject in a grand, large style, throwing abundance of action and a great variety of expression into his figures The features generally are of that strongly marked order in which Mr. Ward is apt to indulge, and which in this—an historical picture, intended to hang in a corridor—will be found of good effect. He has introduced in the foreground a very touching incident, that of an old man, a Royalist by his garb, who, in spite of the threatening attitude of a pike-man, lifts his bonnet, and utters a parting blessing upon the gallant defender of his King The colouring is boldly contrasted; and the only point upon which we have anything to object is, the bright scarlet attire of Montrose, which, though historically correct, according to John Nicoll's "Diary," blends but ill with the rest, and might have been subdued to a warmer and richer tint, with advantage to the effect of the picture.

408. "Early Lessons." By A. Provis. A clever little warm interior: a companion piece, 414, close at hand.

409. "Music and Art Instructed and Crowned by Poetry." C. Brocky. A great deal of classic feeling is thrown into this little group. The commixture of Poetry is highly intellectual and commanding, though still of extremely feminine character. On either side are Music—a fair, slight creature, with golden hair—and Art, of stronger mould and darker complexion The sympathy between the two, as they are being crowned with laurel chaplets by the Genius of Poetry, is expressed by their looks The colouring and general treatment are alike excellent

410. "A Domestic Incident." By F. D. Hardy. This is a joke. We have here a very small interior, similar to many others which we have already noticed; the only "incident" in which is an old woman, sitting asleep, and sitting out the fire.

415. "The Inauguration, by her Most Gracious Majesty Queen Victoria, and his Royal Highness the Prince Albert, of the Exhibition of all Nations, on the 1st of May, 1851." Painted by command By D. Roberts, R.A. Very fair as an historical record of the event in question; though, pictorially, but a faint reflex of the glorious *coup d'œil* presented on that ever-memorable day. The view is taken from the south transept, looking towards the dais on which her Majesty received the report of the Commissioners, and all the details are filled in with great accuracy and admirable perspective; but the colouring wants transparency, warmth, and glitter, and the general effect is tame and disappointing

423 "William Penny, the Arctic Voyager, Commander of H.M Vessels the *Lady Franklin* and the *Sophia*, employed in the search for Sir John Franklin" By S Pearce. A good, rough, sailor-like portrait, in the bear-skin costume of the northern regions. In the background is a view of the ships of the expedition blocked up in ice.

424 "Cattle and Landscape." By F. R. Lee, R.A., and T. S. Cooper, A. The cattle in this picture are excellent, and the landscape agreeable and natural; with the exception, only, of the water, which is cold, and of the snowy whiteness and opacity at the surface.

441 "The Young Mother." By J. G. Gilbert. This picture, though very unfairly dealt with by the "hangman" of the Academy, we can see enough of to pronounce it of no ordinary merit. It represents a woman, sitting on the ground (seen in profile), with a child across her lap, its little head towards the spectator. Materials simple enough, it will be said; but their very simplicity, and the unaffected manner in which they are treated, show the merit of the artist, and constitute the charm of his work. The woman's expression is modest and matronly; and the flesh of face and hands admirably painted; her drapery, of deep crimson and blue, is loose and easy—a nice medium between the ancient and modern style of costume. In the back-ground a simple landscape is slightly sketched in; with a deep toned, broadly painted sky. The general composition and treatment of this picture would lead one to suppose that the artist had taken Titian for his model; and, all points considered, he could hardly take a better

WEST ROOM.

442. "The Madonna and Child." By G. A. Storey. A very feeble and formal imitation of the coldest and most formal of the early masters.

448. "The Pier and Bay of St. Ives, Cornwall." By E. W. Cooke, A. A picturesque little coast scene, with a coaster and various small craft on the strand within the pier. Time, low water.

449. "Flowers." By Miss A. F. Mutrie. A good specimen of flower-painting; soft in texture, and rich and brilliant in colour.

451. "A Token from the Fight." By G. Stubbs. A small picture of an imaginative subject, which is well and feelingly expressed. A man standing, holds forth some blood-stained garment, which he contemplates with horror and grief, well denoted by the palor of his face; his wife is in a chair, overcome with anguish, her face resting in her lap. The colouring is subdued in tone.

453. "Maternal Solicitude" By R Rothwell

> Intent they gaze into each other's eyes
> With mutual love—that in the mother dwells,
> Calm and profound, the well-spring of her being,
> And in the child sports as a bubbling fount
> In sunshine —E.L., MS

A mother dancing her child on her knee—both faces expressive of great joy and affection; but the flesh is a little too pink, the effect of which on the picture is aggravated by the peach blossom colour of the lady's dress.

454. "A Welsh Interior—Merioneth." A. W. Williams. A charming little nook, with some foliage and cattle

459. "Ceres Demanding of Jupiter the Restoration of her Daughter Proserpine." C. Brocky. The design is somewhat in the style in which the numerous followers of Raphael treated so many of these mythological subjects; and the execution very creditable. Ceres is partially draped in a transparent amber scarf, and the same warm and golden hue prevails over other parts of the picture

460. "Abraham and Isaac" (Genesis, xxii.) J. T. Linnell Mr Linnell has paid more attention to the minute details of his landscape than to his figures, which are small, and of second-rate importance The foliage, and even some flowers on the ground, are elaborated with great minuteness; but the effect is spotty, and by no means equivalent to the labour bestowed.

461. "Wellington at Scrauren." T. J. Barker. A very poor attempt to illustrate the fact recorded of the Duke during the Peninsular War, of his hastily writing his orders in pencil on the parapet of the bridge at Scrauren, in sight of the French under Clausel, not a single person being with him at the time except Lord Fitzroy Somerset, who alone kept up with his rac ng speed

465. "My Garden Door." By R. Leslie, jun. An effort of painstaking copyism of petty details, worthy of the very infancy of art. The scene is the back-yard of a very humble class of house; two children playing with a dog and a cat—mamma looking out of the door at them; above, the muslin blind blowing out of the window; every brick and stone of the house, the wall, and the yard pavement being individually picked out as if daguerrotyped. When will this childishness end?

466. "Edward IV's First Interview with Elizabeth Woodville. By A. Johnston. The story is thus related by Hume:—

> The King came accidentally to the house after a hunting party, in order to pay a visit to the Duchess of Bedford, his aunt, who had espoused in second marriage Sir Richard Woodville. Elizabeth, their daughter, had married Sir John Grey, of Groby, by whom she had children; and her husband being slain in the second battle of St. Albans, on the Lancastrian side, and his estate being for that reason confiscated, his widow retired to live with her father. And as the occasion seemed favourable for obtaining some grace from this gallant monarch, the young widow flung herself at his feet, entreating him to have pity on her children. The sight of so much beauty in affliction strongly affected the amorous Edward; her sorrow, so becoming a virtuous matron made his esteem and regard quickly correspond to his affection.

The treatment of the picture is unequal The group of Elizabeth Woodville and her two children is an extremely beautiful one, and could not have been better in conception, arrangement, or execution; but Edward wants the air of gallant assurance, and the kingly port which history attributes to him, and which art should give him, whether historically correct or not.

470. "Brunetta and Phillis." By A. Solomon.

> Phillis was draped in a brocade more gorgeous and costly than had ever before appeared. * * * Brunetta came in a plain black silk, attended by a negro girl in a petticoat of the same brocade with which Phillis was attired. This drew the attention of the whole company, upon which the unhappy Phillis swooned away.—*Vide Spectator*, No. 80.

The story of the rival beauties in the *Spectator* has furnished the subject for many an excellent picture. Mr. Solomon has treated it with all the gusto of expression and richness of detail, which it could possibly suggest.

471. "Now for your Jack." By T. Clater. A smart little composition of two errand boys playing at cards; other children looking on, and taking a lively interest in the game.

473 "Portraits of his Grace the late Duke of Wellington, K.G., in his study, at Apsley-house (from sittings given in July, 1852), and of his Private Secretary, Algernon F. Greville, Esq." By J. W. Glass. An interesting addition to the historical portrait-subjects relating to the late illustrious Duke. He is seated in his red leather arm-chair, in his modest study at Apsley-house, with a paper in his hand, his secretary bringing him a book, which he, probably, wishes to refer to. The portrait is like, but a little heavy in the lower part of the face.

478. "The Master is Come." By F. Stone, A.

> And when she had so said, she went her way, and called Mary, her sister, secretly, saying, the Master is come, and called for thee.—*John* xi., 28.

The subject of this picture relates to the arrival of Jesus in Bethany, after being informed of the death of Lazarus, the brother of Martha and Mary. Mary having heard of the Lord's arrival close to the city, goes out to meet him, and hastily returns to Martha, who had remained at home, saying "The Master is come and calleth for thee," upon which the latter "arose quickly and came unto him" There is considerable power displayed in the treatment of this incident, though the expression of Martha, seated upon the floor of the house, with her hair dishevelled, is decidedly exaggerated, and more that of terror than of joy. The colouring of this work is singular and not agreeable, being throughout, flesh and all, of a deep brown or stone colour.

479. "The Page." By C. W. Cope, R.A.

> Let your haste commend your duty.—*Shakspeare.*

This very charming little work we engraved in our last: the figure of the fair mistress, who is sending the pretty page on some errand of interest, and that of the little zealous fellow himself, are alike admirable for expression and artistic treatment.

480. "The Monarch Oak." By M. Anthony.

> Our walk was far among the ancient trees;
> There was no road, nor even a woodman's path;
> But a thick umbrage checking the wild growth
> Of weed and sapling, among the soft green turf
> Beneath the branches, of itself had made
> A track that brought us to a slip of lawn.—*Wordsworth.*

The subject matter of this picture, we understand, was taken in the old portion of Windsor Forest, which lies north-west from the town and Castle, beyond St Leonard's-hill. This portion of the forest is not now preserved; owing, it is said, to its having been infested with poachers, who, in one of their encounters, left a Royal keeper dead upon the field. Though this part may not now have many attractions for the sportsman, it has many for the lover of nature, as it is beautifully broken by ravines, down which the water trickles; while the trees over-arch above, and dense masses of foliage fringe the sunny peep of distance beyond. It abounds in ancient trees—trees coeval with the Norman William (tradition assigns one not far distant from this spot to him); some, perhaps, even more ancient, in various states of decay, beautifully contrasted by an under-growth of young wood, also of oak (for the beeches are few in this part), with silvery stems, dotted here and there with moss, and stained with lichen: making one wonder that a thing so straight, so round, and so beautiful, could ever become so gnarled, so wrinkled, and so old. A curious incident is related in connexion with this "monarch oak." For some years it was the abode of a fox, which was skilful enough to baffle his pursuers. In the centre, where the branches fork out, there is a hole some four feet deep, in which he lodged.

Mr. Anthony, encouraged by the success which attended his large Forest Scene of last year, has, upon the present occasion, produced one of still larger proportions. He has evidently bestowed immense study and labour upon the "Monarch Oak" now before us; and, if the result be not so happy in its pictorial effect as could be wished, we think it may be owing to his paying too great devotion to the one darling object, to the neglect of other features incidental to grand forest-scenery. Among these incidents are noble perspective vistas, various gradations of light and shade, happy glimpses of sky through the foliage, to say nothing of the judicious grouping of trees of various families: and these being made proper use of, make all the difference between portraiture and poetic art. The tone of the picture is impoverished by the absence of the deeper tints of green, and the comparatively large space occupied in the middle of the picture by the black trunk of the tree; the light yellow tints of the comparatively dwarf foliage on either side is purely local: there being no attempt at aerial medium. Still, with all its short-comings in the matters we have pointed out, this gigantic oak is entitled to respect for its ambitious design and patient execution; and we have great pleasure in presenting an Engraving of it.

487. "An Incident in the Civil Wars: Concealment of the Fugitive—

(*Continued on page 384.*)

THE PROPOSED GREAT INDUSTRIAL EXHIBITION FOR SCOTLAND. A proposal is being circulated, that the undertaking of "National Monument" on the Calton-hill, Edinburgh, should be adapted to contain a Great Industrial Exhibition for Scotland. The proposer says:—"The interior of the main building will be formed into a central hall, of 220 feet in length and 100 wide. The ceiling will be divided into panels, and the light will fall in, on unbroken and uniformly-distributed mass. The central hall will be surrounded by galleries, affording space for exhibition pur\[illegible\]. The east and west divisions of the basement space will consist of large compartments for machinery and heavy goods. Around the entire building, within the colonnade, will run external galleries for promenading. The materials will consist of iron, timber, and glass. The estimated exhibition space will be about 12,000 square feet. Wall space, 60,000 square feet."

DEPARTMENT OF PRACTICAL ART.

EXHIBITION OF WORKS OF FEMALE STUDENTS

ON Saturday last a private view (for ladies only) was afforded at Marlborough-house of the works of the female students of the various classes connected with the Department of Practical Art in the metropolis, previous to the general exhibition of the works of students of all the schools of art in the country to be opened at Gore House, Kensington.

The works exhibited on Saturday included specimens from the elementary classes, as well as from those special classes to which female students are admitted; and the display manifested a decided improvement over former exhibitions, and a nearer approach to what must ever be kept in view—the applicability of the designs to practical purposes.

A class recently formed for painting on porcelain contains some very promising productions; and it is not too much to hope that attention and encouragement, combined with those many examples of choice and celebrated specimens now in the museum of Marlborough house, may ultimately develop in this country something of that tasteful design, and beautiful execution, which are so characteristic of many of the ceramic productions of the Continent. Among the students in this class we may especially mention Miss Mary Burrows, whose "Sanctus Marcus" attracted considerable notice at the Great Exhibition, and several copies of which form part of the present display.

In Wood Engravings—a class especially devoted to female students—there are some neatly and cleverly-executed impressions, with the blocks, among which may be mentioned a copy of a Roman frieze from the Vatican, a Cinque Cento frieze from Florence, a portion of a pilaster from Santa Maria de Miracoli, Venice, and several others. In composition of colours there are several very creditable fruit and flower pieces; and some very accurate and well executed copies of elaborate India shawl-work.

In the class of "Printed Garments," Miss Florence Collins has the honour of the first design which from this department has been used by manufacturers. The design is printed on cambric by Messrs. Liddiard, who a short time since offered a prize of £10 for the best design of this class—a proof that at length manufacturers are beginning to perceive that it is possible, by a little encouragement on their parts, to obtain designs from these schools. The design printed consists of a simple heath-blossom, conventionally treated, and forming a pretty and genteel dress piece.

We notice, also, a few good specimens of design for lace work: and appended to one or two of the specimens worked from the designs, are some interesting details, showing, in a remarkable manner, the value of labour when applied to an article of but small value. For instance, we are informed that one of the lace collars, designed by Miss Susan A. Ashworth, was worked by Dinah Tucker, of Offwell, Devon. It took 300 hours to complete the collar, and the patient worker was paid at the rate of 1¼d. per hour. The value of the thread employed—16 skip thread—was about 6d.; the price of the finished article is £2 6s. There is another one designed and worked by the same parties; the time employed in working being 176 hours, the rate of pay the same as in the previous instance; the cost of the the thread 4d.; and the value of the collar £1 5s 2d.

The exhibition was visited during the day by a large number of ladies; and it will, doubtless, as in most previous cases, occupy and deserve the greater share of attention in the forthcoming general exhibition of the works of all the students at Gore House

We should add that the examples of the Messrs. Liddiard offering prizes for designs by students of the school, has been followed by other manufacturers; among whom are Messrs. Jackson and Graham, who offer £10 for a Brussel or velvet carpet; Messrs. Elkington, £10 for the best models of tea-service; and Mr. Lapworth, a prize for an Axminster or Brussels carpet.

GOVERNMENT DEPARTMENT OF SCIENCE.

The recommendation in the Speech from the Throne, on the opening of the present session of Parliament, that Government should foster science, and make it a branch of national education, has met with a response on every hand, the Royal Commissioners and the Legislature aiding equally in the good cause. The necessity of a system of scientific instruction, of a thoroughly practical character, has long been felt, and in various ways, the people have themselves endeavoured to supply the want The great cause of their failing to do so effectively, and, consequently, of the abandonment of some, and the failure of other plans, has been the non-existence of well-trained teachers. The universities, the colleges, and a few wealthy establishments, have secured to themselves all the available scientific talent, and the institutions of the people could only be supplied from the uncertain class of teachers left unemployed.

The Great Exhibition has shown, in a most convincing manner, the necessity of introducing, in all directions, a system of education in science and art, as applied to the useful or ornamental purposes of life. We have just received the first report of the Department of Practical Art, which has been now for some time established; and, on the whole, the progress made may be regarded as encouraging; but much remains to be done in art education the difficulties being greater, we imagine, than the authorities at Marlborough-house can appreciate. We have before us the Civil Service Estimates for the year ending 31st March, 1854, which gives us the earliest exact insight into the intentions of Government in regard to science.

We propose, at present, merely to show what is contemplated; as we shall, in all probability, have to return to a more detailed consideration of a subject of such vital importance to the country, and to a careful examination of its somewhat involved elements.

In a letter from the Committee of Council of the Board of Trade to the Treasury, by Sir J. Emerson Tennent, it is stated that, "from the communications addressed by deputations, and otherwise, to the Government School of Mines, by places of great importance—such as Manchester, Birmingham, and Newcastle—their Lordships have every reason to believe that a cordial disposition will be shown to co-operate with the Government in promoting *industrial science*." Of this there can be no doubt; but we find on every side a disposition to hood Government aid as much as possible, except it is in those chartered institutions which ask the assistance to prop up a little longer their decaying elements.

It is then proposed, and a Treasury minute accepts the proposition, that a United *Department of Science and Art* be at once established. The office of secretary and inspector in the Department of Art already conferred on Mr. Cole is continued; and the secretary and inspector in the Department of science, now appointed, is Dr. Lyon Playfair: each of these gentlemen receiving salaries of £1000 per annum. It is intended to encourage, as much as possible, the establishment of provincial schools of science; and we learn that already there are several applications from most important localities to form connections with the Government Department of Science. To advance these as much as possible, it is proposed that apparatus, models of machinery, diagrams, &c., shall be supplied to them at one half their actual cost; and it is hoped that the Government will be induced to place a certain number of scholarships in the gift of this department; and provision is to be made for the training of teachers for the local schools. On these points the views of the Committee of Privy Council for Trade are as follows

It is proposed that similar principles to those adopted in the Department of Art, shall govern the distribution of apparatus, &c., in the case of the Department of Science. As regards the proposed expenditure for a guarantee fund for teachers, training masters, scholarships, and prizes, the outlay is intended, in both the Departments of Science and of Art, as an encouragement towards establishing provincial schools, and also to furnish young men educated in those local schools, and found to be meritorious, with means and inducements to finish their training at the metropolitan schools This mode of stimulating local talent is open to no abuse so long as it is confined within moderate limits; that is, so long as the main support of the metropolitan schools is derived from the fees of the pupils resorting to them for instruction. The honour of being elected to these scholarships, combined with the means which they will afford for improvement in science and art, may be expected to prove a great incentive to the ambition of the pupils

The Treasury minute unites in one department, under the Board of Trade, with the Department of Practical Art and Science, the kindred studies of the Museum of Practical Geology, the Geological Survey, the Museum of Irish Industry, and the Royal Dublin Society, thus bringing the whole of these hitherto isolated establishments under one common superintendence. With the organisation by which they are to be

worked we are as yet unacquainted. We hope Dr. Playfair may be enabled to produce harmonious movement in the complicated machine entrusted to him.

The School of Mines, in connection with the Museum of Practical Geology, in Jermyn-street, will continue to discharge its useful functions as the Metropolitan School of Industrial Science, with an enlarged sphere of usefulness, from its new relation to the provincial schools. Sir Henry De la Beche continues still the sole director of the school, and of the Geological Survey of the United Kingdom. The desire of the gentlemen connected with the School of Mines to advance the objects in view, is shown by a resolution of their council, that, in the event of the Government establishing scholarships in provincial schools in connection with the Government School of Mines, the professors will cheerfully dispense with the payment of fees for scholars thus appointed, with the view of enabling the Government allowance to be applied to the maintenance in London of provincial students. The liberality of this resolution, and the zeal with which the voluntary and unpaid labours of the lecturers to working men have been carried out, require no comment from us. With such enlarged views, the Metropolitan School cannot but have a successful progress. The results of the establishment of local schools we can scarcely venture to predicate. Everything will depend upon the adaptation of the instruction given to the wants of each locality.

The estimates, which will shortly claim the attention of the House of Commons, for the year 1853-54, under these departments, are as follows —

	£
Geological Survey	23,759
Metropolitan School of Science and Museum of Practical Geology	8,173
Museum of Industry, Dublin	2,400
Division of Art Central school and Museum	7,618
Normal Training School	1,325
Central Female School	825
Local Schools	7,450
Local self-supporting Schools of Science and Art	7,600
Department of Science and Art	5,325
	£44,476

We expect to obtain much additional information shortly, when we shall return to the subject. We reserve until then our remarks on the general feeling in the provinces in respect to this movement of the Government, and on Government education in general.

EXHIBITION OF CABINET-WORK.

On Saturday last, a meeting of the producers of cabinet-work was held in the lecture-theatre of Marlborough-house, to hear the arrangements that were to be made with respect to, and the objects of, the collection of cabinet-work that has been recently sent to the Board of Trade Department of Science and Art, Gore-house, Kensington, by her Majesty the Queen, and several distinguished noblemen and gentlemen.

The Right Hon. E. Cardwell, M.P., who presided on the occasion, stated that the object of the proposed exhibition was to induce among those engaged in the production of cabinet-work a taste for the best possible kinds of furniture, and also to afford to the trade, and manufacturers generally, the best example which this country, or probably the world, could produce for the cultivation of the art which they professed. The deficiency of correct taste in matters of the kind among the producers of this description of manufacture had long been a subject of regret; and whatever might be the cause of it, whether traceable to producer or purchaser, it was necessary that they should now endeavour so far to improve themselves as to occupy the highest position in this branch of art to which it was possible for them to attain (Hear, hear). The right hon. gentleman stated that he had just received at the Board of Trade an official letter from the Foreign-office, covering a letter from the French Ambassador, announcing, on the part of his Government, that a Universal Exhibition for Agricultural and Industrial Productions would be held in Paris, in May, 1855. He hoped that the exhibition from Great Britain there would be worthy the place which we occupied among the nations of Europe; and that the proposed exhibition would tend to promote those objects of universal good-will among all nations of Europe, which these combined exertions of industry and skill were so well calcu ated to subserve (Hear, hear). It would be gratifying if Great Britain should, at Paris, be enabled to compete successfully with those manufacturers of cabinet-work who, in France, had long enjoyed such great celebrity; and it was fortunate that there shou d be, at this time, such an exhibition of cabinet-work as that which, by the gracious kindness of her Majesty, and many of her subjects, was now about to be opened. He was glad to have the opportunity of meeting the producers of cabinet-work, on that occasion; for it was well worthy of the consideration of the Executive Government to consider how far it could co-operate with the feelings and wishes of both producers and consumers in the country, for the purpose of doing everything which might tend to ele ate every branch of manufacture in Great Britain, and particularly of those in which the finer productions of the human mind, and the highest achievements of human industry were concerned (Cheers).

Mr. Redgrave, R.A., then proceeded to explain the nature of the proposed Exhibition; commencing with a brief history of ornamental cabinet-work. Mr. Redgrave stated that the collection sent by her most gracious Majesty, and others, dated from the time of the Reformation to the beginning of the present century. It was not necessary to go further back than the period of the Reformation; for, previously to that epoch, the style of cabinet-work was ecclesiastical; and, as the abbots and Church dignitaries were very rich, their furniture was gorgeously ornamented, but limited utility. He mentioned several styles of ornamental furniture; the Renaissance, the style of the epoch of the Jameses; Louis XIV., XV., and XVI.; of the Consulate, and the Empire. He gave a preference to the Renaissance style, and said that in the great National Exhibition, in Hyde-park, there were many excellent specimens of this style by foreigners, and also by Englishmen. The style of the epoch of Louis XIV. aimed chiefly at magnificence in surface decoration, but was defective in construction. He exhibited the drawer of a cabinet made by the celebrated Gautier, to show the great pains that artist took with external decoration, and pointed to the apparently gold handle of the drawer as a model of design and chasing. Still Gautier was faulty in construction; and there were French specimens of this epoch highly and beautifully ornamented, but so badly put together, that an English hedge carpenter of the present day would be ashamed to turn out such work. He had seen French cabinets, exhibiting extremely beautiful and well-executed designs, the drawers of which fitted so badly, that it was a nuisance to draw them out and put them back again. The English excelled all other nations in finish of fit and construction; and the cabinet work produced by Gi low in this respect was superior to anything of the sort made abroad. He urged the cabinet-makers to aim at excellence in the decorative element. They need not be afraid of a paucity of purchasers. A new class had ar sen a wealthy class, not hampered like many of the nobility, with expensive establishments in the shape of troops of servants and other costly appendages—he meant the manufacturers and wealthy tradesmen, who appreciated art, and were willing to purchase its productions. At first they were not good judges of art, which he knew from the selections they used to make in his province—painting—but they soon acquired fine taste and sound judgment, and would be found now to be the best encouragers of decorative cabinet-work. Mr. Redgrave then passed to the taste of the time of the Consulate and the Empire, when artists gave themselves up to the classical style, but so rigidly and timely did they copy from models and designs of ancient Greece, that the people grew disgusted, and the result was a return to the Renaissance—to warmer, more decorative, and more natural styles. All the English craftsman wanted was a better knowledge of design, and a purer taste for external decoration; for in construction he was perfect. That knowledge he could now obtain. The fine collection already alluded to would be at his service. He could model or mould from its many varied and beautiful specimens, embracing all the styles that prevailed since the time of Henry VIII. up almost to the present day. He could draw, design, and paint from them at the slightest possible expense. He could take them into a room not frequented by the public, and study them without interruption—he could make drawings and sketches at all times. The exhibition would not be open to the public daily before noon; but it would be open to students who paid a fee of a guinea a year, at least a.m., six days in the week. There would be, between nine and twelve o'clock, classes by Mr. O. Hudson, T. C. Robinson, and Mr. Professor Semper, who would direct the students in studying and copying, who would examine their examples, and correct them if necessary; admission, ten shillings for a course, or sixpence for one attendance. There would also be a library of works upon art, and the librarian would assist the student in his researches, or point out to him the book, plates, prints, or designs it would be most advisable to study or copy. Students of the special classes of the Department in Jermyn-street, and at Marlborough-house, would be free at all times to make studies; and the students of all schools of art, metropolitan or provincial, would have free admission on Mondays and Tuesdays, on showing their fee receipts, or an order from the master of any School of Art. The collection at Gore house would, moreover, contain the best specimens of drawings and prints in the country, the British Museum excepted. It was the intention of the Board of Trade to have the exhibition open in the evenings, for the convenience of those whose occupations would prevent their from attending at any other time of the day (Hear, hear)

Mr Cardwell thought they ought all to be obliged to Mr Redgrave for his excellent re marks; and he hoped every one that had heard them would receive instruction from them.

The exhibition will be opened to the public next Saturday.

SITE OF THE NEW NATIONAL GALLERY.

THE accompanying map shows the purchases, as far as completed, of land necessary for the execution of the object contemplated by the Royal Commissioners for the Exhibition of 1851. In their second Report, the Commissioners state:—

Proceeding to the question of locality, we would call attention to a Report from a Commission, appointed in 1851, to "consider the question of a site for the new National Gallery," which Report was laid before Parliament in August, 1851. The Commissioners (Lord Seymour, Lord Colborne, Sir Charles Eastlake, Mr. Ewart, and Sir Richard Westmacott) there stated their opinion of the advantages for such a purpose of the neighbourhood of Hyde-park and Kensington, not only on account of the dry character of the soil, but also because "those large open spaces afford a present security against the inconveniences to which the National Gallery is exposed, and are the only grounds which remain safe for future years amidst the growth of the metropolis."

They then reported, that, from information which they had received, they believed that "from fifteen to twenty acres of land, with a frontage to the park, might yet be obtained at a reasonable price, which would afford a space for the construction of a Gallery on an eligible site;" after which they proceeded to discuss the question of a site in Kensington-gardens, in case the outlay which would be involved by making such a purchase should be deemed inexpedient.

It was for obvious reasons that this Commission alluded only in the vague manner above shown to the locality in question, as any greater precision would have had the inevitable effect of enhancing the price that would be asked for the land.

It is understood that the late Government were actually in negotiation for a piece of ground, for public purposes, of the character referred to From some cause that negotiation was broken off. It appeared to us so important to secure this locality, that, through the zealous and disinterested instrumentality of Mr. Kelk, the builder, we have obtained possession of the land for which the Government had been treating.

The estate, which is very nearly opposite the site of the Exhibition Building, is best known by the name of the "Gore-house Estate." It contains about 21½ acres, and is situated at Kensington Gore, about midway between Prince's-gate and Kensington-gate, and faces Hyde-park, possessing a frontage of between 500 and 600 feet. The cost of the estate has been £80,000.

The above property presents great advantages of position, and will be found extremely valuable in serving, as far as its limited extent permits, as a locality on which to develop any scheme of public utility, the execution of which involves, as a necessary condition, the acquisition of a site. But it appeared obvious to us that a space of little more than twenty acres would be quite insufficient to admit of the full and satisfactory development of a plan so comprehensive as the one suggested by us, and which is intended to meet, not only existing wants, but has in the progress of time in the advance of knowledge in science and art—may render apparent. For this object, a much larger extent of ground would be required.

It is unnecessary for us to point out the evils which have unfortunately so frequently arisen in practice in this country from a want of foresight in this respect—attention having generally been confined to the absolute and pressing requirements of the moment, without providing for their inevitable extension It has been usual, in purchasing property for public purposes, to obtain only the exact space needed at the time of the purchase, and even to re-sell any amount of ground that might remain over and above that called for by the exigencies of the case. The invariable consequence of this mode of proceeding is, that the adjacent land, which might have been procured on reasonable terms in the first instance, immediately rises in value, passes into the hands of other persons, who invest large sums in erecting houses and buildings upon it; and when, at length, it becomes absolutely necessary to obtain it, in order to satisfy the public wants—which will not remain stationary, and cannot be disregarded—the most exorbitant sums have to be paid for it.

Nor is it necessary to point to the lamentable fact that, even when this has been done, most of our public buildings remain subject to the disadvantages of being placed in such a situation, from the crowding of surrounding houses, that they are without light or air, have no convenient access, and cannot be seen to any advantage, and that the extensions which may have been effected, are ill-arranged for their purpose, inconvenient, and inharmonious in their effect.

The Report next refers to certain instances of the cost of obtaining space for the extension of great national objects, and then proceeds:—

But while it was obvious to us, on the one hand, that our own means were totally insufficient to provide the extent of land required for the objects we have in view, it appeared, on the other, that those objects com-

EXHIBITION OF THE ROYAL ACADEMY.

NO. 480. "THE MONARCH OAK."—PAINTED BY M. ANTHONY

(*Continued from page 332.*)

Destruction of Compromising Documents." By D. W. Deane. Quite a scenic tableau, after the approved fashion of a Surrey or Princess' melo-drama; and well worthy the study of those engaged in getting up such productions. In the front, the "compromising documents" are being hastily consigned to the flames; whilst the fugitive makes an abrupt exit through a panel in the wall—taking a sufficiency of provisions with him for the day's consumption. In the room at the back the soldiers are seen breaking their way through the window.

488. "Sophia and Olivia"—from the "Vicar of Wakefield." By T. Faed. This charming little picture, which is finished with all the delicacy of miniature-painting, is one of the gems of the Exhibition. The two sisters are represented as engaged in conversation under the shadow of a tree, at the door of the vicarage; the one sitting, the other standing and leaning against the paling. Both the sisters are extremely beautiful, but of a different order of beauty: Olivia, fair and bright-eyed, gay of heart, somewhat *espiègle*, and evidently vain, and susceptible of admiration; Sophia, more homely and thoughtful, but full of tenderness of feeling. The former is dressed in rich brocaded silk, with a quilted petticoat beneath; the other in quieter guise. The little English landscape beyond, the trailing plants which creep up the walls of the vicarage-house, all assist in carrying out the sentiment of the subject. This picture we have great pleasure in being permitted to engrave.

489. "The Chapel, Bolton." By J. W. Inchbold.

> Nature softening and unsealing,
> And busy with a hand of healing.—WORDSWORTH.

This picture is very verdant—all local colours; but the "softening" effects of nature's atmosphere are not perceived in it.

490. "Canterbury—from Tonford." By T. S. Cooper, A. A fine broad landscape, with cattle; the water more pellucid than in some other works of this artist previously referred to.

498. "Uncle Tom and Cassy." By G. P. Manley. A very effective illustration of a most picturesque incident in Mrs. Beecher's Stowe's popular story. It represents Tom lying "groaning and bleeding alone, in an old forsaken room in the gin-house, among pieces of broken machinery, piles of damaged cotton, and other rubbish," when Cassy enters with a lantern, and, raising his head, gives him a drink of water. The effect of the light falling softly on the head of the poor sufferer tells very well, and the character infused into his face, and that of the kind-hearted Cassy, truly realise the conceptions of the author.

499. "Dr. Watts Visiting some of his Little Friends." By A. Rankley. Johnson mentions of the amiable Dr. Watts that "For children, he condescended to lay aside the scholar, the philosopher, and the wit," and Mr. Rankley has seized upon the idea so suggested, as the subject for a very clever picture, of which we present an Engraving. The good Doctor is here represented as paying a visit to some worthy family, apparently in the middle or humbler walks of life, and conversing, without reserve, with the children; who show, by their varied expression, the high respect in which they hold their kind friend, and the delight and pride they experience in being taken notice of by him.

507. "Speak, thy servant heareth"—1 Sam., iii. 10. By J. Sant. Mr. Sant here takes a higher flight than any he has hitherto attempted—that of scriptural poetry—and, we are glad to say, with unqualified success. Nothing can be more simple than the manner in which this single head is treated; yet nothing could be wished for more impressive and truthful in character. The boy, Samuel, has just been aroused by the Divine summons; he sits up in bed, his eyes turned to heaven in a manner expressive of deep attention, not unmixed with a feeling of awe; his hair loosely scattered; as he exclaims, "Speak, thy servant heareth." We can accord no higher praise to this work than to say that it will form a worthy companion to the "Infant Samuel" (praying) of Sir Joshua Reynolds

508. "A Welsh River." By T. Creswick, R.A. A bold mountain scene, through which a river flows briskly, sparkling, as it goes. In every respect an extremely satisfactory performance.

512. "Joséphine Signing the Act of her Divorce." Scene in the Grand Cabinet of the Emperor Napoleon, at the Tuileries, on the evening of the 16th of December, 1809. By E. M. Ward, A. We have already given our opinion of the merits and defects of this production, the former of which vastly preponderate. Barring a little hardness in the outline of the features, and the yellowness of the tone, adopted, perhaps, in the intention of carrying out the effects of candlelight, there is nothing to find fault with in this picture, which accurately realises the descriptions of the historian:—

> In the centre of the apartment was placed an arm-chair, and before it a small table with a writing apparatus of gold: all eyes were directed to that spot, when a door opened, and Josephine, pale, but calm, appeared, leaning on the arm of her daughter. * * * * Both were dressed in the simplest manner. Josephine's dress of white muslin exhibited not a single ornament; she moved slowly and with wonted grace to the seat prepared for her, and there listened to the act of separation. Behind her chair stood Hortense, and a little further on towards Napoleon, Eugene Beauharnais, trembling as if incapable of supporting himself. * * * Even sitting down, she took the pen from the Count Regnaut de St. Jean d'Angely, and signed it.—*Mme's Mémoires of the Empress Josephine*

514. "The City of Refuge." By E. Armitage.

> Then ye shall appoint you cities to be cities of refuge for you; that the slayer may flee thither, which killeth any person at unawares.—*Numbers* xxxv., 11
>
> A w[illegible] s of refuge; and, fatigued, is nearly ready [illegible] women go forward to support him.

The drawing is masterly, and the colouring of that peculiar pale but warm tone which this artist has adopted in some others of his works.

520. "The Proscribed Royalist, 1651." By J. E. Millais. This is a very attractive and richly-coloured picture; but not by any means so important in practical character as that of the "Order of Release," by the same artist. It represents a cavalier concealed in the trunk of a tree; and a young lady, in an amber satin petticoat, supplying

EXHIBITION OF THE ROYAL ACADEMY.

him with bread, which she takes from her pocket. The cavalier devours—not the bread, but the lady's fair hand, with kisses; whilst she, more cold in temperament, and more discreet, looks round the other way, to see if she is being watched. The back is closed in with a very thick foliage, brightly coloured

524. "The First Meeting of Alexander the Great and Roxana" By F. Cowie.

Alexander the Great, having penetrated into the countries north east of Persia, captured its lovely Roxana, daughter of Prince Oxyartes The beauty of his young captive made a deep impression upon the victor, and the momentary passion ripened into a lasting attachment.

There is certainly rather a violent display of passion and astonishment, and of various disturbing emotions in this picture, which is one of considerable size. But if we miss the tenderness of Roxana, and the chivalrous grace of Alexander, we must admit that the design is spirited, the drawing vigorous and correct, and the colouring bold, rich, and well contrasted.

528. "Tobias, with Raphael, his Guardian Angel, on their Journey to Medea." By W. C. T. Dobson. Rather formal in treatment, but highly finished.

534. "Our English Coasts, 1852" By W. H. Hunt. Let no visitor pass without examining this little picture, upon which labour appears to have been bestowed for pure love of labour; and every colour in the rainbow comes in for a share. The scene is a rather broken spot, near the edge of one of the cliffs on our southern coast, overhanging the sea. Nothing can be imagined greener, softer, more tempting than the herbage of those downs, where golden-fleeced sheep are herding, various hues of sun-light playing fitfully across their woolly coats; —nothing calmer than the clear blue sea and sky beyond. It should be added that one of the woolly tribe has fallen into a shallow pit, amongst the brambles, where he looks to be very uncomfortable, one of his brothers looking on and wondering how he could have been so clumsy; in consideration of which circumstance, the frame bears the inscription, "The Lost Sheep."

536. "Bethlehem, the City of David, looking towards the Dead Sea and the land of Moab." By D. Roberts, R.A. Mr. Roberts never painted anything finer than this; it is in his grand picturesque style, remarkable for breadth and softness. The spot is thus described in the words of the Catalogue:—

Immediately over the pine-trees, in the centre, stands the Convent and Church of the Holy Nativity, erected over the site of the birth of our Lord, by the Empress Helena, mother of Constantine, including the chapels of the Greek, Latin, and Armenian Christians. To the right, and overlooking the Dead Sea, is a high, conical hill, surmounted by a ruined fortress, called by the natives the "Franks-hill;" probably from its having been in the possession of the Crusaders, but by some fixed upon as the site of the ancient Beth-horon, mentioned by the prophet as a place for a beacon; whilst others believe it to be the Masada of Josephus, which was situated on a high rock, fortified by Jonathan the Asmodean, and rendered impregnable by Herod.

537. "Francesco Novello da Carrara, when escaping from the persecutions of the Duke of Milan, is arrested by order of the Podesta of Ventimiglia." By F. R. Pickersgill, A. An incident in Italian history, thus recorded in "Gataro's Chronicle:"—

The magistrate despatched an officer, with ten soldiers, to bring the travellers before him. Francesco, when they overtook him, fought his way to the shore, and succeeded in getting his lady (who was ill at the time) and her attendants on shipboard; but he himself, being last, was overpowered and taken prisoner

Mr. Pickersgill has produced a very animated picture, in which the whole story is well told. On the one side we have the wife (who is pale with affright) being hurried into a boat by her friends; whilst on the other hand, in the background, the husband struggles vainly with two assailants. This group, with legs absolutely intertwined, is vigorously conceived.

538. "Dogberry examining Conrad and Borachio." By H. S. Marks. A hard featured but characteristic study of the Prince of Night Guardians:—

Dogberry. Masters, do you serve God?

Con. and *Bor.* Yes, sir, we hope.

Dogberry. Write down that they hope they serve God: and write God First: for God defend, but God should go before such villains!

Much Ado About Nothing, Act iv., Scene 2.

541. "An Hour with the Poets" By R. Redgrave, R.A.

In the leafy month of June
A lady walking, with a book in her hand, in a park The foliage very "leafy" and spotty

(*Continued on page 388.*)

NO. 538. "SCENE FROM 'THE TEMPEST.'"—PAINTED BY C. ROLT.

NO. 248. "AN EPISODE IN THE HAPPIER DAYS OF CHARLES I."—PAINTED BY F. GOODALL

SOME

ACCOUNT OF THE GOLD-FIELDS OF AUSTRALIA.

BY A DIGGER.

(To the Editor of the ILLUSTRATED LONDON NEWS*.)*

HOBART TOWN, VAN DIEMEN'S LAND, October, 1852.

THE excitement produced in England, and elsewhere, by the late extraordinary discoveries of gold in the province of Victoria (Australia), and the great emigration taking place from your country, consequent thereon, lead me to believe that a detailed account of that portion of the Gold-fields I have lately visited, and worked at—namely, about Ballarat—will not prove unacceptable to the readers of your Journal; more especially to those of them who contemplate visiting the remote continent of the Pacific. At the risk of exhausting the patience of yourself and readers, I will append hereto a detailed statement of the various strata usually encountered in the work of sinking; and also the processes whereby the metal is finally separated from the auriferous earth, called technically the "washing stuff," with other matters of importance to intending emigrants. A narrative of this kind will never prove unmustructive, but may, possibly, serve them, in some measure, as a guide or hand book of reference; showing, as it will, amongst what strata the auriferous deposits are to be looked for; for, without this essential knowledge, one may just as well go to work with his eyes shut.

My account is drawn from my own notes, written while I was on the spot; and may, therefore, be implicitly depended on as the production of a practical digger.

The gold-fields of Ballarat may be said to commence at the foot of the Bunninyong tier; and though this tier has not been worked, I feel certain it will prove productive of gold whenever it is properly tried. The foot of the Bunninyong Hills may be pretty safely taken at 40 or 45 miles from the sea-port town of Geelong, the place of debarkation for persons proceeding to Ballarat. The tract of country between this town and the above-named Hills is generally very level, mostly open, free from all large trees, and well covered with grass. The soil of the surface is mostly black and good, but at times inclining to clay. It is, usually, free from stones; but, where these prevail, they are the same scor as we see lying about many of the grassy plains of Van Diemen's Land. I also noticed a little of the common iron stone (trap), but not much. The only stream of consequence that we cross is the Barwen, seven miles from Geelong, where a broad wooden bridge affords an inexpensive means of passage. All the other water-runs are insignificant. The road (like all the roads in Victoria) is perfectly unmade, and is in a condition reflecting no great credit on the Government of the finest province of the British Empire.

Passing across the Bunninyong Hills, it is scarcely possible not to be struck with the large admixture of quartz pebbles, small and very white, which the surface soil contains. Here, also, the country becomes heavily timbered, the trees being exactly the same as those growing in Van Diemen's Land—namely, the stringy bark, the common gum-tree, and peppermint, mixed with a few cherry-trees and oaks.

At about fifty-six miles from Geelong we reach the digging-ground of Ballarat, where we observe the character of the soil greatly deteriorates; and nothing can be well more inferior than that about the once rich diggings of "Poverty" and "Golden-points;" though it is passable enough in the closely adjacent bottom lands. These diggings are now nearly deserted; the tents being mostly shifted to the "New Diggings" (called also "Eureka"), the "Surfacing Gully," "Little Bendigo," the "Brown Hill," the "Black Hill," &c.; all which are within four or five miles of Ballarat, and lie between north-east and north-west of that place. The surface soil of some of these places is superior to Ballarat. They are all heavily wooded, like Bunninyong, and tolerably grassy. The common grass tree (*Xanthorea*) are very abundant about some of them; but they are of stunted growth. The surface is every where undulatory, but the hills and ridges are never high, and are seldom steep. The streams here are very small; and I should suppose that nearly all of them fall in dry weather. An admirable weather I observed them to rise and fall, with uncommon rapidity.

I nowhere noticed any masses of fixed quartz rock. But on most of the eminences we meet with a fixed clay-slate rock, of a brownish yellow colour, which protrudes through the surface, but seldom rises more than three or four feet above it. The same is almost invariably placed on its edges, and its figures have uniformly a northerly direction. So constant is this, that I verily believe a stranger might almost find his way through the bush here by simply attending to the direction of the slate rocks. I never met with slate of a blue colour at Ballarat, but I believe it to be common enough at Bendigo, and in the gold regions of Van Diemen's Land, as also of New South Wales. Micaceous rocks seem also absent from Ballarat. I did, indeed, occasionally meet with a few small shining flakes of mica, scattered through the soils we penetrated, but these particles were few, and could not well be more minute than they were.

I was working at the diggings of Ballarat (that is, at "Eureka," and in the "Surfacing Gully") for seventy-two days—from the 31st of May to the 16th of August, 1852—during which period our party, consisting of five persons, sunk nine holes, whose average depth was about 26 feet (260 feet in all) the deepest being 45, and the shallowest 15 feet. Six of these proved blanks, the other three prizes. The deep holes were always on the tops, or the sides of hills; the shallow ones in the valleys. The former, in addition to their great depths, presented by far the most difficult strata to cut through; and this feature, in sinking, was the same all over the digging ground. The holes in the valleys required little more labour than that of excavating various soft soils, and this feature was also nearly invariable. So to describe one of each of these holes is really to describe, with pretty considerable fidelity, the diggings generally: for though the strata passed through in the different holes vary in thickness, their quality is always the same.

I suppose that the majority of persons have seen the operation of well-sinking performed, or at least that they know what it is, and this pretty-ely resembles the principal work of the gold-digger, the hole being, in fact, a dry well. A few of the holes are cut square; but where I was at least 99 in 100 were round. The tools required for the work are well-steeled and tempered pickaxes, neither very heavy nor too light, a short-handled round-nosed shovel; a windlass over the hole (an implement easily constructed on the spot); a fifty-foot rope, of one inch diameter, with a good bucket-hook attached to it, and a sound bucket. On reaching the "washing stuff," several sacks are necessary, for bagging it in, to carry it down to the water. Cradles, also, are required for sinking, unless it be a light crowbar, but this I seldom saw used.

In describing the nature of the soils we passed through in sinking, I will commence with the first hole (the same being on the top of a ridge), which we opened on the 1st of June, and bottomed on the 12th following, at a depth of 37 feet, working every day (Sunday excepted) through all the hours of daylight, with only a short intermission at dinner-time. We first dug through about eighteen inches of black mould, largely mixed with small and very white water-worn quartz pebbles.* Below this lay three feet of stiff yellow clay, being precisely the same as that which brickmakers use. We had next to pierce through a thick and wonderfully hard bed, formed of large quartz pebbles of extraordinary whiteness and slight transparency, cemented together by a very hard red cement, if possible more difficult to break through than even the quartz pebbles themselves. The labour of piercing this obstinate and infrangible concrete can only be understood by those who had the troublesome task to perform. It knocked up our picks fully a dozen times, and proved famous exercise for the patience and mettle of a parcel of new hands at that sort of work. It often took fifteen or twenty heavy blows of the pick before a particle of it would break off, and the jarring of our hands and arms in this business was the very reverse of agreeable. The thickness of this stratum was twelve feet. It will be easily understood that so obstinate a mass could only be removed by positively reducing it to powder—by smashing it literally to atoms. When thus broken up and exposed, it bore much the appearance of a brown gravelly earth. This is the conglomerate which is called at the diggings "burned quartz;" but the designation is evidently inappropriate, for the quartz it contains is of snowy whiteness, proving that it has never been exposed to heat, while the red cement was probably deposited by water. Beneath this most obdurate stratum, we sank through a bed of whitish loam, slightly mixed with clay, whose thickness was nine feet; it was easily penetrated. This description of mould is what the diggers call "white sand," though there is really no sand in it. We next encountered a second seam of "burned quartz," three feet through; and then about five feet more "white sand," like that preceding noticed. Lastly, a third stratum of "burned quartz," of two feet; beneath which lay the "washing stuff," being a thin layer, varying in thickness from one foot to eighteen inches, resting on pipeclay; and a yellowish brown fixed rock, called "slate" at the diggings, and which is invariably found at the bottom of every hole. Deniis this slate be rotten, as it is called—that is, half resolved into a sort of pipe clay it is never sunk into at all; but, if rotten, then the gold is often found to have penetrated it, and is, consequently, followed. When the slate in the bottom stands on its edges, then gold is often found in large quantities in the crevices, with no very great admixture of earth: in this case, the metal is said to be found in pockets.

In the above hole, the reward for our labour was between 60 and 70 ounces, obtained principally by *driving* for it—of which process hereafter.

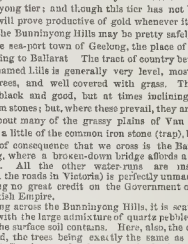
An exact section of this hole will be found below (No 1)

The description of the sinkings in the valleys will be pretty well understood from the following account of one of five holes we bottomed in the Surfacing Gully. Its depth was 17 feet, the same being sunk in two days and a half, yielding near 70 ounces of gold.

The first foot was of black mould, greatly mixed with small white water-worn quartz pebbles. We then cut through 12 feet of the white loam noticed in the precedingly-described hole (the "white sand," as it is inaptly called), which, though compact, is always easily penetrated. Beneath this we came to a stiff clay, of a very dark brown colour, dipping rapidly to the north, at an angle of about 30 degrees or so, under which lay the "washing stuff," the same being a light-coloured earth, very tenacious, and difficult to wash, and largely mixed with quartz pebbles, as usual, very much water-worn.

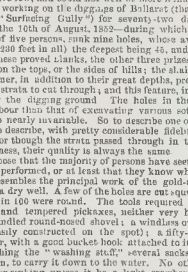
This hole is shown in the section No. 2 below.

No. 1.



Black loam, and water-worn quartz pebbles.
Common brick clay.
Mar. concrete, called "burned quartz."
White loam, mixed with a little clay, called "white sand."
2nd stratum of "burned quartz."
3rd stratum of "white sand."
3rd stratum of "burned quartz."
The "washing stuff" on pipeclay and fixed slate.
Fixed slate.

No. 2.



Black loam, and water-worn quartz pebbles.
White loam, mixed with a little clay, called "white sand"
Very tenacious dark brown clay.
The "washing stuff" on pipeclay and fixed slate
Fixed slate.

It is quite impossible to say, the proportion that the fertile holes bear to these that are barren; but I should think I am not below the mark in stating that for one of the former, there are three of the latter.

If washing stuff be found in the bottom of a hole, it must be worked out, to the extent of your claim (of which I will speak presently). This is always done, by driving in from the bottom, as far as your claim allows you to work; though it is to be observed, that everybody follows the washing stuff, wherever he can find it, so long as he confines himself to his own claim, or to unappropriated ground. This latter is certainly not a very legitimate proceeding, but nevertheless it is invariably pursued. The washing stuff must be followed and removed by the process of driving or tunnelling under ground. Thus a digging field, or its surface, is an infinite assemblage of wells, closely packed together—say about 20 feet apart—but beneath the surface all is a perfect rabbit warren.

When the washing stuff is reached, it is brought to the surface, and put into sacks. It is then carried down to the water, mostly on the back, if the water be within a quarter of a mile; but sometimes in carts, if the party chance to possess one, when the water is far off. At the water, the operation of washing, or (as it is more frequently called) puddling, is performed.

The implements necessary for this purpose are three washing tubs, which are usually common hogsheads cut in two through their diameter; a water-dipper; two or three spades (not shovels); two large tin washing-pans, which exactly resemble ordinary milk-dishes (fluted, however, with strong handles), and two of a smaller size; these latter differ from the larger ones by being perforated through the bottom with numerous small round holes, about large enough for a swan drop to pass through. As for the cradle, I hardly know whether to recommend its use or not. One thing is certain, that it is very extensively employed. It enables one to wash earth somewhat quicker than you can do with the tin pans alone, but not much. Its great defect is, that it wastes the gold. Our party was provided with one; but, like many others, we seldom used it; and finally sold it on the diggings, for just half we gave for it in Hobart.

The washing stuff is usually a most adhesive clay, of various colours—blue, red, white, brown—all in the same mass; and, then first brought to the surface, has rather a pretty appearance. It is always largely mixed with quartz pebbles and boulders, mostly perfectly white; and also with fragments of the slate, which is always found in the bottom of every hole. These fragments are what are accidentally broken off the fixed slate rocks in cutting up the washing stuff which lies almost immediately above them, there being only a thin layer of pipe-clay between them, the top of which is always more or less auriferous (that is, if there be any gold at all in the hole), the metal having sunk into it. Unless the washing stuff be very rich, the gold is seldom discernible in it until the washing operation is more than half completed.

Though the above is the most common kind of washing earth, there are sorts which differ a good deal from it: for instance, that in the second hole I have described was of a grey colour throughout. Another sort is a red gravelly earth, with not much clay in it, which is sometimes exceedingly rich; but all washing stuffs contain vast quantities of quartz pebbles.

I suppose the party to possess three puddling or washing-tubs. Then to wash your stuff, you put about three bucket-fulls into each of two of the tubs, keeping one empty, for a purpose to be presently described. Water is next to be ladled out of the creek into the tubs containing your stuff, until each is at least three parts full, and the earth therein well covered. You then take the spades (two of your party being engaged at this work), and chop and stir the earth about with a rapid energetic motion, which is to be continued until the water becomes perfectly thick and muddy, and incapable of holding any more earth in suspension. The water is then poured off, by the simple act of half upsetting the tub. This is usually done without much care, as you may be perfectly certain no gold will escape, so long as you allow none of the washing stuff to run off with the muddy water. Water is again put into the tubs, and the work of chopping and stirring it well repeated till the water becomes perfectly thick, when it is a second time poured off. The tubs are again filled up with water, the earth well chopped and stirred, and the water passed off as before. These operations must be repeated, over and over, till it becomes perfectly evident that all the earth which water will hold in solution, has been got rid off. About five repetitions of these processes are generally sufficient. This is the most troublesome part of the business of washing, and whereby all the clay contained in the auriferous soil is separated from it; to perform this, it will take one man forty or fifty minutes to one tub of stuff.

To wash the red gravelly earth is much less tiresome, and occupies far less time.

There must be no idling over this work, the arms must fly up and down without resting, and the muscles be well exercised.

The operations of tubs now left in the tubs is about equal in bulk to a bucket and a half. It consists of a mixture of purely white quartz gravel (containing many large quartz pebbles), some lumps of slate, much white sand, a little magnetic iron sand, and the gold—which at this stage of the operation is perfectly visible.

The largest of the quartz pebbles are next removed by hand, being first washed clean, and then thrown away. A small portion of what is now in the tubs (say two thirds of a spadeful) is put into one of the small perforated washing pans. These implements are designed to act as sieves, whereby all stones above the size of a large swan drop are separated from the mass, in which the gold is finally found. The gravel, &c., now in the pan is sifted into the tub, which was left empty at the beginning of the work, water being passed through the sieve at the same time to assist the operation, and which is accomplished in less than a minute. Nothing larger than a swan-shot goes through the tin; and what is left behind, in it, is carefully examined for any particles of gold too large to fall through; and when these are extracted (if there be any, which is not very often the case) the remainder is thrown away. The whole of the gravel left in the tubs is treated in the same manner.
